Appointed seven assistants; submitted their names to the Board, who approved of them; formed them with himself into four pairs; each pair took a parish, but shifted them occasionally in order to keep up the principle of uniformity. Shifted them by taking away one and filling his place with another, and thus endeavoured to infuse notions of value which would be general and common to all. Also furnished them with printed instructions of his own, which he had submitted to the Board, and to the Assistant Commissioner, Mr. Hall, who approved of them (refers to a copy). Appointed those persons partly on the recommendation of guardians, and partly from his own knowledge. Two of them were professional valuers, one being a surveyor, and the other a builder. The others were not professional valuers, but had had experience in valuing, with the exception of one. That one gave him as much satisfaction as any other, and even more than the two professional men. The latter decidedly gave him less satisfaction than any of the others. Kept continually moving from one of the parties to another in order to see how the work was proceeding, and to maintain its uniformity. Found a difference of opinion between the assistants and himself on the subject of value, but overruled their opinions, and suggested the necessity of their adhering more closely to his notions of value. Found that they were always disposed to value on too low a scale. However, he found a complete willingness on their part to adhere to his instructions. Some of the assistants were inclined to be particularly low, lower than the rest. Those were the professional persons. They appeared to be going as much as 10 per cent. under his notion of value. At the commencement relied for a correct return on the local knowledge or the experience of the assistants as well as upon the plan of going about from party to party. Thinks that unfortunately this did not check their tendency to value lower than he (Mr. Lawrenson) should have done at the time.

Printed instructions
of his own.Did not inquire the
rents.

Did not desire the assistants to inquire the rents, and does not consider it necessary. Would not rely on any information obtained from occupiers on the subject, occupiers being in the

habit of representing that they hold at moderate rents with a view to influence the decision of the valuation. Believes the assistants did not shut their ears against representations as to the amount of rent paid; but is certain they were not at all influenced by them. From various causes the actual rent of a house does not sufficiently represent the value. If he was valuing in a town which he was not acquainted with, would find it necessary to inquire the rents in the several localities, but would not be governed by individual cases.

For instance, in Upper Mount-street the rent of the houses ranges at between 70*l.* and 120*l.* A house there which would let for 100*l.* a year he would probably value at 90*l.* Does not value it at 90*l.* because it would let for 100*l.*; that is not the reason for fixing the valuation at 90*l.*; but finds by experience that, when he has valued a house according to his own notions, the rent on inquiry turns out to be about that proportion higher. A house that he would value at 20*l.* would turn out to be let at 25*l.* The lower the amount the greater is the percentage by which the rent exceeds the valuation. A house which he would value at 10*l.* would be let at 12*l.* 10*s.*, or sometimes 14*l.*; a house that he would value at 5*l.* would be generally producing about 8*l.* rent; a house which he would value at 7*l.* 10*s.* would be likely to be producing 10*l.* Has the character notwithstanding of being considered a high valuator. The reason he values under the rent is because he thinks the rents too high in Dublin. The several amounts of rent which he has above referred to relate to rents paid by tenants who keep their premises repaired and insured. The reason why he considers the rents too high is because he thinks that the amount of his valuation ought to be the fair letting value.

With regard to the private streets, does not complain on the whole of the rents which houses produce when let without fines, though his valuation happens to be under those rents. Another reason why he does not approach to the actual rent, is because valuations are supposed to be of a permanent nature, say at least for some years; and as house property does not increase in value, but rather the reverse, he thinks it fair to be as liberal as duty will permit. Finds that he approaches more nearly to the actual rent when the house is let upon lease than when it is let from year to year. Generally is under the actual rent in both cases.

With regard to business streets containing shops, &c., finds that he is generally from 20 to 30 per cent. under the actual rent: that applies only to the first class of business streets, such as Grafton-street, Westmoreland-street, Dame-street, &c. In many of the first business streets in the immediate neighbourhood of those principal streets, approaches the rent in the same proportion, viz. 20 to 30 per cent. In Grafton-street a house that would be let at 160*l.* would be likely to be valued at 120*l.* With regard to such streets as High-street, Francis-street, Thomas-street, Meath-street, &c., a house of which the rent would be 40*l.* would be likely to be valued at 32*l.* 10*s.*, or perhaps 35*l.* It is almost impossible to come at a positive scale in Dublin. The reason why he does not value a house which would produce 40*l.* at 40*l.* is that he does not think it worth 40*l.* Finds it the general complaint, and believes it to be well founded, that the rents are beyond the proper means of the occupiers; that is, beyond the sums that would enable tenants to succeed in trade and maintain the character of paying 20*s.* in the pound to all their engagements, and affording the maintenance and education of their families suitable to their condition and to the general interests of society. Does not found the valuation on what the house would bring, because this depends on a variety of causes foreign to the intrinsic value of the premises, but values it at what it should fairly produce between indifferent parties, and considering what he has already stated.

In streets occupied by petty shopkeepers and others, such as the poorer class of clerks and persons living on small incomes, where the rents range from 10*l.* to 20*l.*, the valuation of a house paying 10*l.* rent would be valued at 7*l.* 10*s.* or 8*l.*; a house paying 20*l.* rent would be valued at about 16*l.*

In the still poorer localities occupied by workmen and others, where the rents range from 1*l.* to 8*l.*, a house let at 5*l.* would be likely to be valued at 3*l.*, and a house let at 8*l.* would be likely to be valued at 5*l.*

There are another class of houses in the hands of what are termed house jobbers, that is persons who take whole houses or several houses in the same street, and in various districts, for the purpose of obtaining exorbitant rents by letting them out into separate rooms, which produce in each case very often an income very considerably beyond the fair letting value of the premises: for instance, various families will be located in one room, paying sums which on the whole amount to three times the fair value of the premises; that is to say, a house that would probably let to a single individual at from 12*l.* to 15*l.* may produce 30*l.* or 35*l.* to the house-jobber, who seldom or never attends to the repairs of the house, and who contrives from various causes to evade paying the taxes and common municipal charges to which other property is subject. Such a house as the above is valued at from 10*l.* to 12*l.*

Thinks that he himself adhered to those rules respecting the above several classes of houses, but is convinced that his assistants did not do so.

Sent in his valuation as prepared by himself and his assistants; the Board of Guardians then apprized the public that the valuation was lying at the Board-room for public inspection. Knows that many objections were sent forward with regard to many of the houses therein returned. The objections principally related to the lower class of property in point of value, such as the class under 10*l.* The objections were for being undervalued. There were many objections also to the higher class of property, and those were for being too high; was engaged at this period on other employment of a similar nature for the Commissioners of Police, and what he states with respect to the objections to the Poor Law Valuation, was conveyed to him by an official intimation verbally given by the Board at one of their ordinary meetings, after the period during which the valuation lay for inspection. Had also heard of the objections and the nature of them from individual guardians and from many other persons, but never read one of that class of objections relating to tenements under 10*l.*

Valuation compared with probable rent. Private streets.

Valuation and rent. Streets containing shops.

Rents beyond the means of occupiers.

Valuation and rent. Petty shop streets.

Poorer Localities.

House-jobbers.

His assistants did not adhere to the above rules. Valuation laid before the public. Objections to valuation.

APPENDIX.

*South Dublin.*Evidence.
Revision of the
valuation.

At the meeting at which the above official communication was made to him, the guardians asked him to revise the objections; means by that to revise the valuations of the tenements objected to. Pleaded his other employment; the Board then asked him to recommend them some other persons in whose judgment he had confidence, for the purpose of this revision, stating that the two guardians of each respective ward would accompany each such assistant round their own ward. Did recommend those persons, after which a revision took place in that manner. The guardians of each ward, as he was informed and believes, took with them the draft parish book, containing the valuation of the parish, when such alterations were suggested in pencil as the guardians and assistants thought advisable; the whole of this labour being completed in all the parishes, the books were then formally produced before the guardians as a Board at one of their regular weekly meetings, and each guardian made his report, when the Board adopted the report. The report was then transferred to the rate-books in red ink, and the pen drawn across the previous valuation. The nature of these alterations will be best collected from the rate-books of the first rate struck in the Union. The rate was struck on the valuation so revised. Sanctioned this revision by having appointed the assistants with whose concurrence they were done. Considers himself responsible for that revision. Never saw the revision until after the rate was struck. There were five such assistants, two of them were some of the same persons that he had first employed. The reason why the other assistants who had been first employed were not continued for the purpose of the revision, was because he had lost all confidence in their judgment, with one exception, and that person was otherwise engaged. Of the three assistants knew them all, one of them he put on of his own accord, and the other two were recommended to him; believed them to be competent persons, and had no reason to find fault with their labours as far as they went.

The first assistants
had valued too low.

Is certain that the former assistants had all valued too low, particularly the professional persons. They valued both classes of property both of high and low value, infinitely below what they should have done. They valued houses at 10*l.* which he has since ascertained to be paying rents at 35*l.* and 40*l.*; and at 20*l.* houses which were paying 50*l.*, and they valued the lower class of houses in the same proportion. Considers this course to have been very unfortunate, and it would not have happened if he had had sufficient time allowed him to complete the valuation with less hands; was not allowed quite three months by the terms of his contract to complete the valuation.

Revision for the
purpose of the
second rate.
Inaccuracies of the
first valuations.

Subsequent to the first rate being struck, was called on to make a valuation of new property, that is, of houses built since the former one. For this purpose carried the parish books with him to enable him more accurately to fix upon new houses, when he detected with much regret that many inaccuracies still existed with regard to the first valuation; many houses appeared to be valued much under their value, and some over their value. Immediately reported those circumstances to the Board, when they empowered him to have them corrected, and passed a formal vote to enable him to revise the valuation generally; he accordingly proceeded with the revision, which applied to every class of property, and also introduced the new houses, and with regard to the former revision found it to be fully justified in the alterations that had taken place. That is with regard to the alterations of the valuations under 10*l.* The alterations made during that revision were mainly applied to that class of property, and not only does he say that they were justified in raising them to 10*l.* but in many cases they ought to have gone higher. Does not approve of the cases of the higher class of property that were lowered, but these were few in number.

Permanent Valua-
tion Committee.

There is a valuation committee supposed to be always in existence. They sat in the Board-room and made many alterations upon statements and applications to them; but does not feel responsible for those alterations. They referred many cases to him, as appears by the minute-book of the committee, but which cases he never saw; and having applied on one occasion for the book, he was informed that it was in the hands of the rural valuator, and had no means of seeing it afterwards, the rural valuator, Mr. Vaughan, having detained it for the purpose of revising some objections referred to him. There were one or two cases of houses raised to the value of 10*l.*, which he did not approve of, and accordingly reduced them; but there were many cases that had not been increased that ought to have been increased, and which he has now increased, some to 12*l.*, some to 14*l.*, some to 16*l.*, that had been valued under 10*l.* Extended the same operation to all classes of property, high and low, that in his opinion had been undervalued, while some he reduced in value.

Revised valuation
adopted without
alteration by the
Board.

When the whole was revised, he submitted all to the Board of Guardians, at one of their regular weekly meetings, when the same was adopted by the Board as the revised valuation of that period. The new rate-books for the second rate were prepared from this revised valuation, which was adopted without alterations by the Board, and the rates accordingly declared upon it.

Objections to re-
vised valuation.

Before the second rate was declared, some objections in writing were submitted by the Board for his report upon them, all of which he read over and investigated, turning down the margin of the letters and reporting them, and returning them to the custody of the clerk.

Revised valuation
not laid before the
public.

The revised valuation was not laid before the public for inspection, that not being considered necessary under the Act of Parliament except in the case of a new valuation, that is, of an entirely new valuation.

No assistants in
revising the valua-
tion.

Had no assistants for the purpose of the revision.

Knows of no objection now on the ground of property being undervalued, but has heard that occasional objections are coming in to the Board of Guardians with regard to the higher classes of property; this he was prepared for, as he cannot expect that his labours could satisfy the entire public.

APPENDIX.

Clerk of Union.
Present practice of
revision.

City revision.

Supervisor of rates
and valuation.

Mr. Gavin,
Elected Guardian.

Valuation of city
division.

Names of assistants
submitted to Board.

First revision.

Inspected the
tenements in the
parish generally.

Complaints of dis-
franchisement.

Mr. W. KENNEDY, Clerk of the Union, *examined*.

Was appointed about the 3d of December, 1840; the clerk of the Union first appointed is dead; there is a book in which the cases revised by the Board are entered. The practice since his appointment has been for the persons complaining to state their case by letter to the Board; these letters are referred to the Guardians for the ward from whence the complaint emanates. The guardians visit the tenements and report to the Board whether the valuation should stand or be altered. That Report is invariably acted on by the Board.

Believes Mr. Lawrenson was to revise the entire valuation; presumes that includes everything, as well those houses not objected to as those which are. Knows of instances in which he has raised valuations without any special complaint being made; that was merely upon his own opinion of their being too low valued.

There was a proposition to elect a supervisor of rates and valuations. Advertisements were published and candidates attended, but the guardians were of opinion on the election day that it was then unnecessary for some time to appoint a supervisor of rates and valuation, and accordingly postponed the matter. The subject has not been resumed. The Board considered that the utility which such an officer would be of would not warrant the expense

Mr. CHARLES P. GAVIN, one of the Guardians for St. James's ward, *examined*.

Was chosen a guardian at the first election in the Union, and is still a guardian for St. James's Ward. Recollects Mr. Lawrenson being before the Board before he went out to value, when Mr. Hall inquired from him whether he had read the Commissioners' instructions. Mr. Lawrenson appeared to be very well acquainted with them. In consequence of the very short time which there was to make the valuation, the Board being anxious to strike a rate, authorized Mr. Lawrenson to appoint seven assistants. He was obliged to submit the names of those persons to the Board before he appointed them. One or other of the Board generally knew the assistants so appointed, and the Board generally inquired of each other as to the competency of those assistants. None of those recommended by Mr. Lawrenson were objected to. Mr. Lawrenson was considered responsible for the valuation, and the Board held him responsible for the mode in which the assistant-valuators performed their duty. They were not generally professional valuers; some of them had a great deal of experience in local valuations, and in the registries of electors. That would not apply to all, there might be one or two; there were no other candidates for the situation of assistant valuator but those who were appointed; there could not be any applications to the Board, Mr. Lawrenson being the person who was to appoint them. After the valuation was made there were a great number of objections to it, both as to houses which had been too low valued, and as to those which had been too highly valued. The Board resolved to revise the valuation; the return of the city valuation was then made in parishes, and it was resolved that the guardians of each ward should inspect their wards generally and in particular the houses the valuations of which were objected to. Assistant valuers accompanied the guardians; some of those assistant valuers were the same persons who had been originally employed as Mr. Lawrenson's assistants in making the valuation; some of them were persons who had not been employed before; the number of assistants appointed for the purpose of the revision was five or six; he and his brother guardian, together with Mr. William Seton, the assistant-valuator, revised the valuation of St. James's parish. It occupied two or three days; both guardians were present nearly the whole time. Inspected not only the tenements objected to, but the tenements in the parish generally. The written objections were handed to Mr. W. Seton; as far as he recollects there were about 50 in the whole or rather under that. Went round the parish regularly and exercised their judgment upon every valuation in it. There are very close on 1500 valuations in the ward, which nearly corresponds with the parish. The parish is somewhat smaller in point of the number of valuations. They carried the valuation book relating to the parish with them; whenever they found a house the valuation of which in their opinion required to be changed, they made an observation in pencil in the book opposite the name, whether the valuation of the house had been objected to or not. Out of the total number of valuations in the parish, found about 100 which in their opinion required a change. In every instance the assistant valuator and the guardians agreed on the proper value before they made an entry; raised some and lowered some. Thinks he made alterations in nearly all the 50 cases in which there were written objections, and in about 50 other cases in which there were no written objections. Is speaking from memory as to the numbers. Some of those cases which they raised, were the high class of houses, and others the poorer class, and lowered others of both classes in the same way. The written objections generally came from the occupiers of the houses. Some persons complained of their having been disfranchised by their houses being improperly valued under the sum of 10*l*.; desired them to send in written objections; several of them did so. In going over the parish, did not find many which had been improperly valued under the sum of 10*l*.; found some, thinks there were about 25 such cases in the parish; inquired into the rents paid for those houses as far as they could; found the rents of those houses in many cases double, and in some cases treble the original valuation, and suggested alterations accordingly; raised some from 5*l*. or 6*l*. to 12*l*. 10*s*. and 14*l*. Never raised them to what they found to be the rent. Their reason for not doing so was, that they found that the parish generally was not valued up to the rent. Where a house was barely worth 10*l*. rent, did not value it above 6*l*. Raised some of the houses of a high class also. In one case raised the valuation of premises from 60*l*. to 120*l*. In cases of dwelling-houses, sometimes raised the valuation from 85*l*. to 95*l*.; in some instances lowered high priced houses by 10*l*. or 15*l*. The original valuation was made by one of Mr.

APPENDIX.	
<i>South Dublin.</i>	
Evidence.	
Higher class of houses valued nearer the rent.	Lawrenson's assistants, of the name of Gaynor; he had been a candidate for the valuation in the first instance, and was a professional valuator. As he best recollects, did not make such large alterations with regard to the middle class of houses as with regard to the higher class of houses, and the poorer class of houses. Thinks that Mr. Gaynor had been more nearly accurate with regard to the middle class of houses. Speaking of the valuation as it stood when the first rate was struck thinks it was about from 10 to 15 per cent under the rent; valued the higher class of houses nearer the rent than the lower class. There are not many of the very poor class of houses in the parish. Did not think it right to value the poor houses on so high a scale in proportion as the houses of a higher class. In saying that the valuation is from 10 to 15 per cent under the rent, refers to the higher and middle class of houses, in fact to all but the very poor class of houses. In speaking of the very poor class of houses, refers to those standing in the valuation under £10. There has been a continual revision going on since; does not think that in his ward that the alterations are very material.
Revision submitted to Board.	When they had gone round the whole parish they reported to the Board. The assistant valuator produced the valuation book, with the remarks in pencil. The Board inspected the alterations. There were three of the houses which had been raised by the assistant valuator and the guardians to 10<i>l.</i> from about 7<i>l.</i>; Mr. Taylor, the guardian for Rathmines division, was on the Board, and knew the premises, and said they should have been raised higher; he proposed to raise them to 12<i>l.</i> 10<i>s.</i>, which was agreed to, and with those alterations the report was adopted. In one case, a house which had been originally valued at 5<i>l.</i>, was raised to 20<i>l.</i>, with the consent of the occupier. The occupiers of the houses, the valuations of which were altered, knew of the alterations; they were generally present when the tenements were visited, and showed the houses.
House, valued at 5 <i>l.</i> , raised to 20 <i>l.</i>	
Mode of proceedings at the Board.	Was frequently present at the Board when the reports of the assistant valutors and the guardians of the other wards were received. The Board generally adopted those reports. The Board read out the remarks of the guardian and assistant valuator on the tenements which they had revised. It was then open to the members of the Board present to make any objections. They almost invariably after going through that form, adopted the opinion of the guardians of the ward and the assistant valuator where they agreed. In some instances, guardians inspected the wards of other guardians to see whether they could find fault with their reports. Never heard any complaints. Did not himself inspect the ward of any other guardian. Does not think it was generally done. There are very few of the city guardians who are not acquainted with other parts of the city, as well as their own wards. Thinks that the city guardians who know the tenants, and could exercise a judgment on the tenements, were responsible for the correctness of the revision. There were sometimes differences of opinion amongst the Board as to particular items, but never as to adopting the general report of a guardian and an assistant valuator. When there was a difference of opinion as to one item, it was generally referred to Mr. Lawrenson. Does not recollect any instance in which the Board divided upon any item.
First rate struck.	The first rate was struck upon the valuation so revised. Does not think it was then an equitable valuation. Thinks that some localities were valued on a higher scale than others. There were several assistant valutors, and each adopted a scale of his own; some nearer the rent than others. None of them adopted a scale of valuation equal to the rents. Thinks the scale in his own ward is nearer the rent.
Second revision.	There was a second revision of the valuation previous to striking the second rate. That revision was not made by assistant valutors. The guardians during the second revision only went to places from which objections came. Nothing is done without a written objection, except by the valuator, who then had instructions to revise the valuation generally, for which his remuneration was 30<i>l.</i> There was no system of revision by the guardians as on the first revision. It was found to be very inconvenient to the guardians to visit the tenements as on the occasion of the first revision. It was also found that different scales of valuation had been adopted in the different wards, in consequence of the valuation having been originally made by different persons, and revised by different persons. There was an anxiety on the part of the Board to equalize the valuation all over the south city division, which could only be done by having it made by one competent person. It was also found that it would be impossible to sustain the valuation in cases of appeal, as if it was made by the guardians, and not by the valuator, it would be unreasonable to expect that the valuator should swear to valuations made by the guardians. The Board, for those reasons, resolved on leaving the valuation entirely to Mr. Lawrenson's judgment, and he made a revised valuation, which was adopted by the Board without any alteration, and on which a second rate was struck.
Mode of revision changed.	
Objections since the second rate.	Since the second rate was struck there have been objections by occupiers to the valuation of their tenements; they are not numerous. They are not similar in character to the objections made to the first valuation; there are no objections that he is aware of, relating to the smaller class of houses; knows of no objections on the ground of under value since the second rate was struck upon the revised valuation. The objections come chiefly from occupiers of houses of considerable value, complaining of being over valued. There are a few objections from the middle class of houses; there are no complaints relating to the smaller class of houses either from over-value or from under-value. Is not surprised at those objections which have been made. Has no doubt that there will be more objections as the collection of the rate proceeds; that is the natural consequence of the equalization of the valuation. It is natural to expect objections from those districts of which the valuation has been raised for the purpose of equalizing them with the rest.
	In cases of objections from his own ward, sometimes has gone to view the premises merely to satisfy the occupiers; never interfered with Mr. Lawrenson in forming his judgment; does

not recollect any instance during the second revision in which he suggested an alteration to Mr. Lawrenson.

Thinks the present valuation of the south city bears pretty equally on all the wards; the scale has been raised in some wards; it is under the rent.

With respect to streets containing private houses, is not of his own knowledge particularly acquainted with the valuation.

Is best acquainted with his own ward. The houses in James-street do not bring a high rent; few of them let for 50*l.*; there are some with the premises behind them let for more, as high as 90*l.* A house in James-street, which is let for 50*l.*, is valued in the revised valuation at about 45*l.*; one let for 90*l.* will be valued at about 80*l.*

A house let for about 30*l.* will be valued about 27*l.* 10*s.*; (refers to the book;) a house which he finds valued at 35*l.*, knows it to be let for 45*l.* Thinks Fenny's house is a fair specimen of the valuation in his ward; it is valued at 70*l.*; is quite sure that they pay upwards of 80*l.*; Hutton's house valued at 50*l.*, he is paying 60*l.*; Howleigh's house and concerns valued at 40*l.* would let for 50*l.*; Anderson's house valued at 45*l.* would not let for more than 50*l.* Nos. 121, 122, 123, and 124 in James-street are valued at 10*l.* each, believes that they pay 15*l.* a-year. Nos. 2, 3, 4, 5, 6, 7, and 8 in Hospital-lane, valued at 2*l.* would set for 5*l.*, and is quite sure they are set for 5*l.* and upwards by the year; does not speak of a weekly letting. Thinks that sum would be paid by a tenant who would keep them in repair, such repairs as are usual with that class of houses. They are occupied by labourers. Mr. Cormick's house in Bell-place is valued at 6*l.*, it would be let for 9*l.* Thinks that these are fair specimens of the valuation; is quite sure from looking over it that some of the tenements are valued on a higher scale than others, but the inequalities are not great; for instance, one house may be valued at 6*l.* and worth 10*l.*, another valued at 6*l.* may be worth only 9*l.*

There is some difference of opinion at the Board with regard to particular valuations having been raised from what they were in the original valuation. All those cases relate to tenements of considerable value; and so far as he is acquainted with them thinks it was necessary to raise them for the purpose of equalizing the rate.

The original valuation was made in too hurried a manner, which was owing to the Board having limited the time too much, which has occasioned the necessity of revisions. Considers the present mode of revision much better than the former one. It is better to have the revision entrusted to a responsible valuator, which removes any imputation from the guardians.

Instances of rents and valuations.

Original valuation a hurried one.

Mr. SHANNON, Guardian for St. James's ward, *examined.*

Mr. Shannon,
Elected Guardian.

That he is tolerably well acquainted with the valuation of the city generally, but is more particularly acquainted with his own ward. It was originally valued by two assistant valuers, Gaynor and W. Seton, chiefly by Gaynor; considers Gaynor the responsible person, being a surveyor and valuator by profession. The valuation made by Gaynor was considered rather high and unequal; he valued more as if he were in a wealthy part of the city than in a declining part, as James's ward is. James-street is the best class of property in the parish. There is a great deal of middle class houses which let from 10*l.* to 17*l.* 10*s.*, and a great deal of houses which let at sums under 10*l.* Gaynor went nearer the letting value in valuing the middle and better class of houses than in valuing the lower class.

First valuation of
St. James's Ward.

Thinks that in James-street Gaynor valued the best class of houses to the full value at which they would set to a solvent tenant; thinks he made no allowance for repairs. The Board did not consider that a fair valuation; many of them have since been reduced, both in the first and the second revision on objections being made. Thinks that in many instances Gaynor went up above the actual rent; some of these have been twice altered; generally speaking, those valuations have been reduced. Knows No. 158 in James-street; it was formerly let at 60*l.*, and lately let at 30*l.*; Gaynor valued it at 40*l.*, it is now reduced to 30*l.* No. 116 is let at 30 guineas without a fine, Gaynor valued it at 50*l.*; it was subsequently reduced to 40*l.*; those he considers extreme cases. Generally speaking, he valued them at the rent at which they would be let, if the landlord was to make the repairs and pay the taxes.

First Class.

In the middle class of houses there are a good many objections to Gaynor's valuations; in those cases they were generally reduced something; there were some valued at 15*l.* reduced to 12*l.* 10*s.*; others valued at 12*l.* 10*s.* were reduced to 10*l.* Thinks that in most instances Gaynor had gone up to the letting value in the middle class of houses also. Means the letting value, supposing the landlord to repair and pay the taxes. Thinks that he did not in so many instances go up to the utmost letting value in the case of middle class houses, as in the first class houses.

Middle Class.

With regard to the lower class of houses, Gaynor valued a great many under the value. That is a class of houses which in James's ward set higher in proportion than the better class of houses; 10*l.* a-year may be got for a poor class of house, while it is very difficult to get 30*l.* a-year for a most respectable class of house. Thinks that in valuing the lower class of houses Gaynor went something beyond two-thirds of the rent; means a rent paid as a yearly rent, and not the sum of weekly rents. The sum of weekly rents would of course be considerably more. There was a great want of attention, especially in the lower class of houses; finds an instance of one house valued at 8*l.*, afterwards reduced to 2*l.*, and the house next it valued at 4*l.*, since raised to 12*l.*; the next to that valued at 12*l.*, since reduced to 4*l.* Generally speaking, thinks Gaynor over-valued the better and middle class of houses, and under-valued the lower. Thinks that he did not take into account that small houses in that ward let much better in proportion than large. A house that from its appearance would let for

Lower Class.

Gaynor over-valued the higher, and under-valued the lower.

APPENDIX.

South Dublin.

Evidence.

45*l.* would, in fact, let for only 30*l.*, whilst a house, that from its appearance would be supposed only worth 5*l.* or 6*l.*, would in fact let for 10*l.*

Thinks that the defects in Gaynor's valuation arose from too great a desire to copy the former valuations; means by the former valuations, Sherrard's; since that valuation was made the better and middle class of houses have greatly fallen in value, but the lower class of houses have not fallen in value.

In valuing the higher class and middle class of houses, Gaynor adhered very nearly to Sherrard's valuation; but he struck something off Sherrard's valuation when he came to the lower class of houses.

Objections to original valuation.

First revision.

There were many objections; the objections were of two classes; one to the higher and middle class of houses, on the ground of the valuation being too high; the other to the lower class, on the ground of being too low. The guardians went round their respective wards with an assistant valuator, and went through the objections. Went along with his colleague, Mr. Gunn, and W. Seton, the assistant valuator. Found that with few exceptions the objections were well founded. The two guardians reported to the Board their opinion on the objections, and the Board adopted the report. The Board thought that the guardians and the assistant valuator having inspected the premises, were the persons best able to form an opinion, and always adopted the report. Does not recollect any instance in which the Board declined to adopt the report of the guardians. In some instances while going round the ward with his colleague, made alterations where there were no objections; those were sometimes cases of adjoining houses where there was an objection to one only. If the objection was well founded, sometimes altered both the houses, being similar. In other cases saw instances of wrong valuation in going through the ward, and altered them. In Bow-lane, made a new valuation of every house; most of them were objected to as being too low. Sometimes the occupiers objected, on the ground of being disfranchised. Recollects four houses in James-street, and four in Lambs-court adjoining, all valued by Gaynor at 7*l.* 10*s.* each, they were all objected to as being too low; raised the four in James-street to 12*l.* 10*s.*, and allowed the other four to remain at 7*l.* 10*s.* The first four have been since reduced to 10*l.*, the other four have been reduced to 6*l.* on the second revision.

Second revision.

The second revision began before the second rate was struck; that revision has been made by the valuator and not by the guardians. He was not paid a per centage; he was paid a lump sum for the whole revision. There has been a great deal of alteration made by that revision. It was intended to equalize the valuation; for that purpose it was necessary in James's ward to reduce the valuation of the middle and better class of houses, and to raise that of the lower where it had not been already done. In the instances revised at the time of the first revision, reductions were made which the valuator thought too great, and he has since raised those cases.

Third revision.

There is a third revision now in progress; that applies only to those cases in which objections come in. It is not a general revision of the valuation; does not know the numbers; believes they are not numerous; there have been about a dozen from James' ward; the number of valuations there is about 1500. The present revision is conducted by the guardians without the assistance of the valuator. The objections are referred to the guardians of the ward from which the objection comes. The guardians of the ward visit the premises, and report their opinion to the Board, which opinion is always adopted; thinks that the assistance of the valuator is unnecessary in deciding the objections.

Principles of valuation.

If a house were under consideration, and he found that it was lately let for 30*l.* without a fine, would fix the valuation something under that, say 25*l.* If a house was set at 60*l.* without a fine, would fix it at 52*l.* to 55*l.* In speaking of the rents of 30*l.* and 60*l.* means rents paid by tenants who would repair and insure.

If a lower class of house is under consideration, looks more to what the tenant actually pays, because the landlord usually repairs.

If the rent were 12*l.* or 15*l.*, the landlord repairing, would value that house at 10*l.* to 12*l.* 10*s.*

If the rent were 10*l.*, in most cases the occupier would claim to be rated at 10*l.*, to avoid being disfranchised, and the Board would value him at 10*l.* accordingly. If the rent were 10*l.*, and the landlord repaired, the occupier would claim to be rated; and if the guardian of the ward informed the Board that the occupier paid that rent for it, they would rate him at 10*l.*, although the landlord might repair.

If the occupier paid 10*l.* rent, and repaired, would value him at something above 10*l.*, it might be 1*l.* or 2*l.* above it, or according to circumstances.

In the higher class of houses landlords make greater sacrifices to get a good tenant than in the case of a lower class of house. That is one reason why the valuation should be nearer the rent in the lower class of house than in the higher. The higher class of houses are falling in value every day, while the smaller class are maintaining their value. Considers that another reason for the difference.

If the rent be 7*l.* 10*s.* and under, they are mostly cottages; would value those about 1*l.* or perhaps 2*l.* under the rent. Knows a great many in the neighbourhood of Kilmainham which are set at 6*l.* a-year, which are valued at 4*l.* Knows an instance in James's ward, John Lynch, who was valued by Gaynor at 3*l.* 10*s.* He claimed to be valued at 10*l.*, on the ground of being disfranchised. That was at the period of the first revision. His premises were inspected; he had a neat cottage, and near an acre of ground. Considered that the cottage was worth 4*l.*, and the land attached to it worth 6*l.*, and accordingly raised his valuation to 10*l.* That was confirmed by the Board. Has no doubt whatever that the tenement is worth 10*l.* A tenant would give 10*l.*, and keep it in repair.

Objections on the ground of disfranchisement.

Many occupiers, while he and his colleagues were going round the ward at the time of the first revision, came and complained that they were disfranchised by being valued below 10*l.*,

stating that their property was worth that or more. Frequently found it so, and raised them accordingly.

Where the persons claim to be rated on the ground of being undervalued, they have frequently proved that their house is worth 10*l.*, even though they may not pay so much. In all these cases they were at all events so near the mark that the Board did not think themselves justified in disfranchising them, the occupier insisting that the house was of the full value.

There never was so doubtful a case as to give rise to the question whether an occupier could insist on being rated at 10*l.* Always considered that it was optional with the Board to raise or not. Never heard it discussed whether the Board had power to refuse or not. The Board always considered that they had power to refuse, if they thought that the tenement was not really worth the sum to which the occupier claimed to be raised.

The number who have claimed to be raised, compared with those which have claimed to be reduced, is very trifling.

All the cases of persons claiming to be raised occurred at the time of the first revision. Does not recollect any case of a similar nature since.

The cases of valuations raised were most of them clear cases. There was little or no discussion, except about two or three. But they were all finally agreed on. Never knew a division in the Board on any of those cases.

The present revision has been going on about two months.

As the letters containing objections come in, they are referred to the guardians of the ward once in every week. The guardians report as soon as they have examined the premises to the full Board on Board-day. There was a Valuation Committee, but now it is considered the best course to refer at once to the guardians of the ward, who endorse their opinion on the letter of objection. When the Board has adopted it, the clerk keeps the letter until the next rate is about being made, when new valuation books are made out, with the corrections.

Reports are entertained from time to time. They have occurred at every Board-day since the last rate. They come from all parts of the Union. There have been very few from the rural districts latterly, no rate having been made on those districts lately. All the objections which now come in are on the ground of over-value. Does not recollect any lately on the ground of being rated too low. None of the objections relate to any of the property that was raised from sums under 10*l.* to 10*l.* and upwards. No complaints of any sort come at present from occupiers of tenements under the value of 10*l.* The objections are chiefly from occupiers of houses above the value of 20*l.* There are about six or seven objections come in every week, making about 50, as he supposes, since the last rate. The total number of valuations in the south city division is 13,733.

MR. LAWRENSON, Valuator of City Division, *re-examined.*

The second revision commenced about August, 1840, before the second rate was struck. It continued up to the time the second rate was struck; it then ceased, so far as he was concerned. Has heard that the guardians are investigating objections now. Has not been referred to on the subject. Understands that the guardians are desirous of not incurring any expense, and have not referred to him, as he believes, for that reason.

The effect of the second revision was a great increase of the valuation, believes to the amount of 24,000*l.*; that includes some new houses which had not before been valued. The new property amounted to about 9,000*l.*; that was property which was not in a sufficient state of forwardness to be rated at the time of the first rate. The other 15,000*l.* was the result of the alteration of former valuation. Thinks that the revision has affected some localities more than others. It has affected Catharine's ward, Andrew's ward, Patrick's ward, and the castle ward more than the rest. Attributes that to the want of judgment in the assistant valuers who valued those wards. Found that they had valued all classes of property too low, both the higher class and the lower class. The errors were chiefly confined to property from 60*l.* down. Found houses valued at 5*l.*, which had so remained at the time of the first rate, notwithstanding the first revision, and which he has since raised to 20*l.* There are a good many such instances. There are many instances of houses originally valued at 5*l.*, and which were not altered at the revision, which he has since raised to 10*l.*, 12*l.*, and 15*l.* Believes the reason why those houses were not raised at the time of the first revision was that there was no objection, as he was informed by the guardians and assistant valuers.

In the second revision has raised a great number of houses of all classes, and lowered a good number; thinks the alterations apply equally to all classes in St. Catherine's, St. Andrew's, and the Castle ward. Thinks he reduced more in James's than increased. Has reduced some of all classes; has reduced some which were originally valued by Gaynor at 10*l.* to 8*l.*

The higher class of houses in James's parish are not so marketable as the lower class, and for that reason they are not so highly valued. A house let at 20*l.* to a solvent tenant who could pay taxes and repairs, would be valued at 15*l.* or 16*l.* Houses from 25*l.*, upwards, have not maintained a proportionate letting value.

Thinks that a house set at 10*l.* to a solvent tenant, who would pay taxes and repairs, is valued at 7*l.* 10*s.* Thinks there are large numbers of persons who are registered as 10*l.* householders and pay 10*l.* rent, who are rated at sums under 10*l.*; some at 6*l.*, 7*l.* 10*s.*, and 8*l.*; some of them are rated at 10*l.*

There is a great variety of landlords, some of whom let their tenements more moderately than others, and hence some may be valued at 6*l.* though they paid 10*l.* rent; others may have

Higher class of
houses falling in
value.

premises of the same class for which they do not pay 10*l.*, and others may only charge 10*l.* for a house which is valued at 10*l.* In that case the landlord might get more.

Never heard of any occupier complaining of being rated at 10*l.*; has heard landlords complain that some of their houses let to tenants were raised to 10*l.*, for the mere purpose of giving the occupants the franchise. Mr. Halahan, the owner of property in Cathedral-lane, was one of those. There was a Mr. Marquis, who complained of houses being raised in the neighbourhood of South George's-street. All the houses, of which much complaint were made, were let to room-keepers.

It is general over the city, that the higher class of houses are not maintaining their value, as well as the lower class. Thinks that the higher class of houses are falling in value, while the lower class are maintaining their position; thinks that is to be attributed to the circumstances of the citizens, who are generally desirous of getting into houses subject to less rent, and taxes.

Upper Fitzwilliam-street is maintaining its value; the houses are valued from 80*l.* to 150*l.* a-year. If the rent there be 100*l.* without a fine, would value that at 85*l.* or 90*l.*

Bride-street is a falling neighbourhood; a house there let at 50*l.* would be valued at 40*l.* Makes a greater allowance in a falling neighbourhood. Bride-street has fallen within the last eight years 20 per cent.

In James's-ward the difference per cent. between the rent and the valuation of the lower class of property, is the same as that between the rent and the valuation of the higher class of property. The reason of that is that the higher class of property is falling in value, while the lower class of property is maintaining it.

In localities where both classes of property are maintaining their value alike, makes a greater difference per cent. between the valuation and the rent in the lower class of property than in the higher.

The same observation applies to Catherine's-ward as to St. James's; the better class of property is falling in value while the lower class is maintaining its position.

Does not make any difference between a rising and a falling neighbourhood, in the proportion which the valuation bears to the rent paid at the period of the valuation.

Thinks that the north city electoral division of North Dublin Union is valued 10 to 15 per cent. lower than the South city. Thinks that applies to all classes of property. Thinks that the western side of the North city is valued higher than the eastern side.

Mr. Fisher,
Assistant Valuator
of City Division.Mr. JOHN FISHER, assistant Valuator, *examined.*

In September, 1839, was appointed assistant valuator by Mr. Lawrenson; there were six or seven others. Had not acted as a valuator before. Was acquainted with the value of houses in Dublin generally. Is a householder in Dublin for nearly 40 years; lived for 27 years in St. Andrew's parish. Thinks that having intercourse with the inhabitants enabled him to form an opinion of the value of house property, although not a professional valuator. Began with St. Andrew's parish; Mr. Lawrenson was with him. After valuing St. Andrew's with Mr. Lawrenson, went over St. Andrew's with Roger Maginnis, another of the assistant valutors; Roger Maginnis is a builder. Did not in general make any inquiries about the rents. It was not always Roger Maginnis that was with him. Sometimes was accompanied by W. Seton, sometimes by Hugh Motherwell, sometimes by John P. Gaynor; was never alone. Formed an opinion of what a house ought to bring from a solvent tenant; was rather inclined to be under the mark than over it. If a house was let for 60*l.*, put from 50*l.* to 52*l.* 10*s.* on it. It struck him that property was rather likely to be worse than better, and made an allowance for deterioration. Always went into the house and saw what sort of ere it had.

First class business
localities.

In first class business localities valued some houses as high as 100*l.* and 180*l.*; thinks that No. 24, Merchant-quay, which he valued at 160*l.*, was then let for 180*l.*; thinks it would not let for that now. No. 19, Bridge-street Upper, is valued at 30*l.*; the tenant then paid 40*l.* or 45*l.*, but has since quitted it; thinks the utmost that it would now bring from a solvent tenant would be 35*l.*

Middle class ditto.

Part of Corn-market is a middle class locality. A house there, No. 11, valued at 20*l.*, would let for 25*l.*, thinks it would not let for more. No. 12 is valued at 22*l.* 10*s.* It is a degree better than the other; it would let for about 27*l.* to a solvent tenant.

Found that he was inclined to value higher than Mr. Maginnis; found that he was inclined to value lower than Mr. W. Seton; was inclined to value higher than Mr. Motherwell. Mr. Gaynor was a professional valuator, and took the valuation upon himself, but paid him the compliment of asking his opinion.

revision.

Was employed on the revision in March, 1840. Went with Mr. Keshan, one of the guardians of Andrew's-ward; went to Luke's parish; had only 15 or 16 houses to visit; they were a low scale of house. Raised some, lowered others, and let others stand. There are about 1981 valuations in Andrew's ward.

Mr. Gaynor,
Assistant valuator
of City Division.Mr. JOHN P. GAYNOR, assistant Valuator, *examined.*

Was appointed to assist in the valuation in September, 1839. Is a surveyor and civil engineer. Has been employed as a valuator of lands and buildings. Made the valuation of Kingstown under the 9 Geo. IV. Was employed in the tithe valuation.

Previous expe-
rience.

Some members of the Board called on him and requested him to assist in the valuation. Then Mr. Lawrenson came the next day and requested him to assist, stating that the time

APPENDIX.

South Dublin.

Evidence.

allowed for the valuation was very short. Was quite ignorant whether he was appointed by Mr. Lawrenson or by the Board; expected to be paid by the Board, but made no agreement. Went sometimes in company with Mr. W. Seton, sometimes with Mr. Fisher, and sometimes with Mr. Lawrenson. Went first to St. James's parish, then to the outskirts of the city not occupied by buildings, then to St. Catherine's and Luke's; then went with Mr. Lawrenson over the breweries, distilleries, manufactories, and other extensive buildings.

There are four classes of houses in St. James's parish. The middle part of James-street is the better part. The greater part of the parish consists of a middling class of houses which he would divide into two classes. There is a still lower class of houses, but they are not very numerous in the parish.

Knows some of the rents in the better part of James-street; generally kept under the rents. If a house would let to a solvent tenant for 60*l.* a-year, would value that at about 50*l.* In speaking of a house let to a solvent tenant for 60*l.* a-year, supposes the tenant to repair and the letting to be on lease. Such a house if let from year to year would be higher. Smith's house in James-street was held at 50*l.* a-year; he got an abatement, and now pays 45*l.* Valued that at 45*l.* Sherrard's valuation was originally 65*l.*

If a house would let for 30*l.* a-year to a solvent tenant who would repair, would value that at about 25*l.* Maly's house is held at 30*l.* a-year; valued it at 25*l.* It is let in tenements; valued it lower on that account. Sherrard's valuation of that house was 35*l.*

If a house was let to a solvent tenant for 10*l.*, and that it lets by rack-rent in separate tenements for 20*l.*, would value it something under 10*l.*, say 7*l.* 10*s.*, according to the locality.

If a house was let to a solvent tenant for 10*l.*, and that it sets by rack-rent for 15*l.*, would value that something under the other.

In speaking of the above houses as let to solvent tenants for 10*l.*, means that the tenant should be bound to repair.

If a tenement, not calculated to be divided into separate tenements, were let to a solvent tenant for 10*l.*, would value it at about 7*l.* 10*s.*

The greater number of the tenements in Luke's parish, Catherine's parish, and great part of James's parish are let to tenants at a rent of about 10*l.* That is a general amount at which the rent is fixed in those parishes for that class of tenements. Is sure that he valued more than 1,000 such tenements. Valued those at about 7*l.* 10*s.* each, according to the locality. Where a house was in very bad repair, although it might be let for 10*l.*, would probably value it at 5*l.*

In valuing fixes a maximum, and then reduces the valuation regularly downwards.

Thinks that the lowest amount at which he valued any house was 4*l.* 10*s.* or 5*l.*

Thinks that the time was too short to make a good valuation. To value 30 or 40 houses is a good day's work to do it well. Thinks the smallest day's work he did during the valuation was from 80 to 100. Was about three months at it but not constantly; had other professional business to attend to, and after he commenced he heard he was not to be paid by the Board.

When the revision was proposed previous to the first rate, offered to go out and run over anything that might have escaped him, free of expense, provided the Board would pay his original demand, and would guarantee that the valuation should be perfected. He had not been paid his original demand, and was obliged to take a compromise. Communicated the proposal to some of the guardians, but it was not accepted. The chief complaint was, that he had undervalued the lower class of houses. There were complaints from Klogher and a few others of his having overvalued their premises. These were large tenements.

MR. FRANCIS M'ARDLE, Assistant Valuator, *examined.*

Was appointed an assistant valuator for the purpose of revising the valuation of houses objected to; thinks that was early in March, 1840. Was appointed by the city valuator, Mr. Lawrenson. His duty was to examine the houses objected to, in company with the guardians of the respective wards. Was one of five assistant valuers. The district which he revised was St. Catherine's parish, in company with Messrs. Moran and Sheridan, the two guardians of St. Catherine's ward. Is not professionally a valuator, but has perfect knowledge of the value of houses, particularly in the liberty, being acquainted with them from his boyhood. Lived in the neighbourhood of St. Catherine's parish from the year 1792 till the present time. Had an intercourse with all the manufacturers of that district during that period. Was extensively engaged in the woollen trade. Had a mortgage upon property in the liberty for 400*l.* That house was then subject to 36*l.* per annum; it originally cost 500*l.* or 600*l.*, as he was informed. Believes it is now set for 11*l.* Had and has still a number of acquaintances in the liberty. Has a general knowledge of the value of property there. Was handed written objections; there were a good number, perhaps 200 or 300, but cannot be positive. The number of valuations there is about 1926. Was also handed the valuation book relating to that parish. The revision of St. Catherine's parish occupied 13 or 14 days, as he best recollects. Was accompanied during the whole of that time by the two guardians of the ward. Visited the tenements, the valuation of which was objected to. Did not meddle with any of the other houses. There were two classes of objections, some for being too low, and some for being too high. The two guardians and himself agreed upon whether the objection was well founded or not; and one of the guardians made an entry in pencil in the valuation book accordingly. Concurred in the propriety of each entry. There was no difference of opinion between him and the guardians in any one instance. Some of the valuations were raised and some lowered, others were allowed to stand. He and the two guardians

the rent.
Instances.

afterwards reported to the Board. Thinks, but is not positive, that they made no report until they had finished the inspection of all the tenements objected to. In every case entered the houses and examined them. The two guardians were perfectly acquainted with the value of houses in the parish as well as himself. Reported to the Board, which was then sitting at the Royal Exchange. There were always three guardians, two of those were the guardians of the ward. The Board adopted the report as a matter of course. He and the guardians, in coming to a conclusion as to the proper value to be put on a tenement, were not guided by the rent paid. Where they raised the value, inquired what rents were paid: found in many instances that the value put upon houses was below the rents. That applies to the smaller class of houses. Means by the smaller class of houses those which had been valued under the sum of 10*l*. Found that some of the tenants of those houses were paying rents considerably beyond the value which had been set upon them. In some instances they were paying 6*l*. or 7*l*. a-year beyond the value which had been put upon them by the first valuation. In speaking of the rents paid, means yearly rents, and not the sum of weekly rents; except in one instance, as he best recollects. In that instance, the original valuation was 7*l*. 10*s*., and the occupier was paying 6*s*. a-week for the shop and parlour, as he best recollects; raised the valuation of that tenement to 10*l*. In other cases where they found that the rents were about 14*l*., paid as a yearly rent, raised the valuation to 10*l*. There were other tenements complained of as being incorrectly valued at too large a sum. In some of those cases he and the guardians thought the objection was well founded, and lowered the valuation accordingly. Considers that the difference between 10*l*. and 14*l*. was about the proportion which the valuation bore to the rents when paid as yearly rents. Thinks that proportion held good with regard to the whole valuation as it then stood. Believes there has been a continual revision going on since, and does not know the effect of it.

Does not recollect any instances of objections by persons when valued under the sum of 10*l*., on the ground of being too high. Found that the smaller class of houses which he visited were in a great many instances valued under the rents. Thinks that they raised about 100 of them out of about 240 objections, as he best recollects, on the ground of being too low. In one street, Crane-street, found the rents generally to be 14*l*. and taxes; those tenements had been originally valued at 7*l*. 10*s*. or 7*l*.; generally at 7*l*. 10*s*.. Is quite satisfied that he is accurate in stating that the rents of these houses is 14*l*. Never raised the valuation of a tenement to 10*l*. unless it would let for 10*l*. or more.

Captain Nowlan,
Elected Guardian.Captain NOWLAN, Guardian for Palmerstown Division, *examined*.

Became a guardian at the last election. Is acquainted with the valuation, particularly with James' parish; valued James' parish on a former occasion for parish cess; found that the valuation for minister's money was very unjust to the poor class of occupiers.

Principle of
valuation.

Thinks that if premises would let at 18*l*., they ought not to be valued at more than 15*l*. Means let at 18*l*. to a solvent tenant, who would be bound to repair and to pay the taxes. Thinks 3*l*. should be allowed for wear and tear, assurance, and taxes. Thinks that the taxes alone on such a house would be about 1*l*. 15*s*. to 2*l*. Thinks that is in pursuance of the spirit of the Act. Knows a house in James-street which is let at 18*l*. to a solvent tenant, who pays the taxes and repairs; that house is valued at 25*l*. Does not think that the whole valuation is on that scale; but there are instances of such valuations. Thinks that the valuation is in many cases very unequal. Would not care whether it was high or low, so that it was equal.

Opinion as to
revision.

Thinks that the guardians of each division and each ward ought not to have anything to do with the valuation of their own districts. Would undertake to value any part of the city as well as a professional valuator. Thinks the system of guardians revising the valuation ought to be set aside. Thinks the valuator ought to be appointed by the Government or by the Poor Law Commissioners, and not by the Board.

There are persons who have stated to him that they are valued under the Poor Law at 10*l*., which they consider an overvalue. Does not refer to the amount of 10*l*. in particular; but there are complaints of overvalue at all amounts. Complains of premises which are under-valued, as well as those which are overvalued.

Mr. Seton,
Assistant Valuator.
First revision.Mr. GORGES SETON, Assistant Valuator, *examined*.

Was not one of the original assistant valutors appointed in September, 1839. Was appointed an assistant valuator at the first revision to assist the guardians in examining the objections. Previous to the first revision had not acted as a valuator. Was acquainted with Dublin. Was acquainted with the rents paid in Dublin generally. Had attended in the Registry Court for two or three years, and heard the rents paid and the valuation of houses in Dublin in every part of the city discussed. Acted as a registry agent. The guardians were directed by a resolution of the Board to inspect their wards, and see if the objections were well founded. He and three others were appointed by Mr. Lawrenson, the valuator of the city division, to go round with those guardians and visit the tenements. Was first directed to go with the guardians of St. Andrew's ward. Went accordingly. One guardian only, Mr. Reilly, attended. The original valuation was arranged in parish-books; one book, and sometimes more, for each ward. Was handed the book which related to the ward, and the written objections which had been sent in to the Board. The objections, generally speaking, were handed to him. Believes he saw all the objections relating to that parish; they were all handed to him; carried them and the book. The guardian accompanied him. Only visited

Revision in St.
Andrew's Ward.

APPENDIX.

*South Dublin.*Evidence.
Mode of revision.

those tenements with respect to which objections had been sent in. The guardian of St. Andrew's ward left it to him to say whether the objection was well founded. The guardian sometimes suggested that it should be raised and sometimes lowered; generally acceded to the suggestion. If it was thought by him and the guardian that the objection was not well founded, made an entry thus, "Stands." The objection papers were arranged according to streets for convenience, and the entry was sometimes made on a sheet of paper prepared for the street, and sometimes on the objection papers themselves; if it was thought well founded, an entry was made of what he and the guardian thought to be the true value. As he best recollects, it occupied him and the guardian two or three days going through all the objections which came from St. Andrew's parish. Made no alterations or entries in the valuation-book, it being necessary that the proposed alterations should be reported to the Board, and sanctioned before they were introduced into the valuation. The Board was sitting at that time from day to day for the purpose of hearing the reports of the guardians, and deciding on them. Three formed a quorum. The Board generally sat in one committee in the same room. On one occasion, as he best recollects, when there was a great deal of business to be done, they sat in two committees in separate rooms. The revision by the guardians and the five assistant valuers was going on at the same time in five different quarters of the city. If there was time, reported their opinion on the objections to the Board the same day; if not, the next day, or as soon afterwards as they had an opportunity. In making their report, the objections and the opinion of the guardian and the assistant valuer were laid before the chairman, who read out each objection, and then called for the opinion of the guardian and the assistant valuer. As he best recollects, the question was put whether the opinion should be adopted by the Board or not. If the guardian and himself agreed, the Board always adopted their opinion, upon the ground that, as they had inspected the premises, they must be better judges of the value than the Board. As he best recollects, no difference of opinion ever occurred between the guardian of St. Andrew's ward and himself. Does not recollect any difference of opinion between the members of the Board as to adopting the decision of the guardian and himself. Does not know whether all the objections came from the occupier of the house the value of which was objected to, or from others. They were handed to him in the board-room. They were sometimes on the ground that the tenement was too low valued, and sometimes on the ground that they were too highly valued. Some of the objections from St. Andrew's ward were on the ground that some of the tenements had been improperly valued under the sum of 10*l.*; others were for overvalue. The tenements which were objected to as undervalued were chiefly tenements which had been valued under the sum of 10*l.* Those tenements which were objected to as overvalued were chiefly large tenements. Referring to the revision-book, finds that there were about 30 objections from St. Andrew's parish of all classes. There are about 1,600 valuations in the parish. Thirteen out of the 30 objections were on the ground of being undervalued; those tenements had been valued under 10*l.*; some of them were raised to 10*l.* and upwards, and some were not altered. The remainder were on the ground of overvalue; those were from tenements which had been valued at more considerable sums. In two or three cases where the valuation was raised the houses had been improved subsequent to the original valuation. It was the opinion of the guardian and himself that some of them had been originally valued too low.

Reports to Board.

How entertained
by Board.Grounds of
objections.

Went next to Merrion ward, accompanied by W. T. Lloyd, Esq., one of the guardians of that ward; called on the other, but he did not come. There were a good number of objections, as he best recollects. The objections were similar to those in St. Andrew's parish; some were for being too high and others for being too low. They were disposed of in the same way. Some houses were raised to 10*l.* and upwards from sums under 10*l.*, three of those were in Verschoyle's Court; there were some others in Power's Court; there were about 56 or 57 objections from this ward and about 1,200 valuations; he and the guardian of the ward consulted together, as in the case of St. Andrew's parish, and made an entry of their opinion accordingly. He and the guardian generally agreed; did not make a correct revision of those parts of the ward called Power's Court and Verschoyle's Court; could not do so; a great part of the objections were imperfect in not containing the numbers of the houses or the names. Did not attempt any general revision of the houses in any part of the ward, but considered that they had nothing to do with any houses but those which could be identified with the objections put into their hands; he and the guardian reported to the Board in the same way as already described, and the Board always adopted their opinion.

Revision in Merrion
Ward.

After Merrion ward went to Stephen's ward; was accompanied by John Mackey, Esq., one of the guardians of that ward. The objections from that ward were of the same nature as elsewhere; only went to a portion of Stephen's ward. Thinks there were about 100 objections in that ward out of 1,187 valuations. There was a difference of opinion between him and the guardian with regard to several tenements. Considered that several of the tenements which were objected to as too low were in fact too low. The guardian thought otherwise. Some of the houses objected to as too high were lowered; the guardian agreed with him in respect of those which were lowered; and some houses objected to as too high were raised still higher; reported to the Board in the same way as before. In those cases in which he and the guardian disagreed the Board declined to act on his (Mr. S.'s) suggestion, and the tenements remained valued at sums under 10*l.*, although in his (Mr. S.'s) opinion some of them were of that value and some of them more; believes every one of them have been subsequently visited by the valuers of the city division, and the value raised to 10*l.*, and in some cases to more.

Revision in
Stephen's Ward.

Did not attend at the revision of any of the other wards.

In most cases in which he visited the tenements in St. Andrew's, St. Stephen's, and Merrion wards, ascertained the rents paid; found that in many of the cases where houses

Ascertained the
rents paid.

APPENDIX.

Evidence.

Houses valued at
10*l*.

had been valued under 10*l*. the rents were above that sum; sometimes treble the sum at which they had been originally valued; gives instances; one house valued at 6*l*., the rent of which was 17*l*.; in another where the house was valued at 8*l*., it was held on lease at 25*l*., it was raised to 12*l*. 10*s*.; thinks that 25*l*. was an excessive rent, and that 16*l*. or 18*l*. would be a fair rent for it; was guided by the rents, but did not come up to them in reporting to the Board; never recommended the Board to raise a tenement to 10*l*., unless the rent paid was actually more than 10*l*., or unless he and the guardian were of opinion that the house might be let for more than 10*l*. If he thought that the house would only let for 10*l*. did not recommend the valuation to be raised to that amount, even if it were let for 12*l*.; would not recommend the valuation to be raised to 10*l*.; would not recommend the valuation in such a case to be raised beyond 8*l*.. Thinks that would be sufficient, because such houses are often let at weekly rents, which are uncertain, and it would not be fair to take the sum of those weekly rents. If a house would let by the year for 12*l*. would not raise that house above 9*l*.; thinks that would be enough with reference to the existing valuation of the higher class of houses. Thinks the cases in which the objections were sustained, both those of houses of considerable value objected to as too highly valued, and those of houses of small value which were objected to as too low, were cases of real errors committed in the original valuation. There were no objections, that he recollects, on the ground of overvalue from tenements of small value; means by small value under 10*l*.. The houses under that value were generally valued too low.

The valuations were generally adopted at even sums, thus:—1*l*., 2*l*., 3*l*., 4*l*., 5*l*., 6*l*., 7*l*. 10*s*., 8*l*., 10*l*., 12*l*., 12*l*. 10*s*., 15*l*., 17*l*. 10*s*., 20*l*., 22*l*. 10*s*., 25*l*., and so on. There are few or no valuations at sums in the intervals between those sums. Adopting that sort of valuation facilitates the calculation of the rate. There is an observation in one of the books published by the Commissioners, suggesting that the rate should be struck in the decimal parts of a 1*l*.

Knew parties to object to houses in Herbert-street valued at 60*l*. when the tenant was paying 90*l*. The objections came from the landlord, although he was receiving 90*l*.; does not know whether that was independent of taxes.

Mr. O'Connor,
Assistant Valuator.
First revision.Mr. CHRISTOPHER O'CONNOR, Assistant Valuator, *examined*.

Was appointed an assistant valuator for the purpose of revising the valuation which was objected to previous to the first rate being struck, about March, 1840; believes he was appointed by the valuator of the city district and not by the Board. The Board were aware of his appointment; was handed a number of written objections by the clerk of the Union. Is not a professional valuator; is acquainted with the value of houses in Dublin generally; had never been employed to value houses before; has had a good deal of dealing in houses on his own account; was acquainted with the letting value of houses generally. Was appointed to accompany Mr. M. Walsh and Mr. M. Butler, the guardians of Patrick's ward. Visited the tenements, the valuation of which was objected to; there were about 200 or 300, as he best recollects. The total number of valuations in St. Patrick's ward is about 2,147. He and one of the two guardians visited the tenements objected to together, and took extracts from the valuation book relating to the tenements objected to. Did not take the valuation book with them. Found a great many of the objections well founded, both those which were made on the ground of too low a valuation, as those which were made on the ground of too high a valuation. Thinks that about two out of each three of the objections were well founded. Found that the original valuation was, in many cases, very much below the rents. That observation applies both to houses of a small value and houses of large value, but principally to houses of a small value. In speaking of houses of a small value means houses which had been originally valued under 10*l*.. Knows instances of houses originally valued under 10*l*. which he found it necessary to raise to 20*l*. and 25*l*.; some were raised from 6*l*. to 25*l*.. Generally inquired the rents paid. In general found, with reference to the smaller class of houses, that the original valuation was not more than half the rent. Thinks that that was generally the case with regard to that class of houses. An occupier of a house, of which the rent was 20*l*., as he best recollects, complained that he had been valued under the sum of 10*l*., for the purpose of disfranchising him. Knew of other complaints of the same sort; cannot say whether the complaint was general, or not. Found that some of the objections, on the ground of too high a value being put on tenements, were well founded, and reduced the valuations accordingly. In other cases, found that the valuations objected to as too high were not high enough, and raised them accordingly. In coming to a conclusion as to what ought to be the value of a tenement, he and the guardians who accompanied him consulted together. Was sometimes accompanied by one of the guardians of the ward, and sometimes by the other. Except a part of one day, was always accompanied by one of those guardians; that was only for a short time, during which he revised from five to seven tenements. One of the guardians also visited those tenements, and approved of his decision. Always had the police valuation with him. Generally inquired the rents. Never adopted the rent as the proper value. Did not adopt the police valuation; adopted a value generally considerably under the rent, and in general under the police valuation. The rent was often considerably too high; adopted what would be a fair rent as the value. If the houses revised by him were now to be let, is sure they would bring the valuation which he set on them; they might bring more; will not say they might bring less; generally speaking they would bring more. In setting a value on a tenement objected to, could not say whether he was adopting a higher scale of valuation than had been applied to the other tenements in the parish, or not. Considered only the tenements objected to, and paid no attention to the valuation of the tenements to which no objection had been made. Concludes that he valued the tenements objected to on the same scale as the

other tenements had been valued, because his revision was adopted; and, from an inspection of the books since, was occupied about a fortnight or three weeks with the revision. Reported about four times to the Board during that time. The Board adopted the reports without alteration. Some of them were surprised at the errors which appeared to have been in the original valuation. Believes the original valuation of that district was made by one of Mr. Lawrenson's assistants. Is not aware of any inequality existing between the valuation of that district and any other in the south city. Is generally acquainted with the valuation of the south city. Does not refer to the valuation as now revised for the purpose of a new rate, but to the valuation as revised in the first instance. In the district revised by him, there are few or no first-class houses; they are generally middle-class houses, or of a poorer class. The middle-class houses were generally correctly valued originally; but the poorer class were decidedly undervalued. When he reported to the Board, there were from four to seven members present. They adopted the report, but not as a matter of course. There was at first a difference of opinion amongst the Board, as to adopting his reports; but finally they were unanimously adopted. The difference of opinion which first arose was respecting houses which he had raised from sums under 10*l.* to 10*l.*, 12*l.*, 15*l.*, and up to 25*l.*; but in every instance the revised valuation was adopted.

Middle class houses correctly valued.

Mr. EDWARD VAUGHAN, Valuator of the rural districts, examined.

Mr. Vaughan,
Rural Valuator.

The rural portion of South Dublin Union, of which he was appointed valuator, comprises 44,000 acres. The south bank of the Grand Canal is the boundary of the district of which he was appointed valuator. His appointment in this Union took place about a week after his appointment to value the rural districts of the North Dublin Union. Began both the same day; that is, sent assistants to number the tenements; and afterwards proceeded to value in person. Went day about to the north and south Unions. Valued both Unions in two months; was allowed three months, but was a month away in the county Galway and in the county Tyrone, valuing for private individuals. His assistant went over the Union, and numbered the tenements on the map, inquired the names of the occupiers and owners, entered the latter in the field-book, and made such other observations and inquiries as he considered would be of use in setting the value on it. The person so employed in the Rathmines and Donnybrook electoral divisions is an architect. Having made this preliminary survey, he accompanied him, the valuator, and pointed out the localities of the various holdings, and the advantages and disadvantages. Were able to value, in that way, 400 houses a-day. In valuing the other districts, did not take the assistant with him, as the holdings were distinct upon the map. Told his assistant to make inquiries as to the rents of houses. Was not so well acquainted with the value of city property (such as Rathmines) as with that of land. Had the police valuation; took it with him, and compared it as he went along. Inquired the rent of about every twentieth house.

Duties of assistant valuator.

Police valuation.

Began the valuation at Donnybrook. Mr. Askins is one of the guardians of Donnybrook; he said he would be happy to give any assistance. Heard that he was a person on whom he could place confidence. He is a builder, and valued the parish of Donnybrook several times for grand jury taxes. Spent a day with him in the electoral division of Donnybrook, comparing the police valuation with the rents which Mr. Askins was well acquainted with. Had the police valuation; did not set down the rents in his book; wanted only to establish a scale for his valuation. Adopted a considerably lower scale than the police valuation. The latter was on a rack-rent scale, made on a supposition that the tenant could not be bound to keep the place in repair. The police valuation of Donnybrook was considered very irregular. Thinks that any valuation so made would be considered irregular; one house might require five times as much repair as another. Thinks the police valuers inquired the rents, and set them down as the value, and made no allowance for repairs.

Began the valuation in Donnybrook division.

Police valuation on a rack-rent scale.

There is great diversity of land in this Union. There is mountain, not worth 1*d.* an acre, and land worth 20*l.* an acre. There are the following classes of property:

Classes of property in rural divisions of South Dublin Union.

1. Villa property.
2. Land used for agricultural purposes, but the value of which is enhanced by being in the vicinity of house or villa property (including building ground).
3. Localities occupied by large farms.
4. Localities occupied by small farms, of a size sufficient to support a family.
5. Crowded localities.
6. "Town fields" round Donnybrook, Rathmines, Rathfarnham, and part of Palmerstown.
7. Houses in towns and villages.
8. Mills and factories.
9. Mountain districts about 10,000 acres.

Valued the second class as agricultural ground, and not as building ground. Knows land to be let for 20*l.* which is valued at 6*l.* 12*s.* The person who pays that 20*l.* an acre does so on the speculation of letting it for building ground, but for agricultural purposes it is only worth 6*l.* 12*s.* Was desired to value it in that way by the guardians and the commissioners. Thinks that that person might re-let it for 20*l.* to a solvent tenant, who would take it on the same speculation.

Valuation of building ground.

As to the third class, the same remark applies as in North Dublin. The large farmers complained of the valuation, which came nearer to the rents they paid than the valuation of holdings near Dublin. Did not go so near the letting value on the south side as he had done on the north. Land of the same quality on the south side lets higher than on the north. Valued it at the same acreable rate. Knew that the effect of this was to make it more under the letting value, but did so to lessen the number of objections, having had experience of the difficulty of maintaining a valuation which comes near the letting value. The plan of

Valuation of large farms.

APPENDIX.

South Dublin.

Evidence.
Building ground.

valuing, as agricultural ground, land held at high rents, in anticipation of its being eventually used as building ground, gave great dissatisfaction to the rate-payers of the electoral division furthest removed from Dublin. Taking the valuation of a farm of 100 acres, occupied solely for agricultural purposes, and not with a view to its being ever used as building ground, and supposing it let at the utmost rent that a solvent tenant would pay, thinks that the valuation is about one-sixth lower. Thinks that on the Marquis of Lansdowne and Sir C. Domville's property the valuation comes up to their rents. The mode in which they let their lands is to fix the rent and then select the tenant. They do not ask for the utmost that a solvent tenant will give. Thinks that when a solvent tenant agrees to pay the utmost value, he does not intend to keep the farm in its present condition. Thinks that his valuation is a little under the utmost that might be obtained from a solvent tenant who would keep the farm in its present condition. The South Dublin Union is valued a little lower than the North.

Localities occupied
by small farms.

Districts occupied by small farms, the occupiers of which support themselves and pay their rent out of the produce of the land.—The greater part of the electoral divisions of Clondalken, Whitechurch, and Tallagh, and part of Palmerstown, are of this character. Valued these holdings according to an acreable value, which was the same as that fixed on for large farms, if the land was of the same quality. Charged nothing additional on account of the farms being smaller. Would consider it a very cruel principle to go on, to charge the small holders with a higher valuation, merely because their necessities oblige them to pay a higher rent. Is perfectly aware that they pay a much higher rent than the occupiers of large farms.

Houses in towns
and villages.

House property in towns and villages.—Rathmines is of a similar character in a great degree to city property; a great portion of it is occupied by the better classes, many of them by persons of the mercantile class, who have counting-houses in Dublin. Thinks his valuation is within one-fourth of the rent of that class of houses. The occupier does not in general pay the taxes, or repair or insure the houses. Thinks if the taxes and repairs and insurance were deducted from the rent paid, his valuation would be within about a sixth of the rent so reduced. Considered houses perishable property, and on that account did not value them to the utmost amount that could be paid by a solvent tenant.

Shops.

Shops.—There are some shops in Rathmines, Donnybrook, and Palmerstown. Thinks that in the valuation of shops his valuation is within a sixth of the rent paid, reduced by the amount of taxes, repairs, and insurance. Thinks he is as near the rent in the valuation of shops as in that of private houses. Is aware that in the city there is a greater difference between the valuation and the rent of shops, than between the valuation and the rent of private houses, but thinks that in his own valuation he has not made any such difference. In fact, there is not such a difference between the rent of shops and private houses in the towns and villages of the rural divisions as in the city.

Houses occupied
by the humble
classes.

Streets in towns and villages occupied by the poorer classes.—There is a greater difference between the rent and the valuation of such houses, than between the rent and valuation of houses of a higher class. The persons who occupy those houses pay a weekly rent, and neither repair nor insure. The rent is very precarious, and takes trouble to collect. There is a class of persons who make it a sort of business to let such houses. They look after the tenants and get the rents paid, and those rents, so paid, are extravagantly high, but it is an undesirable sort of property in which respectable people do not like to be concerned. Those extravagant rents are double the valuation. Thinks it right that the valuation of such houses should not be higher than one-half such rents. When there are two or three families in a house, the whole rent collected from them is very exorbitant, and more than double the amount of the valuation. Thinks there is not so great a disproportion between the valuation and the rents of small cottages occupied by one family. Supposes that the valuation of such cottages is about one-half of the rent. They are let at a weekly rent. The rent of such cottages is from 1s. to 2s. a-week, that is, from 2l. 12s. to 5l. 4s. a-year. His valuation is about half that.

Mountain districts.
Tallaght and
Whitechurch E. D.

Mountain districts.—There is a great extent of mountain, about 15,000 acres, in the electoral divisions of Tallagh and Whitechurch. A great portion of it is enclosed and let at an acreable rent. The part which is not inclosed is grazed in common. The skirts of the mountain are inclosed, and each tenant has liberty over the mountain in proportion to the extent of his arable rent. Those farms range from five to fifteen acres of arable. The rents which they pay is about 1l. an acre for the arable, with the right over the mountain. This applies particularly to Mr. Cobbe's estate; had his rental while making the valuation. From the way in which it is held it was impossible to mark the boundaries of the holdings on the Ordnance maps. The estate is held in *rundeal*, that is, there may be twenty occupiers of one field, each holding a few ridges; and it is the same with all the fields which may be in tillage in a townland. Where a field which has been tilled becomes laid down again in grass, it becomes common to the whole. Was obliged to adopt Mr. Cobbe's rental. Thought his rent was a fair one. Found an estimate of the value of the whole townland, and compared it with the total of his rent-roll for that townland. The estate is held at will, and the county cess is paid by the landlord. Believes that the landlord could get a higher rent for the land; supposes he could get 10 per cent. more from a solvent tenant. Thinks a valuation is correct if it amounts to a fair rent between landlord and tenant, even though a higher rent may be got from a solvent tenant. It would be impossible to maintain a valuation against the objections which would be made to it if it went up to the utmost that could be obtained from a solvent tenant.

Occupation in
common.

Revision.

The revision in South Dublin was performed by a committee of inspection for each division; the committee of inspection consisted of the guardians for that division; they went round with the valuers and visited the tenements, the valuation of which was objected to. Each com-

mittee of inspection was supposed to consist of the two guardians for the division; but in practice only one actually went round to visit the tenements. In consequence of this arrangement there were very few alterations made in the valuation, although there were a great many objections. There were a couple of hundred objections, but after the tenements had been thus inspected, not more than thirty were reduced. Some cases of objection appeared so vexatious and frivolous that the valuation was raised as a punishment. The guardians who attended on this inspection appeared actuated by a disposition to act fairly in every case. The object of this inspection was not to inquire into the scale of valuation adopted, but to see whether the individuals who objected had any reason to complain.

There was an appeal to the quarter sessions by Mr. Lynam, of Mount Seskin, in the division of Tallaght; he holds the whole townland, and he appealed against the area as returned by the Ordnance survey, and consequently against the valuation; also that he was charged with land as mountain which ought to have been exempt as bog; he, Mr. V., was out of town and Mr. Lynam compromised the appeal with the guardians. He, Mr. V., would give Mr. Lynam 500*l.* for the farm held at the original valuation. That was the only appeal.

Six or eight months after the rate was struck the Board put an advertisement in the papers, calling on any person who had any complaint to make of the valuation to send in objections. There were about 30 sent in. They were chiefly respecting contents and exemptions. Those objections have been referred to him, Mr. V., as the valuator, to report on. A great many of those are peculiar cases,—nunneries, school-houses, dispensaries, charities, and the like, claiming exemptions. There are some of them which complain of excess of valuation. These latter are chiefly from the occupiers of mills and factories. There are a few objections as to the valuation of particular farms, few of which he, Mr. V., thinks will be sustained. He, Mr. V., is also called on to value the houses, the building of which has been completed since the original valuation was made; there are a considerable number of them. The revision which is now going on only affects the cases of objections above referred to and the new buildings. There is no general revision of the valuation intended nor required. The Board consider the scale fair enough: witness thinks they will not revise except in cases where objections are made, or in cases where new buildings are erected.

Advertisement for
objections.

Does not know of any disputes between landlords and tenants with regard to the distribution of the rate which has been levied. There appears to be considerable doubt amongst them as to whether the rate which has been levied is to be considered as a year's rate or half a year's rate, and therefore they do not know whether the proportion of the rate, payable by the landlord, is to be deducted from the whole year's rent or from the half year's rent. Heard of cases in the city where the rent was more than double the valuation, and the tenant sought to deduct from the landlord more than the whole amount of the rate which he had paid.

Distribution of the
rate.

Statement sent by Mr. Lawrenson, Valuator of the City District, previous to his Examination.

Written statement
by Mr. Lawrenson,
City Valuator.

"On the 24th day of August, 1839, the Board of Guardians of the South Dublin Union advertised for tenders to contract for the valuation of the rateable property of the Union; and on the 2nd of September following I was declared contractor for the South city electoral division of the Union, embracing the parishes of St. Mark, Peter, Andrew, Werburgh, Bridget, John, Michael, Audeon, Nicholas in, Nicholas out, Luke, Catharine, Patrick, Anne, and James. The Board required the valuation to be completed on or before the 30th of November, and that their wishes might be complied with, I employed seven assistant valuers, with a competent staff of clerks. I take it that it is not necessary for your purpose to enter here into a detail of all my arrangements in the completion of this return; but so far as the character and complexion of my proceedings, I can have no hesitation in laying them before you. Then, first, that my labours might be completed within the period required by the guardians, I resolved on having seven assistants, who, together with myself, would form eight valuers, or four pairs, for I had determined that the valuation in every instance should be the result of two opinions. The employment was therefore in the hands, as it were, of four distinct parties; and that uniformity might be the result of the complete and united return of all, I alternately changed the assistants one to another, successively visiting each myself, or moving through the staff, that the common principle of my opinions might be diffused through all. This I believed to be a desirable course, and I cannot say, on the whole, that my expectations were not to a very considerable extent realized.

"The names of my assistants were, Edward Dowling, John Fisher, William Jordan Lambert, William Seton, John P. Gaynor, Roger Magennis, and Hugh Motherwell. I should not think it of any importance now to advert to the religious or political opinions of those gentlemen, but for recent public discussions upon Poor Law appointments in Ireland; and from those discussions I am led to state that when my assistants were appointed, they were selected by me from amongst the most competent persons that presented themselves for this employment, without reference to their religious or political opinions. When my selections were made, and being desirous of having an independent staff, it occurred to me that four of those persons were Protestants and three Roman Catholics, but circumstances afterwards showed me that four were Catholics and three Protestants. One of this staff was and is an intelligent member of the corporation of Dublin, and a Conservative in politics. A second was recommended to me by two very respectable members of the Board of Guardians, of conservative principles, who had opposed my own appointment upon political grounds (as subsequently acknowledged by one of those gentlemen to me). Yet I did not hesitate appointing their nominee, who also is Conservative in principle. A third, I have strong reason to know was not and is not in the confidence of the reform party in Dublin. A fourth, possessed no

APPENDIX.

South Dublin.

Written statement
by Mr. LAWRENSON,
City Valuator.

decided feeling, and the other three hold moderate opinions, but are decided reformers. With regard to myself, in religion I am a Roman Catholic, and in politics a reformer, but neither one or the other influenced me in the patronage of the responsible public employment that devolved upon me, as may be collected from the circumstances I have just detailed. I have already stated that the assistants were paired in the progress of their labours, and my arrangements induced me to pair a Roman Catholic and Protestant together—a reformer and conservative. The reason of my doing so must be very obvious; but I may be permitted to remark that this arrangement and its motives were alone known to myself, and that it was followed to the end of the employment as far as the same could be well adhered to. In addition to the instructions of the Poor Law Commissioners to valuers, which the field-books in the hands of the assistants contained, I had also printed instructions of my own conveyed to those assistants, and which I beg to annex for your information. The principles which governed the judgment of the valuator in forming the net value in each case may be pretty accurately collected from those instructions, but should you desire any further information upon this head I shall afford such information to your questions as it may be in my power to supply. Let me now introduce a copy of the printed instructions to which I have referred.

“ 14, Summerhill, September 5, 1839.

“ *Instructions to the Assistant Valuers now employed upon the Valuation of Property (under the Poor Law Act) for the South Dublin Electoral District of the South Dublin Union.*

“ GENTLEMEN,—As the Poor Law enactment, under which you are now proceeding to value the rateable property within your authority, makes special reference to the character of property liable to be rated, and, at the same time, makes certain exceptions in reference to many cases that will, doubtless, come before you; it appears to me desirable that you should have both confirmed and excepted cases plainly set down, in the shape of Instructions for your guidance, so that, in complying with the Act of Parliament, your proceedings may not be embarrassed by any extension of your labours beyond its operation and control. By the Act referred to the following are liable,—buildings, open mines, commons, rights of commons, other profits out of land, canals, navigation, or rights of navigation, rights of way, and other rights or easement over land, and tolls in respect of such rights, all other tolls, turf bogs or banks, when a rent is payable for the same.

“ The following are the exceptions,—turf bogs or banks used exclusively for fuel or manure, when no rent is payable for the same; mines which have not been opened seven years previous to the making of the rate; mines, once abandoned, must be re-opened for seven years before they can be rated. All houses of worship, all schools exclusively used for charitable purposes, hospitals, infirmaries, burial-grounds, or buildings, land, or hereditaments dedicated to or used for public purposes; but where any private profit, by use or occupation, may be made of any or in any way out of the above exceptions, the same must be valued and rated to the extent so used or occupied, according to its value to any indifferent person.

“ There are many cases recited above that will not come before you in your present district, but their general importance will plead a justification for their brief insertion here.

“ The Act requires that you shall value each holding (or as the case may be) at its fair annual value, that is, at what the same would be let for from year to year, to indifferent parties, in the state in which you may then find it, divesting yourself of all the other relations by which the property may stand, either in reference to rack-rents or to a beneficial interest, in any wise produced. That is, you shall not be influenced in your valuation of any property by what A. B. may rent it at, or by what C. D. may hold it for; but your guide shall be, what it may be fairly worth to either from year to year. This will be your common rule, and your more general rule will be to make certain that all will bear a direct and relative proportion to each other in their respective peculiarities, advantages, and localities. A careful inspection of the premises, and a reference then to its advantages or disadvantages, with a recollection of its local situation, will not fail to lead you immediately to the proper conclusion.

“ It is presumed here that all rates, taxes, insurance, and repairs, are paid for by the tenant, and such is the rule in Ireland, but you will find exceptions, and where the landlord is liable to those charges you will note it accordingly. You will be careful in your inquiries upon this head, as your valuation book must be filled up in the respective columns, as far as the same can be ascertained or is practicable.

“ Should any difficulty, either of an extended or partial nature, arise to you in the course of your labours, my attention must be called to it. However, my attention to you respectively will be close, as I shall be as desirous as possible to have the valuation uniform and equitable, one property with another, one locality with another, considered. I shall, therefore, have such opportunity of promptly settling any cause of difficulty that may arise, that you will not be interrupted in the regular course of your employment; I am, at the same time, desirous that you should avoid those difficulties as much as possible, as a too ready willingness upon your part, to refer differences of opinion to me, would not be calculated in the end to ensure a better opinion, perhaps, than the one that both might calmly and rationally form, avoiding the hasty decision of reference. I dread, further, that hasty decisions would be but calculated to engender opinions in each, unfavourable perhaps to the capacity of the other; a state that would be ill suited to the harmonious working of all engaged in the very important undertaking in which they are employed.

“ It will be, therefore, most advisable to avoid differences of opinion, but at the same time, doubtless, circumstances may arise that might warrant a difference of opinion, and that could be settled only by a third party.

“ In the case of public establishments, such as mills, distilleries, breweries, factories, &c., great care should be taken lest that the too ready conclusion of, “ Oh! its a very valuable concern, and

does an immense trade," might prove unfair, if adopted in considering the value of such premises; for to charge any establishment upon its trade, is highly objectionable in any valuation of real property. This admits of too general an illustration for detail here; but you are to consider the premises, in such case, more as buildings of a certain magnitude, in a certain locality, and condition of repair, than as vehicles through which personal property alone is conveyed.

"There are many circumstances, however, that contribute to render those establishments desirable, and hence enhance their real value, and great care must be accordingly taken in such cases; with this view, I shall be anxious to join you in visiting such establishments.

"Whenever a commonage presents itself, you are to value the same according to the rent obtainable by the owner, including any general profits that such owner may derive out of them.

"A right of fishery is to be valued upon the ordinary principle of "what it may be worth from year to year," all outgoings and expenses considered.

"In reference to canals, water-courses, navigations, tolls, gas pipes, water pipes, railways, &c., those require a special mode of proceeding, and one to which my personal attention will be directed.

"All premises, whether yards, building ground or other land, distinct stabling, waste plots or commons, slaughtering yards, stalls, or houses, timber yard, or any other yard, building, or premises, used or applied to any purpose, are to be valued, save when the same may be solely used for charitable or public purposes, and from which no person, or corporation of persons, derive any profit, the same being intended to this end.

"However, you will visit all, and note the exceptions in their proper places. With regard to myself, I shall be always with one of you during this employment, alternately with each, and by this means I hope to ensure a relative uniformity in our important proceedings.

R. LAWRENSON."

"In following out these instructions, I apprehend that I have but followed the wishes of the Legislature, and I had them submitted to the Board of Guardians, and the Assistant Commissioner, Mr. Hall; one of the most steady, intelligent, and independent public officers that it was ever my fate, to have had intercourse with. Those instructions met with the approbation of both guardians and commissioner, when they were then issued by me to my assistants, and no instructions of any nature, directly or indirectly, but those, I pledge my reputation were ever issued by me to my assistants; indeed, the complexion of this staff, and the precaution I adopted in forming it, are my best proofs of the perfect independence of my conduct throughout this entire employment. The portion which I have marked in brackets is that which most directly governed their opinions in forming the net value; indeed the rest was merely advice, and I have made this allusion, that your attention may be the more closely drawn to the passages referred to. You will perceive that those instructions imply that the net value in each case was to be assumed upon the fact on recollection of what it may be fairly worth from year to year in its present condition and situation to a tenant, who would undertake to keep it in the same state, and pay all taxes, rates, &c., with insurance; in fine, what it was fairly worth from year to year to a tenant who would live in it, as it was, and where it was, and maintain it in the same condition, and pay every charge to which it was fairly and commonly liable, including insurance. Under those circumstances the valuation was compiled, and returned by me to the Board of Guardians on February 3rd, 1840, but agreeable to the Act of Parliament, the same, lay open for public inspection for 21 days; during the progress of which many objections were tendered to the sums respectively set against many houses. I was not unprepared for such a result; for to affect that my labours were or would be perfect, I would be but attempting to establish that which is unknown to human nature. I know of nothing in our system that is perfect, and I did not expect that my proceedings should be so; but to discharge my duty to the best of my ability was my desire, and beyond this I did not expect to succeed with the public. In the interim, those objections were to be investigated, and the Board called upon me to revisit the houses respectively to which they referred, and report upon them. At this period my services were retained by the Commissioners of the Metropolitan Police, in effecting a valuation return of their new district, known as the Kingstown division, (then coming, for the first time, under their authority.) I was solely and entirely responsible for the efficient and immediate completion of this labour; and so much did it engross my time, that I was wholly unable to comply with the request of the Board of Guardians. The Board of Guardians then very considerably formed themselves into a committee for revisiting those premises, merely requiring of me to recommend them one competent person for each ward, to revalue with them such premises as might require revision. Those assistants being procured, and in the same independent manner that suggested my former appointments, they, with the two guardians of each ward, respectively visited the premises complained of, and made many alterations; but from subsequent opportunity afforded me of seeing those premises, as I will by and by refer to, I cannot say but that I entirely approve of those alterations with some one or two exceptions which I had afterwards corrected. I do not wish to screen any circumstance connected with this class of objections; and I have to say that they principally related to houses returned under the value of 10*l*. But not only do I adopt the alterations made (with the one or two exceptions mentioned), but I am prepared to say that hundreds of houses were not revised in this instance, that should have been attended to—should have been revised, and that the value of should have been very considerably increased. This circumstance came to my knowledge from having been employed by the Board of Guardians to make a return of *new* property; that is, of property created since the period of the first valuation (new houses say); and, upon this employment, I had the parish books carried with me, containing a return of the former valuation; when, to my great surprise, I detected some of the most glaring cases that could possibly be, exhibiting a want of judgment in some of those valuations that was very much to be lamented. Those cases did not relate to any particular class of property, but to all, and were the result of the labours of persons in whose judgment I had reposed much confidence; the one a builder, the

South Dublin.

Written statement
by Mr. Lawrenson,
City Valuator.

other a surveyor; professional persons, and each of whom had been previously upon similar employment. I immediately communicated with the Board of Guardians upon the subject, as will be seen by my letter on their minutes of September 3rd, 1840. They at once very properly empowered me to have them corrected, when I entered upon a complete revision of the whole, examining into all, and making many alterations. Some increased in value, and some lowered; but the great majority increased in value; and this employment was concluded on September 22nd, when the same was adopted by the Board of Guardians.—(See their minutes.)

“If I am asked what proportion the valuation bears to the actual rent, my reply must be of a general nature; and first I should say that, in the city of Dublin, middle-men prevail to the very fullest extent; and so fully so, that their numbers are almost innumerable. They are actuated by such different motives, different principles to guide them, circumstances so often control them, and the judgment of all so varies, that there is no common or fair rule of letting property here, such as one would find in a rural district. It is in Dublin—get the highest rent by such means as will bring about such a result. In trading streets, shops are so transformed, and the other portions of the houses so let, as to preclude one of asking what the house produces. The effect of this principle varies with the character of the districts of the city, but is most felt in the first-class streets, where such exorbitant rents are demanded and promised payment for, as to shut out the hope of the tenants, success in trade. And in those districts I should say that, in following out the terms of the Act of Parliament, by returning the property at the fair annual value, I have been infinitely below the rents that are obtained. In the second-class districts, I should say that I have approached the value much nearer; that is, that the valuation more closely approaches the actual rent. In the third-class districts, my opinion is that, as exorbitant rents are never obtainable here, I have nearly approached the letting value—the actual rent paid.

“The first-class districts are such as Grafton-street, Westmoreland-street, College-green, Dame-street, &c.

“The second class may be found to be Castle-street, Parliament-street, St. George's-street, Merrion-row, &c.; and the third class consists of such as High-street, Francis-street, Thomas-street, Meath-street, Townsend-street, &c. With regard to the private streets, such as Leeson-street, Harcourt-street, Fitzwilliam-street, Merrion-street, Mount-street, Pembroke-street, Dawson-street, &c., I am of opinion that I have approached the value in the proportion of 15 per cent. less than the rent paid. On the whole, I must again repeat that there is no uniform principle of letting property in Dublin. Not so with a rural district, where one agent, or two or three agents, will have an entire district of country under one management, one system of letting, governed by the same uniform notion, when the actual rent paid is so easily traced as to afford a pretty correct notion of the decided proportion the valuation bears to the rent actually paid. But if I again refer to Dublin, I do assert that it is wholly impossible to say what proportion the valuation, upon a common scale, bears to the actual rent paid. My desire would be, however, to state that, whenever I found the premises fairly let to the occupying tenant, the valuation would appear to be about 15 per cent. under the actual rent paid. I can more fairly illustrate this view by the following scale, which will show a pretty accurate view of the result of the valuation as compared with the rent paid:—

APPENDIX.

South Dublin.

Written statement
by Mr. Lawrenson,
City Valuator.

"I do not mean to say that this scale is the *bonâ fide* result of deliberate inquiry, and it is not given by me as such. Both cases are assumed, but assumed by one whose experience in the matter to which it refers has enabled him to say that, whenever circumstances opened to his view the actual rent paid, he almost invariably found the proportions in this scale, as now set down, to be fully borne out,—not from any fixed rule or determination in his mode of proceeding, but from his individual notions in each case of the fair annual value of the premises. This scale, therefore, may be taken as a fair index of the proportion that *his* valuation generally bears to the actual rent paid, rack-rent and beneficial interests not considered; and I think, when one compares the supposed value and supposed actual rent paid, that an occupier, in any of the cases mentioned, should not fairly complain, though the approximation *per centum* of the net value to the rent paid is more closely approached by me than I find to be the case in any of the published reports that I have yet seen. Therefore I do think that, as no rational man could complain of my scale, and as the proportion here between the net value and the actual rent paid, in all cases from 65*l.* upwards, is generally but 12 per cent., it can admit of no doubt but that the valuations of Ireland bear infinitely too great a disproportion to the rents paid. But where we consider property valued at 50*l.* down to 10*l.*, though an apparent approximation exists in each case to the rent paid, yet, by reason of its descending scale, a very great difference in the per-centage appears, as compared with the previous class. And further, in property valued at 8*l.* down to 1*l.*, a still greater per-centage appears to influence the return; though, in both cases, the valuations and the rents appear to approach each other very closely. I should say that, with regard to the two last classes, I do not disapprove of the disproportion, and it seems to be but a leaning to those who are least able to contribute to the common burthen; and, independent of this, I do not see how any remedy lies for the correction of the apparent inequality; for it certainly is no advantage by design in favour of the latter class, and appears to arise solely from a mere arithmetical decline in value; but it arises, nevertheless, to an extent that would wholly shut out much of the present Parliamentary constituency; not, in my mind, from any want of the actual and *bonâ fide* qualifications being in their possession, but arises from causes peculiar to the rateable value fixed for TAXING purposes, seldom or never approaching to within 30 per cent. of the actual and absolute value of the premises.

R. LAWRENSON."

CORK UNION

Extracts from Minute Book of Board of Guardians.

APPENDIX.

Cork.

Extracts from
Minute Book.

At the first meeting of the Board of Guardians of the above Union, held at the House of Industry, on Tuesday, the 4th day of June, 1839, at noon, pursuant to the order of the Poor Law Commissioners, present 47 guardians,

It was Resolved,—That the following gentlemen do constitute a Committee, for the purpose of conferring with the Assistant Commissioner upon the most effective steps for insuring the completion of the valuation of all assessable property, and the declaration of the workhouse of the Union, at the earliest period consistent with the forms prescribed by the Act of Parliament and the order of the Poor Law Commissioners.

The	{ Colonel Burke,	John Bagnell,
three	{ Thomas G. French,	Horace Townsend,
Chairmen.	{ Sir T. Deane.	J. J. Murphy, and
	William Fagan,	Thomas R. Sarsfield, Esqrs.!
	Lionel J. Westropp,	

Appointment of Valuation Committee.

That this Committee do meet *de die in diem* until their report is ready, and that they do hold their first meeting at the Commercial Buildings to-morrow, at noon.

At the second meeting of the Board of Guardians, held on the 17th of June, 1839,

The Valuation Committee having handed in their first report,—Resolved, That the same be adopted, subject, however, to the gentlemen named as superintendents and valuers being individually proposed for the consideration of the Board.

Report of Valuation Committee adopted.

The following gentlemen were then proposed and adopted, namely:—

Superintendents.—William Travers, John Fleming Beale, and James Wherland.

Appointment of superintendents and valuers.

<i>Valuers.</i> —	Geoffry O'Connell,	James Russell,
	Thomas Anthony,	Nicholas White,
	William White,	William Hallinan,
	William Kenealy,	Edward Sullivan,
	John Haynes,	John Barry,
	Thomas Devereux,	Markham M'Carthy.

The Committee resolved to meet at the committee room of the Commercial Buildings, to-morrow, Tuesday, the 18th instant, for the purpose of instructing the valuers, who were required to attend.

At a meeting of the Board of Guardians, held at the Board-room of the House of Industry, on Monday, the 1st day of July, 1839, pursuant to adjournment, William Crawford, Esq., in the chair,

Resolved,—That the following resolutions be adopted by this Board, as recommended by the Valuation Committee, viz. :—

Resolved,—That we recommend to the Board of Guardians that the payment for the valuation of the houses within the electoral division of Cork, as well as the towns of Cove and Passage, shall be 2½d. per house; that a house be considered to mean every building, be it dwelling-house, warehouse, or other tenement, having a separate entrance, and that every building or all buildings connected, and to be communicated with by one outward entrance, be considered one house. That the valuers shall be entitled to the sum of 2l. 19s. per 1,000 statute acres; the above to include all expenses. That the Committee are decidedly of opinion that without the Board of Superintendents there will not be sufficient accuracy, nor without the number of valuers mentioned will there be the requisite despatch.

Recommendations of Valuation Committee.

Resolved,—That the guardians approve of the rate of payment proposed to be given as remuneration for the services of the valuers.

Approved of by Board.

Resolved,—That the Committee be requested to superintend the valuation of the Union, and allocation of the remuneration to the valuers; and that so soon as the services of the superintending valuers are requested to check the value of any portion of the Union, the Committee forthwith instruct them to proceed to discharge that duty.

Resolved,—That Richard Gould be added to the Valuation Committee.

At a meeting of the Board of Guardians, held at the Board-room of the House of Industry, on Monday, 15th July, 1839, pursuant to adjournment,

The minute of last meeting, held on the 1st day of July, was read, and confirmed by the following letter, received from Mr. Stanley, assistant secretary to the Poor Law Commissioners:—

*Poor Law Commission Office, Dublin,
6th July, 1839.*

SIR,

REFERRING to the minutes of the proceedings at a meeting of the guardians in Cork Union, held on the 1st instant, and of the Valuation Committee, I am directed to signify to the Board the Commissioners' approval, generally, of the arrangement proposed.

I am at the same time to state that as the list of valuers includes two of the persons originally named to act as superintendents of the valuation, it is presumed that the sum to be expended will not exceed an amount produced by the rate specified in the resolutions to which

Appointment of valuers confirmed by Poor Law Commissioners.

APPENDIX.

*Cork.*Extracts from
Minute Book.

the approval of the Commissioners is limited. Forms of valuator's bonds, and contracts, are forwarded herewith.

I am, &c.,

(Signed) WILLIAM STANLEY, *Assistant Secretary.**To the Clerk of the Guardians, Cork Union.*

Resolved,—That the valuator be directed to proceed with their labours with every dispatch consistent with the correct discharge of their duties.

That a calculation be prepared for the Valuation Committee, by Mr. Gould, of the sundry sums to be inserted in the various calculations to enable the gross annual value to be ascertained of Patrick-street, and of two or three farms already gone over by the valuator.

That the valuator's bonds and contracts be submitted to the Valuation Committee for their due execution.

July 29, 1839.

Mr. Gould having given in the various calculations of the probable annual average cost of repairs, insurance, and other expenses, in pursuance of the resolution of last Board day,

Resolved,—That the said calculations be submitted to the Poor Law Commissioners for their approval.

August 12, 1839.

Report of Valuation
Committee.

The Valuation Committee reported that they empowered, on their last meeting-day, their clerk to employ such assistants as he may require for the fair copying of the valuation and rate-books as each ward and division may respectively be transmitted to him by the valuator, which was approved of by the Board.

Mr. John McDonnell was added to the Valuation Committee.

September 9, 1839.

Resolved,—That a draft, No. 2, be drawn and granted to our clerk for the sum of 10*l.* towards the payment of clerks copying the wards and electoral divisions, for payment of incidental expenses, for three maps of the wards to assist the valuator, and for printing notices to landed proprietors, to be debited for preparing the valuation and rate-books, and credited treasurer.

October 23, 1839.

Notice ordered to be
given of Board sitting
to receive suggestions
as to the Valuation.

Resolved,—That notice be given of the intention of the guardians to sit from twelve to four daily for the purpose of receiving suggestions as to the valuation on the part of the public, who are invited to attend; and notice is hereby given by the clerk of the Union that the rate is intended to be declared with as little delay as possible, and that the books are now open for inspection.

That the following notice shall be placed on the Board book:—

Notice by the guardians of the time and place where the valuation for rating purposes may be seen. 1st and 2nd Vic., ch. 56, s. 69.

Notice.

Cork Union.—The guardians of the poor of the Cork Union hereby give notice that the valuation whereon it is proposed that a rate shall be made of the rateable property within the said Union, will be open for the inspection of the rate-payers in the said Union, at the House of Industry, in the city of Cork, where the same may be seen, between the hours of ten and four of the 11th day of November, 1839, and of the 21 succeeding days, Sundays excepted.

WILLIAM CRAWFORD, *Chairman.*

JOSEPH HAYES.

CHARLES MATTHEW.

*R. A. Deane, Clerk to the Union.*Order in which re-
vision of the several
Electoral Divisions to
be proceeded with.

Resolved,—That our clerk be authorised to publish that the guardians will take into consideration, on Monday next, the valuation of the Lee ward, and that the Board will continue to sit daily to discuss the valuation of the several wards and electoral divisions of the Union, in the following order:—

Cork Electoral Division, No. 1.

Resolved,—That all questions are answered through the chairman of the meeting of the day relative to the valuation.

October 28, 1839.

Valuation Books open
for inspection.

Resolved,—That the valuation books be open for inspection at the House of Industry daily, Sunday excepted, between the hours of ten and four o'clock, where the rate-payers may be at liberty to take extracts of same; but in doing so will be restricted to the use of pencil, the guardians being of opinion that neither pen or ink should be allowed in the room.

The guardians having been engaged this entire day in hearing objections as to the valuations of the Lee ward in Cork division, and having heard the several objections, decided thereon, after hearing the valuator's opinion, it was resolved,—That this Board do adjourn until twelve o'clock to-morrow to hear any objections (if any), commencing with the St. Patrick's ward.

October 29, 1839.

The guardians were engaged this day in examining objections to the several valuations, and decided thereon.

October 30, 1839.

The guardians were engaged this day in examining objections to the valuation, and deciding thereon.

October 31, 1839.

The guardians were engaged from 10 till 4 this day in hearing objections against the valuation in presence of the valutors, examining into them and deciding thereon.

November 1, 1839.

The guardians were again engaged this day examining the several valuations, hearing objections, and deciding in each case submitted in the presence of the valutors.

November 2, 1839.

Resolved,—That the guardians of the Cork Union having in part inspected the valuations, find that necessarily much discrepancy prevails in the values assigned to several lands and tenements relatively, and are of opinion that it will be essential, in order to secure a just relation in all the districts, that a public officer to be charged with the inspection of the valuation, should be appointed. That such officer should be permanent, and that the Poor Law Commissioners be requested to sanction such appointment.

Resolution of Board
for appointment of a
Public Officer to
inspect Valuation.

Resolved,—That a copy of the foregoing resolution be handed to the Assistant Poor Law Commissioner, that he may be enabled to explain its application to his Board on his projected visit to Dublin.

November 4, 1839.

Resolved,—That an inequality of the valuation exists between the North and South electoral divisions, and that the northern valutors be requested to value one division of the south districts, and the southern valutors one division of the northern divisions, and report the result as speedily as possible to this Board, and that our clerk be instructed to furnish the valutors with books, names, and acres, but not valuations.

Inequality of Valuation
between the
North and South
Electoral Divisions.

November 5, 1839.

The Board was engaged this day, hearing objections and inspecting the several valuation books in the presence of the valutors and deciding on them.

November 6, 1839.

The guardians were engaged this day in examining the different objections in the Carnar electoral division, and on investigation it was the opinion of the guardians that a fair relative valuation was kept up in this division.

November 7, 1839.

Resolved,—That a special Board be summoned to meet on Saturday next, in order to reconsider the resolution passed for sending the country valutors to revalue portions of the North and South rural districts, information having been since received by the guardians leading to a contrary conclusion.

Special Board summoned
to reconsider
Resolution for re-
valuing portions of
the North and South
Rural Districts.

November 8, 1839.

The Board was this day engaged in hearing further objections to the valuations, and no person being in attendance at 2 o'clock, the Board adjourned until 12 tomorrow.

November 9, 1839.

It was proposed from the chair that the resolution of the 4th of November should be suspended, and on the guardians voting, there appeared against the suspension 11, for the resolution 7. But it was unanimously agreed upon, that instead of going over the whole divisions for the present, that Carrigrohan townland in Ballincollig should be valued by the northern valutors, and Farranastig townland, in the White Church Division by the southern valutors, to proceed on Monday, and report to the Board on Wednesday, provided the weather was favourable.

Only one Townland
in each to be re-
valued.

The Board having taken into consideration the objection made by Mr. Jeffreys in reference to the valuation of a timber plantation on his property and urged on the ground that the valuation should not have exceeded what such land would bring from year to year if not planted, that is, at no more than 5s. an acre, whereas the valutors appointed by this Board estimated said land at 1*l.* per acre on account of its enhanced value, by reason of the said plantation,

Mr. Jeffreys' objection
in reference to timber
plantations.

It was unanimously resolved,—That the objection of Mr. Jeffreys be referred to the Poor Law Commissioners, with the view of obtaining legal advice on the following queries:—

Referred to Poor Law
Commissioners.

Firstly, on what principle are the valutors to proceed in valuing plantations. Is it the ascertaining what the land if not planted would let to a solvent tenant from year to year; is it what said land in its actual state would bring, if let from year to year; or is it by first estimating how much the plantation has improved the land as a perpetuity, and then reducing said estimate to an annual value.

Secondly. If land improved by being planted, is to be valued in its natural, or according to such improvement; is land deteriorated by plantation to be valued on the same principle, and estimated at a less rate than if not planted; for instance, in the site of demesnes and ornamental ground which may not produce from year to year in its actual state what it would bring as arable or pasture land; finally is there to be a different principle adopted in valuing ornamental

APPENDIX.

Minute Book.

plantations from that employed in valuing woods grown for the purpose of profit, and if so, what is that difference of principle.

November 13, 1839.

The valuers of the southern district returned the townland of Farranastig in the Whitechurch division. The Board was engaged this day in discussing the valuations and hearing objections.

November 14, 1839.

Resolved,—That the question of the appointment of a permanent valuator shall receive further discussion, and that Monday the 2nd day of December be appointed for that purpose.

The Board was engaged this day in hearing a number of objections to the valuation, and the guardians having decided in each case with the sanction of the valuers, and in their presence, the Board adjourned till 12 o'clock to-morrow.

November 15, 1839.

A communication was this day received from the Poor Law Commissioners, sanctioning and directing the publication in the newspapers as to the inspection of the valuation for 21 days (exclusive of Sundays) pursuant to the 69th section of the 1st and 2nd Vic. chap. 56.

The Board was engaged this day in hearing a number of objections to the valuation, and decided thereon.

The valuers of the Northern division returned the townland of Carrigrohanemore in the Ballincollig division.

November 16, 1839.

The Board was engaged this day in examining numerous objections to the valuation in presence of the several valuers, and having decided thereon with their consent.

November 18, 1839.

Board engaged this day in hearing objections to the valuation in the presence of the valuers, and the valuation of Mr. Newenham's demesne having been under consideration for a great portion of the day, it was resolved in consequence of the disagreement of the valuers, that the other valuers should revise same, namely, Messrs. Ahern, Haynes, and O'Connell, and report to the Board on Thursday next.

November 19, 1839.

Resolved,—That the officer of the Union be instructed to make a minute of each appeal against the valuation, and that the chairman shall, on the original book of the valuation, mark how each case has been disposed of.

The guardians were engaged this day in hearing the several objections to the valuations.

November 21, 1839.

The Board was engaged this day in hearing objections to the valuations in the presence of the valuers.

November 22, 1839.

Messrs. O'Connell, Haynes, and Ahern, valuers, returned the valuation of Mr. Newenham's property at Coolmore, in conformity with the resolution of the 18th of November.

The Board was engaged this day hearing objections to the valuations in the presence of the valuers.

November 23, 1839.

The Board was occupied in hearing objections to the valuations in the presence of the several valuers.

The valuers for the Carnar Electoral Division agreed to reinspect the valuation of the townland of Droumbee.

November 27, 1839.

Resolved,—That the following questions be put to the Poor Law Commissioners.

"Are barrack canteens rated in England, and on what principle is the value ascertained?"

"Is the whole rate to be paid by the occupier of such canteens?"

The Board was engaged this day in hearing objections to the valuations in the presence of the several valuers.

November 28, 1839.

Board engaged this day in hearing objections to the valuations,

November 29, 1839.

Board engaged this day in hearing objections to the valuations.

Resolved,—That the valuers be directed to make out their several accounts in order to enable the guardians to consider the same previous to ordering their payment.

November 30, 1839.

The Board was engaged in hearing objections and making alterations in presence of the valuers, and with their concurrence.

December 2, 1839.

The Board was engaged this day in hearing objections to the several valuations.

December 3, 1839.

The necessity for procuring a rate to supply the immediate wants of the poor in this Union coerced the Board to limit the valuers to a period of time for valuing the Union not quite sufficient for effecting a full, equal, or satisfactory valuation thereof.

Resolved,—That, in order to satisfy the public mind and prevent the numerous appeals which will be otherwise made, this Board do take immediate measures to effect, before a second rate, a full revision of the entire Union.

Appointment of
permanent Valuator
to be further discussed.

Minutes of Appeals to
be made in Valuation
Book.

Queries respecting
the rating of Barrack
Canteens.

Resolution for a full
revision of Valuation
of the entire Union.

Resolved,—That an application be made to the Poor Law Commissioners to aid this Board in appointing three competent persons to act jointly in such revision, such appointment to be but for one year.

December 30, 1839.

The valuation of the Cork Union, under the Act of 1st and 2nd Vic., ch. 56, having been completed, and the rate-books having been prepared in conformity thereto,

Resolved,—That the same be certified to the commissioners, and entered on the minutes of the proceedings.

January 20, 1840.

Proposed and seconded,—That the valutors be required, with reference to the payment of their remuneration, to furnish the guardians with accounts, in the sections in which they worked, showing what portion of the sum of $2\frac{1}{2}d.$ per house, and $2l. 19s.$ per thousand acres, agreed to be paid, each section is entitled to, and that the same be examined by the clerk.

February 3, 1840.

Resolved,—That the valutors' accounts are passed for payment, as certified by our clerk; but that a declaration to the following effect be made by each valuator, as to their attendance on the revision, previous to their payment, viz.:—"I have attended the Board of Guardians on the revision of my valuation (*blank*) days, as charged in my prefixed account."

February 12, 1841.

Resolved,—That we consider that the valutors of the rateable property in this Union under the Poor Law, have performed their duty with integrity, ability, and fidelity, and that the secretary certify this resolution to any of the said valutors who may apply for the same.

February 17, 1840.

Proposed and seconded,—That Mr. William Travers, not being satisfied with the apportionment of remuneration for valuation allotted to him, be informed that the proper course is to embody his wishes in a memorial.

February 26, 1840.

Resolved unanimously,—That an application be made to the Poor Law Commissioners for an advance of the sum of 1,000*l.*, through the Exchequer Bill Loan Commissioners, in pursuance of the 89th section of the 1st and 2nd Vic., chap. 56, for the payment of the valutors in pursuance of their agreement and bonds, and for preparing the valuation and rate book: and that said sum will be repayable in five years by yearly instalments, and secured upon the rates of this Union, pursuant to the said clause.

March 16, 1840.

Resolved,—That two persons be appointed for the purpose of revising the valuation of the entire Union; and that an advertisement be inserted in the papers calling on fit and proper persons to offer themselves as candidates on Monday, the 6th of April next, each candidate stating the terms upon which he will undertake that duty.

March 23, 1840.

Notice by Thomas G. French, to be taken into consideration on next Monday, of the propriety of appointing one additional supervisor to the two already advertised for, making in the entire three persons for revising the entire valuation already made; and the propriety of excluding all the persons heretofore engaged in the valuation, and appointing persons not hitherto employed.

April 20, 1840.

Resolved,—That, with a view to the distinct and specific instruction of the persons who may be appointed to revise the valuation of this Union, Mr. Voules be requested to compose an instructional letter on the subject, comprising directions for every case which can possibly arise in the Union; and that, with a view to the right understanding of the subject, by the guardians as well as by the valutors, he be requested to lay such letter, when prepared, before this Board.

That, in the hope of obtaining as correct a valuation for this Union as possible, it is resolved, that three persons not heretofore employed shall be now chosen for re-valuing the entire property in all the electoral divisions of this Union.—Carried by the casting voice of the chairman.

That this Board, having regard to the previous expression of their opinion that the appointment of three permanent valutors is necessary to counteract the fluctuating value and condition of the large amount of property assessable in this Union, consider that the present is a fitting season at which to make such an appointment; they therefore resolve to invite the attention of three competent persons, to be appointed at a salary of 100*l.* a-year each for the first year, and the same sum for the future years jointly between the three, or 33*l.* 6*s.* 8*d.* to each, to go through the whole of the former valuation, to adjust and equalize the same, and to keep the same relatively fair, just, and equal; to hold the office during the pleasure of the guardians and the commissioners; and that the election do take place on Monday, the 4th day of May next; testimonials to be sent in the Thursday previous.

May 4, 1840.

Resolved,—That the resolutions respecting the revision of the valuation of the Union be taken into consideration on this day fortnight, with the view of fixing the remuneration to be allowed for such revision, and the number of persons to be employed therein.

August 17, 1840.

Resolved,—That one officer to revise the valuation of the Union be appointed; that he shall be a permanent officer for this purpose; and shall be paid a salary to be fixed at the next meeting.

Valuation completed and certified.

Resolution that Valutors performed their duty with integrity, ability, and fidelity.

Resolution for appointment of two revising Valutors.

Mr. Voules requested to prepare instructional letter for revising Valutors.

One revising officer to be appointed.

APPENDIX.

*Cork.*Extracts from
Minute Book.

Duties of Revisor.

August 31, 1840.

In pursuance of the resolution of last board-day, that a proper officer should be appointed to revise the valuation of the Union and for other duties, it was resolved that the following be defined as his duties:

1. To investigate all objections made by rate-payers to valuation of their own property.
2. To investigate all objections made by rate-payers in reference to the valuation of the property of other parties.
3. To revise the valuation of each district as the Board may direct.
4. To assist in making out the rate-books.
5. To fix a value on all new buildings as they become inhabited, and improvements and deteriorations in the property of the Union.
6. To attend at the trial of the appeals.
7. To attend at the board-room for the above purposes whenever the guardians shall direct.
8. To report on all those subjects to the Board from time to time, as occasion may arise.

And 16 candidates for the office of revisor of the Union having appeared, a poll took place, when there appeared for—

Mr. Timothy Lane	19 votes.
Edward Carroll	5
James Whirland	5
Daniel Daly	1
George F. Delany	1

Mr. Timothy Lane
appointed Revisor.

Resolved,—That Mr. Timothy Lane be and is hereby duly elected revisor of the valuation of the Cork Union.

September 21, 1840.

A letter from the Poor Law Commissioners, confirming the appointment of Mr. Timothy Lane as revisor, was read.

Committee of revision
appointed.

October 19, 1840.

Resolved,—That a committee of five be appointed to arrange and direct the manner in which the revision of the valuation of the Union shall be proceeded with, and that the revisor be directed to report from week to week to the committee the progress made in such revision, and that committee shall report each week to the Board.

The following gentlemen were appointed a committee: John M'Donnell, Robert A. Rogers, Edward England, Littleton Lyster, and William Fagan.

December 14, 1840.

Ordered,—That the clerk be requested to summon the gentlemen composing the Revision Committee to meet at 10 o'clock on every Thursday, such summonses to be issued weekly.

January 4, 1841.

Ordered,—That the revisor be directed, for the present, to attend to and investigate the complaints of parties making objections in the first instance.

January 25, 1841.

Ordered,—That the revising officer be directed to attend this Board on Monday next, and to be then prepared with all books and documents necessary for the information of the Board; and that on that day this Board do take into consideration all matters connected with the revision of the valuation of this Union.

Barrack canteens and
new houses to be
rated.

February 1, 1841.

Resolved,—That Mr. Lane at once proceed to bring into charge barrack canteens, which were omitted, and also bring into charge all new houses and buildings for the purposes of the next rate, and report next Monday.

March 22, 1841.

Amount at which Gas
Company to be rated.

Resolved,—That the amount to be charged as the valuation of the ground occupied by the Gas Company in the city of Cork division, in the rate-books now making out, be 750*l.* for 54,750 square feet of ground occupied by their pipes, as per return handed in by Bartholomew Gibbings, Esq.

Resolved,—That the following notice of the valuation be published in the newspapers preparatory to the striking of a rate:—

“ Notice that the Guardians intend to make a Rate.

“ Cork Union.

Notice of new valua-
tion being made.

“ I hereby give notice, that a new valuation of all the property situated within each of the electoral divisions of the above Union, and rateable to the relief of the poor under the provisions of 1st and 2nd Vic., chap. 56, has been completed, and that the guardians of the said Union intend to make a rate for the relief of the poor according to such valuation. And I further give notice, that the said new valuation is lodged and will lie at the Office of the Clerk of the Union, at the workhouse, from Wednesday, the 31st March instant, to Tuesday, the 20th day of April, inclusive, and will be shown by me there on any day, except Sunday, between ten o'clock in the forenoon and four o'clock in the afternoon.

“ Signed this 29th day of March, 1841,

“ R. ALLEN DEANE, Clerk to the Guardians.”

*Evidence.*Messrs. WILLIAM HALANAN, and JOHN AHERN, Valuators, *examined.*

Were appointed with Mr. John Haynes (who has since left Ireland) in June 1839, to value the Blarney, Inniscarra, Grenagh, Whitechurch, Carnavar, Rathcooney, and Kilquane electoral divisions of the Union of Cork.

Mr. Halanan had previously valued the parish of Ballenora in the south liberties of Cork, and some townlands in the county for the purposes of the county and city rates. Mr. Ahern is a farmer and lives within three miles of Cork. Mr. Haynes had been a tithe proctor for a considerable time.

Were furnished with the Commissioners' circulars on valuation and rating, and with the county cess applotment. They valued together. Used the county cess applotment only to ascertain areas. Could not rely on it as to value, from its incorrectness, some ploughlands being valued in it higher than others in which the lands were much better.

Neither inquired nor ascertained amount of rent.

Did not estimate the gross produce and reduce it by the outgoings of the tenant in order to ascertain the value, but formed their opinion at once of the net value. Adopted the same system in the villages as in the rural districts. Estimated local advantages and disadvantages from their own knowledge of the different localities.

Visited each tenement. The inquiries made by them on visiting each tenement were as to its boundaries and extent, and the names of the occupant and immediate landlord, which they ascertained either from the occupant himself or from his neighbours.

The test of value which they adopted was what, in their opinion, each tenement was worth to a solvent tenant, reserving reasonable remuneration for capital, time, and labour. The value was struck according to the prices of farming produce at the time of the valuation. Made no difference when there was a lease or when there was not. Put a higher value on small farms on which there were houses, than on large farms. Farms of 60 acres and upwards are most prevalent in the portion of the Union which they valued. The only instances in which they instituted a comparison between their valuation and the rent was with respect to three or four farms in the townlands of Lisard and Drumbee, the result of which was that the amount of the rent as stated to them by the tenants, was double the amount of such valuation. Valued houses and land separately when occupied together.

Allowed for repairs what would keep the house in the same state as they found it in. Made no allowance for insurance.

Supposed the tenant bound to manage the farm so as to deliver it up at the end of the year, and estimated the value by what would be given for it by a person bound by covenant to keep it in such condition. Made no allowance for any profit to be derived from the occupation. Made no reference to the value which the owner had put upon the tenement in the registry court.

The most usual mode of letting lands in this part of the Union is from year to year. Lord Middleton, who is the greatest landed proprietor, has not granted any leases since he came into possession of the estate, though a great portion of it has fallen out of lease. Mr. Jeffries of Blarney is in the habit of granting leases for a term of only five years; but Captain Rogers, Mrs. Puxley, Mr. Atkins, and Mr. Putland, who are owners of several townlands in this part of the Union, grant leases for three lives, or 31 years.

There is much competition for land in this Union. Made no allowance for the effects of such competition in raising the market price of land. Such competition has raised the market price above what a solvent tenant could afford to pay, reserving a reasonable remuneration for his time, labour, and capital. Considers one third of the produce to be such reasonable remuneration.

The valuation of this portion of the Union gave very general satisfaction to both landlords and tenants. There were no appeals lodged against it.

The disposition to lower the valuation is most prevalent. The supposed reasons of tenants for wishing to keep the value low is the expectation that the valuation will probably be taken by landlords as the criterion of the true value. The valuation is supposed to be below the rent.

Messrs. JOHN BARRY and DANIEL FOLEY, Valuators, *examined.*

Were appointed in June, 1839, with Mr. Nicholas White, who has since gone to reside in London, valuers of the rateable property within the wards of Glanmire, Mansion House, St. Finbarr's, Cornmarket, Bishop's-town, and Blackrock, being one half of the electoral division of the city of Cork.

Mr. Barry's qualification for the appointment was his having been a builder by profession, having always lived in the city, and having a property in houses in it; Mr. Foley's qualification was his having been an extensive manufacturer, and having built extensively in the city, of which he is a native. Mr. White was extensively engaged in agricultural business, and had acted as agent and overseer for several properties in the neighbourhood of the city.

Were furnished with the Commissioner's circular on valuation and rating, and with the county cess applotment for the city. Always valued together.

The only use made of the county cess applotment was to ascertain the extent of the different holdings. Did not rely on it as to value, in consequence of its being much lower, and struck on a different principle from the Poor Law valuation, a deduction of from 20 to 25 per cent. having been made in the county cess valuation of the city wards below the real value.

Always required to know the amount of the rent, but were unable in general to ascertain it correctly, the tenants in some instances refusing to state it at all, and in others understating

APPENDIX.

*Cork.**Evidence.*

Messrs. Halanan and Ahern, Valuators.

Qualifications of Valuators.

Documents furnished to Valuators.

Use made of them. County Cess Valuation inaccurate.

Did not ascertain Rent.

Did not estimate gross produce, in order to ascertain net value.

Inquiries made by valuers on visiting each tenement.

Test of value.

Value, how struck. Leases.

Large and small farms.

Only compared rent of three or four farms with valuation. Result of comparison.

Did not attend to the value which owner had put on tenements in Registry Court.

Usual mode of letting lands.

Competition for land.

Reasonable remuneration; one-third of produce.

Valuation satisfactory. No appeals.

Disposition to lower valuation.

Messrs. Barry and Foley, Valuators.

Appointment.

Qualifications.

Documents furnished.

County cess applotment only used to ascertain extent of holdings.

Not relied on as to value.

Valuators unable to ascertain rent.

APPENDIX.

Made no allowance for any profit to be derived from occupation.
No reference made to value set on tenements in Registry Court.
Valuation-books opened for inspection of rate-payers.

Proceedings adopted by guardians for revising valuation.

Little difference between first and second valuation.

Valuation satisfactory to rate-payers and landlords.

Prevalent grounds of value; excess of value.

Disposition to lower valuation.

Mr. Lane, revising valuator.

His qualifications.

Was furnished with rate-books.
Instructions of Board to revising valuator.
Valuation of rural districts has given satisfaction.
But in the city the contrary.

Valuation of newly erected buildings.
Test of value.
Three rates made since Union declared.
Two on original, and one on revised valuation.
Usual mode of letting lands.

Impossible to ascertain rents of 10% electors in this Union.

the amount, but in no instance did they make any memorandum in their field books of the amount.

Estimated local advantages and disadvantages from their own general knowledge of the city and liberties, and the value of houses and tenements in the different streets and districts. Visited each tenement. The inquiries made by them on visiting each tenement were as to the extent of the premises, the names of the real occupant, and of the landlord, the rent, and whether any and what fine had been paid or improvements made by the tenant.

Ascertained the name of real occupant, either from himself or by inquiring from his neighbours. The test of value which they adopted was not the rack-rent, but the fair rent which a solvent tenant could afford to pay, after deducting repairs, rates, and taxes. Made no difference when there was a lease.

Instituted a comparison between the value set by them upon each tenement, and the rent actually paid whenever they could ascertain it correctly, the result of which was, that their valuation was about 15 per cent. higher than the old county cess valuation, but that in general it was lower than the rent.

Estimated the value of each house by its state of repair and its locality. Made an allowance for such repairs as would keep the house in the state they found it. Did not calculate the amount of allowance for insurance. That was done by the guardians.

In estimating what a tenement would let for, did not make any allowance for any profit to be derived by the tenant from the occupation.

Made no inquiry whether the owner had registered out of the tenement, and in estimating the value made no reference whatever to the value which the owner had set upon it in the Registry Court.

Commenced the valuation on 3d June, and completed it on 20th October, 1839, when the valuation-books were left open for the inspection of the rate-payers for upwards of a month, during which the valuator attended the Board of Guardians which sat daily to hear objections against the valuation. After hearing the objections, and examining the objectors and the valuator, the Board of Guardians either dismissed the objection or directed the valuator to revisit the tenement and to reconsider their valuation, which the valuator accordingly did, and if they still retained their original opinion, the valuation was confirmed; the Board of Guardians in no instance taking upon themselves to alter the valuation without the valuator's consent.

There was very seldom any difference in value made between the first and last valuation, except in cases where the valuator had been misled in the first instance, by untrue representations as to the extent of the premises.

The rate-payers and landlords are in general content with the valuation.

The only appeal lodged against the valuation in the district which they valued was by the Gas Company for excessive valuation.

The prevalent ground of objection both by tenants and landlords was excessive valuation.

There were objections by a few persons on the ground of other properties being valued too low comparatively with theirs, but all these objections were settled satisfactorily by the guardians and valuator.

The disposition to lower the valuation is most prevalent. Had no opportunity of ascertaining the reasons of landlords for lowering the valuation. The supposed reason of tenants for wishing to lower the valuation is that it exceeded the county cess valuation.

MR. TIMOTHY LANE, Revising Valuator, *examined.*

Was appointed by the Board of Guardians on 31st August, 1840, at a salary of 120*l.* per annum, to revise the valuation which had been made of all the rateable property within the Union. Is also collector of grand jury cess within the liberties of the county of the city of Cork, and has been so since July, 1836, in which capacity he has had an opportunity of becoming acquainted with the value of property in Cork and its neighbourhood. Was furnished with no documents to assist him in the revision, except the rate-books, which had been prepared by the valuator. Was instructed by the Board to attend to any objections made to the valuation, and to visit the tenements of all parties complaining, for the purpose of revising the valuation already made. The valuation of the rural districts has given very general satisfaction, and he has only been called on in very few instances to revise it, but has been very frequently called on by parties in the city complaining of an excessive valuation.

In most of the places visited has left the value as it was, conceiving that there was no ground of complaint. In some instances, however, he has lowered the valuation, and in a very few instances increased it. It is also his duty to value all newly erected buildings, and to insert them in the rate-book. The test of value which he adopts is what a solvent tenant could fairly afford to pay for the premises. There have been three rates made in this Union since it was declared. The two first rates were made on the original valuation, but the last has been made pursuant to his revised valuation.

From his knowledge of the mode of letting lands in this part of the country, considers that there is a growing disinclination on the part of landlords to grant new leases on the expiration of the old ones, and believes that there is an anxiety on their part to let their lands from year to year on the English system. Has instituted no comparison between the rent and the valuation, as he considers it would be impossible to ascertain correctly the rents of the rate-payers within this Union.

CITY ELECTORS.—It has not been thought necessary to publish in detail the Returns of the Valuation, Acreage, &c. £10 Electors of the City of Cork, of which Classifications and Summaries appear in the Local Report. The originals have been deposited in the Irish office. The schedule, as prepared for the Commissioner, contained about 4000 names, and nearly half these were traced in the rate-books.

LIMERICK UNION.

APPENDIX.

Limerick.

Extracts from Minute Book of Board of Guardians.

2nd February, 1839.

A Committee of nine appointed to report to the general meeting, on the 20th instant, as to the best standard of poor-rate assessment.

20th February, 1839.

Resolved, That there appears to the Guardians to be no valuation of hereditaments now existing in the Union (with the exception of that in St. Michael's Parish) which can be made available for the purpose of estimating the net annual value of such hereditaments as are liable to be rated under the Poor Law Act; but that the tithe survey may be made useful in furnishing a basis for the valuation of the lands comprised in the Union.

That in the parish of St. Michael there exists a valuation which the Guardians conceive may without much difficulty be so corrected as to be made sufficient for the purposes of said Act.

10th April, 1839.

Clerk directed to advertise for proposals from competent persons for the valuation.

1st May, 1839.

Tenders read and considered.

Resolved, That Mr. Piers Creaghe's proposal for the valuation of the Union be agreed to, subject to the approbation of the Poor Law Commissioners; and that the following Guardians be appointed a present Committee to superintend such valuation, subject to occasional changes at the approval of the Board, for the valuation of the different localities.

For the City.—Messrs. Fisher, Shannon, Quinlan, Quin, and Wallace.

For the Country.—Messrs. Furnell, O'Grady, Barry, Potter, and Delmege.

15th May, 1839.

Letter read from the Secretary to the Poor Law Commissioners, approving of the appointment of Mr. Creaghe, but suggesting that he should be required to revise the tithe survey as he proceeded with the valuation.

17th June, 1839.

The valuator produced a written report of his proceedings in the District of Patrick's Well.

A letter from the Poor Law Commissioners being read, in which they desired that the property within the proposed wards in the Municipal Bill should be valued as quickly as possible.

Resolved, That Mr. Creaghe be directed to proceed accordingly with the valuation in the city of Limerick.

31st July, 1839.

Resolved, That on Wednesday, the 14th August, Mr. Creaghe do make a special report of his valuation in the Patrick's Well Electoral Division, and that the clerk do notify the same to the several members of the Valuation Committee.

14th August, 1839.

The examination of the valuation books in reference to the district of Patrick's Well was gone into, and various calculations made as to the proportion borne by Mr. Creaghe's standard of valuation to the ascertained amounts of rent, or to the sums actually paid for certain large properties in said district. For this purpose, four in number of those holdings were adopted by the Committee, viz., Tervoe, Cooper Hill, Elm Park, and Fort Etna; when, after a long investigation and a very general discussion of the subject, it appeared to be the opinion of the Committee and of the Board generally, that whether as regarded the net annual value in the first instance, or the incidental charges afterwards (particularly the charge of insurance), the valuator should amend his standard, in the former by adding 5s. per acre to his former estimate, and in the latter by assuming those charges rather in reference to such net annual value than to the full estimated value, which, as relates to the above-mentioned charge of insurance especially, he appears to have done.

The result of the above discussion led to the consideration of the best standard of valuation to be adopted in future; when it was proposed by Mr. Scanlan, and seconded by Mr. Unthank,—

That, as it is essential to make an uniform rate, our valuator is to value the land to what a solvent tenant would pay for it from year to year, taking into consideration the situation and convenience of the property.

The foregoing resolution appearing to be expressed in terms too general for the guidance of the valuator, it was

Resolved unanimously, that it is expedient that the valuator should approximate as closely as possible to the net annual value; but at the same time to be rather under than over the same in his valuation of the tenements within the Union.

28th August, 1839.—Present 13 Guardians.

Mr. Creaghe handed in his books to the Valuation Committee, who, on examining same, approved generally of the principle on which his valuation was then proceeding.

13th November, 1839.—Present 8 Guardians.

The valuator attended to report on the progress he had made in the valuation of the Union. Electoral Divisions then valued—Patrick's Well, Crecora, Fedamore, Ballybricken, Kil-murry, Caherconlish, Murroe, and Cappamore.

The valuator reported that he was then in the division of Abington, and that the rural districts of Castleconnell and Doon only remained to be valued at the Limerick side of the Union. The total number of statute acres valued he reported to be 68,684, and the number exceeding the return furnished to him he stated at 19,232 acres.

18th December, 1839.

The valuator having been called upon to give in a report of his valuation (as regarded the number of electoral divisions valued) handed the following statement to the clerk:—

Extracts from
Minute Book.

A new valuation of
the Union resolved
upon.

Advertisements for
a valuator.

Mr. Creaghe ap-
pointed valuator.
Valuation Com-
mittee.

Valuation of the
electoral division of
Patrick's Well

examined by the
Committee and
Board of Guardians,

and declared too
low.

Resolutions decla-
ratory of the
principle on which
the valuation
should be made.

The principle adopted by
the valuator approved of
by the Committee.

Valuator's report
of progress.

APPENDIX.

Limerick.

Extracts from
Minute Book.

Electoral divisions valued—eleven.

Total number of acres in same 91,292

Excess in the number of acres beyond that furnished to him . . . 28,135

22d January, 1840.

The valuator reported to the Board, that he had completed the valuation of the North Liberties, and of the electoral division of Kilfenaghta, and had nearly completed the South Liberties of Limerick.

5th February, 1840.

A letter from the valuator read, requesting to be allowed further time to complete the valuation of the Union. It was ordered that the Board of Guardians recommend to the Commissioners that the period for completing the valuation be extended to the 1st of June.

8th April, 1840.

Resolved, That it is the opinion of this Board that such portion of the valuation as is completed may be laid before the Board for inspection the next Board-day.

22d April, 1840.

A letter from Mr. Creaghe, stating that he had not yet completed the books ordered to be laid before the Board, having been read, it was

Valuator required to lay the valuation, so far as completed, before the Board. Resolved,—That it is the desire of the Board that Mr. Creaghe should complete some one or more divisions of the Union, and lay the valuation before them at the next Board-day. The Board request that Mr. Creaghe will not neglect to comply with this direction of the Board.

6th May, 1840.

The valuator attending with the required books, they were found to be not sufficiently prepared; and it was finally arranged that such portion of them as would be perfected should be laid before the Board on the 3d June.

3rd June, 1840. Present, 18 Guardians.

The valuation books were produced by Mr. Creaghe for the inspection of the Board; and, it appearing that those of several of the electoral divisions were finally completed, viz., Cre-cora, Fedamore, Caherconlish, Kilmurry, Murroe, Cappamore, St. Mary's parish, Limerick, and part of St. Michael's, it was

Resolved unanimously,—That such of the valuation books as were finished should be sent to the Vice-Chairman for the inspection of the Guardians, and that, according as each division or ward was completed, notice should be given by the clerk to the Guardians of such division or ward; and that the period for completing the valuation should be further extended to the 1st of July.

18th June, 1840.

The books of the following districts or wards, as completed by the valuator, were laid on the table, and afterwards forwarded to the office of the Vice-Chairman, for the inspection of the Guardians, viz., Ballybricken, Abington, Patrick's Well, Thomond Gate, and St. John's, making a total of 12 books then completed.

24th June, 1840.

The completed valuation books of St. Michael's, No. 1, William-street Ward, and Patrick-street Ward, Richmond-place Ward, and Glentworth-street Ward, were laid on the table.

1st July, 1840.

A further period, viz., to the 1st August, granted to Mr. Creaghe for completing the valuation; and in reference to a former vote of the Board, that the completed valuation books should be deposited at the office of the Vice-Chairman, it was

Resolved,—That the valuation books then completed should be left at Mr. Creaghe's residence for the Guardians' inspection, as a competent person would attend to explain them.

5th August, 1840.

Further extension to the 12th August of the valuator's time for completing the valuation.

12th August, 1840. Present, 19 Guardians.

Resolved, That the valuation of all property in the Union rateable to the relief of the poor be this day lodged at the house of Mr. Piers Creaghe, Hartstonge Street, and remain open for inspection by the rate-payers for the time allowed by law, &c., and that the Notice thereof required by the Statute be forthwith given to all persons interested.

5th September, 1840. Present, 22 Guardians.

The minutes of the Board having been read, 16 objections to the valuation were laid before the Board, 9 of which were confirmed by the Guardians, after which the valuation books of the Union, which were opened for inspection during 21 days, pursuant to the resolution of the 12th August, were ordered to be brought down to the Board, the period for closing the inspection having arrived, and duly signed by the majority of the Guardians present, and countersigned by the clerk.

The first rate was then declared at 5d. in the pound; and it was proposed by Mr. Roche, M.P., seconded by Mr. Alton, and

Unanimously resolved, That we consider our valuator, Mr. Piers Creaghe, entitled to our best acknowledgments for the ability and accuracy with which he has executed the arduous task committed to him, of preparing a valuation of the several rateable properties or hereditaments within the Limerick Union, an ability and accuracy so forcibly and satisfactorily demonstrated by the exceedingly few and trivial objections made to his valuation by the numerous persons interested, the small amount of 17l. 2s. 2d. of the large total of 240,106l. 17s. 10d. being alone (of those few and trivial objections) confirmed by the Guardians this day.

Ordered, That copies of the resolutions passed that day should be forwarded to the Poor Law Commissioners, and to his Excellency the Lord Lieutenant.

Time for completing the
valuation extended to
the 1st July, 1840.Time for completing the
valuation extended to
the 1st August, 1840.Valuation books ordered
to be left at the valuator's
residence for inspection
by the Guardians.Time for completing the
valuation extended to
the 12th August, 1840.
The valuation of the
entire Union ordered to
be lodged at the valuator's
house for inspection by
the rate-payers, pursuant
to the statute.Sixteen objections taken
to the valuation;
nine of them allowed.

Inspection closed;

and first rate
struck at 5d. in
the pound.
Vote of thanks to
Mr. Creaghe.

APPENDIX.

*Evidence.**Limerick.*Mr. PIERS CREAGHE, Valuator of the Union, *examined.**Evidence.*

Has been for many years an architect and civil engineer. Has resided in Limerick for six years and upwards, and previously for about nine years in the county Clare. Is not by profession a valuator of land, but frequently valued land for private persons and purposes before he was appointed valuator of the Union. Was highly recommended to the Board of Guardians by several gentlemen of property and influence in the neighbourhood,—most of them of the county Clare,—who signed a written testimonial in his favour. Was appointed on the 1st of May, 1839, and in the course of the same month commenced his valuation, beginning with the electoral division of Patrick's Well. The only documents furnished to him, for the purpose of assisting him in the valuation, were some tithe surveys and valuations. He made no use of these, finding, after a short examination, that they were likely only to mislead him. There was no uniformity in the valuation made by them of different parishes. Even as to the relative value of the different lands in a single parish, he does not think that any one of them furnished to him was correct. He had particular local means of information in the Patrick's Well District, being intimately acquainted with many of the resident proprietors, and well acquainted already with the nature of the lands there, some of which are among the best, and some among the worst (except the mountain districts), in the whole Union. He visited every tenement himself, and ascertained the name of the occupier, in general either from the returns given him by the landlords or their agents, or (which was oftener the case) from the bailiff or rent-warner who is usually to be met with on every estate, and in a few instances, from the occupiers and the neighbours. He did not at first make any inquiries as to the rents paid by the occupiers; but, after he had been proceeding with his valuation for four or five months, he was directed by the Assistant-Commissioner, Mr. Hawley, to ascertain the rent wherever he found it possible to do so; and accordingly, from that time forward, did ascertain it as far as he could. For information as to the rents of the occupiers, he in general applied to the landlords or their agents, sometimes to the tenants. There was at first some unwillingness on the part both of landlords and tenants to give information as to the rents. In the end, however, he procured some information as to the rent paid for every holding in the Union. The rents taken down in his field-books were not always those which he finally ascertained or had reason to believe that the tenants paid. He found that in many instances he had been at first misinformed about the rent. The landlord and tenant's proportions of the rate as calculated in the rate books, are founded on the latest and best information he could get down to the time he made that calculation; in many instances the rents on which he made that calculation were not the same as he had taken down in his field-books: believes he may have been in many cases misinformed to the end. In some instances, where there are leases, the full rent reserved is not in fact paid, but the landlord goes on from year to year accepting a part instead of the whole; sometimes as much each year as he can get the tenant to pay him; sometimes a fixed abated rent instead of the full rent, reserving to himself the right of demanding the full rent in subsequent years. Thinks that in the case of such an abated rent, where the abatement was of a fixed amount, the landlord or his agent would, generally speaking, mention that as the rent, whereas the tenant would be likely, in most cases of the kind, to mention the full rent. He found this to be the case where he had opportunities of comparing the statements of both. He was never guided in his valuation by the amount of the rent paid by the occupier. Thinks the rent is no test of the value of lands. Thinks that rents are calculated to mislead a valuator, and therefore, to guard against being misled by the rent, he in general, indeed in almost all cases, valued the tenement first, and then, and not till then, inquired about the rent. He did not in any case estimate the produce of the land: does not see how by doing so he could arrive at a satisfactory result as to the value of the land.

In valuing land, he ascertained in each case, as accurately as he could, the quantity of land in the occupation of the tenant; and after he had satisfied himself as to the nature and quality of the land in its actual state, he supposed a person willing to take it as tenant from year to year, and undertaking to keep it in the state it was then in, and to pay all taxes upon it except tithe, and considered at what rent it ought to be let to such a person,—that is, what was the fair rent for him to pay. The fair rent in such a case was what he set down as the net annual value. By a "fair" rent he means a rent which leaves the tenant enough of the produce of the land for the comfortable subsistence of himself and his family. Thinks that ten acres of land, of the average quality of land in the county of Limerick, if let at a rent of the amount of the net annual value he would set upon it, ought to enable the tenant to have enough of potatoes and milk through the year, with a pig to kill for bacon. The butter would be required to pay the rent. Does not think a rent would be fair which would not enable a tenant paying it for that much land to derive from his occupation at least such a subsistence as he has described. It is more than many occupiers of thirty acres within this Union are able to get out of the land,—so high are the rents they pay for it. Thinks it would be monstrous to make the rack-rent a test of the value of land, or in any manner to measure the value by the rent actually paid. It frequently happens that where the land in two adjoining farms is of the same intrinsic value, a high rent per acre is paid for one of them, and a low, or a comparatively low, rent for the other. Does not think the utmost that can be got from a solvent tenant is or ought to be made the net annual value. The competition for land is so great, at least in this Union, that the rent that can be got is far

Mr. Creaghe, Valuator.
His qualifications.How recommended to the Board.
Date of appointment.

Documents with which he was furnished.

His reasons for beginning with Patrick's Well.

He visited every tenement.
His course of inquiry.
As to the names of the occupiers.

As to the rent.

Directed by Assistant Commissioner to ascertain the rent.

His observations on the information procured by him as to the rents.

Does not think the actual rent any test of the value of land.

He generally valued the land before he inquired about the rent.

He did not estimate the produce of the land.

Test of value.

Fair rent

Thinks the utmost that can be got from a solvent tenant no criterion of the value of land.

APPENDIX.

Limerick.Evidence.

No distinction made between large and small farms—and why.

Outlay of capital in large farms, time and labour in small farms, entitled to compensation.

Made no distinction on account of leases.

Valuation of houses and land where occupied together.

Valuation of houses.

Previous survey of St. Michael's parish, Limerick.

The repairs allowed for in the valuation.

Made no account of surplus profit.

Made no reference to the registry.

County cess.

Tithe.

The resolution of 14th August, 1839.

There has been no appeal.

Both landlords and tenants, generally speaking, satisfied with the valuation. Both classes in favour of a low valuation.

higher than what he considers a fair rent. Understands by "a solvent tenant" a tenant able to pay his rent, and to keep paying it. Does not mean a person having capital. What a tenant can pay, reserving reasonable compensation for capital, time, and labour, is in his opinion the fair rent. He applied the same principle and the same standard without distinction to small farms and to large ones; and when the quality and condition of the land was alike in both, fixed upon the same rent per acre as the fair rent for each, and therefore as its net annual value. Did so because he considered the tenant entitled to remuneration for his capital, as well as for his time and labour; and a large farm requires a proportionably larger capital for its proper management. Means, in saying this, the capital necessary to keep it in its actual state, not what might advantageously be laid out in improving it. The actual state of the land was what in his opinion he had to consider. It was in that state that the supposed tenant was to keep it; and where, from the size of the farm, that could not be done without capital, he thought the tenant entitled to be compensated for the outlay of that capital. With regard to the small farms which did not require capital, the tenant's time and labour were all that was to be taken into account. Thinks the fair rent for a small farm not requiring capital, that is, a rent which would leave the tenant a reasonable compensation for his time and labour, is also a fair rent per acre for a large farm of land of the same quality and actual condition,—that it leaves the tenant of the latter enough to remunerate him for his capital as well as for his time and labour. Does not think it leaves him more than enough for that purpose. He did not make any distinction between the cases in which there were leases and those in which there were not, as he uniformly, without regard to the manner in which the tenant in fact held, supposed a letting from year to year of the land he was valuing. For this reason he did not make such inquiries as to the existence of leases as would enable him to say whether land in the Union is usually held from year to year or under lease. Thinks both modes of letting so frequent that neither can be properly said to be the usual mode of letting. Whenever he found a house and land occupied together, he valued them separately. He supposed a separate letting of each from year to year, and his net annual value, as it appears in the rate-book, of the two together is the sum of the separate net annual values of both so ascertained, and then added together. In valuing a house, he always supposed the tenant to insure it, except in the case of the cabins and cottages in the country, which are never insured. Whether the house was in the city or country, he determined its value by its extent, and the advantages or disadvantages of its situation. The latter were of course very different in the case of a country house and a town house.

He began his valuation of the city of Limerick with the parish of St. Michael, in which a survey and valuation had already been made by the Commissioners, appointed under a local act, for cleansing, lighting, and watching the parish. He examined that valuation, but did not in any instance adopt it. Does not think that it gave the true relative value of the tenements within the parish. Had to ascertain the parochial taxes of St. Michael's by means of that survey, but did not use it for any other purpose. The repairs for which he allowed were such as he thought necessary to preserve the tenement in the state in which he saw it externally. He did not consider the ability of the tenant to answer in damages for neglecting to make such repairs; he considered him as having to make them, and as making them; also as paying all taxes except (where tithes were payable) tithes, and then determined, according to the best of his judgment, what over and above the taxes and the expense of such repairs, it was reasonable that he should have to pay in the shape of rent. Did not enter into any calculation of any profit to be made by the tenant over and above the remuneration for his capital, time, and labour; did not allow for any such profit. Some persons might think the rent he considered fair left the tenant some such profit, but to think so they must consider the tenant entitled to nothing but bare subsistence, just enough to enable himself and his family to live. Did not consider the tenant bound to manage the farm as if he were to deliver it up at the end of the year. Lands let from year to year are not usually held or managed by the tenant as if he were not to expect to hold beyond the year; but the interest of a tenant from year to year is so far precarious that a person would not pay the same rent for land, which he was taking from year to year, as he might be induced to give if he got a lease of it. He took this into account in estimating the fair rent on a letting from year to year of the land he was valuing. He never considered or inquired, for the purposes of his valuation, whether the person whose tenement he was valuing had a registered freehold or not. The average amount for the last seven years of the county Limerick cess is 2s. 7d., and of the county Clare cess, 4s. 10d. per acre; 10s. 6d. is the average for the same period of the city of Limerick cess. He cannot say what the average of the tithes in any part of the Union has been. He applied the same principle and standard all through in his valuation. Did not alter his mode or rate of valuation in consequence of the resolution passed at the meeting of the 14th of August, 1839. There has been no revision of the valuation, nor any alteration made in it, except the reduction (to the extent of about 17l.) mentioned in the resolution of the 5th of September, 1840, approving of the valuation, and thanking him for the manner in which he had conducted it. There has not been any appeal, or any notice of appeal, given. Believes that both landlords and tenants are satisfied with the valuation. Thinks the landlords as well as the tenants are in favour, generally speaking, of a low valuation.

Will not undertake to account for this: it is said by some to originate in a dread, on the part of the landlords, of an income-tax, of which, they apprehend, the valuation may be made the basis. Thinks that the resident landlords, who are very numerous in this Union, may be influenced by a wish to have their demesne and other lands in their own occupation valued low. The general disposition of occupiers and landlords throughout the Union is certainly to

leave his valuation as it is. Believes a few persons are disposed to think his valuation rather low; but he does not think he could have made it higher, following the principle and applying the standard he has described. The general, and, he believes, almost universal, feeling is, that it is quite high enough. Those who applied to him from time to time, while his valuation was under consideration, to have their tenements valued lower, did so on the ground of those tenements being, as they alleged, valued too high, without regard to any comparison between the valuation upon them and upon their neighbours. He has no doubt that the acreable contents of the several townlands and electoral divisions of the Union, as stated in the valuation books, were ascertained by him as accurately as they could be without an actual survey. He used his best exertions to learn the exact quantity or area in every instance, and took care to understate rather than overstate it. The Commissioners directed that no actual survey should be made for the purposes of the valuation except in extreme cases, as the Ordnance Survey, which would answer all purposes, would be published so soon, and it was therefore advisable to save the expense of a separate survey.

JAMES ALTON, Esq., Elected Guardian, *examined*.

Is one of the Guardians elected for Richmond Place Ward, in the Limerick Electoral Division. Was Guardian for the same ward last year (1840, 1841). Is owner, in fee-simple, of 550 acres in the south liberties of Limerick: has about 40 acres in his own occupation. As a proprietor, and as one of the Guardians of the Union, has given a great deal of consideration to the valuation: he thinks it very fair indeed. It has met, to his knowledge, with the decided approbation of all persons and parties, with one solitary exception: he alludes to Mr. Powell, who objects to it as being too low. Thinks that the rents paid by the occupiers in the Union generally, where they are fair, do not exceed, except by a small sum, the net annual value fixed by Mr. Creaghe, which, in some instances, the rent does not exceed at all. Thinks that where the highest rents that can be got are reserved, that only three-fourths of the amount are usually paid. Thinks about 30s. the English acre is the maximum in this Union of what he would consider the fair rent: he considers it would vary even in the case of what are considered good lands, from 1*l*. to 1*l*. 10s. per English acre. As to the rents he receives out of the tenements in the Union held under him, he would say that he receives upon the whole about 3s. per English acre more than the net annual value of those tenements as fixed by Mr. Creaghe. Considers the valuation of those tenements fair. Thinks the valuation, if at all different from what he would be himself disposed to make it, rather high. Thinks that it would require at least 15 English acres of the average good land of the Union, if set at 25s. per acre, to provide the tenant and his family with the fair means of subsistence, not allowing him any comfort in addition: this would allow him milk with his potatoes, and enable him to feed two or three pigs. He would say that a tenant so circumstanced, in the neighbourhood of Limerick, would be considered amongst others of his class as very comfortable. In general they cannot have milk: scarcely one in ten of the occupiers of small holdings in the Union has milk at any season of the year; they can hardly be said to know what milk is.

APPENDIX.

WATERFORD UNION.

Extracts from Minute-Book of Board of Guardians.

Union declared 20th April, 1839; 11 ex-officio, 34 elected Guardians. The first meeting of the Board of Guardians was held at the Town-hall on the 8th day of June, 1839, Samuel King, Esq., chairman *pro tem*. Present 10 ex-officio, 31 elected Guardians, and the Assistant Poor Law Commissioner.

Moved by Thomas Murphy, Esq., seconded by Thomas Gamble, Esq., That a committee be appointed to inquire into the valuations and surveys of the Union, and report thereon. Motion carried.

The committee named consisted of 3 Guardians for the city, and 12 Guardians for the rural portion.

At an extraordinary meeting of the Board of Guardians, held in the Town-hall, June 22nd, 1839, Henry Alcock in the chair. Present 5 ex-officio, 19 elected Guardians, and the Assistant Poor Law Commissioner.

Moved by Alderman Milward, and seconded by John Hacket, Esq., That a committee of 9 Guardians be appointed, to be called the Valuation Committee, with power to supply omissions in their number, and to associate with them Guardians in turn for each electoral division, to superintend the progress of the valuation of the Union; such committee to be open to Guardians and to hold meetings once a fortnight, and to report to the Board when the valuation for each electoral division shall have been completed, and that the following gentlemen do form that committee:—

<i>City of Waterford.</i>		<i>County Waterford.</i>	<i>County Kilkenny.</i>
Alderman Harris,		Wm. Christmas,	John H. Jones,
John Power,		Maurice Ronayne,	John Hacket,
Wm. Aylward.		William Morris.	John Carrol.

Moved by George Meara, Esq., seconded by John Power, Esq., That the chairman be directed to advertise for valuers in the three Waterford newspapers, and the two Kilkenny papers, Evening Mail and Post, once in each. Carried.

At a meeting of the Board of Guardians, held in the Town-hall, July 1st, 1839, Henry Alcock chairman. Present 9 ex-officio, 31 elected Guardians, and the Assistant Poor Law Commissioner.

After certain proceedings relative to the appointment of a secretary were concluded, Moved by Samuel King, Esq., and seconded by Maurice Ronayne, Esq., That two valuers be appointed for the rural portion of the Union. Carried.

Moved by Thomas Meagher, Esq., seconded by John Power, Esq., That 2*l.* 2*s.* be paid the valuers for the valuation of every 1000 statute acres (houses included gratis) in the Union, and that they give security to complete the same within 12 months from the time of getting notice from the Board. Carried.

The Board having proceeded to ballot, the numbers were, for Mr. Gamble 24, Mr. Lymberly 20, Mr. Barron 19. Mr. Gamble and Mr. Lymberly were appointed valuers.

It was also moved and carried that an advertisement be inserted once in each of the Waterford papers, prolonging the time for valuing all rateable property in the city, exclusive of land in the liberty, to the next meeting. It was also moved that those meetings be open to the public, and that the chairman should convey to the Commissioners the wishes of the Board on the subject.

At a meeting of the Board of Guardians, held in the Town-hall, 13th July, 1839, Henry Alcock, Esq., in the chair. Present 4 ex-officio, 19 elected Guardians.

It was moved and carried that 500*l.* be the security for the valuers. Moved by John Power, Esq., seconded by John Barden, Esq., That two valuers be appointed for the city. Put and carried.

Moved by William Morris, Esq., seconded by J. Harris, Esq., That 8*l.* per house as a joint remuneration be given to the valuers of the city, and that 200*l.* be the security. The valuation to be completed on or before 25th March next. Motion carried.

The Board having proceeded to ballot, the numbers were, for Mr. Hearne 23, Mr. Galway 15, Mr. Hudson 13, Mr. Lumley 1. Mr. Hearne and Mr. Galway were appointed city valuers.

At a meeting of the Board of Guardians, held in the Town-hall, on Saturday, July 20th, 1839, Henry Alcock, Esq., in the chair. Present 5 ex-officio, 17 elected Guardians, and Assistant Poor Law Commissioner.

The minutes of the last meeting were read. The correspondence of the Commissioner on the irregularity and illegality of making appointments by ballot was read, and after some other motions were disposed of.

Moved by Thomas Meagher, Esq. and seconded by Thomas Murphy, Esq., That the following notice be published in each of the Waterford newspapers, on Monday in the Mirror; Wednesday in the Mail; and Saturday in the Chronicle. Carried *nem. con.*

NOTICE.—POOR LAW VALUATION.

"The Commissioners having by letters dated the 11th instant declined to confirm the appointment of valuers for the Waterford Union, on the ground of such appointment having been made by ballot, and they the Commissioners having informed the Board of Guardians that the terms agreed on in other Unions were much lower, Resolved, that the Board of Guardians of the Waterford Union do proceed to appoint valuers for the said Union on Tuesday, the 30th July, at 12 o'clock, in the Town-hall. All persons desirous of becoming valuers are hereby given notice to send in Sealed Proposals to the clerk of the Waterford Union, specifying the rate per Irish or statute acre, or per 1000 Irish or statute acres, including all rateable property in the rural portion of said Union, and also specifying the rate per house in the city of Waterford at which the parties are willing to undertake the same."

At a meeting of the Board of Guardians, held in the Town-hall, July 30th, 1839, H. Alcock Esq., in the chair.

The applications and testimonials of the several candidates for the valuatorship of the rural portion of the Union, also for the city, were read in the presence of the Assistant Commissioner, J. O'Donohue, Esq.

Moved by John Power O'Shea, Esq., seconded by Samuel King, Esq., That this Board consent to give a joint remuneration to two valuers, 2*l.* per 1000 statute acres. Carried, T. Meagher, Esq., dissenting.

Moved by John Power O'Shea, Esq., seconded by Henry Law, Esq., That the sum of 5*s.* per 1000 statute acres be paid the valuers of the Union for reporting to the Guardians or their clerk, any change which shall have taken place in the parcels of land held by one or more occupiers in said Union, and a statement of all the particulars contained in said valuation, and so in proportion for any number of acres. Carried, Thomas Dillon, Esq., dissenting.

It was also resolved, That 10*s.* a-day be allowed the valuers for attending at Sessions in cases of appeal if the valuation be confirmed, and 5*s.* a-day if the valuation be quashed or amended. Carried as an amendment to a motion for allowing a larger sum.

County Valuers
appointed.

The several candidates for the valuatorship of the rural portion of the district were called, when the chairman informed them of the resolution first passed. Seven candidates appeared, and after the votes were taken a motion was put and carried, That Messrs. Lymberry and Barron be appointed, Dr. Poole dissenting.

Moved by William Morris, Esq., seconded by Thomas Dillon, Esq., That the two valuers for the city be paid 6*d.* per house and premises. Carried, J. Power, Esq., dissenting.

City Valuers re-
appointed.

Moved by Dr. Poole, seconded by John Hacket, Esq., That Thomas M. Galway and Thomas Hearne be re-appointed valuers. Unanimously carried.

A letter was read from Mr. Mortimer respecting copies of part of the county Waterford valuation.

A motion was carried unanimously, That the valuers for the city be allowed 5*s.* a-day for attending the Sessions in cases of appeal if the valuation be affirmed; 2*s.* 6*d.* per day if the rate be quashed.

At a meeting of the Board of Guardians of the Waterford Union, held August 6th, 1839, Henry Alcock, Esq., chairman. Present 6 ex officio, 14 elected Guardians, and the Assistant Commissioner.

The county and city valuers being in attendance with their respective securities—

Moved by William Aylward, Esq., seconded by John Hacket, Esq., That the Board do approve of the following persons as securities for the under-mentioned valuers.

Sureties for Valua-
tors.

[Here follow the names of two sureties for each county valuator, in 300*l.*, and of two sureties for each city valuator in 200*l.* each.] Carried unanimously.

The several bonds and contracts were accordingly executed by the parties.

Moved by George Meara, Esq., seconded by William Morris, Esq., That the blanks in the bond and contract for the period at which the city valuation shall have been completed be filled up with the words "five calendar months." Carried unanimously.

Moved by John H. Jones, Esq., seconded by Thomas Murphy, Esq., That the blank in the second covenant of the contract entered into by the city valuers be filled up at the rate of 4*d.* per house and premises. Carried unanimously.

Moved by William Aylward, Esq., seconded by John W. Maher, Esq., That our clerk be directed to write immediately to the Commissioners for all papers necessary to effect the valuation of the Union. Carried unanimously.

At a meeting of the Board of Guardians, held at the Town-hall, August 19th, 1839, Henry Alcock, Esq., chairman. Present 4 ex-officio, 11 elected Guardians, and the Assistant Commissioner.

Valuers in-
structed by Poor
Law Commis-
sioner.

The county valuers having complained of the difficulty of ascertaining the number of acres held by the several individuals in the Union, were called in, when the Assistant Commissioner (as far as in him lay) gave them instructions as to the means by which they might obtain the necessary information.

At an extraordinary meeting of the Board of Guardians, held in the Town-hall, August 29th, 1839, for the purpose of taking into consideration the plan of the Union workhouse, Henry Alcock, Esq., chairman. 7 ex-officio, 10 elected Guardians.

The city valuers being in attendance were called in, when their books were examined by the chairman and others; approved of; and some motions with respect to the plan of the workhouse were considered and disposed of.

At a meeting of the Board of Guardians, held in the Town-hall, September 16th, 1839, Henry Alcock, Esq., chairman. The Assistant Commissioner being present, and 2 ex-officio and 12 elected guardians.

The city valuers were called in: On the examination of their books a question was raised, viz., who is to be set down in the schedule as the occupier when there are several tenants or room-keepers in the house. In elucidation of the point the Assistant Commissioner read a letter from the Commissioners addressed to the Belfast Union, wherein it was stated that the owner's name should be entered.

Mr. Barron, one of the valuers of the rural portion of the Union, was then called, and his book examined and approved of.

It was then ordered, That the county and city valuers meet and arrange their respective bounds.

At a meeting of the Board of Guardians, held in the Town-hall, on the 14th October, 1839, William Morris in the chair. Present 4 ex-officio, 10 elected Guardians.

A committee of valuation was fixed to meet on Saturday, 26th instant.

At a meeting of the Board of Guardians, held in the Town-hall, on Monday, 27th January, 1840, Henry Alcock chairman. Present 3 ex-officio, 8 elected Guardians.

It was moved by Michael Dobbyn, and seconded by John Bogan, and resolved, That the sum of 10*l.* 19*s.* 6*d.* be paid to R. Mortimer for furnishing extracts from the county valuation for the valuation as per account furnished.

Notice of motion for adding to the Valuation Committee was given by Wm. Aylward.

At the desire of the Assistant Commissioner the city valuers attended. A question having been raised as to the filling up the column in the sheets headed "Landlord's Rate," where the valuers could not learn the reserved rent, the Commissioner informed the valuers that in such cases they should assume that the estimated value was the rent paid.

At a meeting of the Board of Guardians, held at the Town-hall, February 24th, 1840, Henry Alcock in the chair. Present, 3 ex-officio, 14 elected Guardians, and the Assistant Commissioner.

Moved by William Aylward, seconded by William Morris, That Thomas Murphy, D. Carrigan, John Barden, Michael Dobbyn, John Bogan, Thomas Gamble, and Henry Langley, be members of the Valuation Committee. Carried *nem. con.*

At a meeting of the Board of Guardians, held at the Town-hall, on Monday, 23rd March, 1840, Henry Alcock chairman. Present, 6 ex-officio, 14 elected Guardians, and the Assistant Commissioner.

Thomas Galway, one of the valuers of the city, having claimed payment for the valuation thereof, Mr. O'Donoghue, on inspecting the sheets, declared them unfit to be used as public documents, and ordered a fair copy to be written out.

Moved by William Aylward, seconded by John Power, and resolved, *nem. con.*, That the sheets now exhibited are not duly completed according to the valuator's contract and bond.

Moved by John Power, seconded by Matthew Poole, and resolved, *nem. con.*, That the rural valuator be directed to finish the valuation of that part of the city which comes under the contract before the next meeting of Guardians, which will be held on Thursday, 16th of April, 1840, and that the clerk send a copy of this resolution to both the valuers.

It was also moved, seconded, and carried, That the sum of 50*l.* be paid on account to the city valuers.

At a meeting of the Board of Guardians, held at the Town-hall, 16th of April, 1840, Henry Alcock chairman. Present 3 ex-officio, and 8 elected Guardians, and the Assistant Commissioner.

The county valuers having informed the Board that they could not furnish them with the valuation of that part of the city which comes under their contract, as required by a resolution adopted at the last meeting, owing to the great difficulty of ascertaining the acreage of Mr. Lane Fox's property—it was moved by John Bogan, and seconded by John Hacket, That in order to prevent the necessity of appeal against the rate, our chairman be requested to apply to Mr. D. Stewart, the agent of Mr. Lane Fox, to furnish to the valuers such information respecting Mr. Fox's property in this Union as may be necessary to enable them to value same. Carried *nem. con.*

At a meeting of the Board, held 15th May, 1840, John Barden in the chair. Present, 1 ex-officio, 6 elected Guardians, and the Assistant Commissioner.

Mr. D. Stewart's reply to the president's letter, pursuant to a resolution adopted at the last Board meeting, having been read, it was seconded and carried, That it be inserted on the minutes.

Moved by Mr. Aylward, seconded by Henry Alcock, and resolved, That a difference of opinion having arisen on this Board as to the mode of valuing young plantations, such not being for ornamental purposes, the opinion of the Commissioners be taken, as to whether such plantations are to be valued according to their agricultural capabilities, or in their actual state of plantations; and that our clerk be directed to transmit a copy of this resolution to the Commissioners.

At a meeting of the Board of Guardians, held in the Town-hall, 12th January, 1840, William Morris chairman. Present 3 ex-officio and 11 elected Guardians.

After some conversation relative to the instructions contained in the Commissioners' letters, received 19th May last, respecting the mode of valuing young plantations, it was moved and

Tolls on shipping.

carried, That the communications received from the Commissioners relative to young plantations be handed to the Valuation Committee, for the guidance of the valutors of such property. Extracts from Minute-book. Carried *nem. con.*

The question of the liability of the Harbour Commissioners to be rated in respect of the tolls on shipping having been moved, the Assistant Commissioner intimated to the Board, that in his opinion such tolls were not rateable, as being collected for public purposes.

Thomas Galway, one of the city valutors, whose letter of application had been previously read, having been called in, was informed by the Board that they could not entertain the subject of his communication, viz., payment for the duty of valuator, now stated to have been completed, until the Committee of Valuation had reported thereon.

At a meeting of the Board of Guardians, held on Friday, 7th August, 1840, Samuel King in the chair. Present 4 ex-officio and 12 elected Guardians.

It was moved by John Hacket, and seconded by Henry Alcock, That the city valutors be paid the sum of 50*l.* on account. Carried *nem. con.*

The valutors of the rural portion of the Union having informed the Board that they were unable to ascertain the net yearly value of the Knockmahon mines,—

Knockmahon
mines.

It was moved and carried, That the clerk be directed to write to the Poor Law Commissioners, to ascertain how the mines of Knockmahon were to be valued.

At a meeting of the Board of Guardians, held at the Town-hall, on Friday, 4th September, 1840, Henry Alcock chairman. Present 5 ex-officio, 11 elected Guardians, and the Assistant Commissioner.

A copy of a resolution, adopted at a meeting of the Valuation Committee, held on the 8th ultimo, was laid before the Board, to the effect, that as the rural Valutors had not completed their duties within the time specified in their contract, no subsequent acts of the committee should prejudice the legal rights of the Board of Guardians.

Question as to time
for declaring rate.

At an extraordinary meeting of the Board of Guardians, held at the Town-hall, on Tuesday, 22nd September, 1840, Sir Benjamin Morris, V. C., in the chair. Present 1 ex-officio and 6 elected Guardians.

Moved and carried, that the clerk inquire from the Commissioners, whether the Guardians, immediately after the completion of the valuations, and the notice of them, and plan for submitting such valuations to the inspection of the public is given, are competent to declare a rate; or whether the declaring of such rate must abide the expiration of the time for which such valuation is submitted to the consideration of the public—being for the period of 21 days.

At an adjourned meeting of the Board of Guardians, held at the Town-hall, on Friday 25th September, 1840, Sir Benjamin Morris, V. C., in the chair. Present 2 ex-officio and 10 elected Guardians.

The minutes of the last day's meeting, and the communications of the Commissioners, having been read, the chairman of the Valuation Committee handed in the Report of the completion of the valuation, which the chairman read for the Board.

Moved by William Aylward, seconded by John Hacket, and resolved unanimously, That the Report of the committee now read be entered on the minutes.

Valuation com-
pleted.

REPORT.—The Committee of Valuation take leave to report to the Board of Guardians that the valuation of this Union is complete, and fit for public inspection.

Waterford, September 25th, 1840.

(Signed)

WILLIAM MORRIS, Chairman.

Valuation books
opened for inspec-
tion.

Moved by William Aylward, and seconded by Michael Dobbyn, and resolved unanimously, the Committee of Valuation having reported that the valuation of this Union is completed, and fit for public inspection, we now resolve, That the books containing such valuation be kept at the Town-hall (our temporary Board-room), during the time directed by law for public inspection, and that our clerk and the valutors attend there daily, between the hours of 10 in the forenoon and 4 o'clock in the afternoon, to receive objections; and that of this public notice, according to the Act, be given on to-morrow, 26th instant, in the Waterford Mail, Chronicle, and Mirror, and that 100 notices be printed for distribution in the electoral divisions of the Union.

It was then resolved, That the notice for the exhibition of the valuation be published in each of the Waterford papers on the next three Saturdays. Carried *nem. con.*

At an adjourned meeting of the Board of Guardians, held on Friday, 6th November, 1840, Henry Alcock in the chair. Present 3 ex-officio and 11 elected Guardians.

The Board proceeded to examine the valuation books, in order to ascertain if the valutors had complied with the directions given at the last meeting.

It was moved by Michael Dobbyn, seconded by Matthew Poole, and unanimously resolved, That the books of valuation of the Union being now completed, and every preliminary being complied with for the making of a rate, we do therefore declare that a rate of 5*d.* in the pound, on the value of property in the Union, be accordingly made this day, and that our clerk be directed to give the necessary notice thereof to the public.

Rate declared—5*d.*
in the pound.

(Signed)

HENRY ALCOCK, Chairman.
MATTHEW POOLE,
THOMAS MURPHY.

It was also moved and carried, That an advertisement be inserted in the Waterford papers for persons to collect the rate.

Evidence.

CITY PORTION OF UNION.

Messrs. THOMAS HEARNE and THOMAS MICHAEL GALWAY, Valuers, examined.

Messrs. Hearne and Galway, City Valuers.

Were elected Valuers of the city of Waterford; Mr. Hearne is a builder, and valued a good deal of his own building in the city. Mr. Galway is the owner of some houses in the city; is not engaged in any trade. Both have resided in the city over 40 years. They were almost daily employed for 4 months in making the valuation. They valued over 4,000 tenements. That does not include the suburbs, which were valued by the rural valuers. They invariably went together to value. They asked the rents and entered them in the field-book. When the rents appeared to them to be low, they asked if fines had been paid. They were furnished with no documents to assist them in the valuation. There is an old valuation of the city for grand jury purposes, which is very low, and very unequal. The value of the city in that valuation is 21,000*l.*, and the valuation under the Poor Law, amounts to 54,433*l.*, but they brought into their valuation property which had never been rated before to the amount of 12,000*l.*, or 14,000*l.* Before they went out to value they got field-books, with printed headings to each column, the same headings as are in the valuation books. The entries were generally made in those books, in the presence of the occupiers of the houses, and they readily supplied all the necessary information, with very few exceptions. They were saved much trouble by having printed papers first circulated with queries to be filled in by householders. These were left at the several houses to be filled up, and were called for the morning after. They were generally filled up and returned. Although they generally ascertained the rents, they were not guided exclusively by them in determining the value. They examined each house and considered what rent a solvent tenant would give for it, taking it by the year. When they considered the rent paid a fair rent for a solvent tenant, they entered that in the column for net value. Their valuation was generally under the rents. In valuing they did not ask what it cost to build each house. They took into consideration merely the letting value. They generally entered the houses and examined the rear to see the extent, and then fixed the value, but they did not go through the several apartments nor make a minute examination of each part of each house; they made such an examination as in their opinion enabled them to judge of the value. In some cases the owners asked them to go through every part of the house, and they did so. There are several hundreds of houses in the city paying a rent of from 3*l.* to 4*l.*, from those they took off a third. They were directed by the Guardians to take one-third off small properties, such as thatched cabins and small tenements. The better class of houses they valued nearly at the letting prices, but, generally speaking, under the rents actually paid, except in cases where a fine was paid, or the house was built by the occupiers, or improvements were made in it; in which cases they valued over the rents, and in some cases, considerably over them. They always considered the locality in fixing the value, for instance, they valued a house in New-street, which lately belonged to Mr. Kearne and now belongs to Mr. Moore, at 46*l.* only, although it is one of the best, if not the best house in Waterford. The Valuation Committee, after the valuers had informed the Guardians that the valuation was completed, generally met twice in every week at 7 in the evening and remained till 10, and had Mr. Galway the valuator before them on each occasion. They first examined the field-books, previous to their being copied into sheets. They then examined the sheets, and after they had examined them they were copied into books, and those books were then placed in the town-hall for the public inspection for 21 days, and the alterations which now appear on the face of the books were made by the directions of the Revising Committee, with the approbation of the Valuers, after the books had been exposed to the public, and in consequence of objections made by persons valued. Those alterations are very few. Thinks the valuation committee rather increased than diminished the valuation. The alterations are very trifling with the exception of the Bridge, Breweries, and other peculiar properties, such as the gas works and water works. Has heard that only two appeals are threatened—one from the gas-works, the other from the water-works.

Previous experience.

Always valued together.

Were furnished with no documents to assist them.

Enquired the rents.

Estimate of value.

From small houses took off one-third by directions of guardians.

Proceedings of Valuation Committee.

Alterations very few.

RURAL PORTION OF UNION.

Mr. GREGORY LYMBERRY, Valuator, examined.

Mr. Lymberry, Rural Valuator.

Has lived at Ballylough all his life; was born on the lands. Always had in his own hands a farm of 60 acres, which he has farmed all his life—he has let to tenants another part of his lands—and has got one pound Irish an acre, for the lands he has let; he pays himself but two shillings an acre. Is not a professional valuator; was employed on several tithe valuations before, frequently for the parishes against the parson, and no complaint against his valuation. Was also employed under the county Waterford valuation act, to value the western division of Decies without. Was elected in conjunction with Mr. John Barron, of Ballinacurra in the county Kilkenny, to value this Union.

His previous experience.

APPENDIX.

Waterford.

Evidence.

One valuator selected from Waterford, the other from Kilkenny.

Reported their progress once a month to Valuation Committee.

How value ascertained.

Had some returns from Barony Cess Collectors. Got every information from landlords

Generally valued under the rents.

No allowance for vicinity to any town but Tramore.

General size of farms

The Union is partly in the county of Waterford and partly in the county Kilkenny, and it was thought right, to prevent jealousies, to choose a valuator from each county. Commenced valuing in the month of August 1839, and concluded about the end of September, 1840, but the books lay for inspection for 21 days, and the whole was completed on the 6th November, 1840. They were furnished with the usual field-books by the Guardians. They used but one book, which Mr. Barron kept, and he generally made the entries in the field-book. They had also a class-book, in which they made the rough entries and alterations if necessary; and when the sums were precisely made up, copied the whole into the field-book. They wished to keep the field-book clean, as they made reports generally once a month to the Valuation Committee, and on those occasions were obliged to shew the field-book. Both valuers always attended on the committee, and they examined very minutely into the valuation of each part.

The committee suggested alterations, sometimes raising the valuation and sometimes lowering it. The valuers attended to their suggestions, and sometimes went to examine the tenement again, to try if the views of the committee were correct, and wherever they thought they were correct, they altered the valuation according to the views of the committee. They formed their judgment of the value of the lands by walking over each tenement and classifying the several parts of the farms according to their qualities; they however did not put down in writing how much of each quality was in each farm, nor did they ascertain it accurately, but as they walked over the farm they discussed in conversation with each other, about how much of each quality was in the farm, and struck a general average. They first went to the house of the occupier, and if they found him at home, they invariably took him with them to point out his holding. They were furnished by the barony collectors with some returns for the county of Waterford portion of the Union, and with copies of portions of the county of Waterford valuation, from Mr. Mortimer, secretary to the Commissioners under the Act.

For the county of Kilkenny they were obliged to rely on the rentals of the landlords, and such information as they could get from the occupiers. In all cases when they applied to landlords they were furnished with rentals and all other information, except in the case of Mr. Lane Fox.

In every case asked the tenants the amount of their rents, even when they had the landlord's returns. Very few refused to give every information they could, and they generally found their rents were given correctly and agreed with the landlord's returns. Generally, speaking, valued under the rents. When they were fair bargains they valued equally with the rents, and in some cases of old takes, where the lands were held for 5s. or 10s. the acre, they valued over the rents. The rents throughout the Union, generally speaking, are high, some of the rents enormously high, particularly in the neighbourhood of Tramore. Generally speaking, in high takes valued 20 per cent. under the rents; did not enquire whether they had leases; did not take that into their consideration. There are four towns in the Union, Tramore, Kilmacthomas, Dunmore, and Passage. The first is in the Electoral Division of Duncannon; the second, Kilmacthomas, is in Rossmire; the third, Dunmore, is in Kilmaclegue; the fourth, Passage, is in Faithleg.

All except Tramore are very bad towns. Their directions from the Guardians were to keep as near the letting value as they could, but they were generally under the rents. In valuing the land near Kilmacthomas made no allowance for being near a town; thinks it was more an injury than an advantage to be near so poor a place. In valuing land near it they valued according to the quality of the land, and just as they would value the largest farms. There are not a great many small holders near Dunmore, as the land is let to Mr. Archer and Mr. Power.

Made no alteration in estimating the value on account of proximity to any town, except Tramore. Regular markets are held in it, and it is of advantage to be near it: it is frequented as a bathing place in the summer, but during the winter it is a poor place. They put no additional value on the land for being near Tramore, except for land immediately adjoining it, say within a quarter of a mile. In valuing the land near Tramore they were a good deal under the rent, as they considered the land let very high, some for 3*l.* the acre, and some higher. Generally speaking the farms there were about 4 or 5 acres, mostly held by fishermen and carmen. In valuing the small farms they made no distinction, but valued according to the quality of the land, but it often happened that there was a good house on a small farm, and that increased the value, for they put an additional value on the land for the house. Valued Tramore about the month of September, the height of the season. During the months of July, August, and September the town is quite full; about October it begins to thin, and is empty in November, except of those who live there permanently. Made no distinction in estimating the lands near Tramore except where the house was good, when it increased the value. Made no allowance for the advantage of sea manure, for both valuers considered it a bad manure, as it hardens and binds up the ground instead of opening it. It would give one good crop of potatoes, but after they were dug out the next crop would be bad; he does not allow any of it to be put on his own ground. The general run of farms in the Union is from 30 to 50 acres, and the smaller class from 10 to 20. Made no distinction between the large class farm and the small. Valued the land as they found it, looking to the quality of the land not the size of the farms. They in some instances asked to see the leases, and sometimes they were produced without being asked for, but they made no difference in fixing the value whether the land was held for a long term or from year to year. If he was taking land he would give more for it by the acre if he got a long lease, but he conceived his

APPENDIX.

Waterford.

Evidence.

instructions did not permit him to consider for what term the land was held. He considers that if a farmer had 30 acres of between second and third class land, at 30s. an acre, that it would be worth to him at least 20%, and would also enable him to support a small family. If land was let according to his valuation he thought the tenant would have that interest. Had not in his mind any particular sized farm when fixing the value; they fixed an acreable value whether the farm had 1 acre or 100; they had some tithe valuations, but they were so incorrect from changes subsequent that they thought it better not to use them. Mr. Griffith's valuation he never saw; he and Barron always valued together until Barron got ill, and then his son valued with him two Divisions, Kebany and Rossmire. Before they fixed the value they always considered what crops the land could bear; very few farms in the Union could bear heavy crops; they always consulted the occupier himself as to what the land could produce, and generally found him willing to give every information, with one exception in the whole Union. According to the crops it could produce and the appearance of the ground they fixed the class; they then considered, on taking an average of the whole farm, what it would be worth. Their test of value was, what a solvent tenant could pay and live by the land as a farmer of his class ought to live—say on a farm of from 25 to 40 acres, have meat on Sunday and once a week besides, and have his family decently clothed. He does not think that a farmer on 10 acres held at his valuation could afford to live in that manner, but the difference in the size of the farm made no difference in their scale; they always valued the houses separately, but in the valuation books they added both together and they form one sum for house and land. Never during their valuation asked whether an occupier was registered or not. There is a great competition for land, and that makes it as high as it is. He considers that the value of land is increasing—the price of every article of produce which the farmer can sell has risen for the last two years. The valuation committee did not visit the tenements for the purpose of revision; they examined the valuers almost in every instance as to the mode in which they fixed the value; in some few instances they suggested alterations, sometimes to lower and sometimes raise. They (the valuers) made no difference between the parts they valued first and the parts they valued last, had a uniform scale throughout. Some of the landlords found fault with the valuation; the tenants in a great many instances objected—they all said they were valued too high, not one complained of being valued too low; but he believes if he valued them at a penny they would want to be valued at a halfpenny. He cannot say that the landlords seemed to be anxious that the valuation should be high or low—Mr. Dobbyn complained that they were valuing at first too low. In one of the cases he mentioned they made a slight alteration, in the other they made no change; both occurred on Mr. Lane Fox's property. Mr. Dobbyn was the only person who spoke on the part of the landlords. Did not alter the value according to Mr. Dobbyn's valuation.

Fixed an acreable value whether farm had 1 acre or 100.

Test of value.

Made no account of registry.

Objections to valuation.

The only exception to the scale on which they valued, was land in the liberties of Waterford and the parts of the county that immediately adjoined the liberties.

In the rural parts the maximum value was 2*l.* the acre, but land in the liberties or immediately adjoining, they valued at from 3*l.* to 6*l.* the acre, and the valuers thought that the occupiers had a better interest at that rate than the country farmers at the other. In valuing villa property they also departed from their scale, for they added to the acreable value on account of the ornamental plantations, but still valued by the acre; distant plantations not immediately connected with the house were valued on a scale sent down by the commissioners, at 5*s.* the acre.

Maximum value per acre.

Villa property.

The county-cess has been about 11*d.* in the pound the two last collections.

HENRY ALCOCK, Esq., Chairman of the Board of Guardians, *examined.*

Henry Alcock, Esq.,
Chairman of the
Board of Guardians.

Was elected Chairman of the Board of Guardians of the Waterford Union, in opposition to Mr. Christmas, who was once member for the city. Witness was also twice mayor of the city, and four times filled the office of sheriff.

He continued to act as Chairman of the Board of Guardians for nearly two years, without being absent from the Board a single day (save one).

As Chairman he was considered ex-officio a member of the Valuation Committee, and occasionally attended its meetings. His attention was constantly called to the progress of the valuation, the valuers having been called on frequently on Board days to report their progress. During the time the valuation was in progress the valuers were frequently examined, and their field-books inspected. The guardians used to suggest alterations to the valuers, generally to lower their valuation.

Valuers reported each Board day.

In some cases the rural valuers excused themselves, saying that they could not get information from the parties, and that they put the high valuation on the property to oblige the parties to attend before the guardians and give the necessary information. The parties interested in consequence generally attended. Those were cases of peculiar properties, such as Knockmahon mines, and some quarries. The mines were valued at first at 10,000*l.* The valuation was afterwards reduced to 3000*l.*, and since, he believes, to something less. Both the rural valuers were selected because they were experienced in valuing land. Lymbery had been employed in the county valuation. Barron had been a tithe-proctor.

High value sometimes put on to elicit information.

Knockmahon mines.

The revision was effected in the following manner:—They gave notice that they would sit to hear objections. The parties were heard, and so were the valuers, and the objections were then disposed of. The guardians acted as mediators between the valuers and parties interested. The objections to the rural valuation were both for acreage and value; chiefly

Objections how disposed of.

APPENDIX.

Waterford.

Evidence.
Motives of objections.

for value: many were also for inequality, because their neighbour's land was valued lower than theirs. The great cause of their dissatisfaction was, that under the county valuation their farms had not been valued near the rents, and they did not understand why they should now be valued so near the rents. They did not appear to be anxious to press their objections. It seemed as if they merely made the objections to see what effect they would have, but they did not press them; and when one was satisfied, it generally disposed of a dozen objections, as his neighbours went off with him when one was satisfied, without bringing their objections forward. Generally at the revision some guardians attended who knew the particular locality, and questioned the valuers. Witness knew the two rural valuers all his life, and he believes there are no two men more competent to value property. This was the general opinion of the guardians: they all knew them. Witness has himself a farm near the town, which he holds from Serjeant Lefroy; his rent is 148*l.* 7*s.* 6*d.*; and that was valued at 140*l.*; however, he has improved the farm considerably, and has registered as a 50*l.* freeholder out of it. In his opinion the rural valuation has given general satisfaction. It is something under the rents; he thinks about 15 per cent. The tenants throughout this Union generally hold under leases, but there are some exceptions.

Rural valuation has given general satisfaction.
Leases generally given.

The tenants of Mr. Lane Fox and of Mr. Fitzgerald have, he believes, no leases. The farms, generally speaking, are as large in this Union as in others. They range from 20 acres upwards. The general average rent of land by the acre for town-fields is from 10*l.* to 12*l.* The high price is caused by their vicinity to the town. The letting price of land in this county is in general high, but he thinks the value of property (that is the real value, not the letting price) is rising. This arises from the country becoming more settled; there is more confidence in the administration of the laws; there is less of party feeling, and he considers the country in general is improving. He is in the habit of selling butter to merchants; it is now 6*l.* the cwt.; the price is higher for the last two years than it has been for many years before. Pork is also on the rise; it is now from 46*s.* to 47*s.* the cwt. This is one of their chief articles of export. The crop of oats last year was the finest he ever remembered since the year of the rebellion, and still oats are high, 15*s.* the barrel. Potatoes too are very dear, as dear as in a scarce year, and yet the crop of potatoes was enormous last year. Tenants who took land at high prices ten years ago would be well able to pay their rents at present.

Value of land rising.
Causes.

The Board of Guardians consisted of gentlemen of all political parties, but they acted with great cordiality, and nothing like a political allusion was ever used in the Board-room.—Is not aware that any question was ever asked as to whether a person was registered or not.

The population of the city within the parliamentary bounds is about 30,000—and the exports from the city amount annually to about 2,000,000*l.* He does not believe it ever entered into the head of any of the Board of Guardians to raise or lower the valuation, with a view to political objects.

City valuation from 8 to 10 per cent. under the rents.
Rural valuation about 15 per cent.

With respect to the city valuation, he thinks it was generally under the rents paid—but not much—he would say from 8 to 10 per cent. He thinks the city valuation was higher than the county. Considers the latter to have been about 15 per cent. under the rents paid. He made no calculation to ascertain this; speaks from a general impression.

He took a great deal of trouble with the city valuers, and watched their proceedings with great care. Is satisfied that the valuers were honest and anxious to discharge their duty. Believes that their valuation was a fair, uniform valuation, and has given general satisfaction. Has heard that only two appeals are threatened. Those were from the gas-works and water-works.

Wm. Morris, Esq.,
Chairman of the
Valuation Committee.
Proceedings of
committee.

WM. MORRIS, Esq., Chairman of Valuation Committee, *examined.*

Has resided for the last 25 years in the county of Waterford, formerly in business in the city. Is one of the Board of Guardians. Was Chairman of the Valuation Committee. The valuers, as they went through their work, reported to the committee, who had frequent meetings during the progress of the valuation. The committee always suggested to the valuers, and gave them information, but in no case altered the valuation without the approval of the valuers.

The valuation was submitted to the committee in loose sheets. The valuers always attended, and any alterations suggested were discussed with them, and in some cases the alterations were made.

Books opened for inspection.

When the loose sheets were revised, they then directed the books to be made up, and laid in the Town-hall for public inspection; as directed by the Act of Parliament, and a notice was given that they were lying there. In all cases where changes were made, they were reductions. Witness's own house was valued at 28*l.*, he would consider it well worth 30*l.* a-year, and a fine of 50*l.* and he would consider this a fair specimen of the entire valuation of houses of the same class, in the city, but considers that houses from 5*l.* to 15*l.* were valued more liberally, and would consider them valued at about 15*l.* per cent. under the letting price: they did not think it right to be laying heavy taxation upon the poor for the relief of the poor, and he considered that they were justified in making a liberal allowance for small houses, by the comparatively greater expense of keeping them in repair; all public-houses which were then valued, which used to let from 12*l.* to 25*l.*, have been since much reduced in value in consequence of the temperance movement, and if they were to be valued again they would not be valued so high; few of those houses are let under 12*l.* Houses usually let from 5*l.* to 12*l.* will not be affected by that depreciation, as they are seldom used as public-houses.

Small houses
valued lower.

Public-houses.

The valuation of the city part of the Union he considers to be about 10*l.* per cent. unde

the letting value, and of the agricultural part to be about 15*l.* per cent., which the Valuation Committee were satisfied to submit to, as the difficulty of getting rents in the county, from the poverty of the tenants, is greater than in the city; he considers it a fair uniform valuation, and that it has given general satisfaction.

MICHAEL DOBBYN, Esq., elected guardian, *examined*.

Is the agent of Mr. Christmas. Is a guardian of the Waterford Union, and was one of the Valuation Committee. In the city about 4000 tenements were valued, and only two appeals were threatened; one by the water company, the other by the gas company. Those are peculiar properties, and difficult to be valued. The Valuation Committee used to meet at first once a-week; towards the close of the valuation oftener, and for the last fortnight or three weeks once every day. There is an old valuation of the city under which the cess is collected, but that is so low and so unequal that it could not be considered as any test of the value. The valuers always attended the committee, and on many occasions the owners of the property valued attended, and told the committee their opinions as to the valuation. Their suggestions were always attended to, both by the valuers and the committee. He considers that the valuation of the city was a fair uniform valuation at the rents which a solvent tenant could pay; at what the tenements would let for, one year with another. Cannot say whether, generally speaking, the valuation is under the rents actually paid.

Mercantile men were on the committee who knew what value should be placed on houses on account of their peculiar advantages for trade. When the estimated value was at or under 5*l.*, the directions to the valuers were to take off one-third, as those houses were generally occupied by yearly tenants, and were more liable to losses and uncertainty in letting. They were also directed to take one-third off breweries.

He considers the county valuation lower than the city; at the commencement it was much lower; but on his calling the attention of the valuers to some cases on Mr. Lane Fox's property, in which they valued much below the rents, they made alterations in those cases, and he now thinks that the county valuation is a fair uniform valuation at about ten per cent. under the actual letting value.

JOHN BOGAN, Esq., elected guardian, *examined*.

Is agent of Mr. John Fitzgerald, who has a large estate in this county. Was one of the committee appointed to revise the valuation. The valuers were always present, and in cases where they did not know a townland the committee sent for the guardian who represented it, and requested his attendance.

They took the valuation-books and went through the items seriatim, and obliged the valuers to produce their field-books. The committee took into consideration not only the rents which the tenants undertook to pay, but what they *bonâ fide* paid, and they looked to the arrears due. Every attention was paid to the valuation by the members of the committee, who were agents to landed estates in the county:—Mr. Dobbyn, the agent of Mr. Christmas, who has about 6000*l.* a-year in the county; the witness, Mr. Bogan, the agent of Mr. Fitzgerald, who has about 4000*l.* a-year in the county; and Mr. William Morris, a resident gentleman, represented the county of Waterford in the committee; Mr. Hacket, the agent of General Bolton and other large proprietors, together with Mr. Jones and Mr. Carroll, represented Kilkenny; and three other gentlemen represented the city of Waterford. Several alterations were made, some raising, some lowering the valuation, but no change was ever made without consulting the valuers, and obtaining their consent. The desire of the persons representing the landlords was to have the valuation approximate to the rents when they considered the farms were fairly let—he means in cases where there were no middlemen. The valuers were frequently asked on what principles they conducted the valuation, but does not think their explanation was satisfactory. Believes they were guided by the rents. Leases are generally given in the Union. They are not given on Mr. Fitzgerald's estate or Mr. Lane Fox's. He considers that the valuation in the rural part is about ten per cent. under the rents, and in the town is about eight per cent. under the rents. It was gratifying to him to be able to add that no political feeling ever caused the slightest difference among the Guardians; on the contrary, when Mr. Dobbyn (whom witness considered a political opponent) was opposed in his re-election as Guardian, witness used all his influence to procure his re-election, and his success gave him great pleasure.

MR. THOMAS GAMBLE, elected guardian, *examined*.

Is one of the Board of Guardians; has been re-elected after a contest in his electoral division; resides in Middlethird, and has always resided there; was born there; always has had 120 acres at least in his own hands, and has valued more lands in this county than any man in it. Under the Tithe Composition Act valued nine parishes, every one of them in the Waterford Union also valued the whole barony of Middlethird under the county valuation; frequently attended the revising committee. In revision the committee never visited the tenements. They always had some one with them who knew the locality under discussion. He frequently met the valuers, Barron and Lymberry, whilst they were valuing, and they appeared to him to endeavour to give satisfaction. On one or two occasions he thought they valued too high; before they returned the books he pointed out their mistake, and they went

The Union valuation 15 to 20 per cent. under rents.

over the tenements again, and corrected their valuation. In his opinion they endeavoured to act fairly. Is convinced that the Poor Law valuation and all other valuations that ever were made were under the letting rents. Thinks the Poor Law valuations from 15*l.* to 20*l.* per cent. under the letting rents.

Large farms.

The great proprietors in the Union are the Marquis of Waterford, Lord Doneraile, Mr. Christmas, Mr. Lane Fox, Mr. Fitzgerald. There are very few middle-men on Lord Waterford's estate or on Mr. Lane Fox's, or on Mr. Christmas's, but there are on Lord Doneraile's, as there are leases for lives renewable for ever against him. On Lord Waterford's estate there are very few small farms; they generally contain from 100 to 300 acres, but has also many of from 60 to 80. The smallest about 50. Any person taking a large farm must get it on more reasonable terms than a person taking a small one. It requires more capital to cultivate it properly, and the persons who can afford to take it will not consent to live as small farmers live. A person who would take a farm of 200 acres Irish he conceives ought to have an interest in it of at least 200*l.* a-year. He thinks that a moderate calculation.

He knows the Marquis of Waterford's estate in Waterford, every perch of it. He thinks his lands are generally let from 1*l.* to 40*s.* the acre; he has scarcely any let over 40*s.* His tenants are the most comfortable he knows. He has scarcely a tenant who has not saved money. Their land is of an even quality; they have very little waste upon it, and they have it at the value. Lord Waterford generally gives leases for 3 lives or 31 years. Witness is a tenant of Lord Doneraile's, and several of his tenants also have valuable interests in their lands.

Valuation under the Tithe Composition Act.

In making his valuation under the Tithe Composition Act in 1834, he classified the land, and fixed as the maximum value of the best land he found in the best parish, 3*l.*: there was a great difference between the best lands in the different parishes; the best land in some parishes he fixed at 2*l.*, and in one parish, Island Keane, he fixed 30*s.* as the maximum: found a great variety both in soil and in local advantages—after he had fixed the classes of lands (in some parishes 4 classes, in others 6). He went first to the best farm in the parish, walked it over, entered in a fieldbook the several portions of the farm which belonged to each class, with the price, then totted up the whole: before he finally determined the value, he considered the advantages of the farm as a whole farm, and asked the rent, which the tenant never objected to tell him; and then, taking all matters into consideration, put the value on it. He was sworn as a valuator, and was therefore very particular, and sometimes went three or four times over the same farm. He on that occasion valued the lands generally under the rents, sometimes over, but in most cases near the rents; but the lands have been improved very much, and the price of produce has been since increased he would say 25 per cent.: at that time butter was selling from 3*l.* to 3*l.* 10*s.* the cwt., and now it is selling from 4*l.* 10*s.* to 5*l.* 10*s.* Pigs were then selling at 25*s.* per cwt., some as low as 1*l.*; they are now selling for 45*s.* Wheat was then selling from 18*s.* to 25*s.* the barrel, it is now from 30*s.* to 35*s.* Oats were then at 8*s.* the barrel, they are now selling from 13*s.* to 14*s.* the barrel. Barley is much about the same price, but very little is now sown, particularly since Father Matthews commenced, and indeed before, they were getting out of the crop as oats was more profitable. Potatoes were then from 1½*d.* to 2*d.* a stone, they are now from 3*d.* to 4½*d.*, and last year were up to 6*d.* a stone. The potatoes are raised by the great demand for pigs: the farmers eat oaten bread, to keep the potatoes for fattening pigs.

Value of produce increasing.

In 1838 when he went to value again, under the county valuation, produce was at the above prices, and during 39 and 40 the prices have improved, and thinks they are not likely to fall at present. The same persons who held the lands in 1834 are still holding them throughout the whole barony, with the exception of 3 or 4; of those, James Dunphy, a tenant of Lord Doneraile's, sold for 350*l.*, his interest in a farm of 60 acres, he held at 16*s.* the acre.

Tramore.

Lord Doneraile gives leases only for 21 years, except building leases in the town of Tramore; the town itself belongs to Lord Doneraile. The land near Tramore very bad, (except the town fields) rocky and boggy. The farms there are divided into small farms; 5 town lands are divided into small farms, ranging from 4 acres to 20—Newtown, West Town, Gavrans, Coolochapogue, and Crowbally; they have particular local advantages, for they are close to the sea, and have the advantage of sea-manure and sea-sand. They are also near the town of Tramore, which is a very nice town, and one of the most favourite bathing places in Ireland; lives himself within 7 miles of it: of course those matters greatly enhance the value of the lands near the town—he would say they enhanced the value 50 per cent. Those farms are generally occupied by small farmers who have other employments; some are fishermen, some have public jaunting-cars for hire, which they drive between Tramore and Waterford, a distance of about 6 miles; others are carpenters or masons, or of other trades, who work in the country and have plenty to do. The improvements in those 2 baronies, (Gualtier and Middlethird) for the last 4 years have been greater than for the 20 preceding, both in building and improvement of lands; has particular reasons for knowing with respect to building, as he has a share in a slate quarry, which has plenty to do. Some of those farms near Tramore belong to Mr. Power, who holds Newtown under Lord Doneraile. All those farmers have leases either from Mr. Power or Lord Doneraile; saw some of those leases when he was valuing Tramore under the county valuation. He gave the Poor Law valuers his valuation, and thinks their valuation was nearly the same. He was directed under the Act of Parliament to take one third off the value of each house; he believes by adding that third the scale of the Poor Law valuers was about the same. The directions given to the valuers under the county valuation by the commissioners were to value under the letting value.

APPENDIX.

Waterford.

Evidence.

Small farms, near
Tramore.

The small farms near Tramore extend from half-a-mile to one and a half mile—they are generally let for about 3*l.* an acre. On one of those farms, containing six acres, near Tramore, one cow could be kept and one horse, and the farmer could have besides one acre of potatoes and one acre of oats. The acre of potatoes would produce from 80 to 100 barrels, at 6*s.* a barrel. The acre of oats would produce 16 barrels, at 10*s.* a barrel (what he considers the average after deducting seed). Considering what it could produce, and its local advantages, he is convinced that a farmer holding one of those 6 acre farms could clear at least 20*l.* a-year. Each farm yields 6*l.* an acre and more.

They have manure for the mere trouble of collecting it, whereas a farmer holding 6 acres in the country should pay from 6*l.* to 8*l.* for manure, from 100 to 120 barrels of lime at 14*d.* the barrel, besides the expense of drawing. The sea manure is not of such advantage to the large farmer as to the small, as it must be watched, drawn from long distances, and is not an improving manure. Some of Lord Doneraile's tenants near Tramore have very valuable interests. Michael Nowlan's farm is the best he ever saw in England or Ireland; it is the best land he ever saw; thinks he would get 1000*l.* for his interest, although he pays 3*l.* 3*s.* an acre. Other tenants of Lord Doneraile hold at the value. He thinks that in letting land on a farm of twenty acres a tenant ought to be able to clear, after all expenses, at least 1*l.* an acre, and if he does not, after the loss of his time and labour, he is worse than the beggar-man. He thinks on a farm of 50 acres he ought to be able to make it worth to him 100*l.* a-year at the least; he includes in that the support of himself and family. Mr. Christmas, Mr. Fox, and Mr. Fitzgerald, all let their lands on reasonable terms; he would say on an average at 30*s.* the acre, but the rents of some middlemen he considers high rack rents. On an estate of a middleman of 200 acres, upon which he is receiver, the profit rent is 200*l.* a-year.

Sea manure.

Profits of farms.

CARRICK-ON-SUIR UNION.

Extracts from Minute Book of Board of Guardians.

APPENDIX.

Carrick-on-Suir.

ORDER DECLARING UNION, 25TH MAY, 1839.

7 ex-officio, 21 elected Guardians.

Extracts from Minute-book.

Appointment of Valuation Committee.

The first meeting of the Board of Guardians for the Carrick-on-Suir Union was held at the Petty Sessions Court, Carrick-on-Suir, the 6th July, 1839.

Mr. O'Donohue, Assistant Poor Law Commissioner, in attendance.

Present, 6 ex-officio, 21 elected guardians. Richard Cox, Esq., chairman, pro tem.

Proposed and carried,—That a Committee of 12 be appointed to conduct and superintend the valuation, to be called the permanent Committee of Valuation for this Union, and that the following members do form the Committee.

It was first proposed that the Committee should consist of nine persons; that as the Union embraced a portion of the three counties of Tipperary, Waterford, and Kilkenny, there should be three guardians for each county, as the fairest mode of conducting the valuation. Mr. Hayden suggested, in order to avoid the least colour or pretext for any ungrounded suspicion of the acts of the Board, to add a practical farmer from each of the three counties to the Committee of Valuation.

This suggestion having been agreed to, it was unanimously agreed that the following gentlemen should form the permanent Committee of Valuation.

For Kilkenny:—Messrs. John Walsh, John Burnett, John Reade, and Thomas Farrell.

For Waterford:—Messrs. John Power, Robert Shaw, William Colman, and John Kirwan.

For Tipperary:—Messrs. H. W. Briscoe, James Cantruck, James Mandeville, and John Ryan.

Resolved,—That the Committee of Valuation do meet once in every fortnight at the Sessions House in Carrick-on-Suir, for the purpose of superintending, watching, and dispatching all business connected with the said valuation, under the provisions of the Poor Law Act, and to associate with them one guardian from each electoral division for the time being under valuation.

Advertisement for valuers.

Resolved,—That we advertise in the before-mentioned papers, "Waterford Chronicle" and "Tipperary Free Press," for competent persons to value the lands and other hereditaments in this Union, upon which to found a rate for the relief of the poor, agreeable to the provisions set forth in the Act of Parliament in sections 63 and 64; sealed tenders or proposals to be directed to the chairman of the Board, and delivered to him before 10 o'clock in the forenoon of Saturday, 10th August, when each candidate for the office of valuator will be required to attend in person, prepared with the necessary securities for the performance of the work, and all other documents as to character and ability which the Board may require. Tenders to state the rate per 1,000 acres for which they will perform said valuation, to the satisfaction of the Board, and separate tenders, directed as above, to be sent in for the valuation of the towns of Carrick-on-Suir and Carrickbeg, stating the charge per 100 acres for performing such valuation.

Resolved,—That this Board do meet again on Saturday, 3rd August, 1839, when they will proceed to elect a clerk to this Union, and also elect other competent persons to value the different rateable properties and other hereditaments in this Union.

A meeting of the Board of Guardians was held at the Petty Sessions Court, Carrick-on-Suir, on Saturday, the 3rd August, 1839,

Mr. O'Donohue in attendance.

Guardians present—6 ex-officio, 21 elected guardians.

Proposal to have three valuers.

Proposed by Mr. Hayden, seconded by Mr. James Power,—That three valutors be appointed, one from each county.

As amendment, by Mr. Walsh, seconded by Mr. Shaw,—That we first know the names of the candidates for the situation, and that the chairman do read the same.

Amendment carried.

The chairman read the proposals of the several candidates for the valuation of the Union.

Resolved, by a large majority,—That the valuation of the property of the Union be given to two valutors.

Two rural valutors appointed.

The several candidates for the valuation were then put in nomination, and on a division, there appeared a majority in favour of Mr. James Hayden, who had proposed to value the rural portion of the Union at the rate of 1*l.* 10*s.* per 1,000 statute acres, and of Mr. Thomas Walsh, who had proposed to value the Union at the rate of 1*l.* 7*s.* per 1,000 statute acres.

Mr. Hayden and Mr. Walsh were then appointed valutors, at the rate of 2*l.* 14*s.* per 1,000 statute acres.

Town valuator appointed.

Proposed and carried,—That Mr. Samuel Bradshaw, who had proposed to value the towns of Carrick-on-Suir and Carrickbeg, at the rate of 1*l.* 13*s.* 4*d.* per 100 houses, be appointed the town valuator.

Proposed and carried,—That the blanks in the second covenants of the valuator's contracts

APPENDIX.

Carrick-on-Suir.

Extracts from Minute-Book.

be filled up at the rate of 1*l.* per 1,000 statute acres, and at the rate of 2*d.* per house and premises for the towns of Carrick-on-Suir and Carrickbeg.

Proposed and carried,—That the blanks in the third covenant be filled up with the sum of 7*s.* 6*d.* per day when the rate shall not be quashed, and 4*s.* a-day when the rate shall be quashed.

Proposed and carried,—That the security for the rural valuers be 300*l.*, and for the towns of Carrick-on-Suir and Carrickbeg 150*l.*; and that both valuations be completed by the 1st August, 1840.

A meeting of the Board of Guardians was held at the Petty Sessions Court, Carrick-on-Suir, on Thursday, 29th August, 1839,

Mr. O'Donohue in attendance.

Present 2 ex-officio, 14 elected guardians.

Proposed and agreed to,—That the securities for the clerk and valuers be completed forthwith.

Proposed and agreed to,—That the town valuator complete the valuation of the towns of Carrick-on-Suir and Carrickbeg within four months.

Four months allowed for valuation of towns.

Proposed,—That the amount of rate be 7½*d.* in the pound.

Proposed by Mr. Hayden, seconded by Mr. Anthony,—That 10*d.* in the pound be the rate.

On a division, there appeared a considerable majority in favour of the 7½*d.* rate.

The contracts and bonds for the valuers, with the clerk's bond, were completed.

The correctness of the valuers' bonds and contracts was at the subsequent meeting of the Board certified by Mr. O'Donohue.

A meeting of the Valuation Committee was held at the Petty Sessions Court, Carrick-on-Suir, on Saturday 26th October, 1839,

Meetings of Valuation Committee.

Mr. O'Donohue in attendance.

Present 3 ex-officio, 10 elected guardians.

The committee was engaged for a considerable time in the discussion of various topics relating to valuation, viz.: the mode by which the net annual value should be obtained, "insurance," and "tenants' other expenses."

Discussion by Committee as to mode of valuation.

The valuation sheets were then examined, and the mode of valuation approved of.

A meeting of the Valuation Committee was held at the Petty Sessions Court, Carrick-on-Suir, on Saturday 9th November, 1839.

The valuation of the electoral division of Carrick-on-Suir being nearly completed, the committee was occupied with the inspection of the valuation sheets until about two o'clock, when the subjoined Report to be submitted to the Board was agreed to.

"We, the Valuation Committee appointed by the Board, have inspected the valuation returns of the parishes of Carrick-on-Suir and Newtown, and consider that, according to the line adopted in the valuation, they have preserved a just proportion throughout."

Report of Valuation Committee.

A meeting of the Board of Guardians of the Carrick-on-Suir, district was held at the Petty Sessions Court, Carrick-on-Suir, on Saturday, 9th November, 1839,

Mr. O'Donohue in attendance.

Present 4 ex-officio, 11 elected guardians.

Proposed and agreed to,—That the clerk shall write to the landed proprietors in the different electoral divisions of the Union for the names of the tenants on their properties, and the quantities of land held by each, and the amount of rent. That he shall lay their answers before the Committee of Valuation at their next meeting.

Information required from landed proprietors.

A meeting of the Valuation Committee was held at the Petty Sessions Court House, Carrick-on-Suir, on this day, 7th December, 1839.

Present 11 guardians.

The committee was occupied several hours in the inspection of the valuers' returns, when the subjoined Report, proposed by Mr. John Power, seconded by Mr. Colmer, was agreed to.

Report of Valuation Committee.

"We, the members of the Valuation Committee, appointed by the Board of Guardians for the Carrick-on-Suir Union, have inspected the valuers' proceedings up to this date, and as far as they have proceeded, the rural valuers having completed their view of the electoral division of Carrick-on-Suir, and the town valuator having considerably progressed in his valuation of the town, have to report that, as far as we can judge, their valuation appears to be equitable with regard to the interests affected thereby."

A meeting of the Valuation Committee was held on Saturday, 11th January.

Three guardians present.

The town valuator's return was inspected. The rural valuers did not attend.

A meeting of the Board of Guardians was held on Saturday, the 8th February, 1840, at the Petty Sessions Court, Carrick-on-Suir,

Mr. O'Donohue in attendance.

Present 3 ex-officio, 13 elected guardians.

Mr. Mortimer's account was referred for further consideration to the next meeting. The Valuation Committee, consisting of the following members, (here follow the names of seven members,) inspected the rural valuers' returns for Grangemockler.

A meeting of the Board of Guardians was held on Saturday, 7th March, at the Sessions Court, Carrick-on-Suir,

APPENDIX.

Carrick-on-Suir.

Extracts from Minute-Book.

Mr. O'Donohue in attendance.

Present 1 ex-officio, 11 elected guardians.

Proposed and carried,—That the next meeting of the Valuation Committee be held on this day four weeks, 4th April, and that the clerk do write to the rural valuator to request their attendance on that occasion.

At a meeting of the Board of Guardians held on Saturday 4th April,

Mr. O'Donohue in attendance.

Present 1 ex-officio, 13 elected guardians.

The Valuation Committee examined the rural valuator's returns for the electoral division of Grangemockler.

A meeting of the Board of Guardians was held on Saturday, 13th June, at the Petty Sessions Court, Carrick-on-Suir,

Mr. O'Donohue in attendance.

Present 2 ex-officio, 7 elected guardians.

Resolved,—That as Mr. Bradshaw has nearly completed his valuation, a cheque be drawn, at his request, on the treasurer, for the sum of 20*l.*, to be charged on the second and subsequent rates, pursuant to the 1st and 2nd Victoria, c. 56, s. 68, and 2nd Vic. ch. 1, s. 6.

A meeting of the Board of Guardians was held on this day, Saturday, 12th December, 1840, at the Library large room, Carrick-on-Suir,

Mr. O'Donohue in attendance.

Present 2 ex-officio, 13 elected guardians.

Proposed and agreed to,—That the town valuation be referred back to Mr. Bradshaw for recopying, so as to enable it to be exhibited to the public by the next day of meeting, and that the number of the rural valuation be added in after the towns.

At a meeting of the Board of Guardians, held on Saturday, 9th January, 1841,

It was proposed and agreed to,—That the meeting, at its rising, do adjourn to Thursday, the 21st January; that the clerk be instructed to inform the valuator that they are required and imperatively called on to come prepared on that day with their books completed, and in every respect fit for the inspection of the Board of Guardians, so as to enable them to publish the valuation, according to the Act.

A meeting of the Board of Guardians was held on Thursday, 21st January, 1841, at the Library, Carrick-on-Suir,

Mr. O'Donohue in attendance.

Present 2 ex-officio, 16 elected guardians.

Proposed and carried,—That the clerk be directed to apply to the Poor Law Commissioners to obtain a return of the number of acres in the several parishes of the Carrick-on-Suir Union.

Moved and carried,—That the clerk be directed to publish a notice that the guardians intend to make a rate, in the "Waterford Chronicle," "Waterford Mail," "Tipperary Free Press," and "Constitution."

Proposed and carried,—That the rural valuator be paid 30*l.* each.

At the subsequent meeting a draft was directed to be drawn in favour of Mr. Bradshaw, the town valuator, for 10*l.*

A Meeting of the Board of Guardians was held on Saturday, February 27, 1841.

Present 3 ex-officio, 13 elected guardians.

Proposed and carried,—That the Board do meet on Friday and Saturday, the 5th and 6th of March next, to investigate the objections made to the valuation for the electoral divisions of the county Kilkenny, on Monday and Tuesday, the 8th and 9th of March, for the county Waterford; and on Wednesday, Thursday, and Friday, the 10th, 11th, and 12th March, for the county Tipperary, and that notices be given by the guardians in their respective districts to the objectors.

March 5, 1841.

It is ordered by the Board that Gavanessa and Tybroughney having been entered erroneously in the Pilltown division, they be removed to the proper electoral division of Owing, and that an alteration in the acreage should be made in the electoral division of Carrick-on-Suir.

A Meeting of the Board was held on Friday, March 5, 1841, to consider the objections made to the valuation for the electoral divisions of the county Kilkenny.

Present 3 ex-officio, 6 elected guardians.

The chairman read a letter from Mr. O'Donohue, relative to the valuation.

It was resolved,—That the rural valuator be recommended to make certain alterations which are specified in their estimate of the number of acres, in compliance with the recommendation of the Assistant Poor Law Commissioner, Mr. O'Donohue.

It was resolved,—That when there exists a reasonable doubt as to value, the valuator be requested to revisit the land or property in cases only where objections have been already lodged.

At a meeting of the Board held on Thursday, March 6, 1841, to consider the objections to the valuation.

Present 4 ex-officio, 8 elected guardians.

Pilltown, No. 402.—The following alterations directed to be made. A. R. P.

Rogerstown, No. 137.—To be altered to plantation acres 6 1 20

And 16 plantation acres to be put to the Earl of Bessboro'. 34 0 0

(Here follow several alterations directed to be made in the valuation.)

Town valuation re-copied.

Valuators required to have their books completed on the 21st January.

Notice published that a Rate is about to be made.

Consideration of objections.

Alterations in acreage directed.

March 20, 1841.

Proposed by Mr. Shaw, seconded by Mr. Colmer,—That the valuator amend their books by correcting the names of the occupiers and owners, the statute measure, net value, and gross value in the several columns, and that the clerk of the Board tot up the acreage and net value columns, and report their correctness to the next meeting, with a view to complying with the instructions received from the Poor Law Commissioners.

The return from the Ordnance Survey of the area of the several parishes in the Union has been received, by which it appears that the extent is 109,859A. OR. 26P.

Evidence.

Mr. SAMUEL BRADSHAW, Valuator, *examined*.

Was appointed valuator of the town of Carrick-on-Suir. Was employed previously to value the town for the Commissioners for Watching and Lighting, about four years ago. Was also employed about ten years ago with six or seven other persons to value the town for church-rates. Commenced to value under the Poor Law in August or September, 1839, and was employed in the valuation until some time in January last, when he gave up the books to the clerk of the Union. Valued in Carrick-on-Suir 1,440 tenements, and in Carrickbeg 508. Entered into every tenement and examined it, and also the rear and back premises; always in the first instance asked the rent, and no one refused to tell what it was. Entered it in his field-book. Was assisted in forming his estimate of the value by the rents.

In estimating the value, he first considered if the rent was a fair rent, and if it was, he set that down as the gross value; he then deducted from it first the insurance. This he calculated according to the scale of an insurance office. He sent for a table to Waterford, and, according to the value of each house, deducted for insurance, according to the scale in the table of the insurance-office. He inquired at every house whether an insurance was effected, and only two houses in Carrick were insured. Has been living in Carrick over 22 years, and only recollects two fires in the town, one in a lane, when a cabin was burned, the other a fire which commenced in Father O'Neill's house, and was immediately extinguished.

Although no insurance was in point of fact effected, he allowed for insurance. He next deducted the repairs. The amount varied according to the state of repair the house was in at the time, and after deducting the landlord and tenant's rates and taxes, found the net yearly value. He made his valuation before the temperance movement, and as that had lowered the value of houses, he suggested to the guardians and the Assistant Commissioner the propriety of reducing the valuation, but this was overruled.

Almost always his valuations were under the rent. He looked at a valuation which was made for the Watching and Lighting Commissioners, subsequent to the valuation which he made for them, but was not guided by it; it was too high a valuation. It was a valuation made subsequent to that which he formerly made for the Commissioners. He only used it to ascertain the tax. He does not consider that competition has made the smaller houses dearer in proportion than the large. There is great competition for them, but the people are too poor to pay high rents. In many houses five or six families live together. The class of houses of which he is speaking are let at from 2*l.* to 2*l.* 10*s.* He thinks there are about 500 such houses. At Green Side, Bally Richard Road, Pill Road, Cyder Lane, and Wren's Lane, all range from 1*l.* to 3*l.* The next class ranges from 7*l.* to 10*l.*—bakers and publicans and shops of an inferior description. The next class ranges from 15*l.* to 40*l.*, which is, he thinks the highest rent in the town. In very few cases leases are given. In some few instances, inquired when valuing whether the occupiers had leases, but it would not have made any difference in his valuation, as he conceived he was bound to value the houses as if let from year to year.

In all cases he made allowance for the situation of the house, as a place of business. Generally speaking, was under the rents; never calculated how much under the rents. Only two objections to his valuation. One did not appear to support his objection. The other on explanation got a reduction. Does not believe any appeal is intended.

Mr THOMAS WALSH, Valuator, *examined*.

Is not a professional valuator; is a practical farmer; has in his own hands a farm of something under 100 acres at present, and had a few years ago in the county Kilkenny 321 acres at 1*l.* an acre, which he has since surrendered, as the rent was too high. Resides in the county Waterford; was appointed valuator of the rural portion of this Union in conjunction with James Hayden, of the county Kilkenny. Mr. Hayden is also a practical farmer, and has a large farm in his own hands. Were employed over 12 months in making the valuation, as the season was very bad. Commenced the 20th September, 1829, and has not yet finally concluded. Was employed previous to his being employed under the Poor Law as a valuator under the County Waterford Valuation Act. Valued the whole of Middle Third under that Act in conjunction with Thomas Gamble, and has frequently valued estates for private gentlemen. Mr. Hayden valued under the Tithe Composition Act, and also for private individuals. Previous to his commencing, he consulted with the valutors of Dungarvan, Clonmel, and Waterford, as to how they estimated the value of land, and in what manner they filled the field books. Believes that his valuation is higher than any of the valuations of the Unions named. The reason he thinks it is higher in Waterford is that the valutors of the Waterford Union valued the townland of Kilmanee, which is in the parish of Guilco and barony of Upper Third, after it had been valued by witness, and his valuation was higher than that of the county Waterford valutors. It was intended that part of this townland should be added to the Waterford Union, but as the whole belonged to one landlord (the Marquis of Waterford), the Commissioners thought it better not to divide it, and left it with this Union.

3 N

APPENDIX.

Carrick-on-Suir.

Extracts from Minute-book.
Valuation books amended and totted.
Extent of Union

Evidence.

Mr. Bradshaw,
Town Valuator.

Previous experience.

Mode of valuation.

Inquired rents.

Net value; how estimated.

Paucity of insurances.

Nevertheless, allowed for insurance.

His valuations generally under the rent.

Competition for smaller houses.

Few leases given.

Only two objections to his valuation.

Mr. Walsh,
Rural Valuator.

Previous experience.

The valuation higher than in other Unions.

APPENDIX.

Carrick-on-Suir.

Evidence.

Acreage generally given.
Did not use County Waterford valuation.

Both valuers had but one field-book.

Mode of valuing.

Considered the description of crops, and the probable price.

Wheat the general rent crop.

Took an average of the taxes.

Allowance for taxes, repairs, and insurance.

Estimate of value.

Poverty of small farmers.

Reason that rents are so high.

The witness also valued Ballygown Reade, which has since been joined to the Union of Callan, and valued by the valuers of that Union, and thinks that they valued lower than he did. Some landlords supplied the rents, others promised but neglected to do so, and others refused. The acreage was generally given to the valuers both by landlord and tenants, and in general correctly. They got the county Waterford valuation, but did not use it as he, (Walsh) knew it to be incorrect both as to acreage and value. Had no other document to assist him; has never seen Mr. Griffith's valuation, nor his instructions to valuers. When he came to the farm he was about to value, he first asked for the occupier of the farm; if he was not to be seen, went to work without him. They were supplied with field-books by the guardians; had two sets, one in which he made the rough calculation in pencil, the other in which he copied it out clean. They had but one field-book on the ground on each occasion, which witness kept and made the entries in. The books which he now produces were the clean copies, and the entries of the rents which now appear on them were made by him from the information which he received at the time either from the tenants or the landlords, and sometimes from both. They have not since been altered, save when the tenants afterwards told him that they had given him an incorrect account. The valuers went together over every part of the farm. They did not distinguish the lands as to their quality into different classes, as in the county Waterford valuation, and enter them in their field-books in separate columns as was done on that occasion, but as they walked over the farm they distinguished in their own minds the different qualities, and after the whole inspection was completed, they then communicated to each other their opinions; and after making a rough calculation of the different parts of the farm, fixed the value of the whole. In estimating the value of the land, they first considered the quality of the soil; they generally saw some part of each farm turned up, and also examined the gripes of ditches and pits to ascertain the bottom. They also considered the convenience to manure or market by being near a town, and all other local advantages, and placed an additional value on the lands which had local advantages. In a great many instances they visited the farms more than once. During the very severe winter before last, they commenced with valuing those electoral divisions of the Union situated in the county Tipperary, as they were directed to value according to the order in which the divisions were placed in forming the Union. But fearing that the difference of seasons may cause an inequality in the valuation, they valued during the same winter one or two farms in each parish in the other two counties, to enable them to form a more correct judgment of their value when they afterwards came to value them in the summer.

In the summer they valued those farms again. It is not easy to judge of the value of the land when covered with the grain, and they therefore valued a few farms in the winter to assist their judgment. They always considered what description of crops the several soils would produce, then what the expense of producing those crops would be, and the probable price for which they would sell. They took an average of the prices of produce and of the crops for the three years preceding. During those three years the prices were better than for the three years before, but the produce infinitely worse, particularly in the wheat crop. That is the general rent crop through the Union. It is preferred to oats, both because it is sown at a season when the farmers have more idle time on their hands, and because they have not as much trouble in thrashing it out. Out of the produce of the land they allowed a certain proportion to the landlord and a certain proportion to the tenant. This proportion varied according to the size and quality of the farms. They also took an average for the last three years of the taxes. The only taxes are the county cess and tithe rent-charge. The county cess varies, not only in the different counties, but in different townlands of the same county. In the county Kilkenny it is very unequal, as there are what are called "concealments," that is, certain portions of farms which do not pay any cess. In other parts (the mountain farms) three acres are counted as one: thus a farm of 60 acres pays as if it were 20. In the Tipperary part of the Union it is unfair that the other parts should pay for the parish of Carrick, which pays no county cess. In Waterford also the levy of county cess is unfair, inasmuch as in some baronies when the rate is 9d. in the pound, it is in other baronies 1s. 3d. in the pound. The county cess is an acreable tax in the counties of Tipperary and Kilkenny, and in Waterford it is a poundage rate.

On a farm of 20 statute acres they generally allowed, in estimating the value, 2*l.* for the tenant's taxes, and about 3*l.* for repairs and insurance; after deducting that, they came to the net value.

They generally, in estimating the value, allowed the tenant out of the produce to support himself and family in a more comfortable manner than they live at present, that is to say, that they should be able to eat meat once or twice a-week, and be clothed in comfortable clothes, suited to persons of their class in life. On his valuation, he thinks that a farmer holding 20 acres of land would be able to live as he describes. He thinks he would have an interest of 1*l.* an acre on his farm—less could not support a family.

At present the manner of living of the small farmers is most miserable. They very rarely have meat during the whole year; and, in his opinion, they are obliged to live in this manner on account of the high rents.

The reason that the rents of those small farms are so high is, that there are so many who can accomplish taking a farm of that size. Competition has raised the price of land, and particularly in those small farms. The number of small farmers of this description is greater in Tipperary than in the other two counties. The electoral division of Carrick has not so many of those poor farmers. In the neighbourhood of the town they are more comfortable. In that division he has valued under the rents, except on the estates of Lord Waterford and Lord Ormonde. He thinks it would be more for the interest of the landlord as well as the tenants if the lands were let more near his valuation.

In Grange Mockler and Kilcash the general run of farms is very small, and the people very poor. The average size of the farms is from 10 to 30 acres.

In Tullahaught and Killmaganny they vary from 15 to 40 acres. In Kilmeaden and Mothel the farms are large, and the people more comfortable.

The other divisions are not remarkable for either large or small farms.

In estimating the value, the size of the farm made a difference—placed a higher value by the acre on the small farm. It is generally more improved and better worked. There is a good deal of waste on the large farms. He was never guided by the rent in forming his estimate, because the lands are generally over-let, on account of the competition.

The farmer can rear his family to nothing but farming, as there are no manufactories in the country.

Generally speaking, throughout the Union, his valuation was under the rents, but never calculated how much.

There was a Valuation Committee, which watched the progress of the valuation. They never visited the tenements for the purpose of revision. They always had some guardian from the neighbourhood present. The Committee suggested alterations always to lower. In no case did they lower their valuation more than 2s. in the acre, and seldom made any alteration. Believes that the tenants are satisfied, and also the landlords. The proof is, that he believes that one appeal only is about to be brought. Never, in valuing, asked whether the occupier was registered.

Mr. PATRICK HAYDEN, Elected Guardian, *examined*.

Was not a member of the Valuation Committee, but attended before the Valuation Committee during the time that his own electoral division was under revision. Thomas Walsh and James Hayden were elected for the rural portion. There were 13 or 14 candidates for the office. They were employed for more than a year in making the valuation; used during their progress to submit the different parts of the valuation to the Valuation Committee. The committee suggested alterations, when they had local knowledge of particular places, but very few alterations were made in the valuation; they were generally reductions. The general opinion is, that the valuation is high, but that it is equal. Generally speaking, the net annual value is under the rents paid. Generally speaking, the valuation has given satisfaction; no person in his division that he knows of intends to appeal. The price of land is he thinks increasing, on account of the competition. The farms in his division are generally from 40 to 100 acres; on some estates there are very few leases; but either leases or proposals are general throughout the Union. In his division the tenants who are best off are the Marquis of Waterford's. Shortly after the year 1826, he has heard, reductions were made on his estates, which have been continued since, and his tenants now hold at fair rents. The rents generally in the Union he considers are high; some of the lands are set from 4*l.* to 6*l.* the acre, close to Carrickbeg. The lands in Tipperary are better than in Waterford; yet the Waterford land, on the river side, brings higher rent. The Tipperary land is let on an average from 2*l.* 2*s.* to 2*l.* 10*s.* The Waterford land on the opposite side of the river is let at least at 10*s.* an acre more. In Waterford the farmers are more industrious and more comfortable than those in Tipperary. He considers the valuation has given general satisfaction. The Board of Guardians at all times acted with great cordiality together.

Mr. REDMOND ANTHONY, Elected Guardian, *examined*.

Was not one of the Valuation Committee; examined the valuation books since they were returned; particularly the part belonging to his own division. Is of opinion that the valuation is a very fair, uniform valuation; in general considered high, but equal on all. The valuation is generally below the rents paid; could not say how much. In his division the highest rent paid is about 50*s.* the plantation acre. Does not know what was the highest valuation. The whole of his electoral division is the estate of the Earl of Bessboro'. There are very few leases on the estate; when the leases expire they are not renewed in general. The valuation he considers has given general satisfaction; he has only heard of three persons who intend to appeal; two gentlemen in the County Tipperary for valuing too high; one in the County Kilkenny, Major Currey, on the part of the Earl of Bessboro', for valuing some ornamental woods and water. Observed the valuers during the time they were making the valuation; they went on the farm, and examined carefully, and in no instance did he hear of their neglecting to examine. Both valuers are extensive farmers; Hayden has 300 or 400 acres his own hands; both are experienced; Walsh is of the County of Waterford, Hayden of the County Kilkenny. All the occupiers in his division appear to be satisfied. Does not know whether the landlord, the Earl of Bessboro', is satisfied. Has heard he has objected to the valuation of some ornamental woods and water; but to nothing else. He considers the rents throughout this Union too high. In the Kilkenny portion of it the land is of a very superior quality. Thinks it is let as reasonably as any other lands, in the Union, but all are let too high. His own farm, seven acres, with a house, has been valued at 24*l.*; he pays 42*l.* rent; but the value of his house has been considerably diminished since the Temperance movement.

APPENDIX

Carrick-on-Suir.

Evidence.

Size of farms in different divisions.

Valued small farms higher than large, as generally in better condition.

A good deal of waste on large farms.

Valuation under rents.

Mode of revision.

Mr. Hayden,
Elected Guardian for
Kilmolleran, County
Waterford.

Few alterations in
valuation.
Generally reductions.
Valuation high, but
equal.

Thinks no appeal intended.
Price of land increasing.
Farms from 40 to 100
acres.
Leases or proposals
general.
Rents high.

Mr. Anthony,
Elected Guardian for
Piltown, County
Kilkenny.

Valuation a fair uniform valuation.

RENT AND VALUATION of £10 COUNTY ELECTORS, (registered 1832 to 1840,) so far as ascertained.

KILMALLOCK UNION

APPENDIX.

Kilmallock.

Extracts from Minute Book of Board of Guardians.

February 20, 1839.

First meeting of the guardians.

Extracts from
Minute Book.
New Valuation
required.

Resolved,—That the tithe valuation may, to a certain extent, with revision and correction, be made available for the purpose of estimating the acreable contents of the Union, but that a new survey and valuation of the remaining hereditaments will be required, and that the clerk be directed to report on the same to the Poor Law Commissioners, and request their advice as to the best mode of proceeding to value the same.

April 19, 1839.

Mr. Commissioner Hawley called the attention of the board to the valuation of the Union, and explained the mode of proceeding.

Mr. Roche's name, as a fit and proper individual to be appointed valuator, was introduced by some of the guardians.

Mr. Evans said he knew Mr. Roche was a most intelligent and competent man; that, when he acted as tithe commissioner with Mr. Gubbins, nothing could exceed the satisfaction given by the two gentlemen.

Mr. Ryan said Mr. Roche was a most respectable man, and possessed considerable judgment and experience in land and business generally. Mr. Walsh said he was himself employed as tithe commissioner, and that he knew Mr. Roche to be a most competent person to be valuator. Mr. McMahon would recommend to advertise at once for a valuator.

Advertisement for
Valuators.

Resolved,—That advertisements be put in the Limerick Chronicle, for two posts, for a valuator that will send in sealed proposals and tenders, stating terms and charges to the clerk of the Union, before the 9th of May next.

May 9, 1839.

Present 27 guardians.

Appointment of
Valuators.

Resolved,—That Michael Roche, of Rocheville, Esq., Kilmallock, be elected as one of the valutors of the Bruff* Union, and be recommended to the Poor Law Commissioners as a fit and proper gentleman, in whose experience, intelligence, and integrity, this board places the utmost confidence.

That Michael Lynch, Esq., of Granagh, in the Rathkeale Union, be elected as the second valuator of the Bruff* Union.

June 6, 1839.

Present eight guardians.

Valuation Com-
mittee.

The chairman said, it was better at once proceed to appoint a Committee of the guardians to co-operate with the valutors, and that it would be desirable to appoint such of the board as resided near Kilmallock, where it would be necessary to meet the valutors.

Mr. Reirdon considered it would be advisable to strike the Committee from the different districts of the Union. Mr. Barry coincided with Mr. Reirdon, but from the prospect of frequent meetings, it would be very desirable to make them convenient to the guardians to be appointed. The board then agreed to the following as a Committee:—

Messrs. R. Featherston, (J. P.)	Messrs. William Collins,
James Barry,	Michael Riordan Thaddeus;
Richard J. Wilson,	R. Ryan, (J. P.)
Eyre Evans, (J. P.)	James Keys.
John O'Donnell,	

Resolved,—That the gentlemen in the above list be appointed a Committee of the board of guardians of the Bruff* Union, with power to act with the valutors, five to form a quorum.

June 18, 1839.

Present six guardians.

Valuation Com-
mittee increased.

In compliance with the recommendation in the Assistant Commissioner's letter of the 3rd instant, six of the guardians, viz., Messrs. Standish O'Grady, Patrick Carroll, Michael Walsh, Michael O'Brien, Patrick Moroney, and Thomas Malone, were added to the Valuation Committee.

July 27, 1839.

Present 12 guardians.

Ordered,—That the Valuation Committee will meet when each electoral division is finished, for the purpose of reporting to the Board thereon, and that the valutors will give notice to the clerk of the Board, who is hereby ordered to call such Valuation Committee.

October 19, 1839.

Present Mr. Commissioner Hawley and 22 guardians, 11 of them members of the Valuation Committee.

The Board considered it was a desirable opportunity to the Valuation Committee to take into consideration the valuation of the districts already finished, and avail themselves of Mr. Commissioner Hawley's presence.

* This Union was declared by the name of the Bruff Union, which was changed to its present name by an order of the Poor Law Commissioners, dated 8th July, 1839.

APPENDIX.

Kilmallock.

Extracts from
Minute Book.

Mr. Lynch and Mr. Roche, the valuers, were accordingly required to attend, and the Committee proceeded to discuss the question.

Mr. O'Brien was of opinion that the valuers were too high in their estimation of the value of land, and accordingly recommended that the question should be seriously considered by the Board. Mr. Barry, Mr. O'Grady, and several of the guardians seemed to agree with Mr. O'Brien.

Mr. Roche, the valuator, would be glad to receive any advice from the Board, and was ready, with his colleague Mr. Lynch, to sustain their valuation, or make any amendment recommended to them.

Resolved,—That it is the opinion of this Committee and meeting that the standard of net value (as produced this day) in the electoral districts of Galbally and Ballylanders is considered too high, and that they (the valuers) are requested to modify and revise the same, and that the rule generally adopted of taking a third from the gross produce, including all charges, use of capital, &c., has been found to give much satisfaction.

The valuers promised to pay the utmost attention to the wishes of the Board, as their only object was to make a fair and *bonâ fide* valuation.

June 21, 1840.

Seven guardians present.

In consequence of the death of Michael Lynch, Esq., Mr. Thomas Lynch, his eldest son, was appointed second valuator.

Standard of Net
Value declared to
be too high.

Mr. Lynch, jun.,
appointed in room of
his father, deceased.

February 8, 1840,

Six guardians present.

In consequence of a letter from the Assistant Commissioners, directing that the nomination of Mr. Thomas Lynch should be again submitted to the Board, for their full approbation,

Mr. Lynch was, by a resolution, (carried unanimously,) appointed second valuator of the Kilmallock Union.

His appointment
confirmed.

April 2, 1840.

A new Committee of Valuation appointed, consisting of the following guardians:—

Messrs. Standish O'Grady,

James Gubbins,

John O'Donnell,

Michael O'Brien,

Joseph Gubbins, (ex-officio,)

Jos. Gubbins, (Knocklong Electoral

Division),

Michael Ryan,

John Thomas Clanchy,

Messrs. James Carroll,

William Gubbins,

Thomas Malone,

Patrick Malony,

Michael Walsh,

Laurence Roche,

Michael J. O'Riordan,

William M. Laffan.

Mr. Commissioner Hawley called the attention of the Board to a letter he had that moment received from the Commissioners on valuation, relating to another Union; it advised, generally, that it would not be desirable for Boards of Guardians to press on valuers any particular scale of valuation of the rateable property of Unions, inasmuch as the valuers would be called upon at a future period, in all probability, to maintain their valuation on oath in courts of appeal, and otherwise.

Remonstrance of
Poor Law Commis-
sioners.

June 18, 1840.

The clerk reminded the Board that the period given to Messrs. Roche and Lynch to finish the valuation of the Union was just now expired.

Mr. Roche having requested the indulgence of the Board, and an extension of the time.

The guardians having inspected several of the field books, appeared to be well pleased with Mr. Roche's system of valuation, and felt generally disposed to give further time.

Resolved,—That the time for finishing the valuation be extended to the 15th September next.

Time for Valuation
extended.

July 17, 1840.

Mr. Hawley informed the Board that the Commissioners, to whom he had conveyed their wishes on the subject, would not consent to the time, but would consent to the appointment of assistant valuers at once, to finish the electoral districts yet undone; and, after some discussion, Mr. Roche declaring he could not possibly undertake to finish before the September next, and that he had no objection to the appointment of assistants, it was

Poor Law Commis-
sioners refuse to
sanction it.

Resolved,—That an extraordinary meeting be convened on Wednesday, the 22nd July instant, for the purpose of appointing Assistant Valuers.

Mr. Hawley handed over to the valuator, Mr. Michael Roche, the field-book and blotters of the county Cork parishes, as valued by the valuers of the Mallow Union, which may assist Mr. Roche and Mr. Lynch in their valuation of the Charleville electoral division.

July 22, 1840.

Present, 15 guardians.

Messrs. John Ryan, Lawrence McCarthy, William Gubbins, jun., and Daniel Kirby were appointed assistant valuers.

Appointment of
Assistant Valuers.

The clerk requested the Board to go into committee on the valuation.

Manisteranenagh electoral division.—

Mr. Moloney and Mr. Barry expressed themselves pleased with the valuation of this electoral district; which, in their opinion, was very fair. Mr. Browne was of the same opinion.

APPENDIX.

Kilmallock.

Extracts from
Minute Book.
Revision by Com-
mittee.

Ballinvana electoral district.—

Mr. Walsh was of opinion that this electoral district was fairly done.

Tankardstown electoral division.—

Mr. O'Donnell could not say that he was pleased with the valuation of this district, and would be prepared with his objections next meeting.

Ardpatrick electoral division.—

Mr. O'Donnell would postpone his opinion of this district to next meeting.

Galbally electoral division.—

Mr. Laffan and Mr. Henebry very strongly protested against the valuation of this district and said their constituents were not at all pleased, as the valuation was too high.

August 1, 1840.

Present 10 guardians.

Resolved,—That the Valuation Committee now present will proceed to inspect the valuation books.

Ardpatrick electoral division.—

Mr. O'Donnell said he could himself see no objection to the valuation.

Kilmallock.—

Mr. Evans had no objection to the valuation of this district, not having got any from his constituents.

Glenbrohane.—

Mr. Keys, the guardian for this district, not attending, the chairman referred to Mr. Gubbins, as to the valuation of it; and his opinion was favourable, so far as he could be informed.

Knocklong.—

Mr. Gubbins could speak decisively as to his own district, and considered the valuation fair.

Uregare.—

Mr. Wilson was content with the valuation.

Ballylanders.—

Mr. O'Brien not attending, the opinion of the committee was, that Mr. O'Brien was pleased at a previous meeting with the valuation of this district.

Ballyshonboy.—

Mr. O'Donnell not attending, the opinion of the meeting was, that he had not objections to this district at a previous Board.

Glenroe.—

Mr. O'Riordan was content.

Kilfinnan.—

Mr. William Gubbins was content.

Dromin.—

The committee seemed to think this valuation pleased the meeting.

Galbally.—

Postponed to the 15th August.

Tankardstown.—

Mr. Malone not attending, Mr. L. Roche informed the committee Mr. Malone was content.

Kilfin.—

Mr. O'Connor not attending, the committee considered there was no objection to this district.

Cahercorney.—

Mr. Barry not attending, the committee considered there was no valuation objection here.

Bruff.—

In the absence of Mr. Moloney and his colleagues, this is adjourned to 15th August.

Knockanny, Ballinlough, Charleville, and Hospital, adjourned to 15th August.

August 15, 1840.

Present, Mr. Assistant Commissioner Hawley, and 30 guardians.

Field-books to be
forwarded to Guar-
dians.

Proposed by Mr. Wise, seconded by Mr. William Gubbins,—That on Mr. Roche completing each electoral district, he shall forward his field-books of such district to the guardian or guardians thereof, which the guardian or guardians thereof will afterwards return to the clerk of the Union.

August 25, 1840.

Present 11 guardians.

A resolution passed unanimously, by which it was consented to and agreed upon, that time be extended to the valuers to lodge the books and schedules with the clerk of the Board by Wednesday, the 3rd September next.

September 20, 1840.

Present 27 guardians.

Mr. Evans at this time pressed a resolution he had brought into the Board-room, proposing a vote of thanks to Mr. Roche, the valuator. The guardians of the Galbally district, Messrs. Laffan and Henebry, opposed the resolution; and Mr. Evans having pressed, the sense of the meeting was taken.

Proposed by Mr. Evans, seconded by Mr. Clanchy,—That we consider Mr. Michael Roche

and Mr. Thomas Lynch fully entitled to our best thanks for the ability, honesty, and zeal with which they have perfected the arduous task committed to them, of valuing the several properties in this Union.

Proposed by Mr. Laffan, seconded by Mr. Lawrence Roche,—That the resolution of thanks be postponed to a future day.

The chairman took the votes, and there appeared for the resolution 19, for the amendment 7; the resolution was accordingly carried.

The clerk produced Mr. Commissioner Hawley's reply to Mr. Laffan's letter to Mr. Hawley, on the Galbally electoral district valuation, whereby it appeared that the objections handed in to the clerk by Mr. Hennebry, one of the guardians, cannot be entertained, as not being signed according to the orders of the Poor Law Commissioners. The Board appeared anxious that application should be made to the Poor Law Commissioners on the subject.

Proposed by Mr. Joseph Gubbins, seconded by Mr. Keys,—That the clerk will write to the Poor Law Commissioners for liberty to receive the objections brought by Mr. Hennebry, on behalf of the people of Galbally, and which were signed at Galbally in the presence of Messrs. James Keys, Joseph Gubbins, William M'Laffan, Michael Hennebry, and Hugh Massy, five of the guardians of the Union; and that the clerk will communicate the Commissioners' wishes to the guardians of that district.

Moved by Mr. Michael O'Donnell, seconded by Mr. Joseph Gubbins, that an adjourned meeting of the Board of Guardians of this Union be held on Tuesday, the 6th of October next, to complete the valuation and fix a rate, after hearing any objection lodged against the valuation.

October 6, 1840.

Present 22 guardians.

The Board commenced to proceed with the objections lodged to the valuation, and got through several electoral districts satisfactorily; namely, Bruree, Manisteranenagh, Cahircorney, Ballinlough, Hospital, Uregare. Consideration of objections.

October 30, 1840.

Present 14 guardians.

Proposed by Mr. Carroll, seconded by Mr. L. Roche,—That this meeting be adjourned to Saturday, the 17th October instant, to go through the valuation objections remaining undisposed of; and, if necessary, that another adjourned meeting take place for the purpose.

October 17, 1840.

Present 8 guardians.

The Board went into the consideration of the objections to the valuation from the electoral district of Galbally; and the guardians' time was thereby occupied till a very late hour in the evening, when it was proposed by Mr. Keys, and seconded by Mr. L. Roche,—That this Board, having gone through a number of objections this day, deem it proper to adjourn to the 21st October, instant, for the purpose of finally closing the valuation objections; and that the clerk will write to all the guardians, giving notice of this adjournment, and that the objections will be finally determined on same day.—Carried.

The objections were again proceeded with. Adjournment to Wednesday, 21st October, 1840.

October 21, 1840.

Present 3 guardians.

The Board proceeded with the consideration of the objections undisposed of, and finally closed the objections of the entire Union.

Proposed by Mr. Michael O'Donnell, and seconded by Mr. Keys,—That this Board, having used every diligent exertion in the consideration of the valuation objections, even up to six o'clock, do hereby confirm the valuation, and determine all objections closed, and that the rate be struck at the next ordinary meeting, if then advisable.

November 20, 1840.

Present 11 guardians, and Mr. Commissioner Hawley.

Resolved,—That the first poor-rate, to be collected for the wants of the Union of Kilmallock, be struck at the rate of 5d. to the pound on all rateable property within the Union, and that said rate is hereby so made, and the clerk of the Board instructed and empowered to prepare a rate accordingly. Rate declared; 5d. in the pound.

Evidence.

MR. MICHAEL ROCHE, Valuator, *examined*.

Evidence.

Mr. Roche, Va-
luator.

Was appointed valuator of the Kilmallock Union in June, 1839, along with Mr. Lynch, of Granagh, who afterwards died in January, 1840, and his son, Mr. Thomas Lynch, was then appointed valuator in his stead; had, along with Mr. George Gubbins, conducted the tithe valuation, in the parish of Kilmallock, in or about the year 1831. Has resided for nearly 40 years in the neighbourhood, where he has during all that time managed an extensive farm. Is well acquainted with the value of land from his experience as a farmer. When valuing the Union he tried in every instance to procure copies of the tithe surveys; it was not thought worth the expense to procure abstracts or copies from the Diocesan Courts in which the originals were lodged; procured copies in some instances. They were not of much use, except in ascertaining general extents of parishes, and, in some instances, of townlands, where the townlands were not broken up after the tithe composition was made. He did not rely upon them either as to the quantities or the value of the land. Did not use the county cess or applotment-books, except to ascertain the amount of baronial cess. He was not furnished

nished.

APPENDIX.	
<i>Kilmallock.</i>	
Evidence.	
Inquiries made.	with any maps, except a few private ones of particular estates. For the few first days after he began the valuation he did not make any inquiry as to the rent the occupier paid, but afterwards, in consequence of being directed to do so by the Board of Guardians, he inquired as to the rent in every case, and ascertained besides the rents of those holdings which he had in the first instance valued without making those inquiries. Inquired in each case into the amount of the rent and tithe rent-charge, and the quantity of land held by each occupier; made these inquiries from the landlord or landlord's agent whenever he had an opportunity of doing so. In some cases he had no such opportunities. Was furnished with the rentals of a few estates only. He visited in person every tenement in the Union, and ascertained the name of each occupier by inquiries made on the spot, and in general learned the amount of the rent from the occupier himself. Many of the occupiers produced their receipts to him; and, whenever he thought it advisable, he required them to do so. Believes he was in almost all instances correctly informed as to the rents, which he always took down in his field-books. Ascertained the gross rent whenever he could, but was in most cases told the acreable rent, the rent throughout the Union being usually an acreable rent, so much per Irish plantation acre. In valuing land he did not estimate its produce, or found his valuation upon any such estimate; he took the land in its actual state, without regard to the degree in which it admitted of improvement, and considered what it ought in fairness to be let for from year to year to a person paying, in addition to the rent, all taxes except tithe and the expense of keeping the land as he found it. Thinks that the rent, to be fair as he understands the word, ought to be such as to leave the tenant one-third of what would be a rack-rent for the same land, for the payment of the taxes and the subsistence of himself and family, over and above the small profit which the tenant, paying a rack-rent, might contrive to make out of the land; means by rack-rent such a rent as the tenant cannot pay by means of the produce of the land, without confining himself to bare subsistence, and depriving himself of every comfort and convenience. Some tenants within the Union holding only two or three acres, and paying between three and four pounds an acre, contrive to pay thereat and live, but they live very poorly,—indeed quite miserably. They till a small part of it for a corn crop, by which they mean to pay the rent, and plant the rest with potatoes for the subsistence of the family, and feed a pig or sometimes two besides. They generally, but not always, add a little to their means of living by working for hire.
Visited every tenement.	
Ascertained rent.	
Standard of value.	
Definition of "fair rent."	
Definition of "rack-rent."	
Poverty of small farms.	
Made no distinction on account of leases.	Made no distinction between a case where there was and one in which there was not a lease. Thinks he valued small farms a shade higher than he valued large ones, as he took into account the money capital necessary for the cultivation and management of large farms. Thinks the rent, to be fair, should leave the tenant reasonable remuneration for the capital necessarily expended by him, as well as for his labour. The net annual value fixed by him is in many instances higher than the rent, but in the majority lower; thinks the effect of his valuation, taking one part of the Union with another, is to throw three-fifths, or very nearly three-fifths, of the poor rate on the landlord, leaving the other two-fifths, or a little more, to be borne by the tenant. When he found a house and land occupied together he valued them together; the standard pointed out by the Act could not in his opinion be properly applied to either separately; the house might be valuable with the land, and scarce of any value without it; and the land might be of a different value to a person getting the house along with it, from what it would be to a person who took it by itself. In valuing a house when occupied alone, he considered what it would be reasonably worth to a person who should take it from year to year, keeping it in the state it was in, estimating according to the best of his judgment the advantages and conveniences, if any, of local situation, and calculating what it would cost each year to keep it in the state of repair it was in at the time of the valuation. He invariably supposed an insurance of the house. In estimating what would be a fair rent for land, in order to determine by that the net annual value, he did suppose the tenant bound to deliver it up at the end of the year; that is to say, the rent was calculated as lower than if there was a lease; as he thinks the same amount of rent would not be given by a person taking land from year to year, as by a person taking a lease of it. Thinks the fair rent for a tenant without capital is about the utmost that can be got from a tenant with capital. By solvent tenant he understands a tenant with capital. What a tenant could pay, reserving reasonable compensation for capital, time, and labour, is just what he means by a fair rent, and is also, he thinks, the utmost that could be got from a solvent tenant. Does not think a tenant, properly speaking, a solvent tenant, who is barely able from year to year, by means of the land itself, to pay the rent. To be a solvent tenant he must either have capital, or be able from the lowness of the rent to acquire it out of the land. Thinks that a tenant, to be a solvent tenant, should be able not only to pay his rent, but to compensate in damages for any breach of covenant he might commit. Did not make an allowance for any profit to be derived by the tenant from his occupation over and above reasonable compensation for his capital, time, and labour. To allow anything further would be taking from the rights of the landlord. Most of the farms in the Union are held under leases of lives or years, the shortest term usual being 21 years. Some landlords, however, do not grant any leases. In calculating the remuneration he thought reasonable for the tenant's capital, considered him entitled to five per cent., perhaps more, certainly not less; and thinks the tenant entitled to the same compensation for his time and labour, as he would get for the same time and labour, that is the constant caring of the same quantity of land, as steward for another. The average amount of county cess throughout the Union is 4s. 3d. per acre. No part of his valuation has been revised; the rate-payers have hitherto, generally speaking, expressed satisfaction as to the valuation. Has not heard that any landlord has objected to it. No notice of appeal has yet been lodged, the general feeling both of landlords and tenants, as far as he has been able to observe, has been and is in favour of a low valuation. Does not think landlords have, under the 74th section of the Act, any direct interest in the amount of the valuation, as long as it is not below half the rent, and that it cannot often be; the

Tendency to a low valuation.	

landlord indeed has an interest in common with every other landlord in the Union, in the valuation being high, so as to lessen the amount of the poundage rate, the one-half of which is to be deducted from each pound of his rent, but thinks that this is too slight and indirect an interest to influence landlords generally speaking. There was no survey made for the purposes of the valuation. Did not lower or alter the standard of his valuation in consequence of the resolution of the Valuation Committee, adopted at their meeting of the 19th October, 1839. Had some time previous to that lowered part of the valuation he had then completed, upon reconsidering that portion of it in consequence of the representations of some of the guardians. The reduction so made was about $12\frac{1}{2}$ per cent. on part of Galbally. The assistant valuers when appointed carried on the valuation in conformity with the instructions and directions of his coadjutor, Mr. Lynch and himself; before the valuation books were finally closed, he himself visited the district that had been valued by the assistant valuers, and examined their valuation in order to ensure a uniformity of valuation throughout the Union. Did not find occasion to alter any valuation made by them, except in very few instances. The Valuation Committee never interfered with the valuation while going on except upon the occasion of the meeting of the 19th October, 1839. In valuing the Charleville district used, but did not adopt the valuation made by the valuator of the Mallow Union. Thinks, if he had adopted it, that the valuation throughout this Union would not have been uniform, the valuation of the Mallow valuator being somewhat higher than his. The difference between the two was very slight with regard to land; it was greater with regard to houses and other rateable property not consisting of land. Thinks that no two valuers acting without consulting together would be found to agree exactly as to the latter kind of property. Believes that, in giving his own opinions on the subject of the valuation, he has stated those of his late and present colleagues, the Messrs. Lynch, with whom, though they might not describe the valuation exactly as he has done, he always found, while making it, that he practically agreed.

Alteration in Valuation.

NEWCASTLE UNION.

APPENDIX.

Newcastle.

Extracts from Minute-book of Board of Guardians.

July 2, 1839.

Present, Mr. Hawley, assistant commissioner, and 23 guardians.

Resolved,—That, subject to the approbation of the commissioners, the tender of Mr. William Wilson, of Springfield, be accepted, at 2*l*. 10*s*. per 1000 Irish acres, including buildings and all other kinds of rateable property within the Union; the valuation to be completed on the 25th day of March, 1840.

Resolved.—That the following seven guardians, viz., Alfred Furlong, Edward Lloyd, John Dowling, Cornelius John Curtin, Maurice Roche, John Cox, and John Harnett, be appointed a Valuation Committee, to meet on Saturday at 12 o'clock, once a fortnight, to be open to the remainder of the guardians, but not for voting. The first meeting to be summoned upon the requisition of three of said committee.

August 6, 1839.

Mr. Wilson reported to the Board that he commenced the valuation of the division of Newcastle on Saturday, the 3rd instant.

The Valuation Committee to meet on Saturday, the 24th August instant: notice to be given to all the guardians.

March 4, 1840.

Mr. Wilson, valuator, forwarded books containing the valuation of the divisions of Newcastle, Monagea, Mahoonagh, Killeedy, Castletown, and Ballingarry, being the remainder of the valuation books of the Union; also a letter requesting an advance of 100*l*. on account of his services; which were laid before the Board, and after the books had undergone a minute inspection, the following order was made:—

That the clerk do communicate to Mr. Wilson that the guardians do not consider the books to be in a state which justifies their advancing money, even if the security were completed.

That they find in them many striking errors—in one case, the gross value stated about 6*l*. under the net annual value; the Christian names incorrect, or not written at full length, or not given at all: thus, “Miss Gun,” &c. &c., which would be fatal to the levy. Landlords' names are also incorrect. The Earl of Devon is not in any way liable.

That as the Valuation Committee will sit at a house on the Quay, Newcastle, from day to day, until next general meeting, Mr. Wilson may be present and satisfy himself on the objectionable points.

Resolved,—That the Valuation Committee shall meet every day until the books are satisfactorily completed.

March 23, 1840.

Present, Mr. Hawley, assistant commissioner, and 16 guardians.

The valuator's letters, dated the 7th and 20th March, 1840, having been read, and the valuation books of the 13 divisions of the Union been laid before the Board for inspection,

Resolved,—That the more we examine the valuation books furnished by Mr. Wilson, the more we are convinced of their general incorrectness, which extends, not only to the disproportionate value of farms in respect to each other, but to the total omission, not only of farms, but of whole townlands. Striking instances of the latter are, the omission of Castleview (Guriboy) the house and demesne of Thomas Lock, Esq., 64 acres, in Newcastle division, and of the whole townland of Ballyelane, 607 acres, in the division of Ballingarry.

That many other glaring omissions having been ascertained, the guardians cannot regard Mr. Wilson's valuation as suited to the purpose for which it was intended, or according to his agreement with the Board; and on that account, as well as that Mr. Wilson has declined to enter into security, although repeatedly called on to do so by the Board, and lately by Mr. Hawley, we are of opinion that the Board should take immediate steps to provide a correct and sufficient valuation, and a fair transcript thereof in books, without erasures and alterations, such as abound in the books furnished by Mr. Wilson,

That a copy of this resolution be furnished to Mr. Wilson, in order to enable him to make any communication thereupon which he may think proper, previously to the next general meeting of the guardians, on Tuesday, the 7th day of April next.

Resolved,—That the respective guardians be at liberty to take charge of the books belonging to their divisions severally, for the purpose of scrutiny; and that they be requested to return them before the next general meeting.

April 7, 1840.

Present, 25 guardians.

Mr. Wilson's letters, dated Cootehill, the 26th March, and 4th April, 1840, having been read,

Resolved,—That we suspend any proceeding for re-making, revising, or completing the valuation of the Union until our next general meeting, in order that Mr. Wilson may then have a further and final opportunity, as suggested by his letter of the 26th March, of explaining the errors and omissions appearing in the books furnished by him; and in case he shall fail to attend and satisfy the guardians as to the propriety and sufficiency of his valuation, that we shall

pended.

proceed to value the Union as if no valuator had been heretofore employed; and that a copy of this resolution be forwarded to Mr. Wilson.

April 29, 1840.

Present, 22 guardians.

Mr. Wilson having expressed his readiness to execute his bond and contract immediately, and to proceed, with the assistance of divisional revisors, to correct his valuation to the satisfaction of the guardians, previously to his being paid any money on account,

Resolved,—That the clerk do cause notices to be posted in each division, requesting the cess-payers of each division to appoint a committee for such division, to consist of one cess-payer to be returned from each townland. The committee so appointed to select a revisor for the division, not being a poor law guardian, and to return his name in writing to one of the guardians of such division; the revisor to co-operate in his division with the valuator, and to be paid, at the discretion of such committee, a sum not exceeding one farthing for each Irish acre in the division. In case a revisor shall not in such manner be appointed for Newcastle division on or before Monday next, and for the other divisions on or before the Monday following, the Board of Guardians will make the appointment. If any townland shall not make a return, the persons who shall be returned by the other townlands shall constitute the committee.

Resolved,—That Alfred Furlong, Edward Lloyd, John Dowling, Cornelius John Curten, Maurice Roche, John Cox, and Michael Sheahan be appointed a Valuation Committee, to meet every second Saturday during the revision. That the other guardians be at liberty to attend the committee, but not for voting, and that the clerk do summon the first meeting.

June 2, 1840.

Present Mr. Hawley, Assistant Commissioner, and 20 guardians.

Resolved,—That Mr. Wilson attend at the hotel every day during the remainder of the present week, and on Monday next, from 10 o'clock till 4, to receive objections from the guardians, which must be in writing; that on Monday next all the books be given to Mr. Wilson, who shall forthwith cause them to be fairly copied, so that the fair copies shall at all events be ready for the next meeting of the guardians, on the 1st day of July next; that the clerk do give immediate notice of these resolutions to the guardians who have not attended this day.

July 1, 1840.

Present Mr. Hawley, Assistant Commissioner, and 15 guardians.

Resolved,—That Mr. Wilson, having failed in producing the valuation books, pursuant to the resolution passed at our last meeting, when he was present; and inasmuch as Mr. Wilson has not attended this meeting, nor made any excuse for such omission, our clerk be instructed to apprise him, that the commissioners have directed a rate to be made, and that unless he shall forthwith furnish the books in a suitable manner, proceedings will be taken against him and his securities, and such other steps resorted to as may be necessary for relieving the guardians from the inconvenience to which Mr. Wilson has subjected them, and that on receipt of an answer from Mr. Wilson the clerk do communicate with the guardians, with a view of causing an extraordinary meeting to be convened.

August 5, 1830.

Present, Mr. Hawley, Assistant Commissioner, and 26 guardians.

The valuation books of the Union were laid before the board for inspection.

Resolved,—That the clerk do apprise Mr. Wilson that many errors have been discovered in his valuation books; that unless Mr. Wilson attend in Newcastle within 14 days, and remain until the books be completed, some competent person or persons be appointed to correct and complete them, previously to their being submitted to public inspection, and that a copy of this resolution be forwarded to Mr. Wilson and each of his sureties.

August 20, 1840.

Present 18 guardians.

Letter read from Mr. Wilson, the valuator, dated Newbliss, County Cavan, 16th August, 1840, complaining of illness, and of not having received in time the clerk's letter, conveying to him a resolution of the last meeting of the board, and promising to be immediately in Newcastle to correct any errors which might appear in his books.

Resolved,—That the committee do meet from day to day until the books shall be corrected and completed for public inspection, and that this meeting do adjourn to Wednesday, the 2nd day of September next.

September 2, 1840.

Present 21 guardians.

The valuation books having been examined by the board,

Resolved,—That the books require further correction, and that the Valuation Committee do meet on Saturday, the 5th instant, to ascertain if they be then fit for general inspection by the rate-payers. The meeting adjourned to Saturday, the 12th day of September instant.

September 12, 1840.

Present 21 guardians.

The valuation books were laid before the board, but Mr. Wilson did not attend as was expected, and there being many important corrections still to be made by him, several of which were already brought to his notice,

Resolved,—That Mr. Wilson be required to make such corrections as shall appear necessary, and that in the meantime the valuation books of the Union be exhibited to the rate-payers at the Court-house in Newcastle for 21 days, commencing on Thursday, the 17th day of September instant, and be continued to Saturday, the 10th October next inclusive, from 10 o'clock in the

forenoon to 4 o'clock in the afternoon of each day, and that a notice to that effect be published in the *Limerick Chronicle* newspaper once, and in the *Reporter* newspaper once, and that notices be posted, particularizing the day appointed for each electoral division.

October 6, 1840.

Present Mr. Hawley, Assistant Commissioner, and 17 guardians.

Mr. Assistant Commissioner Hawley's letter of the 12th August last, on the exhibition of the valuation books for 21 days being completed, having been read, it was

Resolved,—That the several objections recorded by landlords, agents, and occupiers against Mr. Wilson's valuation, be taken into consideration on the next day's meeting of the board, and that the clerk do give notice in the several divisions of the Union to that effect.

January 12, 1841.

Present Mr. Bourke, Assistant Commissioner, and 16 guardians.

The rate-books of the Union were laid before the board, when a rate of 5*d.* in the pound was declared on the net annual value of the Union, and the books signed by the chairman and three of the guardians present.

March 27, 1841.

Present 16 guardians.

Samuel Dickson, Esq. having served notice on the clerk that he would appeal against the valuation of his property in the electoral division of Ballingarry, at the next Limerick sessions,

Resolved,—That Mr. Dowling be requested to attend the appeal on behalf of the Union.

Objections to the
valuation.Rate declared; 5*d.*

Dickson, Esq.*Evidence.*

Evidence.

Mr. Wilson,
valuator.*Replies of Mr. WILLIAM WILSON, Valuator, to written Queries addressed to him.*

When were you appointed by the Newcastle Board of Guardians valuator of their Union?—June, 1839.

Was your tender as to the terms on which you would make the valuation the lowest?—It was not.

How many, if any, were lower?—Many.

His qualifications.

What were your qualifications?—Testimonials from many of the most respectable gentry in the country, with those from scientific persons.

Your profession?—A surveyor, commonly and erroneously called *C. E.*

Had you ever valued land before?—Yes.

Had you done so for any public purposes?—Yes.

As Commissioner under the Tithe Composition Acts?—Yes.

As valuator of any other Poor Law Union, or otherwise?—Not before this.

Had you valued land for any private persons or purposes?—Yes.

If so, had it been principally in any particular county or counties, district or districts?—

The name or names of such county or counties, district or districts?—Limerick and Clare.

Had you valued any, and what, large estate or estates?—Yes; for Stephen Dickson, Esq., and others in County Limerick and Clare.

Where?—County Limerick.

When?—First about 1828; my age at present 38 years.

Had you ever yourself held or managed any considerable quantity of land?—Yes.

If so, where, and for how long a time?—In Islandaneen, County Kerry; Ballinacurra Wilson, Ballinacurra Bowman, County Limerick, and many other places. Some up to the present period.

What, on the whole, at the time of your appointment, was the state of your experience as to the value and qualities of land, and how had you acquired that experience?—Both as a professional person and practical farmer of great experience, and having a good knowledge of the building of houses and machinery, as will appear from testimonials I hold from scientific persons.

Where had you usually resided previously to your appointment?—Near the city of Limerick, 20 miles from Newcastle.

Had you been for any time before resident in the Newcastle Union or its neighbourhood, if so, where, and for how long a time?—No.

How far and by what means, and through what opportunities or means of information, were you, when appointed valuator of the Newcastle Union, acquainted with the nature or circumstances, general or particular, of the land or other rateable property within the Union?—Acquired the information from an examination of the soil and sub-soil, situation, and other local circumstances connected therewith.

What testimonials did you produce to the Board of Guardians when a candidate for the appointment?—Those as before stated as to my qualifications from the most respectable sources the country could afford. Not personally known to any of the guardians, save one.

How (independently of your terms being thought acceptable) were you recommended to their choice?—From high qualifications.

When was the approval of the choice by the Poor Law Commissioners communicated to the Board?—About one month, or less, after appointment.

When did you commence your valuation of the Union?—About July or August, 1839.

With what electoral division did you begin?—Newcastle.

Did you select that division as the first in consequence of the rateable property therein being in any way, and how, peculiarly circumstanced, or of your being possessed of any peculiar means of information in regard to it?—According to the instructions of the Poor Law Commissioners, being first on the list.

Valuation com-
menced.

APPENDIX.

Newcastle.

Evidence.

Documents used
by valuator.

Were any documents furnished to you, or did you procure any, for the purpose of guiding or assisting your valuation.—Yes.

Any tithe surveys?—Yes.

Or valuations?—No.

Those of all the parishes in the Union?—No.

If of some only, of how many parishes?—Seven or eight.

What use did you make of such surveys or valuations in the instances in which you procured them?—Tithe valuations as to the survey and names at the period the tithe valuation was made.

Did you find them in any and what degree useful as ascertaining boundaries—of townlands?—Yes, of farms and townlands.

Of particular holdings?—Yes.

Did you use them as guides or aids to the discovery or ascertainment of the value of the land?—Decidedly not.

How far, if at all, did you rely upon them as to the quantities of land either within particular townlands or particular holdings; how far as to the value they fixed upon the land?—I did rely on the tithe surveys, as the Commissioners had the power, when there was any doubt as to the survey of a particular holding, to cause a new survey, and I found in this Union they did so. The value thus fixed was not correct in most cases.

In what respects, when you compared your own valuation, made independently of, or without reliance upon them, with the valuation made by them, have you found, or do you consider the latter correct?—The Tithe Commissioners did not make a uniform valuation, inasmuch as they rated first quality land five miles from a town as high as town fields.

Valuation by Tithe
Commissioners;
how defective.

Were you furnished, for the purposes of your valuation with, or did you procure any county-cess applotments?—I was not, nor did I procure them, being quite useless, for many reasons, in that district.

What use did you make of these?—No use.

How far did you find them useful?—Not at all.

In what respects did you find they could (generally, or in any class of cases,) be relied on as accurate?—In no respect whatever in the county.

Were you furnished with any maps?—Yes.

Of the Union?—Yes, a very imperfect one.

Of its electoral divisions?—Yes.

Of any particular districts? Of any private estates?—Yes, of some.

Were any, and which of these, of much use to you?—Some gentlemen's private maps of much use.

If in the case of the tithe surveys, cess applotments, &c., you have to state that you did not rely upon them, either as to extent or value, state *why* you did not?—As to extent, quite correct, but not as to value, for the reasons before stated.

How did you, generally speaking, ascertain the names of the occupiers of the tenements you were valuing?—On inquiry at each holding from one or two persons residing on the different townlands, walking round with me.

Names of occu-
piers; how ascer-
tained.

Have you since found that you were ever misled in this respect by the information on which you at first relied?—I have not; and, from the arrangement made by me, I fancy I could not.

How did you determine or fix the net annual value of each tenement?—By the quality of the soil, its improvements and locality.

Net annual value,
how fixed.

Take first the case of land, and say what test or criterion of value you adopted?—A fixed price on the produce.

Did you make any estimate of the produce of the land, in order to determine the value?—Certainly.

If so, how did you do so, and how did you estimate the tenant's outgoings?—Ascertained what the land was able to produce, allowed one-third rent, one-third for seed and labour, and one-third for the farmer.

Did you make the rent the test, in any way, of the value?—In very few cases.

Or the rack-rent?—No.

Or the utmost that could be got from a solvent tenant?—No.

Or the utmost at which the land might be let to a person who would pay the rent, and continue to pay it?—No.

How do you understand the phrase solvent tenant; does it, with you, mean a tenant with capital, or a tenant able to pay his rent, and keep paying it?—I mean a man able to pay well his rent, and have capital to a certain extent, say as much as would pay a year's rent to guard against casualties on large farms, or three year's rent on small ones.

Definition of "sol-
vent tenant."

Would a tenant who could continue to pay his rent, but would not be able to pay damages for a breach of covenant, be, as you understand the phrase, a solvent tenant?—Certainly not.

Or was what a tenant could pay as rent, reserving reasonable compensation for capital, time and labour, that which you fixed upon as the net annual value?—Yes.

Did you strike any average from year to year?—Yes.

What average? how struck?—Certain rate for wheat, oats, barley, pork, butter, and potatoes.

Did you fix upon any sum as the value per acre of any particular class or quality (according to your estimate) of land, and value other land upon any scale calculated upon the degrees in which they approached to or receded from the value of the land you so selected?—Yes.

How was such sale, if any, graduated?—From the very best to the worst, or mountain.

What was the maximum and what the minimum of the value of land with you?—50s. per acre to 1s. per acre.

Maximum value
per acre.

APPENDIX.

Newcastle.

Evidence.
Valuation of large
and small farms.

Did you value large farms and small ones upon the same principles, and at the same rate per acre, where the land was, in your opinion, of the same intrinsic value in both?—I did not; as reluctantly I was obliged by the Act of Parliament to lay a value on the tenements in the small holdings.

If the size of the farm or holding made any difference with you?—It did.

What difference did it make?—That above quoted.

Did you value large farms higher than small ones, or *vice versa*?—Small ones the highest.

State the principle upon which you did so?—From the reason above stated.

In a word, explain your mode and standard of valuation in such terms, and with such accompanying remarks, as you may think best adapted to make both clearly understood?—Fixed the annual value on certain farms according to the foregoing principles, and then observed the same ratio throughout the Union according to circumstances, good roads, markets, manure, &c. &c.

For this purpose I would recommend you to imagine yourself directing a deputy or assistant (to whom you might be obliged to commit the valuation of part of an Union, the rest of which you were valuing yourself, and for whose valuation you felt yourself responsible) to make such a valuation as you would make yourself, and giving him such instructions as you would think necessary in order to ensure uniformity between his share of the valuation and your own?—I have given the subject of assistant valuers a great deal of consideration the last 12 months, and think it quite impossible that the assistant could do the work of valuator, unless conjointly with the valuator; there never could be a uniformity of rating.

Assistant valuers.

And then think (they will, I am sure, readily present themselves) of the questions which an objector to your theory of valuation would, upon hearing your statement of it, be disposed to ask, and answer them as if I asked them here?—Such instructions as I would give to an assistant would fill half a quire of paper.

Valuation of houses
and lands when
occupied together.

And say, when you found a house and land occupied together, how you valued them, whether separately or jointly?—Jointly.

And how, if at all, the value of either was enhanced or affected by the circumstance of the occupiers enjoying both?—As a matter of course it enhances the value of a farm to have a certain description of house; but enormous large houses on small farms do not enhance the value; that is, houses that cost 20,000*l.* could not readily get tenants.

How did you allow for repairs? For insurance?—For repairs and insurance a sum to keep them in the same repair I found them.

Averages of County
cess and tithe.

What is the average (taking such periods of time as you think will enable you to average it most fairly) of the county cess per acre throughout the Union?—I forget, but rather think about 2*s.* per acre on the good land; nothing on the black mountain.

Ascertained rents.

What is the average of the tithe?—Different in the several parishes; average, 1*s.* per acre. Did you, while valuing the Union, ascertain the rents of the occupiers?—In many cases.

How did you do so?—By application to the landowners and their agents.

Have you instituted any comparison between the rents of the occupiers and the net annual value of their tenements as fixed by you?—I have.

State, as well as you can, the proportion your net annual value bears to the rent, taking the entire Union?—My recollection is not, at this distance of time, clear on this point.

Abbeyfeale Electoral
Division.

ABBEEFEALE.

Then take each electoral division singly, and say, as to Abbeyfeale, of what description the lands in this electoral division are for the most part?—Mostly mountain.

Are they tillage lands?—No tillage to any extent.

Is any considerable portion of it pasture land?—Principally mountain pasture.

Is any considerable portion (what proportion) of it mountain or waste?—A good portion very bad mountain; all reclaimable.

Who are the proprietors of the principal estates?—Mr. Ellis, Mr. O'Grady, Colonel Fitzgibbon, Lord Dunraven.

Does the net annual value exceed the rent in many instances in this division?—It does not. Mr. O'Grady and Colonel Fitzgibbon's estates are set fairly; Mr. Ellis and Lord Dunraven's much too high.

What proportion, averaging the rent and net annual value throughout this electoral division, does the latter bear to the former?—Net annual value one-eighth lower than rent, except the above two cases.

Monagea.

MONAGEA.

State in the same manner, as to Monagea, what kind the lands are of? Tillage? Much pasture? Any (query, much) mountain or waste?—Not much tillage. A great portion pasture. Perhaps one half mountain and waste.

The principal proprietors?—Lord Dunraven.*

Does the net annual value in this electoral division exceed the rent in many instances?—It does.

Average the rent and the net annual value throughout the division, and what proportion does the latter bear to the former?—Perhaps 20 per cent. higher.

Killagholehane.

KILLAGHOLEHANE.

The lands, what kind; tillage, pasture, mountain, or waste, their several proportions?—Principally mountain, with some prime tillage and pasture.

The principal proprietors?—Lord Muskerry and Mr. Sullivan.

The proportion of the net annual value to the rent, taking the average throughout the division of each?—Net value much lower than the new lettings; some old leases.

* Named here, by mistake, instead of Lord Devon.

KILLEEDY.		APPENDIX.
The lands, what kind; the proportions of tillage, pasture, and mountain and waste land?		Newcastle.
—A great quantity of mountain, with a portion of good pasture.		Evidence.
The principal proprietors?—Lord Devon, Mr. Maunsell, Mr. Stevelly.		Killeedy Electoral Division.
The proportion of the net annual value to the rent, taking the average of each throughout the division?—25 per cent. over the rents.		
KILMEEDY.		Kilmeedy.
The land, of what kind?—Principally good grazing, with a very small mountain.		
The principal proprietors?—Mr. White, Mr. Benson.		
The proportion of the net annual value to the rent, taking the average of each?—Twenty-five per cent. over the rent.		
CASTLETOWN.		Castletown.
The land of what kind?—Principally fine pasture.		
The principal proprietors?—Mr. Conyers, Mr. Hart, Mr. Greene, Mr. Monsell.		
The proportion of the net annual value to the rent, taking the average of each?—Twenty per cent. over the rent, except on one or two properties.		
ARDAGH.		Ardagh.
The land, kind of?—Very fine pasture land.		
The proportions of tillage and pasture land, and of mountain and waste?—Some mountain.		
The principal proprietors?—Mr. Serjeant Goold, Mr. Studdert, Messrs. Massey.		
The proportion of the net annual value to the rent, taking the average of each?—About equal.		
RATHRONAN.		Rathronan.
The land, kind of; proportions of tillage and pasture land, and of mountain and waste?—A good portion of mountain, with some fine pasture.		
The principal proprietors?—William S. O'Brien, M.P., Mr. Stephenson, Lord Clare.		
The proportion of averaged net annual value to averaged rent?—Not much difference.		
CLOUNCAGH.		Clounagh.
The land, kind of; proportions of tillage and pasture land, and of mountain and waste?—Tillage and pasture; no mountain.		
The principal proprietors?—Mr. Feltruson, Lord Clare, Mr. O'Grady, Mr. Evans.		
The proportion of averaged net annual value to averaged rent?—[not answered.]		
NEWCASTLE.		Newcastle.
The land, kind of; proportions of tillage and pasture land, and of mountain and waste?—Mostly pasture and tillage; not much mountain.		
The principal proprietors?—Lord Devon.		
The proportion of averaged net annual value to averaged rent?—Net value over rent 25 per cent.		
MAHOONAGH.		Mahoonagh.
The land, kind of; proportions of tillage and pasture land, and of mountain and waste?—Pasture and tillage.		
The principal proprietors?—Mr. Massey, Lord Devon.		
The proportion of averaged net annual value to averaged rent?—About equal.		
DRUMCALLAGHER.		Drumcallagher.
The land, kind of; proportions of tillage and pasture land, and of mountain and waste?—Fine pasture; no mountain.		
The principal proprietors?—Lord Muskerry, Mr. Stevelly, Mr. White.		
The proportion of averaged net annual value to averaged rent?—Twenty per cent. over rents; many being very old leases.		
BALLINGARRY.		Ballingarry.
The land, kind of; proportions of tillage and pasture land, and of mountain and waste?—Mostly tillage.		
The principal proprietors?—Mr. Dickson, Lord Clare, Mr. Hart, Lord Dunraven, Mr. Pigott, Mr. Cox.		
The proportion of averaged net annual value to averaged rent?—Ten per cent. less than rents.		
Has any revision of your valuation been made?—In a few instances by the Board of Guardians, but to no extent.		Revision of Valuation.
Are the rate-payers generally satisfied? Are the landlords?—Yes; except on Mr. White's property, where they hold land at half value; they don't wish their landlords should know anything of the value of their several holdings.		
Is your valuation on the whole thought high or low?—Fair value.		
Have there been any appeals?—One.		
What were the grounds of appeal?—Did not hear.		
What the result?—Did not hear. I should have been sent for to defend it, as on the event of the appellant succeeding, it may cause others to also appeal.		
Did you change your standard or mode of valuation in the course of your valuation. How, and how far?—No.		

APPENDIX.

Newcastle.

Evidence.

Condition of small
farmers.

Have you valued any other Unions?—Finished Cootehill, Granard, and a good portion of Donegal.

Do you think that landlords, generally speaking, are in favour of a high or a low valuation?—Of a high one.

Add from yourself whatever you think may be useful as completing the history of the Newcastle valuation, or as explaining your own views on the Poor Law valuation generally.—The above queries I think include everything, and where proper persons have been appointed valuers, I have seen generally that persons totally unconnected with the Union have made the best valuations.

1. Say in what state of comfort, or with what command of the means of subsistence for himself and family, a person holding five acres of the average good land in the Newcastle Union at a rent of the amount of your net annual value of the same land, could live?—As to comfort; no comfort whatever, but dragging on a miserable existence, having nothing but white potatoes to live on from one year's end to the other, save an occasional salt herring, and, when in the neighbourhood of dairy farms, occasionally in summer sour milk.

2. What if he held 10 acres, paying your net annual value of it as rent?—Nearly as No. 1, but that he may keep a cow for his own use.

3. What if he held 15 acres, your net annual value of them being the rent?—Better, but still not comfortable; for notwithstanding my net annual value being 15*l.*, the occupier in many cases may be paying 25*l.*; in those cases they are much the same, or as badly off as No. 1, trying to keep up appearances.

4. What if 20 acres, similarly circumstanced; specifying diet, &c.? 5. What if 30 acres, similarly circumstanced; specifying diet, &c.?—Entirely depending on the rent they pay; on some of the estates the tenants live comfortable, particularly on Lord Devon's, Colonel Fitzgibbon's, and Mr. Goold's. The tenants have good houses, and are able to have pork, butter, &c. for their own use. The mountain districts have much improved through the exertions of Lord Devon's agent, Mr. Alfred Furlong, which in a few years will cause the lands in those localities to be worth 50 per cent. more than they at present are.

COPY of PART of a LETTER, from Mr. WILSON, accompanying the foregoing replies.

"SIR,

Arran Arms, Donegal, April 26.

YOURS of the 20th instant I only received yesterday, and lose no time in replying thereto.

"I finished the valuation of the Newcastle Union in, I think, May, 1840; so that at that lapse of time, and being since actively employed on Poor Law valuation throughout the counties of Cavan, Monaghan, Westmeath, Longford, and Donegal, it is quite impossible that I can recollect the different queries with as much precision as I could wish: however, I think you have the substance, but not at all to the extent that I could explain the matter in its different bearings, on an interview with you, when I should have the field books that I had with me in the Union."

To I. S. O'Callaghan, Esq.,
&c. &c.

RENT and VALUATION of £10 COUNTY ELECTORS (registered 1829 to 1840), so far as ascertained.

COUNTY LIMERICK.

NEWCASTLE UNION.

Marked thus * registered in or previous to 1832, and not since re-registered.

APPENDIX.

COUNTY LIMERICK.

Rent and Valuation of Occupiers—continued.

NEWCASTLE UNION.

Newcastle.

Rent and Valuation
of Occupiers.

Electoral Division.	Townlands.	Name of Occupier.	Estimated Extent.	Net Annual Value as in Rate Book.	Rent.	OBSERVATIONS.
			Statute Measure.			
MONAGEA.	RATHGAHILL.	John Sexton, Jas. Sullivan, and Thomas Sexton . . .	181 2 0	14 0 0	8 15 0	The six names which immediately follow James King's are those of his under-tenants. James King and Patrick Connell, and the nine occupiers named next after the latter are under-tenants to Mr. and Mrs. M'Sweeny, who are the immediate tenants of the trustees of the Devon Estates, and are thought to derive out of these lands a profit rent of about 110%.

This rent of 14*l.* 11*s.* is apportioned among the several occupiers herein named, all of them labourers. Their holdings are on the mountain of Ruscha, where they have rights of commonage.

RATHKEALE UNION.

APPENDIX.

*Rathkeale.**Extracts from Minute Book of Board of Guardians.*Extracts from
Minute Book.

6th May, 1839.—Third meeting of the Board.—Present 7 ex-officio and 17 elected Guardians.

Resolved, That the clerk do cause advertisements to be inserted in the Limerick Chronicle and Standard for two posts, for proposals from competent persons for the valuation of the rateable property of the Union.

Advertisements for
Valuators.

3rd June, 1839.—Present 10 ex-officio and 29 elected Guardians.

Proposals received and read.

Resolved, That the foregoing proposals be returned to the respective proposers, and that they be informed that the Guardians will be prepared to receive amended proposals in an hour, and that it is the opinion of the Board that no greater sum than 2*l.* 2*s.* per 1000 acres, with all rateable property thereon, should be paid for such valuation.

Resolved, That a standing Committee of the following members of the Board be formed for the purpose of valuing the rateable property of the Union;—3 to be a quorum:—Earl of Dunraven, Thomas H. Royse, John S. Browne, Carrol Naish, John Christy, John Blennerhasset, Thomas Davenport, John McDonnell, and Peter Griffin.

Valuation Commit-
tee appointed.

That the Committee be open to all members of the Board, to attend for the purpose of discussion; but that the decision on all questions before the Committee be left entirely to the standing members of such Committee.

That, as the valuation is to proceed in the order of the electoral divisions, the Guardian or Guardians of the electoral division immediately under process of valuation be provisionally added to the Committee as consulting members thereof.

That the Committee sit at the least once in every fortnight, in the Court-house at Rathkeale, and that the valuator do at such meetings produce all books, maps, and papers connected with the district under the consideration of the Committee.

That, as in accordance with the regulation of the Commissioners, no act or decision of any Committee is valid unless the same be reported to and confirmed by the Board, the Committee do, with the assistance of the chairman, at the completion of the valuation of each electoral division, draw up a Report relative to the valuation of such electoral division, and lay it before the Board of Guardians at a special meeting to be convened for that purpose, in order that it may be approved and confirmed by them.

And lastly, that any vacancies that may occur in the Committee, by resignation or otherwise, be filled up by appointment of Committee.

Amended proposals being then received and read, it was

Resolved, That Thomas Henry Potter and Michael Lynch, of Granagh, be appointed valutors for Rathkeale Union, to be paid for such valuation at the rate of 2*l.* per 1000 acres, Irish plantation measure, with all valuable property thereon, including surveys if necessary; the valuation to be completed in March, 1840.

Messrs. Potter and
Lynch appointed
valuators.

10th June, 1839.—Present 5 ex-officio and 14 elected Guardians.

Thomas H. Potter having stated to the Board that he had resigned the situation of valuator, the clerk was again directed to advertise for proposals.

Resignation of Mr.
Potter.

26th June, 1839.—Present 8 ex-officio and 12 elected Guardians.

Thomas H. Potter was declared by a majority of eighteen to be duly appointed valuator of Rathkeale Union, to be paid for such valuation at the rate of 3*l.* 10*s.* per 1000 acres, Irish plantation measure, with all rateable property thereon, including such surveys as should be necessary, and all other expenses: the valuation to be completed on the 1st of November, 1840.

Mr. Potter appoint-
ed sole valuator
upon terms,

18th July, 1839.—Present 6 ex-officio and 16 elected Guardians.

The letter of Mr. Stanley, Assistant Secretary to the Poor Law Commissioners, having been taken into consideration, the following resolution was proposed by Sir Aubrey de Vere, and seconded by Philip O'Hanlon, and unanimously agreed to:—

which the Poor Law
Commissioners re-
fused to sanction.

Resolved, That having taken into consideration the communication of Mr. Stanley, Assistant Secretary to the Poor Law Commissioners, to the clerk of the Rathkeale Union, under date of the 8th July inst., after mature deliberation, we are of opinion that the Resolution of the 26th ult., agreeing to pay Mr. Potter 3*l.* 10*s.* per 1000 acres should be confirmed by the meeting, believing as we do, that we have already appointed the fittest person we could find, and on the cheapest terms.

Resolution of the
Board in conse-
quence.

The clerk was directed to forward a copy of the above resolution to the Commissioners.

2nd August, 1839.

A letter of the 24th July, from Mr. Stanley, in which the Commissioners again refused to sanction the appointment of Mr. Potter on the terms proposed having been read, Mr. Potter consented to a reduction of 5*s.* per 1000 acres. It was then unanimously resolved that Mr. Potter should be paid the sum of 3*l.* 5*s.* per 1000 acres, on the conditions stated in the resolution of the 26th June; and the chairman (the Earl of Dunraven) was requested to write to the Commissioners, stating the reasons why Mr. Potter was allowed a higher sum than was originally proposed to be paid him.

Mr. Potter having
consented to a re-
duction in the rate
of his remuneration.

APPENDIX.

Rathkeale.

Extracts from
Minute Book.
Letter from Lord
Dunraven to Poor
Law Commis-
sioners.

His Lordship accordingly wrote a letter, of which the following is a copy:—

“SIRS,

“Board Room, August 2, 1839.

At the instance of the Guardians now present, I beg to represent, for your consideration, that the reason why they consented to give Mr. Potter higher terms than he at first consented to take was, their conviction that the Union of Rathkeale required much more time and trouble to value than any other Union in this part of the country,—1st, from the great subdivision of land; 2ndly, from several surveys being probably necessary; and, 3rdly, from its containing 10 or 12 villages besides the town of Rathkeale, and from their conviction that they could not find any other person so well qualified to give general satisfaction.

“I have the honour to be, &c.

“DUNRAVEN.”

16th August, 1839.—Present 2 ex-officio and 5 elected Guardians.

The Commissioners
approve of the ap-
pointment upon the
terms then agreed
to by him.

Mr. Stanley's letter of the 8th August, 1839, was read, stating that, under the circumstances mentioned in the clerk's communication of the 3rd instant, accompanied by the Earl of Dunraven's letter, the Commissioners would not withhold their sanction to the appointment of Mr. T. H. Potter as valuator of the Union, at 3*l*. 5*s*. per 1000 acres. Contract accordingly entered into with Mr. Potter for the valuation, to be completed in fifteen months from this date.

16th August, 1839.—Present 2 ex-officio and 5 elected Guardians.

Resolution of the
Board prescribing a
scale of value for
land.

Mr. Potter having required instructions from the Board for proceeding with the valuation, it was resolved, That 40*s*. per acre should be the maximum sum at which the land should be valued, and that the valuation should decrease at the following rate,—40*s*., 35*s*., 30*s*., 25*s*., 20*s*., 15*s*., 10*s*., 5*s*., 2*s*. 6*d*., 1*s*. 6*d*., 1*s*. per acre, making eleven different qualities, a reasonable value to be put on houses and buildings in the several districts, according to their local situation, in addition to the value of the land. Houses in towns or villages to be rated according to their value and local situation also.

26th August, 1839.—Present 5 ex-officio and 15 elected Guardians.

The valuator di-
rected by the As-
sistant Commis-
sioner to disregard
that resolution.

The valuator was called in, and directed by the Assistant Poor Law Commissioner to make the valuation of the Union according to its actual value, instead of following the rates prescribed at the last meeting.

2nd January, 1840.

The Valuation Com-
mittee virtually dis-
solved.

It was proposed by J. S. Brown, Esq., and seconded by William Mulcahy, That a resolution adopted at a meeting of the Board on the 3rd June last, requiring a meeting of the Valuation Committee of the Union once a fortnight, should be rescinded, and that such Committee should in future meet once every four weeks, on the same days with the ordinary meetings of the Board of Guardians. Whereupon G. W. Maunsell moved, as an amendment, That the valutors should give notice to the clerk on the completion of the valuation of each electoral division, and that the clerk shall, within a week after, call a general meeting of the Guardians for the purpose of examining such valuation. This amendment was seconded by Thomas Davenport, and unanimously agreed to.

22nd July, 1840.—Present 2 ex-officio and 7 elected Guardians.

Request of the
Commissioners that
assistant-valuators
should be appoint-
ed.

The clerk then brought before the Board a letter from Mr. Stanley, Assistant Secretary to the Poor Law Commissioners, dated the 17th instant, and received by him on the 19th, in which Mr. Stanley, after remarking on the progress of the valuation and the state of the workhouse, conveyed the Commissioners' request that Mr. Potter might be required to name a sufficient number of competent assistant valutors for the approval of the Board of Guardians, to receive for their services such an allowance as the Guardians might recommend, and as should appear to the Commissioners to be reasonable, and to act under the instructions and control of Mr. Potter, the valuator, by which means it was hoped that the valuation might be completed by the 10th August, 1840, at furthest. Mr. Stanley further stated that the Commissioners were desirous that an extraordinary meeting of the Board of Guardians should be convened immediately, for the purpose of taking this very important matter into consideration, and directed the clerk to take the necessary steps for that purpose on receipt of his letter.

The clerk then read the requisition for the extraordinary meeting of the Guardians or Rathkeale Union, to be held on Wednesday, the 22nd July, 1840, to take into consideration the appointment of competent assistant-valuators, to act under the instruction and control of Mr. Potter, in order that the valuation of the Union might be completed by the 10th August next.

The clerk then read a letter signed by six Guardians detained at the assizes, requesting the Guardians at the meeting to postpone the consideration of the question respecting the appointment of assistant valutors to a future day, in order to afford those Guardians who were then engaged on public duty an opportunity of expressing their opinions on the subject.

Whereupon it was resolved, That the consideration of this question be adjourned to Tuesday the 4th of August.

4th August, 1840.—Present 7 ex officio and 20 elected Guardians.

Assistant Poor
Law Commission-
er reiterates the
request to appoint
Assistant Valutors.

The clerk read a letter from Mr. Hawley, dated 25th July, 1840, regretting that the Guardians had postponed the consideration of the question respecting the appointment of assistant-valuators, and expressing his hope that at the next meeting the Guardians would take steps for giving immediate effect to the suggestions of the Commissioners, contained in their former letter to the Board. Upon which it was unanimously resolved, “That it appears

Rathkeale.

"to us to be inexpedient to adopt the Commissioners' suggestions with respect to the appointment of assistant valuers; and that the Earl of Dunraven, our chairman, be requested to state to the Commissioners our reasons for coming to this resolution."

Extracts from
Minute Book.

The Board resolve
upon not appoint-
ing assistant valu-
ators.

1st January, 1841.—Present 7 ex-officio and 21 elected Guardians. Mr. Bourke, Assistant-Commissioner, was also present.

The valuation books of the several electoral divisions in the Union having been brought in and laid before the Board by Mr. Potter's clerk, Mr. Potter being himself unable to attend, after some discussion the Guardians gave notice that the valuation-books would be open for the inspection of the rate-payers at the Grand Jury-room in the Court-house at Rathkeale, where they might be seen between the hours of ten and four, of the 9th day of January, 1841, and of the twenty-one succeeding days (Sundays excepted).

Valuation-books
laid before the
Board, and opened
for inspection of
rate payers.

29th January, 1841.—Present 6 ex-officio and 25 elected Guardians; also Mr. Hawley, Assistant Commissioner.

Notice of the order
in which the objec-
tions were to be
considered.

Two hundred copies were directed to be printed and posted of a notice by which it was announced that the objections in the respective electoral divisions would be taken into consideration in the following order, and on the following days, on which all persons concerned were accordingly required to attend and produce to the Board the necessary proof in support of their objections:—

The electoral division of Kilfergus, Kilmoylan, Loughill, Shanagolden, and Dunmoylan, on Tuesday, the 9th of February, 1841.

The electoral division of Lismakeery, on Friday, the 12th of February.

The electoral divisions of Askeaton, Iveruss, Kilcornan, and Ardcanny, on Monday, the 15th of February.

The electoral divisions of Kildimo, Adare North, Adare South, Kilfenny, and Croom, on Friday, the 19th of February.

The electoral division of Rathkeale, on Monday, the 22nd of February; and

The electoral divisions of Croagh, Nantenan, and Kilsannell, on Tuesday, the 23rd of February.

9th February, 1841.—Present 3 ex-officio and 9 elected Guardians.

The objections to the valuation in the electoral divisions of Kilfergus, Kilmoylan, and Loughill, were taken into consideration, and, after conferring with the valuator, such orders were made thereon as appeared to be just and reasonable.

Objections to the
valuation—Kilfer-
gus, Kilmoylan,
Loughill.

After some discussion it was resolved, That Mr. Potter be directed to insert in the proper clauses of the valuation books the estimated amount of the expenses for repairs, insurance, fencing, draining, &c., of the hereditaments in the Union, whenever such expenses shall be necessary.

Objections in Shanagolden and Dunmoylan divisions postponed to the 12th inst.

12th February, 1841.—Present 1 ex-officio and 10 elected Guardians.

It was resolved, That Mr. Potter should again get the valuation books and the sheet of objections, in order to make the necessary alterations in the valuation when the consideration of the objections was concluded.

The objections to the valuation in the electoral division of Shanagolden were then taken into consideration; and a discussion ensued as to the power of the Guardians to alter the valuation without the consent of the valuator, but no resolution was come to upon the subject.

Shanagolden.

Resolved, That in order to save the expense consequent on appeals, the Board would take into consideration such objections to the valuation as should appear just and reasonable, though not lodged within the limited period of 21 days, when the parties making such objections were prevented by indisposition or other cause from making them in the proper time.

15th February, 1841.—Present 1 ex-officio and 9 elected Guardians.

The objection to the valuation in the electoral divisions of Askeaton, Iveruss, Kilcornan, Ardcanny, and part of Lismakeery, were taken into consideration, and such orders made with respect thereto as appeared to be just and reasonable.

Askeaton, Iveruss,
Kilcornan, Ardcan-
ny, Lismakeery.

19th February, 1841.—Present 5 ex-officio and 15 elected Guardians.

Part of the remaining objections in the electoral division of Lismakeery, and the objections in the electoral divisions of Kildimo, Adare North, Adare South, Kilfenny, and Croom, were heard and disposed of.

Lismakeery,
Kildimo, Adare North,
Adare South, Kilfenny,
Croom.

The objections in the divisions of Dunmoylan, and the remaining objections in the division of Lismakeery, were postponed to a day to be thereafter named.

Dunmoylan,
Lismakeery.

5th March, 1841.—Present 1 ex-officio and 6 elected Guardians.

The objections in Rathkeale Union were heard and disposed of.

The clerk was directed not to receive any more objections to the valuation on any pretence whatsoever.

9th March, 1841.—Present 2 ex-officio and 6 elected Guardians.

The objections in the division of Croagh, Kilsannell, and Nantenan, were heard and disposed of.

The clerk was directed to give Mr. Potter the valuation books of the electoral divisions of Kilfergus, Kilmoylan, Iveruss, Kilcornan, Adare North, Croom, Nantenan, and Kilsannell, together with the corresponding sheets of objections and new valuation books, so that he might make the necessary alterations and make out clean copies.

Valuation books re-
turned to the valu-
ator.

Mr. Potter was directed to make the alterations and additions required by the list of errors and omissions furnished by the clerk, also to place the hereditaments in each townland suc-

Alterations directed
to be made in the
valuation books.

APPENDIX.

*Rathkeale.*Extracts from
Minute Book.

sively under such townland, and all the townlands in a parish in each electoral division, under the head of such parish successively; to name the barony, townland, and parish in which each hereditament was situated, and, generally, to be strictly guided in writing out the clean copies of the valuation books by the instructions contained in the revised circular of the Poor Law Commissioners on valuation and rating of the 25th of March, 1840.

26th March, 1841.—Present 4 ex-officio and 14 elected Guardians.

Further objections
to the valuation.

Objections to the valuation in the electoral divisions of Kilfergus, Kilmoylan, Loughill, Shanagolden, Adare South, Askeaton, Iveruss, Ardennay, Kildimo, Kilfenny, Croom, Rathkeale, Croagh, Nantenan, and Kilsannell, were taken into consideration and disposed of.

A discussion took place with respect to receiving further objections to the valuation, when it was stated that there was an order in the minute-book against it, which could not be rescinded except by a resolution, after some Guardian should have given the Board a fortnight's notice to that effect; and it appearing that if such order were rescinded it would cause a great delay to the making of a rate, it was considered inexpedient that such a course should be adopted, particularly as those who conceived themselves aggrieved might appeal to the Assistant Barrister, and no notice of a motion for rescinding the order was given.

Evidence.

Mr. Potter,
Valuator.MR. THOMAS HENRY POTTER, Valuator, *examined.*Mr. Potter's original
appointment,
and resignation.

Was originally appointed valuator of the Rathkeale Union, along with the late Mr. Lynch of Granagh, on the 3rd of June, 1839: resigned, without having taken any steps towards valuing the Union, in the course of the same week. Mr. Lynch declared himself willing to undertake the valuation alone on the terms of the original appointment, but, as he was acting at the time as one of the valutors of the Kilmallock Union, the Guardians did not think he could devote enough of his time and attention to the valuation of this, and they therefore advertised again for a valuator. He (Mr. Potter) was afterwards appointed

Hisre-appointment.
His qualifications.

sole valuator on the 26th of June, 1839. He never valued land before. Has an extensive farm in the parish of Adare in this Union, and another in the Kilmallock Union, and derived his knowledge of the value of land altogether from his experience as a farmer. No testimonials in his favour were required by the Board: he was well known to all the Guardians.

Began his valuation
in October, 1839.

Did not commence his valuation till October, 1839; waited till then from a fear of being misled as to the value of the land by the appearance of the crops, as it was the land and not the crops he considered he had to value. Was furnished for the purposes of the valuation

Documents used or
referred to.
Maps.

with a map of the Union, supplied by the Poor Law Commissioners, which was useful as marking out the boundaries of the electoral divisions; it named all the townlands but did not mark out their boundaries. A map of each electoral division was extracted or made out from

County cess-books.
Tithe surveys.

this by the clerk of the Union for his use. Was furnished also with some county cess-books, but found them quite useless. He was furnished besides with copies of the parochial tithe surveys of all the parishes in the Union, except three which he was unable to procure. Found these surveys very useful in ascertaining the quantities of land held by the several occupiers; did not use them for the purpose of ascertaining the value, except in the mountain district of Kilfergus, which had been valued under the tithe composition by Mr. William O'Leary, with whom he was acquainted, and of whose ability and experience as a valuator he had a high opinion. Mr. O'Leary was agent over several estates lying in that district, and had many local means of information to guide him in the valuation. He (Mr. Potter) visited

The valuator's
course of inquiry

in person every tenement in the Union, and, except where his own previous acquaintance with the people and their property rendered it unnecessary, he inquired as to the names of the occupiers, in general from the drivers of the estates, sometimes from the occupier himself or

as to the names of
the occupiers.

some member of the family. Has not found that he was ever misled as to the names of the occupiers. Ascertained the quantity of land held by each occupier from the occupier himself, with the aid of the tithe survey.

Extent of tene-
ments.Did not take into account
the degree in which the
land might be improved.

In estimating the quality of the land he was valuing, he considered it as he found it, and did not take into account the degree in which he thought it could be improved. Ascertained

Net annual value
how ascertained.

the net annual value by calculating the probable annual produce of the land, the amount of all taxes on it (not including tithe), the expense of the labour it would take to keep it in its actual state, and the expense of procuring the manure necessary for the same purpose; and by determining what rent a tenant from year to year paying those taxes and expenses could pay, reserving such a share of the produce of the land as would enable him, if he held five acres at that rent, to have plenty of potatoes for himself and family through the year, and milk for about nine months. In making his calculation of the gross produce of the land, and the outgoings or expenses of the tenant, estimated, as accurately as he could, the local advantages or disadvantages of the property—for instance, in valuing lands near the seashore, he took into account the facility of procuring manure in that situation. In valuing land not

Lands not under
tillage how valued.

under tillage he calculated what the grazing of it would be worth per acre;—that is, what the grazing of it would set for per acre;—this he considered the gross produce of such land, from which the taxes and expenses of the tenant were to be deducted. He inquired as to

Inquiry as to the
rents of the occu-
piers.Valuator not guided by
the rent.

the amount of rent in all cases, sometimes before, sometimes after, he had fixed the net annual value. Was never guided by the rent in estimating the value of the land. The occupiers of small holdings were many of them under the impression that the amount of the valuation was

to depend on the amount of the rent, and many of them refused to give information as to their rents. Was able, in all cases in which the occupiers did not give him the information he required about their rents, to procure it from the landlords or their agents, from whom he also procured it, whenever he thought it necessary, in those cases in which he had been informed about it by the occupiers. The net annual value fixed by him is not the utmost rent that could be got from a solvent tenant; the competition for land is so great, that, generally speaking, 10s. an acre more than the value fixed by him can be got for land in this Union. In one instance, land valued by him at 35s. was let a few days afterwards at 50s. per acre. Does not think that 10s. an Irish acre more than the net annual value fixed by him would be a rack-rent. By a solvent tenant he does not mean a man of capital, or a man whose solvency arises out of anything besides his interest in the land,—means a tenant who pays his rent, and can continue to pay it, and live by the land. Means by a “rack-rent” a rent which the tenant cannot pay, and live by the land.

In this Union there are several estates, the rents of which are so high, that the tenants do not and cannot pay them. Some landlords, without reducing their rents, agree from year to year to take a fixed abated rent instead of the full rent, but do not give up their right to the full rent; others get from the tenant each year as much as they can of the full rent. Thinks that a rent of the amount of the net annual value of the land as he has fixed, it would leave the tenant reasonable remuneration for his capital, time, and labour out of the land, certainly not anything beyond it. Though he valued land at so much per acre, he has not valued large farms so high as small ones, because he has taken into account the capital necessary for the management of the former, which the latter do not require, and the risks to which the holder of a large farm is exposed with regard to his stock, the greater part of the extent of a large farm being generally grazed and a small part only given to tillage. If the entire of a large farm were given to tillage the gross produce and the expense of managing it would, per acre, be the same as in the case of a small one, and in that case the net annual value of the two should correspond; but when a farm contains 30 acres or upwards, a large portion of it is almost always given to grazing, and stock is liable to risks greater than any the produce of land under tillage is ever exposed to. Thinks that to compensate for those risks, as well as for the tenant's capital, time, and labour, the rent of a large farm should be somewhat lower per acre than the rent of a small one, and has therefore fixed the net annual value somewhat lower in the former case. Never compared the net annual value, as he fixed it, with the actual rents. Thinks that the net annual value is, speaking generally, one-fifth less than the rent, but has not made such a comparison as would enable him to speak positively.

The net annual value of a house is, according to his idea, what a solvent tenant taking it from year to year ought reasonably to pay for it, taking into account all the circumstances of situation and convenience. In valuing a house and land when occupied together, he valued each separately, and made out the joint value of both by adding the separate values of the two. Thinks that, after the payment of the expenses necessary to keep the land as he gets it, and of his taxes and rent, about 2l. 10s. per Irish acre should be left to the tenant for the subsistence of himself and his family, that is where the farm is small and does not require capital; that is the sum per acre which he regards as reasonable compensation for the tenant's time and labour. Thinks that that compensation should increase a little as the farm is large and capital required. If the mere capital, in addition to the time and labour of the tenant, were to be considered in the case of the larger farm, the same sum per acre would be compensation enough: it is the increase of risk to which large farms, and the capital laid out upon them, are always liable, which renders an increased rate of compensation, in his opinion, reasonable. Has calculated the average of county-cess for the last five years to be in Kenry 3s., in Coshma 3s., and in Lower Connelloe 4s., per Irish acre.

There is on the part of landlords generally an indisposition to grant leases, which has been increasing for the last ten years, and is still increasing. The greater part of the objections taken to his valuation were taken on the ground of its being too high: about two-thirds of the objections prevailed. In the instances of two townlands his valuation was raised, having been made low in consequence of the occupiers of each having induced him to believe that they had been deprived of a large bog, which it afterwards turned out they had included in their leases as land, and had only been prevented from cutting for sale. His valuation was not raised in any other instance.

APPENDIX.

Rathkeale.

Evidence.

His net annual value not the utmost that can be got from a solvent tenant Competition for land.

What valuator means by “a solvent tenant.”

What by a rack-rent.

Rack-rents of this Union.

Large farms not valued at so high a rate per acre as small ones, and why.

Proportion which the valuation bears to the rent.

Valuation of houses.

Of a house and land when occupied together.

2l. 10s. per Irish acre should, in Mr. Potter's opinion, be left to the tenant after payment of his rent, taxes, and expenses of cultivation.

Averages of county-cess.

Landlords unwilling in general to grant leases.

Objections to the valuation.

RENT AND VALUATION OF £10 COUNTY ELECTORS (Registered 1829 to 1840) so far as ascertained.

Tithe composition
and county cess
applotment books.
Rents.

Ascertained the net
value in the first
instance.
Local advantages
how estimated.

Visited each tene-
ment.

Test of value.

At the first meeting of the Guardians of the Macroom Union, held on the 31st January, 1840.

Present, W. J. Voules, Esq., Assistant Commissioner, the Hon. H. H. White, Chairman, and 31 guardians.

Resolved,—That an advertisement be inserted in three Cork papers for three valuers.

February 15, 1840. At a meeting held this day,

Resolved,—That it being in the opinion of this Board necessary that a new valuation should be made of all the rateable property of the Union, and tenders having been made by Messrs. John Good, Richard O'Leary, and Edward Sullivan to value all the property within the Union within the period of 12 months, for the sum of 450*l.* sterling for the three, such tender is accepted; it being understood that it is to be a joint valuation, the three acting together.

March 4, 1840. At a meeting held this day,

Resolved,—That the Assistant Poor Law Commissioner having communicated the fact of a memorial having been presented to his Board impugning the propriety of the selection of valuers, the guardians deem it their duty unanimously to state, that their intercourse with the rate-payers in the several districts of the Union since their last meeting has entirely confirmed the judiciousness of their selection, and has assured them of its having given general satisfaction.

June 20, 1840. At a meeting held this day,

Resolved,—That the valuers be written to, and requested to attend with their books on the next day of meeting.

July 11, 1840. At a meeting held this day,

The valuers who were in attendance were called in, when they submitted their books to the inspection of the Board.

September 5, 1840. At a meeting held this day,

Resolved,—That the valuers be paid 150*l.* on account, and that the clerk do draw a check for that amount.

Resolved,—That this meeting do at its rising adjourn till Saturday the 3d of October next at 1 o'clock in the afternoon, and that the valuers be ordered to attend on that day with their books.

March 27, 1841. At a meeting held this day,

Resolved,—That the clerk be ordered to make copies of the Poor Law valuation, and to send one of each district to each guardian elected by that district, and also one of the district in which he resides, to each ex-officio guardian, when the books come into his hands.

Resolved,—That the valuers do before the next meeting of the Board produce the valuation-books in such form as will show at one view the separate value of houses and lands, with the acreable value of each holding.

Resolved,—That the valuers be ordered the sum of 50*l.* each on account of their services.

Evidence.

MESSRS. RICHARD O'LEARY, JOHN GOOD, and EDWARD SULLIVAN, Valuers, *examined.*

Were appointed on 15th February, 1840, to value the entire Union together.

Mr. O'Leary had valued about 1,200 acres of the Union before for Philip Harding, Esq., and is agent for one small estate in the Union; Mr. Good had never been engaged in valuing lands before; Mr. Sullivan had been employed in valuing a part of the Cork Union, and had a certificate of qualification from the Cork Board of Guardians.

The documents furnished to the valuers to assist them were the Commissioners' circulars on valuation and rating, extracts from the tithe composition books, and the county cess applotments.

Valued always together.

Used the extracts from the tithe composition books and the county cess applotment merely to ascertain areas of townlands and farms, but not at all as to value, because they were both much under it.

Occasionally required the amount of rents from tenants, but were unable to ascertain it correctly from them.

Did not estimate the gross produce, and reduce it by the outgoings of the tenant in order to ascertain the value, but struck the net value in the first instance.

Adopted the same system in towns and villages as in rural districts, except that they estimated the local advantages in towns and their vicinity according to the rent the houses would bring if they were to be let.

They visited every tenement in the Union.

Were themselves in general aware of the name of the real occupant, but when they were not so, ascertained it from the tenant himself or from his neighbours.

The test of value which they adopted was to ascertain what quantity of farming produce each

APPENDIX.

Macroom.

Evidence.

Leases.

Large and small farms, how valued.

What farms most prevalent in Union.

Comparison made between valuation and rent.
Result.

Houses and lands occupied together, how valued.
Valuation of house.

Allowance for repairs.

Insurance.

Made no allowance for any profit to be derived from the occupation.

No reference made to valuation in Registry Court.
Usual mode of letting lands.

Competition for land.

Has raised market prices above what solvent tenant could pay.

Reasonable remuneration; one-fifth of produce.

No revision of valuation has yet taken place.

Disposition among both tenants and landlords to lower valuation.

Supposed reasons of landlords.
Tenant.

tenement would afford with proper cultivation, and on that produce they put a value, not according to the present prices, but on an average of the last four or five years. They neither took the rack rent, nor the utmost that could be got from a solvent tenant.

Made no difference whether there was a lease or not.

Put rather a smaller value on large than on small farms, in consequence of the greater competition for the latter.

Farms of from 40 to 60 acres are most prevalent in the arable parts of the Union, but in the mountain districts farms of from 100 to 150 acres.

Instituted a comparison between the value set by them upon each tenement, and the rent actually paid, in as many instances as they could ascertain it, the result of which was that their valuation was at least 20 per cent. under the rent for small farms, and 10 per cent. under the rent of large farms.

Made no separate valuation of houses and lands, when occupied together, unless the house was of a superior description, when they valued it separately, and then added both together.

The value of the house was estimated according to what they considered it would increase the value of the farm.

The allowance made for repairs was about four per cent. on the value of the house.

For insurance, from 1*l.* to 2*l.* was allowed, according to the extent of the house.

In estimating the value of land, supposed the tenant bound to manage the farm, so as to deliver it up at the end of the year in good condition.

The value was estimated by what would be given for it by a person bound by covenant to keep it in such condition.

In estimating what the tenement would let for, did not make any allowance for any profit to be derived from the occupation, but only for the interest of capital and remuneration for his time and labour.

In estimating the value of tenements, made no reference to the value which the owner had set upon them in the Registry Court.

The usual manner in which lands are let in this part of the country by the principal landed proprietors, is for three lives, or 31 years, and by middlemen for 21 years.

There is very great competition for land in the Union.

Made a little allowance for the effects of such competition in raising the market price of land.

Such competition has raised the market price at least 30 per cent. above what a solvent tenant could afford to pay, reserving a reasonable remuneration for his time, labour, and capital, particularly in small farms.

Considers one-fifth of the produce to be such reasonable remuneration.

The average amount of county cess, per acre, is about 8*d.* per annum. Of tithe composition, about 1*s.* per acre.

No revision of the valuation has as yet taken place, and the only proceedings adopted by the Board of Guardians for the purpose of such revision have been to order the clerk to make copies of the valuation, and to send one of each district to each guardian elected by that district, and also a copy to each ex-officio guardian.

Cannot say whether tenants or landlords will be content with valuation, as it has not yet been published.

The disposition both among landlords and tenants is to lower the valuation.

The supposed reason of landlords for lowering valuation, is the fear of a property tax being imposed, and that they expect the poor-law valuation will be made the basis of all future taxation.

The tenant's reasons for lowering it are, lest it may enhance the letting value of their lands on the expiration of the present leases.

RENT and VALUATION of £10 COUNTY ELECTORS (registered 1832 to 1840) so far as ascertained.

COUNTY CORK.

KANTURK UNION.

APPENDIX.

*Kanturk,*Extracts from
Minute Book.*Extracts from Minute Book of Board of Guardians.*

February 27, 1840.

At the first meeting of the guardians for this Union which took place this day at the Court-house, Kanturk,

Present—William J. Voules, Esq., Assistant Poor Law Commissioner; Richard Oliver Aldworth, Esq., Chairman; Daniel Leahy, Esq., Vice-Chairman; George Gilkrest, Esq., Deputy Vice-Chairman; 9 ex-officio and 29 elected guardians.

Resolution to advertise for valuers.

Resolved,—That advertisements be inserted inviting tenders from competent persons to undertake the valuation of all rateable property within the Union.

March 26, 1840.

At an adjourned meeting held this day,

Appointment of three valuers.

Resolved,—That three persons be appointed to value all rateable property within the Union. That we consider 400*l.* a sufficient sum to be given to three valuers to value all rateable property within this Union.

That Mr. John Murphy, Mr. James Sullivan, and Mr. Michael Sheehan, be appointed the valuers of this Union.

Kanturk electoral division to be first valued.

That the valuers do proceed first to value the electoral division of Kanturk experimentally, and that they do give at least 10 days' notice to the clerk before they prepare their valuation, with a view to summon the guardians and commissioner for its inspection.

April 23, 1840.

At a meeting held this day, the following letter from the valuers being read,—

SIR,

Kanturk, April 20, 1840.

Letter from valuers.

WE request that you will call a meeting of the guardians of the Kanturk Union on Thursday the 30th instant, when we will be ready to lay the sheets before them, and you will communicate the same to Mr. Voules.

We remain, sir, yours, &c.

(Signed on behalf of the valuers)

MICHAEL SHEAHAN.

To John C. Ryan, Clerk of the Union.

Resolved,—That this meeting do adjourn to the 30th instant, and that Mr. Ryan be directed to communicate the same to Mr. Voules.

(Signed)

GEORGE GILKREST, *Chairman.*

April 30, 1840.

At a meeting held this day,

Valuation approved of.

Resolved,—That the valuers having exhibited their valuation as far as it has been completed, and it being the opinion of the meeting that they are proceeding on correct principles, they be directed to carry on the valuation without delay.

The following letters were read:—

*Poor Law Commissioners' Office,**Dublin, April 20, 1840.*

SIR,

Letter from Poor Law Commissioners requiring return for the House of Lords.

THE Poor Law Commissioners request you will immediately transmit to them, for the purpose of being laid before the House of Lords, pursuant to an order of the 9th instant, copies of all instructions which may have been issued from the Board of Guardians of the Kanturk Union (exclusive of those published by the Poor Law Commissioners in their printed circulars) relative to the valuation of rateable property in the Union, stating particularly whether any of the instructions, and which, have proceeded immediately from the Board of Guardians or from a Valuation Committee.

By order of the Board,

(Signed)

W. STANLEY, *Assistant Secretary.**To the Clerk of the Board of Guardians, Kanturk Union.*

SIR,

Kanturk, April 25, 1840.

Reply stating that no Valuation Committee had been appointed.

IN answer to your printed circular of the 20th instant, I beg to state that there were only three meetings of the guardians of this Union, (copies of the minutes have been regularly transmitted to your office,) and that there has been no Committee of Valuation appointed.

By the minutes of the meeting of the Board of Guardians of the 23d instant, you will perceive that the valuers are to lay before the guardians and the Assistant Poor Law Commissioner the valuation of the first electoral division of the Union on the 30th instant. Any further information that can be had from the guardians at that meeting shall be forwarded to you in due course. I have the honour to remain, &c.

(Signed)

CORNELIUS RYAN, *Clerk of the Union.**To W. Stanley, Esq.,*

November 10, 1840.—At a meeting held this day, the following letter was read :—

To the Board of Guardians of the Union.

Kanturk, November 10, 1840.

WE, the valuers, beg to state that our books will be ready for the next Board day, in December.

We are, gentlemen, your obedient servants,

(Signed)

JOHN MURPHY,

MICHAEL SHEEHAN,

JAMES SULLIVAN.

November 30, 1840.—At a meeting held this day, the following notice was served on the clerk :—

Board-room, Kanturk, November 30, 1840.

SIR, TAKE notice, that on the next Board-day of meeting of guardians of the Kanturk Union, I shall move that so much of a former resolution of the Board of Guardians as fixes a sum of 400*l.* to be paid to the valuers for valuing said Union, be altered or rescinded, and that a sum of 500*l.* be paid to valuers in place of said 400*l.*, in case the valuation shall be approved of by the guardians.

(Signed)

GEORGE GILKREST, *Guardian.*

To the Clerk of the Guardians of the Kanturk Union.

December 28, 1840.—At a Board held this day,

Mr. Gilkrest withdrew his notice of a motion to increase the remuneration to the valuers. The valuers were informed that they would be required to produce and deliver in their valuation complete at the next meeting.

April 6, 1841.—At a meeting of the Board of Guardians of the Union, held this day at the Court-house, Kanturk, pursuant to notice, to take into consideration the objections registered against the valuation of property within the Union,

The objections registered against the valuation of property in the Union rateable for the relief of the poor were proceeded with. There were 62 objections entered and but 25 tried, the remainder either having withdrawn their objections, or not having appeared; 9 of these 25 objectors induced the guardians to reduce the valuation in a very slight degree, and Mr. O'Keeffe, of Mount Keffe (who is their landlord), was enabled to reduce the valuation on his property at Mount Keffe by about one-sixth of the valuation. The only material alteration made in respect of the valuation, was in the case of Mrs. Anne Bastable, the holder of the tolls and customs of Kanturk, which were valued at 400*l.* a-year by the valuers, and reduced to 250*l.* a-year by the Board of Guardians. The entire deductions made by the Board on the whole valuation of the Union did not amount to more than about 250*l.* a-year. On the conclusion of objections, at six o'clock P.M., the chairman read an application from the valuers for the 100*l.* balance of the sum to be paid them for valuing the Union, and the Board accordingly voted a draft to Messrs. John J. Murphy, James Sullivan, and Michael Sheehan, for the sum of 100*l.*

Evidence.

Messrs. JOHN MURPHY and MICHAEL SHEEHAN, Valuers, *examined.*

The Union extends over a very small part of the barony of Fermoy, a part of the barony of Orrery and Kilmore, a part of the barony of West Muskerry, and the greater part of the barony of Duhallow, in the county of Cork, and also over a part of the barony of Magonibry, in the county of Kerry.

There are 14 electoral divisions in the Union, 29 elected and 9 ex-officio guardians.

Were appointed jointly with Mr. James Sullivan on 26th March, 1840, to value all rateable property within the Union.

The 3 valuers were elected out of 18 candidates, and had no testimonials, except that they were personally known to the guardians, and were examined by Mr. Voules as to their qualification for the appointment previous to being put into nomination. Mr. Murphy and Mr. Sullivan are extensive farmers. Mr. Sheehan had also been an extensive farmer, but now resides in the town of Kanturk.

Were furnished with the Commissioners' circular on valuation and rating, with the tithe composition books for the parish of Kilmeen, and with the county cess applotment for the parish of Newmarket.

Obtained very few rentals.

Valued generally together.

The only use they made of the tithe composition books and county cess applotment was to ascertain areas; made no use of them as to value, as they found them always too low, the value of land having considerably improved since the year 1826, about which period they were made.

In some cases required the amount of their rents from the tenants, but could not depend on their statements, and were only able to ascertain it partially; but always when they were able to do so correctly, entered it in their field books.

In order to ascertain the value, estimated the gross produce, and reduced it by the outgoings of the tenant.

Adopted the same system in towns and villages as in rural districts, except that they made allowance for the locality.

Estimated the local advantages of houses and lands in and about towns, according to a reasonable letting value.

APPENDIX.

Kanturk.

Extracts from Minute Book. Notice from valuers that their books would be ready for the next board-day in December.

Notice of motion to increase the valuers' remuneration from 400*l.* to 500*l.*

Motion withdrawn. Valuers directed to deliver in their valuation complete at next meeting.

Objections against valuation heard. 62 objections entered only 25 tried. The remainder withdrawn or no appearance for objectors. 10 objections allowed.

The entire deductions made by the Board about 250*l.*

Evidence.

Messrs. Murphy and Sheehan, valuers.

Electoral divisions, Guardians. Appointment of valuers. Their qualifications.

Documents furnished to valuers.

Use made of them.

Were unable to ascertain rents in general.

Estimated gross produce.

Valuation in town and villages.

APPENDIX.

	Visited each tenement.
<i>Kanturk.</i>	Inquired from the tenant his boundaries, his landlord, and his rent.
Evidence.	Ascertained the name of real occupant by making inquiries from the tenant himself and from his neighbours.
Test of value.	The test of value which they adopted was without any reference to the rent actually paid, or which might be obtained; but after forming an estimate of the produce of a farm, they took the average of prices for the last three years and struck the value from such average, allowing a reasonable remuneration to the tenant for his labour and expenditure.
Leases.	Made no difference when there was a lease.
Small farms.	Considered small farms from about 1s. to 2s. per acre more valuable than large farms.
	In the mountain districts of the Union, farms of 300 acres, and in the lowland districts farms of from 20 to 40 acres, are the most prevalent.
Comparison between value and rent.	Instituted a comparison between the value set by them upon tenements and the rent actually paid, whenever they could ascertain it, the result of which was, that the rent was in some cases one-half, and always a great deal higher than the valuation, except on Lord Arden's estate, which is let to tenants from year to year, at about one-third of the value, but no leases are ever granted by him, and upon Lord Lismore's estate, which has been lately leased for one life, or 31 years, at the fair value. There are also some other owners in fee, who set at little more than the value; but a great portion of the Union is in the hands of middlemen, who set their lands much beyond the value.
Valuation of farm houses.	Did not value houses and lands when occupied together separately, unless the house was of a superior description.
	Valued such a house according to its appearance, size, and the accommodation it afforded.
	Made allowance for such repairs as would keep the house in the same condition.
	Allowed 3s. per cent. for insurance.
Management of farms by tenant.	In estimating the value of land, supposed the tenant bound to manage the farm so as to deliver it up at the end of the year, in good condition.
How value estimated.	The value was estimated by what would be given for it by a person who would be bound by covenant to keep it in good condition, and who would be able to perform the covenant, or compensate the landlord in damages.
Made no allowance for any profit.	In estimating what the tenement would let for to such a person did not make any allowance for any profit to be derived by him from the occupation, but merely made an allowance for the common necessities of life for himself and his family, which they calculated at one-third of the produce of the soil.
No reference made to registry.	In estimating the value of tenements out of which the owners had registered freeholds, did not make any reference to the value which the owner had set upon them in the registry court.
Usual manner in which lands are let in the Union.	The usual manner in which lands are let in this part of the country is on leases for 31 years, but for the last eight or nine years very few of the landed proprietors have granted any leases, except Lord Lismore, Lord Egmont, and Lord Cork.
Competition for land.	There is great competition for land in this Union.
No allowance made for its effects.	Made no allowance for the effects of such competition in raising the market price of land.
	Such competition has raised the market price above what a solvent tenant could afford to pay, reserving a reasonable remuneration for time, labour, and capital.
Reasonable remuneration; one-third of produce.	Considers one-third of the produce to be such reasonable remuneration.
	The average amount of county cess per acre, including mountain and townland in that part of the Union which is in County Cork, is about 8d.; but in that part of the Union which lies in County Kerry it is 4s. per acre, even for reclaimed mountain.
	The tithe composition amounts to about 1s. per acre on an average of the entire Union.
Objections to valuation heard by Board of Guardians.	The Board of Guardians met on the 6th of April instant for the purpose of considering 62 objections against the valuation, when 37 of them were withdrawn, 25 were heard, and of these 15 were dismissed; in nine cases the valuation was slightly reduced, and in the remaining case, in which the tolls of Kanturk had been valued at 400l. a-year in consequence of the returns being withheld from them by the lessee, the valuation was reduced by 150l., making a reduction altogether in the valuation of the entire Union of 250l.
Rate-payers and landlords content with valuation.	Both tenants and landlords are satisfied with the valuation.
	No notices of appeal have been lodged.
	Thirty-seven of the objections were on the ground of excess of areas, and 25 on the ground of over value.
	There were no objections on the ground of too low a value.
Disposition to lower value most prevalent.	The disposition to lower the valuation is most prevalent.
	Don't know of any reason for the landlords wishing a low valuation.
	The supposed reason of tenants for lowering the valuation is that it may affect future lettings.
Valuation much below the rent.	The valuation, as already stated, is in general much below the rent.

RENT and VALUATION of £10 COUNTY ELECTORS (registered 1832 to 1840) so far as ascertained.

COUNTY KERRY.

Marked thus (*) registered in 1832, and not since re-registered.

KANTURK UNION.

Names of £10 Electors whose Tenements are situated in the above Union.	Date of Registry as in Clerk of Peace's List.	Description of Pro- perty rated; as stated in Rate Book. CLONMEL UNION.*

*Supplemental Evidence.*Messrs. DAVID THORNTON and GEORGE GRAHAM, Valuators, *examined.*

Mr. Thornton is a builder and carpenter; has built many houses in this town; has resided in Clonmel as a fixed resident since the year 1811. Is well acquainted with the town and its neighbourhood; knows the general letting prices of tenements there. Was employed to value premises in the town by the Commissioners for Paving and Lighting, previous to his being employed by the Poor Law Guardians. Those Commissioners are elected every third year. He was employed by one set of those Commissioners to value rateable property under their Act which had not been previously valued.

Mr. Graham is an ironmonger, and has resided in this town for about 25 years; is a mechanic, and understands machinery. They were appointed valuers of the town of Clonmel on the 15th of October, 1839. They commenced the valuation sometime in the November of the same year, and were bound to complete it (which they did) in the month of March following. They valued all tenements within the parliamentary borough; they valued 1773 tenements in all. Those tenements were not all houses; there were fields and yards, and stores and waste-ground, and a great variety of tenements. They always went together to value. They were supplied by the Guardians with field-books with printed headings to the columns, the same as in the valuation-books, but they did not take them with them when they went to value. They also received the printed circular on valuation and rating, and the Act of Parliament, and were instructed in their duties by the Assistant Commissioner, Mr. O'Donohue. They had access to the books of the Paving and Lighting Commissioners, which they only used for the purpose of ascertaining the rate. They took with them a memorandum-book, in which they made the original entries, and afterwards transferred them to the field-book. They had but one memorandum-book between them, which was generally kept by Mr. Graham, who made the entries.

As to the principal streets in Clonmel,—Main-street, Johnson-street, Dublin-street, Bagwell-street,—the valuator Thornton was familiarly acquainted with every house in them, having been constantly employed during the 31 years he resided in the town, either in building or repairing the houses in those streets; he knew their value, and, generally speaking, the prices at which they were let. They inquired in every instance what rents were paid, which they generally learned and entered in their book. They did not enter each house and examine each apartment, but they questioned the occupiers and judged of the value of each house from its external appearance and the information they received, if they had no previous knowledge. In estimating the value, they allowed for its situation whether as a private residence or a place of business. Mary-street, which was once inhabited by very respectable persons, has lately declined, as houses have been built in other parts of the town which are preferred for residence. They valued the houses in Mary-street less than houses of the same description in more eligible situations, although there are few houses in the town better built or more extensive than the houses in Mary-street. They estimated the value of the tenements according to the prices for which they were likely to be let to a solvent tenant. Their test was the rent which a solvent tenant would pay, but not the utmost which could be got from a solvent tenant. They generally knew the rents at which houses were let in the town; in small towns persons generally know at what prices houses are let; many told them what rents they paid; in some cases they inquired from the landlord what the rents were, and in some cases they had the rents from general report. They always asked who the landlords were (as that was part of their instructions), and they also inquired the names of the occupiers; had no other way of ascertaining the names of such landlords and occupiers as they did not know. The value of the tenement was generally estimated by them under the rent paid, except where a fine was paid or a house improved, or if the rent was only a ground rent, or if the rent paid was a fair rent. At the time they made their valuation there was a competition for houses, both in the private streets and in streets of business. The private streets in the town are Anne-street, Gordon-street, and Anglesey-street, which is now being built; in those streets the houses are private residences, and no business is carried on there. Anne-street is an uniform street lately built, containing about 24 houses, each three stories high, with a basement story; and the rent they let for is 20% a-year. In this street they valued two houses, belonging to Messrs. Smith and Mulcahy, above the rent (for they had improved their houses), and all the other houses they valued at the rent. Those houses, however, had been formerly let for 24%, but the situation is not now considered as desirable, and the rents were lowered by the landlord to induce the tenants to remain. In Gordon-street and Anglesey-street they valued generally under the rents, but they did not determine the value by any reference to the rents actually paid. The rent paid did not govern them, nor did the sum expended in building the house govern them. The Bank of Ireland expended about four years ago 3000% in building an establishment for their

Clonmel.

Evidence.

Business streets.

own use, which they (the valuers) valued only at 80% ; they did not think that the sum expended in building the house should govern their judgment, and they never inquired what sum was expended in building, nor did they make any calculation founded upon that. They valued the bank at 80% because it was probable it would not let for more, unless it was taken for a bank. In the principal business streets of the town they set an additional value on the tenements, on account of their favourable situation for business. Main-street, Johnson-street, Dublin-street, a portion of Irishtown, Bridge-lane, Bagwell-street, are the principal business streets in the town ; on the houses in those streets they placed an additional value on account of their situation ; and those houses would on that account bring higher rents.

The difference between valuation and rents greater in small tenements than in large.

The difference between the value which they placed upon the tenements and the rents actually paid for them, was greater in proportion in small tenements than in large. There are several streets in the town occupied by small tenements ; the range of letting prices for those tenements is from 30s. to 12% ; they are generally taken for the purpose of letting out the rooms to lodgers, particularly in Duckett-street ; the person who takes the house occupies one of the rooms, and sets the rest to lodgers. The valuator Thornton has lately built four such houses for the Misses Duckett, and they readily let for 12% each. The letting of those rooms nearly pays the rent. Those houses which let for 12% they generally valued at 9% ; the person who takes such a house generally has his own room rent free. He also reserves for himself the yard, in which he rears one or two pigs, and makes a heap of manure which is valuable. A man named Gilfoyle has been known to make 20% in the year by manure which he heaped together in this manner. The occupiers of those tenements are generally employed as labourers or mechanics in the town or neighbourhood, and they find it a great convenience to have those apartments.

More competition for small tenements.

There is a great deal more competition for those smaller tenements than for the large, and that competition has raised the letting price. There are several large establishments in the town, which give employment to great numbers ; the competition is thus caused. Very few of those small houses are taken by any person for the exclusive use of his own family ; they are almost all let out in lodgings. There are a few small houses in the suburbs, which have been valued at about 30s. each, which are occupied by single families, but no other houses of the same description are so occupied. Mr. Bagwell is the proprietor of the town, but there are many middlemen between him and the occupiers, and not more than from 60 to 80 hold directly under him.

Leases in the town not general.

Generally speaking, in the town the smaller class of houses at and under 12% are held by yearly tenants, and there are no leases made of them ; the same may be said of the shops ; persons take them, satisfied that if they succeed in trade and pay the rent, they will be left in possession, and they take their chance of succeeding in trade ; persons never think of taking leases except they are going to effect permanent improvements ; there are very few leases in the town ; does not think that the letting price would be increased by having leases, but, if anything, diminished. During the valuation they never inquired whether the occupiers were registered or not. During the progress of the valuation they exhibited every Board day to the Guardians as much of the valuation as was completed. The Guardians used minutely to examine every part, and Mr. John Keefe, who was well acquainted with the tenements, being the receiver of the rents of several properties both in the town and neighbourhood, and who was one of the committee, made his observations upon every portion of the valuation ; does not believe that any of the Valuation Committee visited the premises for the purpose of revision ; no alterations were made in the valuation by the Valuation Committee, or even suggested, until after the books had been deposited for public inspection, and objections had been lodged.

Made no inquiries as to registry.

The objections principally by owners of public-houses.

The objections were principally lodged by the owners of public-houses, who complained of the effect of the temperance movement on their business, and said they were afraid that the valuation might be made use of hereafter, to measure their licence. All the objections were for having valued too high, except in one instance, and that was Thomas Dorney, who objected that he had not been valued high enough ; he did not appear to support his objection. Believes that about half a dozen of the objections were sustained, and alterations made ; believes that the valuation has been complained of as too high, when compared with the rural valuation ; never valued any Union before or since. There was no difference in the valuation of the tenements first valued and last valued. Thinks, if the trade of the town continued as it was when they began to value, the valuation would not be high ; but in consequence of the general depreciation of tenements since the valuation, on account of the temperance movement, he believes it to be a high valuation on the houses affected by the temperance movement.

In consequence of temperance movement, valuation high.

House rent not high ; over 50 new houses lately built.

House rent is not high in Clonmel ; knows that over 50 new houses were built in the town within the last three or four years, some of them bringing high rents, 30% and 40% a-year. In estimating the value, their test was what a solvent tenant could pay, but not the utmost which a solvent tenant would pay ; they did not take into their consideration whether the tenement was held under a lease. They always ascertained the net value first, as the habit of the town is, that the tenant keeps the house in repair, and pays the taxes. The only appeals are from two mills and a gas-house.* Cannot say in houses of the more respectable class what

Ascertained net value first.

* As those appeals were decided during our stay in town, it was thought right to examine Mr. Graham as to the mode in which he valued those mills. The following is his statement.—Mr. Graham stated that he estimated the value of the mills according to their working power, taking into account the quantity of machinery. The working power they calculated by allowing for each pair of stones a four-horse power. They are all water-mills, except Mr. Samuel Grubb's. In Malcolmson's mill 16 pair of stones are in working condition ; they calculated on an average that he only worked six pair throughout the year in a complete manner with the necessary screens, &c., as the water-power sometimes failed. This they considered below the actual average of the work done ; but they preferred being under than over. They considered that if he worked those six pair of stones with steam throughout the year, that the

was the reduction they made below the rent; believes that it was about 15 per cent., but thinks that for small tenements, ranging from 5*l.* to 15*l.*, their valuation was not less than 20 per cent. below the rent. After the public exhibition of the books, and the objections, some alterations were made in the valuation; very few, not exceeding half a dozen, and these were always reductions from the valuation. His own house he, Thoraton, valued at 28*l.*, and he pays 34*l.* for it; he valued it long before he had any idea of taking it. After the valuation was completed, there was a dispute at the Board between the town and rural Guardians, the town Guardians insisting that the valuation of the town was too high in comparison with the country, and requiring that it should be lowered, so as to equalize the tax. The valuers offered to consent to a reduction in the city valuation of 10 per cent., to arrange the difference. On a division, the rural Guardians had a majority, and the valuation was confirmed. Since the valuation was made, it has been used for the apportionment of the county cess.

APPENDIX.

Clonmel.

Evidence.

Town Guardians wish to lower the valuation.

Poor Law valuation adopted for apportionment of county cess.

MR. WILLIAM SMITH, elected Guardian, *examined*.

Is one of the Board of Guardians of the Clonmel Union; was also one of the Valuation Committee; was employed in the year 1828 by the Commissioners for Paving and Lighting, to value the whole town of Clonmel; he is convinced that the valuation under the Paving and Lighting Act is lower than the valuation under the Poor Law, particularly in the best streets in the town, he would say Bagwell-street, Johnson-street, Main-street; the smaller description of houses, he would say from 5*l.* to 16*l.*, he thinks were fairly valued under the Poor Law.

Mr. Smith, Elected Guardian.

Valuation under Paving and Lighting Act less than Poor Law valuation.

Thinks the houses in the respectable streets were valued on a higher scale; he thinks they were valued high. After the valuation under the Poor Law was completed, he inspected the valuation; he then objected to the valuation, on the ground that the valuation of the town was too high; and also that it was too high as compared with the valuation of the rural portion of the Union. Did not go through the whole valuation and examine the different tenements, and the value set upon each of them, but says the valuation is high from his general knowledge of the value of tenements in the town; does not think he would let his own house for the sum it has been valued at. He does not consider that the valuation which he made for the Paving and Lighting Commissioners was a high valuation. It was made by him upon oath. Mr. Joseph Higgins and James R. Shea were valuers with him. They made an examination of each house; entered it and went through every part of it; except in cases where there was a row of uniform houses, in which case they entered and examined one house, and judged of the rest from it. There were a few appeals from his valuation on the ground of excessive valuation, and some of them allowed; not more than half a dozen. Those were generally made by the owners of mills. Was not capable of accurately valuing mill property. There are certain streets in the town occupied by small tenements as in Duckett-street, where the rents are from 10*l.* to 18*l.*, some as low as 5*l.*; some also in the Borheen and Irishtown. In part of Irishtown the houses are very good; the rents in Irishtown range from 5*l.* to 60*l.* Under the Paving and Lighting Act, no tenements under 5*l.* are valued. The valuation which he made for the Paving and Lighting Commissioners has been invariably acted upon since. Since that valuation was made, four different sets of Commissioners have come into office, and they never got the part of the town included in that valuation revalued; they were always content with that valuation. There have been some few appeals latterly on account of the dilapidated state of some of the houses, and those appeals have been allowed. There has been a great deal of building in Clonmel latterly; a great number of small houses, also of houses of a better class, has been built, the rents of which would range from 15*l.* to 30*l.* a-year; he cannot say that there is a greater competition for small tenements than for large, for he never knew a house built in the town that was not immediately occupied. The labouring classes and tradesmen are improving in their dwellings; from thatched cottages they are going into slated houses: they take them to let them out to lodgers. Sometimes they let one quarter of a room; he recollects on one occasion, during the cholera, to have seen 60 persons in one small tenement.

Houses in respectable streets valued higher.

Valuation for paving and lighting.

Entered every house he valued.

Few appeals from his valuation.

His valuation for Paving and Lighting Commissioners always acted on.

There is a great deal of employment in the town for mechanics and labourers.

There are six mills in the town; those mills, the iron foundry, and the bacon yards employ a great number of persons.

He considers that rents have lately fallen in all tenements affected by the temperance movement.

MR. JOHN LACY, *examined*.

Is Chairman of the Commissioners for Paving and Lighting the town of Clonmel. The Act was first put in force in 1828. The Commissioners go out of office every 31st July in each third year. In 1832 he was appointed Commissioner, and has continued to be a Commissioner since; has resided in the town for fourteen years; has heard the general letting prices of houses in the town, but has no particular knowledge about them. Has never compared the valuation under the Paving and Lighting Act with the Poor Law Valuation.

Mr. Lacy, Chairman of Commissioners for Paving and Lighting; Vice-chairman of first Board of Guardians.

cost of the steam alone would be 900*l.* a-year at least. For each horse power of the engine it will take 10*lbs.* of coal per hour to work it. That in Malcolmson's mill 240*lbs.* of coal would be used per hour, and it would require 805 tons to work it in the year, at 1*l.* a ton. The cost of the engine would amount to, say 1000*l.*, the interest of that was added at five per cent., 50*l.*, and the pay of an engineer, and two stokers at 70*l.*, made up something more than 900*l.* They set these expenses down at 900*l.* net; they added to that the value of the mills and fixed machinery at 300*l.* a-year. According to their valuation the true value of this mill would be 1200*l.*; but their valuation was only 750*l.* The other mills, which were smaller, they calculated on the same principle. They also valued the gas-works. The valuator, Graham, had rented the concern from the company at 340*l.* a-year for several years, until they raised the rent to 400*l.*, which he paid for three years, when he gave up the concern; but he would willingly have kept it at 340*l.* The gas-works they valued at 300*l.* The memorandum book which he now produces has been in his custody since the valuation was made. No alterations have been made in it. It contains the rents as they were given to them by the different occupiers, and sometimes by the landlord; also the rate payable to the Paving and Lighting Commissioners in the years 1839 and 1840, and their valuation.

and small farms.Landlords unwilling
to let in small farms.Standard of value
adopted.Reasons for adopting
it.

He was vice-chairman of the Board of Guardians first elected for this Union, and was a member of the Valuation Committee. The valutors were required to submit from time to time their valuation, and they did so. They sent to the Valuation Committee loose sheets of their valuation. The valutors attended, and were examined by the Committee as to the principle on which the valuation was effected. The valutors referred to the instructions of the Poor Law Commissioners, and said that they had valued according to those instructions to the best of their knowledge. Their test was what a solvent tenant could pay one year with another. The Committee discussed with the valutors the meaning of this test, and the majority of the Committee agreed with the views of the valutors. The Committee did not agree as to the principles on which the valuation should be conducted; some members said, particularly in one case in which a large farm of over 130 acres was valued at less than the rent paid, that it was extraordinary that the lands could be valued so low when the occupier had registered as a 50*l.* freeholder. The farm belonged to Mr. Power; some of the Valuation Committee thought that the rural valuation was too low, and that the valuation should be nearer the rents, but the majority agreed with the principle on which the valutors had conducted the valuation. He has ceased to be a member of the Board of Guardians since April, 1840. There was a contest for his electoral division, and he was not returned. The valuation-books had not been returned until after he had gone out of office; he never examined the books for the purpose of ascertaining on what scale the valuation had been made. Cannot say whether the town valuation is, generally speaking, under or over the rents. For his own tenement he pays a rent of 60*l.*; he is valued at 52*l.*; he took it fourteen years ago. It is a good looking house outside, and he improved it, but it has a bad rear. There were frequent discussions in the Committee as to the principle on which the valuation should be conducted; knew the rural valutors before their appointment; they had the character of being good judges of land. Mr. Egan has a farm which he has in his own hands; does not know whether Mr. Keating has at present any lands in his possession. The valutors were required to report the progress of the valuation every Board day. The Committee of Valuation generally met each Board day about an hour before the meeting of the Board. They then examined the sheets. The valutors brought them, and remained in attendance during the sitting of the Committee and also of the Board of Guardians. Will not say they invariably attended. They were occasionally absent valuing in distant parts of the Union, but they generally attended. In his opinion it could not have been the intention of the Legislature to have the lands valued at the rents paid; for the Act makes the test what the land could be reasonably let for one year with another. The valuation was not completed for about a year. The county valuation is, generally speaking, under the rents. Knows the town valutors to be highly respectable men. The value of the town tenements has been affected by the temperance movement; does not believe that trade has as yet been improved by it, but it has greatly improved the appearance and conduct of the people. He does not perceive that his own trade (the woollen drapers') has been increased by the temperance movement, but other large establishments in his line have been opened in the town since the temperance movement, and he does not perceive that his business has decreased.

MESSRS. JOHN EGAN AND PEIRCE KEATINGE, the Rural Valuators, *re-examined*.*

Were appointed valutors of the rural district of the Clonmel Union in June, 1839,
There were several candidates.

This was the first occasion they were employed in valuing land.

Are well acquainted with the value of land, and the manner it is set in this Union.

Mr. Egan farms 90 acres; Mr. Keatinge, for a considerable period, was extensively engaged in farming.

The valutors went together on each tenement in the Union; there are no towns in the part valued by them.

The extent of the farm they first valued was 100 acres; a part of it was under tillage, the rest pasture land. They valued it 1*l.* 15*s.* per acre; the rent was 2*l.* per acre. If set up for competition it would set higher.

If they were taking the land, they consider they could not pay more rent than they valued it at. Paying rent at their valuation, they would be able to give back the farm to the landlord in the state it was when taken.

Valued small tenements according to the value of the land. If a house were on the premises, they set a higher value on the land.

The competition is as great for large farms as for small ones. There would be more bidders for small farms; but there would not be so many eligible persons, any of whom the landlord would be satisfied to take as his tenant. The landlords at present seldom let in small farms. They wish to set their ground in as large farms as possible. They think that by setting in this way the ground will be improved, the rents better paid; and they like to have persons of this class living about them.

Considers that a man could not live decently from the profits derived from a farm under 20 acres held at the Poor Law valuation.

A farm of this extent would allow him to give his family meat twice a week, and clothe himself and his family with the same description of clothing that is used by the peasantry of the country; a valuation founded on these considerations is the one they adopted. They never imagined that the Act of Parliament could mean that a tenant holding as much ground as he could cultivate—about 20 acres—should, if the farm was let at their valuation, be obliged to live as the peasantry in this country frequently do, that is, half the year on pota-

* The evidence of these gentlemen, taken in the course of the first Enquiry, is appended to the First Local Report, page 143.

oes and salt, perhaps during the summer some milk. Meat is seldom tasted but on feast days. There are a good many farms in the Union, varying from one to ten acres.

In the neighbourhood of Clonmel the ground is of a superior description, the rent for ground within a mile of the town varies from 3*l.* to 7*l.* per acre. The pasture land is used for dairy purposes; tillage pays well, as there is great facility in procuring manure; this ground is valued from 3*l.* to 6*l.* per acre. Always made inquiry as to the rents paid by the occupiers; generally got such information as satisfied them that they were rightly informed of the rents at which the ground was set.

They did not use the information so obtained even as a guide in making the valuation. Their inquiries were solely made for the purpose of ascertaining what would be the landlords' rates.

The land in the electoral division of Clonmel, with very few exceptions, is good.

A great part of the land comprised in Kilshelan Division is very bad. Mr. Quinlan has the best of it; the poor land is low, with a sandy subsoil; this land is valued from 15*s.* to 1*l.* per acre. He thinks the rent is 1*l.* 5*s.*; the best land in this division is set at 2*l.*, 2*l.* 10*s.*, and some ground even higher. No part of this division is valued by them at more than 2*l.* per acre; their valuation is 10*s.* per acre under the rent, in some instances it is 1*l.* under. They are surprised at the rents paid. In this division the extent of the farms is about 40 acres. The farmers appear comfortable, except where the land is very bad.

Considers that the occupiers had no other means of subsistence but what they were able to make from the land.

Temple Etny.—Lord Ormond, Lord Lismore, and Mr. Perry are the proprietors of the lands in this division. The Poor Law valuation generally agrees with the rents paid for Lord Ormond's property. This property was valued in 1838 by Mr. White, a gentleman well acquainted with the value of land. Lord Ormond set his property at his valuation and it has given great satisfaction. The extent of the farms varies considerably. There are two or three large farms, but in general they vary from 10 to 30 acres of arable land with a pasturable mountain. They are not aware whether the tenants hold under leases. When they valued this property they were ignorant of the rents; they applied for the rental but were furnished only with the acreable contents. The Ordnance survey is not made in this county. They were obliged to ascertain quantities from the statements of the occupying tenants; in some instances agents furnished them with the survey.

The Board did not furnish them with the tithe applotments. The Valuers did not procure them. The Guardians, however, in one instance, compared the Poor Law valuation with the tithe applotment; think that the Poor Law valuation is generally higher.

According as they proceeded with the valuation it was submitted to a Valuation Committee. It was looked over by the members; some suggestions were made. Some landlords complained that their property was valued too low, and that this would cause the whole burden of the poor rates to be borne by them. On those occasions they contrasted the rents with the valuation; on no occasion was the valuation altered solely to meet the landlords' views.

There are a few landlords dissatisfied with the valuation; they think it too low.

Lisronagh.—The land, with few exceptions, is light. Mr. Bagwell of Clonmel, and Sir R. St. George, are the principal proprietors. Sir R. St. George's property is mostly set at the Poor Law valuation; they think that this ground was set within the last 10 years. The remainder of the division is valued from 5*s.* to 10*s.* under the acreable rent. In this division the best land lets from 2*l.* 2*s.* to 2*l.* 5*s.* per acre; it is valued from 32*s.* to 35*s.*; he may be a shilling or so mistaken; never made a calculation of the gross produce of a farm; formed his judgment by observing the quality of land; from this he estimated what a solvent tenant could reasonably pay.

The Act of Parliament was frequently referred to by the Committee, for the purpose of ascertaining if the valuers had adopted the test of value prescribed by the Act. The Committee differed in opinion as to the standard of value they should adopt. Some maintained that as the rents were paid, the tenants should be considered solvent. However, the majority of the Committee were of opinion that the tenant should have a fair and reasonable interest. This they considered the valuation effected.

It would be impossible to make a valuation which would agree with the rents. If the valuator took the mode adopted by one landlord as a standard, the valuation of some estates might be 30 per cent. higher or lower than the rents, and this in cases where the lettings were made at the same time. For instance, in this Union the lands are valued nearly at the same rate that Lord Ormond, Sir R. St. George, and the Marquis of Waterford set their ground, but the valuation of other estates is 30 per cent. lower than the rents.

Newchapel—principally belongs to about six proprietors. One estate is set under the

Owners of property seek to get as much as they can; but a good landlord allows for improvements, builds their houses, and in some cases allows for other improvements. However, the tenants are frequently in arrear. The best quality of ground in this district is set for two or three pounds per acre. In settings made at this day, some landlords demand higher rents than others.

*In Lisronagh few of the tenants have leases, the old ones have expired or depended on old lives, and the landlords are not generally disposed to grant new ones.

In some instances the landlords have been advised by their agents to give leases, stating that

Clonmel.

Evidence.

by so doing the tenants would improve the waste ground and be thus enabled to live comfortably; those landlords having consulted other persons found that no landlord at present gave leases; this induced them not to grant them.

Hardly any of the ground in Newchapel is leased. The tenants pay as high for ground held from year to year as if they were leased; the great object is to get into possession; once they do so, they think the landlord may be induced to give an abatement. This refers to small farmers.

Innishonaghty.
Valuation lower than
the rent.

Innishonaghty.—The land varies very much in quality; that portion of it lying near the town is set from 4*l.* to 6*l.* per acre; the Poor Law valuation is about 1*l.* under the rent. There is no mountain, but a part of the land is very bad. The middling description is set for 2*l.*; this is valued from 1*l.* 8*s.* to 1*l.* 10*s.*; he thinks this amply sufficient.

Killaloean.
Valuation two-thirds
of the rent.
Paucity of leases.
Rathcormick.
In this division land
set at a fair rent.
Valuation 5*s.* or 7*s.*
lower than rents.

Killaloean.—The land here is of a very inferior description, it is generally valued at two-thirds of the rent; a very small portion is leased; it chiefly belongs to two proprietors.

Rathgormack.—There is some good ground in this division, but each farm has a tail of either mountain or bog; this lessens the value of each tenement. With one exception the lands are set at fair rents; their valuation is from 5*s.* to 7*s.* below the rent. They met with no leases in this division. The county of Waterford was valued for the collection of grand jury cess; the Poor Law valuation has been compared with it. They agree in most cases. In Tipperary there has been no applotment for grand jury purposes; the cess is paid under a very defective survey.

Kilronan.
Valuation agrees with
the rent paid for good
ground.

Kilronan.—There are a few good farms, the rest is improved mountain; this land is very inferior. The best land is valued at 2*l.* per acre. The rent is about 2*l.*; he considers that if this ground was put up for competition, considerably more could be got for it; the improved mountain is valued at 8*s.* or 10*s.* per acre; he does not know the rent, but thinks it may be a pound above the valuation, is fully as much as a solvent tenant could pay.

The wild mountain is valued from 10*d.* to 2*s.* 6*d.* per acre. There are two or three landlords and several middlemen.

The worst part of the ground held by middlemen is set by them in small farms at very high rents, which the tenants endeavour to pay in work or from the profits of jobbing; they never could make it out of their farms.

Mode of valuing
ground held by
middlemen.

In valuing ground held under middlemen they valued each holding separately; where the ground was bad their value was in some cases under the head rent, but the rest of the ground was valued high. Landlords are not pleased that the valuation should be below their rents.

Few middlemen have
leases.
Only one appeal.

There are hardly any leases, but middlemen are not dispossessed.

The only person who appealed was the proprietor of a distillery, who succeeded in lowering the valuation of his premises.

St. Mary's.

St. Mary's.—A great portion of it lies near the town of Clonmel; the part near the town sets at very high rents.

Villa property.
Mode of valuing.

There are about 12 villas; from five to fifteen acres are attached to each. The houses were valued from 25*l.* to 60*l.* In making the value he divided the value of the house by the number of acres, and added this to what he considered the land was worth. The improved mountain near the town he valued from 3*l.* to 1*l.*, this is set in small divisions from 5*l.* to 3*l.* an acre. Most of the occupiers earn their livelihood by labouring in the town—certainly not from the ground. There are few leases made in this division. The commons are valued about 1*s.* per acre. This is used by the tenants occupying the cultivated portions of the mountains. They pay no rent for it.

Paucity of leases.

Mr. Green.

MR. GREEN, *examined.*

Valuation high.

Lives about one mile from the town; is possessed of a farm of 150 acres; holds under a lease made in the year 1790; lands were then 25 per cent. lower than at present; pays 2*l.* 10*s.* per acre; if let at present would get from a solvent tenant 3*l.*; this is valued about 2*l.* 10*s.* Does not know how the ground about him is valued, but from all he has heard he believes that the valuation is high enough.

Mr. Keefe,
Elected Guardian.

MR. KEEFE, Elected Guardian, *examined.*

Was a tithe proctor.
Also an agent.

Member of the Valuation Committee.
Landlords complained that the valuation was too low.

He proved to the Committee that the valuation was fair.

Uncertainty of high rents.

That he is a Guardian for the Union of Clonmel; is acquainted with every inch of ground in the Union; had been engaged for thirty years as tithe collector for all the electoral divisions in the Union but one; receives about 10,000*l.* a-year in the rural part of the Union. Was agent over fifteen or sixteen properties; constantly attended the Valuation Committee; some landlords complained that the valuation was too low. When the valuation of any farm was objected to, he was able to prove to the Committee that the valuation was fair. The scale of valuation was such as would allow an occupier to live comfortably and no more. Something better than the peasantry in this country live. High rents are some years obtained; but on properties where the rents are high the tenants are constantly in arrear. When this happens, the landlord must either eject the tenant or compound for the rent; in many instances large arrears are wiped off. He valued the electoral division of St. Mary's as a tithe valuator; compared his valuation with that made by the Union valuator, and the difference between them on the gross of the lands was only 26*l.* on a total of 2581*l.* 3*s.* 3*d.* The tithe valuation was made by him and two respectable gentlemen, Messrs. Gordon and Markham. He is particularly acquainted with Russelstown; these lands were let at a very high valuation; the rents are frequently unpaid. An objection was made by one of the guardians to the valuation of this property, stating that it was too low. But from his intimate acquaintance with that property he was enabled to show to the other guardians that the valuation was fair.

The rental of Lord Ormond's property corresponds with the Poor Law Valuation. He

looked over the valuation-books, and, as far as he can judge, the valuation is fair and equitable; it is about 20 per cent. under the rack-rent.

He thinks it would be impossible for a valuator to value according to the rack-rent; different people have different ideas. If two farms of equal quality were taken by different persons at different prices, the person who got his farm on the most advantageous terms, but who considered that it was reasonably worth no more than he paid, would raise a great outcry if the valuation exceeded the rent. From his local knowledge of the Union he was constantly appealed to by the Board; in general where the value of any townland was disputed he gave his opinion, and the valuator altered his valuation when it was shown before the Committee he was in error.

He has resided for the last thirty years in the immediate neighbourhood of the town; has been receiving rents out of houses in the town amounting to something near to 2000*l.* a-year for different landlords; he believes he receives for six different landlords in the town. The houses are situate in different streets and lanes in the town; he knows the letting prices of houses in the town; he receives rent out of houses in most of the streets. According to the locality of the houses in the same streets and their size, the prices vary. The main street is the best street and has the best houses; some let from 70*l.* to 80*l.* a-year. That is the highest rent paid in any street in the town; in the other business streets the prices range from 10*l.* to 35*l.* Was one of the Valuation Committee. He was first appointed after the books were returned and the valuation completed. The members of the committee were regular in attendance, and the valutors generally attended on them; he was the person who took the greatest part in the revision of the rural portion, and gave great assistance in the revision of the town. When the valuation was completed, a number of the guardians objected on the ground that the town would bear near one-third of the whole rate according to the valuation, while the Union contained about 60,000 acres; but he stated to the Guardians in answer to this, that near one-third of that extent was mountain and unprofitable land; and he still is of opinion that the mountain and unprofitable land in the Union is very nearly 20,000 acres; in the electoral division of St. Mary's alone he valued under the tithe compositions 3500 acres at 73*l.*, and this is but one division out of ten; he thinks the valuation of the rural portion is a fair valuation at what solvent tenants could pay punctually at the gale days, and keep a decent coat on their backs, but it is not equal to the rent which would be promised. There is the greatest competition for land, and he has reason to know it, as every day persons are applying to him for ground. They will promise to pay anything to get into possession. He examined the valuation farm by farm, and thinks the valuation is at the rent which a tenant could pay at the gale days; he desired the Guardians to name any farm that was too low in the valuation. Mr. Pedder said that one of his farms was too low, but said nothing of his other farms. About the town the land is valued from 5*l.* to 6*l.* the acre, and his own farm, about a mile and a half from the town, is valued at 2*l.* 10*s.* an acre, and he only pays 2*l.* 12*s.* for it. With respect to the town valuation, he thinks that it was a fair uniform valuation; very close on the rents they are paying; examined the town valuation also very minutely; does not think that more than ten or a dozen complained of being overvalued. Where they showed good cause the valuation was lowered; in all cases of change the valuation was lowered; no one in the town complained of being valued too low. There was no question asked about the registry in revising the valuation. The Committee questioned the valutors as to the principle on which they valued the tenements; they said they valued each tenement at the rent which they considered a good solvent tenant would pay. When a complaint was made of the valuation, he went himself and examined the premises, and suggested alterations in the valuation where he thought they ought to be made, except in the mill cases, for he was not competent to judge of them; when the valuation was completed, some of the ex officio Guardians objected on the ground that the county valuation was too low; believes they are unwilling that it should appear, when they are letting their land, that any person valued it so low; they fear it may prevent them from getting high rents. With respect to the town valuation, he thinks it is under the rent at which the houses could now be let, but close enough to it; made no calculation how much the valuation of the town is below the rents that could be got. Thinks the two town valutors were as competent valutors as could be found; he has known them for many years, and believes them to be fair honest men, and that the valuation was fairly conducted. They told the Board of Guardians that it was a correct and fair valuation, and he, witness, believes it to be a fair uniform valuation; it is certainly higher than the valuation of the county, but is sure that the rents are paid better and more easily collected in the town than in the county. The people in the town are better circumstanced and can better afford to pay the rents they are charged with; he believes that the valuation of the rural portion of the Union is on an average about one-fifth under the rents the tenants contracted to pay. Throughout the Union there are not many leases, the disposition is rather not to give leases.

JOHN MULCAHY, ESQ., examined.

Lord Clonmel's property lies on the northern bank of the Suir, commencing about three miles and a half from the town, and extends to Lord Ormond's property. He is agent to Lord Clonmel; has been so for the last three years, during which period he never distrained but on one occasion.

O'Donnell of Leskin, tenant of Lord Clonmel, holds under a lease made in 1793; the yearly rent is 491*l.* 15*s.* 7*d.*; the farm contains 318 Irish acres; of this 265 acres are valued at 360*l.* 11*s.* He considers that this is the best of the land; knows no land in the neighbourhood of this farm so good; the land that approaches nearest to it in quality was set to Pat Quinlan in May, 1838; the farm contained forty-four acres, set for 72*l.* 12*s.* Under an old lease which had then expired, the farm was set for 66*l.* 14*s.* 6*d.*; this farm is valued at 55*l.*

APPENDIX.

Clonmel.

Evidence.

Valuation 20 per cent. under the rack-rent. Impossible to make a valuation at the rack-rent.

Town of Clonmel.

Receives rents in the town for different landlords.

Prices vary.

Valuation Committee.

Some Guardians objected that town would bear one-third of the rate.

Fair value.

Great competition for land.

The townfields valued from 5*l.* to 6*l.* an acre.

Opinion of town valuation. Complaints of being valued too high.

When complaints made, went himself to visit the tenements.

Valuation of the town higher than the country valuation. But tenants in town can better afford to pay their rents.

John Mulcahy, Esq.

Is agent to Lord Clonmel.

Instances where the valuation is too low.

APPENDIX.

Clonmel.

Evidence.

Considers valuation to be 25 per cent. too low.

Principle on which the Poor Law valuation should be founded. Rack-rent. His definition. Standard for valuation.

Principles of valuation.

Would not take into consideration the mode a tenant could live.

James Power, a yearly tenant of Lord Clonmel; holds twenty-three acres, rent 38*l.* 7*s.* 4*d.*; it is valued at 23*l.* 9*s.* All he knows about this man is, that he pays regularly; some of the tenements are valued fairly, but others much too low.

John and James Manning hold eighteen acres, rent 25*l.* 9*s.* 10*d.*; lease made 1793, valued 22*l.* 10*s.* Mr. Mulcahy is acquainted with this farm; considers it would let for 32*l.*; considers that Leskin, one acre with another, ought to let to a solvent tenant for 30*s.* per acre. He is not particularly acquainted with the actual state of each farm, but knows the ground generally; considers the valuation a gross under value, particularly when farms under twenty acres are valued; he knows two farms of twenty acres, each valued at 15*s.* per acre.

He thinks the valuation is at least twenty-five per cent. on the average too low; more in some cases, less in others; he speaks of Lord Clonmel's estate. Has heard general complaints from the landlords that the ground was under valued.

He took no steps to correct the valuation, as unless the proprietors generally joined in such a measure he would but increase the rate on the particular tenement without benefit to the landlord. A valuation under the Poor Law should be made at what the land is then worth, supposing the tenant to use it fairly, certainly not at a rack-rent, which means a rent which cannot be made out of land without deteriorating its quality; therefore such a rent could not be paid for any continuance. Considers that a rent which a tenant could pay, and render up to his landlord the farm in at least as good a state as it was when he got it, is the standard of value which the Poor Law valuator should adopt.

Considers that the valuation should be founded on those principles. Suppose an occupier of twenty acres should pay for the labour necessary for the cultivation of a farm at the ordinary rate of wages in the locality (considers the occupier a labourer,) paying for manure and the other expenses attending a farm; considers this a main ingredient in forming an estimate of the value of land, and the only one which can well be had recourse to between landlord and tenant; locality of land, proximity to market-towns, and the facility of obtaining manure should be next considered; the course of crops, their average produce, should be fairly considered and the rent fixed according to the probable prices; the tenant having the advantage of any other outlay of capital or labour beyond the ordinary course of cultivation. Considers that a tenant under such circumstances is paid for the labour of his family, and has the advantage of the rise in the market, superiority of produce and skill in cultivation; thinks no standard could be laid down as to the mode in which tenants of this or a minor description should live without great prejudice to the landlord, as the habits and conditions of families differ so very widely.

The tenements marked thus * in rent column, have either no rent annexed, or the disproportion between the rent and the valuation is so great as to lead to the presumption that fines were paid.

N.B. The statements as to "deaths and removals," in the column of observations, are given on the authority of persons who appeared to have local information. The time did not permit particular inquiries to be made as to their accuracy.

VALUATION OF £10 COUNTY ELECTORS (Registered 1832 to 1840) so far as ascertained.

COUNTY TIPPERARY.

Marked thus * registered in 1832, and not since re-registered.

CLONMEL UNION.

Name of Occupier.	Name of Landlord.	Extent in Irish Measure.	Net Annual Value, as in Rate Book.	Rent.	Observations.
		A. R. P.	£. s. d.	£. s. d.	
(a) Thomas Sadler	Mr. Moore	25 0 0	100 0 0	150 0 0	Worth that. The rent is under 2 <i>l.</i> an acre. If advertised it would let for 2 <i>l.</i> 10 <i>s.</i> or 3 <i>l.</i> per acre. The rent is either 30 <i>s.</i> or 40 <i>s.</i> an acre. Let the other day for 4 <i>l.</i> per acre, and 500 <i>l.</i> fine. Rent 2 <i>l.</i> 11 <i>s.</i> 6 <i>d.</i> per acre, but it is not paid. Mr. Peddar offered 3000 <i>l.</i> for this farm. For 8 of those acres 20 <i>l.</i> is paid. Mr. Peddar gave 3000 <i>l.</i> for a property, and has since laid out nearly 2000 <i>l.</i> in improvements. The Poor Law valuation of this property is 120 <i>l.</i> net annual value.
Moore of Barns	Mr. Perry	349 0 0	960 0 0	1396 0 0	
Samuel Perry		135 0 0	251 0 0		
John Keatinge		125 0 0	209 14 0	209 14 0	
(b) William Quin	Mr. Green .	41 0 0	37 0 0		
(c) Thomas Ryan	Mr. Keele .	97 0 0	242 0 0		
(d) Patrick Shanahan	Sir R. Keane	47 0 0	75 11 0		
(e) Patrick Doyle		316 0 0	100 0 0	150 0 0	
(f) Thomas Dopping		183 0 0	18 4 0		

The above information was furnished by Mr. Peddar.

I afterwards questioned the valuator relative to the valuation of those farms, and the following are his answers :—

(a) The valuator thinks no one could live on the profits arising from this farm if he paid 150*l.* rent. The person who is at present in possession is an independent man, and took it for his convenience.

(b) Two or three farmers who held this farm were broke.

(c) Part of this land is good, and a part light. Thinks it impossible that the rents as stated above could be paid, unless the tenant broke it up, and thus take the worth out of the land in a few years; and in this exhausted state throw it back on the landlord; believes that the 500*l.* fine is to be allowed in the rent.

(d) Considers the valuation sufficient.

(e) A great portion of the farm is mountain, and the rent is considered high by everyone.

(f) Is all mountain unless some few reclaimed patches; the best part of his ground is let and valued on other persons.

J. N.

THURLES UNION.

APPENDIX.

Thurles.

*Extracts from Minute-Book of Board of Guardians.*Extracts from
Minute-book.

At the first meeting of the Board of Guardians of the Thurles Union, held in the Court-house, Thurles, on Saturday the 25th day of May, 1839,—Present, 8 ex-officio and 23 elected guardians,—

Resolved,—That a sum not exceeding 300*l.* be given as a remuneration to the Valuator for valuing the lands and all other rateable property of the Union, and that the clerk be directed forthwith to insert advertisements in the *Nenagh Guardian* and the *Tipperary Free Press*, calling upon qualified persons for tenders for valuing the same. Advertisement for Valuator.

Resolved,—That the appointment of Valuator be made by the Board of Guardians collectively, and not by any committee.

Resolved,—That the seven following gentlemen be appointed as a standing committee for superintending the Valuation of the rateable property of the Union:— Valuation Committee.

Messrs. Henry Langley,
John Lloyd,
Patrick Fogarty,
John Lenigan,

Messrs. John Lamphier,
Patrick Fogarty,
Solomon Cambie.

At a meeting of the Board, 22nd June, 1839—

It was proposed by John B. O'Brien, Esq., seconded by John Lenigan, Esq., That the Board do now proceed to elect a Valuator for this Union. It was moved as an amendment by P. Fogarty, Esq., seconded by William Foley, Esq., That the Board do postpone the appointment of Valuator to the 12th day of July next. On a division the original resolution was carried.

The proposals of the following gentlemen were then read by the clerk:—

	£.	s.	d.	
Messrs. Thomas Pennefather	2	10	0	per 1000 acres.
Cook and Fogarty	300	0	0	the whole.
M. B. Fogarty	1	19	6	per 1000 acres.
Martin Quinlan	2	1	8	ditto.
Milo Bourke	2	5	0	ditto
Scully and Fogarty	2	12	6	ditto
Daniel Slattery	1	10	0	ditto
Denis Leahy	1	19	0	ditto
Daniel Purcell	1	16	0	ditto
Ramsey and Cadney	8	6	0	ditto
				plantation measure.
				statute measure.
				plantation measure.
				ditto.
				statute measure.
				ditto.

On the proposals of the foregoing gentlemen being considered and a poll being taken, there appeared for Messrs. Scully and Fogarty 8, for Mr. Leahy 17. Mr. Leahy was accordingly elected the Valuator of the Union. Valuator appointed.

Mr. Leahy was then called in, and the following questions asked of him by the chairman:—1st. Whether he would make any additional charge for surveying, or for any other operation required?—Answer. No additional charge, unless for an actual survey of any portion of the Union required. 2nd. Whether he will personally inspect and value the property of the Union?—Answer. Yes. 3rd. Whether he will require any assistant, and what description?—Answer. No. 4th. Whether he will engage to have the Valuation completed against the 25th March next?—Answer. Yes. Mr. Leahy then withdrew.

It was consequently proposed by John B. O'Brien, Esq., seconded by John Lloyd, Esq., That Mr. Leahy be allowed 12 months for the completion of the Valuation of the Union.— One year allowed for valuation.

Carried.

At a meeting held the 3rd August, 1839—

Proposed by Robert Lidwell, Esq., seconded by Theobald Wellington, Esq., That 2*l.* be the maximum allowed Mr. Leahy for attendance at sessions, in case his valuation be not amended or quashed; and that in the event of an erroneous valuation 10*s.* be the maximum allowed Mr. Leahy.—Carried.

Proposed by John Lloyd, Esq., seconded by William Foley, Esq., That Mr. Leahy be paid according to his original valuation, 1*l.* 9*s.* for any valuation that may be necessary in consequence of change of occupancy.—Carried.

Proposed by John Lloyd, Esq., seconded by Theobald Wellington, Esq., That the Valuation Committee meet a fortnight after any communication from Mr. Leahy.—Carried.

Proposed by John Lloyd, Esq., seconded by William Foley, Esq., That Mr. Leahy's own security, together with his father, Mr. Patrick Leahy, and his brother, Mr. Edmond Leahy, are approved of as securities, and that the bonds are perfected against the next day of meeting.—Carried. Valuator's securities.

APPENDIX.

*Thurles.*Extracts from
Minute-book.

At a meeting, 31st August, 1839—

Proposed by John Russell, Esq., seconded by Captain Armstrong, That new advertisements be issued for a Valuator of the Union, in consequence of Mr. Leahy not having perfected his bond, in accordance with a resolution of the Board of the last meeting.

As an amendment it was proposed by John Lloyd, Esq., seconded by J. P. Lamphier, Esq., That Mr. Leahy be written to by the clerk, to ascertain why he has not come forward to perfect his securities.—The original motion was withdrawn and the amendment carried.

First sitting of the Valuation Committee, 14th December, 1839 :—

It was proposed by J. P. Lamphier, Esq., seconded by Henry Langley, Esq., That, having examined and considered Mr. Leahy's valuation-sheets of part of the division of Holycross, we have no objection to make against them.

At a meeting of the Board, 20th July, 1840—

Maximum value pro-
posed at Board.

Moved by Mr. Lenigan, seconded by Mr. Sauce, That it is the opinion of the Board that 2*l*. per acre be the highest value at which any land in the Union should be valued, except town-fields, and that such, the opinion of the Board, be communicated to Mr. Leahy the Valuator.

Negatived by a ma-
jority of one.

Moved by George Ryan, Esq., seconded by Sir Henry Carden, That as an amendment it be resolved that the said resolution do not pass, as such resolution would be a restraint on the Valuator, and contrary to the spirit of the Poor Law Act.—The amendment was then put to the poll, when there appeared for the amendment 13, against it 12.

At a meeting of the Valuation Committee, held 26th September, 1840—

Mr. Leahy, the Valuator, laid before the Committee his valuation of the several divisions of Holycross, Mealiff, Ballycahill, and Templebeg.

The Chairman, with the assistance of the other members, and of George Ryan, Esq., of Inch, who was present at the meeting, entered very minutely into the particular valuation of each respective division, and into the entire generally; and made no objection to Mr. Leahy's valuation.

Evidence.

Mr. Leahy, Valuator.

*Evidence.*Mr. DENIS LEAHY, Valuator, *examined.*

His qualifications.

Documents furnished.

Valuation for poor
rate lower than be-
tween landlord and
tenant.Lower than actual
rents.

Standard of value.

Leases formerly
general, but not re-
newed.Unwillingness of
tenants to register as
voters.

Their reasons.

Is a professional valuator and civil engineer. Competent persons were invited by advertisement to send in proposals for valuing the Union, and his being the lowest was accepted. The instructions furnished to him were the printed books on valuation and rating, published by the Commissioners, and instructions from the Guardians to submit his field-books as soon as completed to a Committee, consisting of seven members of the Board (two ex officio and five elected), three or more of whom were to meet and revise the valuation of each division as it was completed, assisted by such of the Guardians of the division as might choose to attend. There were very few objections made by the committee. In every case in which the committee suggested an alteration he reviewed the valuation, and where he was not satisfied that the objection was proper to be allowed he retained his original valuation, and he thinks that this was the case in the great majority of the cases objected to. Knows the Union very intimately for a number of years. His valuation for the poor-rate is lower than he would have valued the Union if employed to do so as between landlord and tenant, perhaps from five to seven per cent. lower; it is also below the rentals of the landlords generally (exceeding them only in cases where old leases exist); he would lay it five to twelve per cent. below the rents in the case of large proprietors, and from fifteen to twenty in the case of small proprietors. Taking a particular instance of the latter class, Mr. — (with an income of about 300*l*. per annum), whose tenants pay their rent punctually, and referring to his valuation-book, the exact per centage of his valuation under the rent paid is fifteen per cent. Taking the case of a large proprietor, with an income of 5000*l*. to 6000*l*. per annum, and again referring to his field-book, the rents paid in a particular townland, recently let, exceed his valuation under the Poor Law Act by seven or eight per cent.; but this particular portion of the property of the individual referred to is let considerably below the estates of the majority of the large proprietors in the Union, and is perhaps the lowest let land in the Union of recent lettings. In valuing the Union he set out on the principle of giving every man an interest in his farm, one-fourth as great an interest as the landlord, that is to say, paying as rent the valuation he has put on it for poor-rate, the tenant's interest would sell for one-fourth as much as the fee-simple of the land. The houses which are in the Union he has valued from thirty to thirty-five per cent. under the rents at which they are let. There are some coal-pits in that portion of the barony of Sleevardagh which is in the Union, but they have not as yet been valued. By much the greater portion of the Union is let upon leases, but a considerable portion within the last ten years has fallen out of lease, and has not been renewed: it is now held from year to year: possibly a sixth or a seventh of the Union may be out of lease. As leases drop he is of opinion they will not be renewed. The tenants require a good deal of persuasion to induce them to come forward to register, even in cases where there is an undoubted interest to confer the franchise; the grounds of their unwillingness are several: 1st, they do not like to let their landlords see they have such an interest in their holdings, lest the rent should be raised on the expiration

of the lease; a second reason is, that, being registered, they are obliged to oppose the wishes either of their landlords or of the clergy and the bulk of their neighbours.

APPENDIX.

Thurles.

Evidence.

JOHN LLOYD, Esq., Chairman of Board, *examined.*

Is an ex-officio Guardian and Chairman of the Board. Is of opinion that Mr. Leahy's valuation is a very low one, perhaps twenty-five per cent. in that part of the Union with which he (Mr. Lloyd) is acquainted below the letting value—the fair letting value. What he means by the fair letting value is this: a rent which, if the land were let at to-morrow to a solvent tenant, he could continue to pay and pay it comfortably. At his idea of a fair letting value, a tenant who had a lease of twenty-one years, and had leave from his landlord to sell his farm, would have an interest for which a solvent man would give him from 3*l.* to 4*l.* an acre. There are a great many of the holdings not let on lease, say a sixth; and as the leases now in existence expire, thinks new leases will not be given. Thinks a reason for not granting leases is, that the landlords do not wish to confer the franchise on their tenants, lest they should go against them at elections: one other reason, which is the stronger one in his opinion, and influences himself, is, that if they had leases they would be subdividing their farms. Thinks that the landlords generally who withhold leases, for the purpose of preventing their tenants from acquiring the franchise, have no hesitation in avowing their motives: there is an indifference, on the part of the tenants themselves, to get registered, from the expense and trouble attending both registries and elections.

J. Lloyd, Esq., Chairman of Board.

Valuation low.

Fair letting value.

Tenants' interest.

Leases not renewed; and why.

J. B. O'BRIEN, Esq., Ex-officio Guardian, *examined.*

Concurred in the greater portion of what Mr. Lloyd had stated, with some exceptions. Mr. Lloyd's statement as to the valuation being twenty-five per cent. below the letting value can only be said to be correct as to the very best land; the inferior and middling qualities are kept more nearly up to the value, and in some cases up to the full value. Thinks that a tenant should have an interest of 3*l.* to 4*l.* per acre at least, at a rent at which a good landlord would let his land.

J. B. O'Brien, Esq., Ex-officio Guardian.

Valuation lowest on best land.

Tenant's interest.

NICHOLAS MAHER, Esq., Elected Guardian, *examined.*

Is agent to Val. Maher, Esq., John Maher, Esq., and John Prendergast, Esq. There are few leases on Mr. Val. Maher's estate, in proportion to its extent. All Mr. John Maher's property is let on lease. Mr. Prendergast's all under lease or agreements for leases. Thinks Mr. Leahy's valuation is a low one, from all the books he has looked over and the lands he is acquainted with—fifteen to twenty per cent. below the value, and twenty to twenty-five per cent. below the rents. On the part of some proprietors there is an objection to grant leases, arising from an unwillingness to extend the franchise (Mr. Langley, one of the Guardians who was present, said, he for one would not grant leases on that very ground). Mr. Maher thinks the letting value of lands should be such that the tenant should have an interest of 8*l.* to 10*l.* per acre. On Mr. Val. Maher's property, a tenant, so long as he pays the rent and conducts himself properly, is never removed, and farms out of lease on his property will sell for as much as if there was a lease—they generally sell for 10*l.* to 12*l.* an acre. Mr. Leahy's valuation is in some instances below Mr. Val. Maher's rent. Generally speaking, lands in the Union are let too high, higher than he would let them if he expected to get his rents.

Nicholas Maher, Esq., Elected Guardian.

Valuation low.

Objection to grant leases.

Tenant's interest.

Tenant's right marketable.

Land in union let too high.

NOTE.—The valuation of the Thurles Union being for the greater portion incomplete at the time the Union was visited, the tenements of the £10 electors could not be traced in the rate-books.

RATHDRUM UNION.

APPENDIX.

*Extracts from Minute-Book of Board of Guardians.**Rathdrum.*

Extracts from
Minute-Book.
Valuation Com-
mittee.

At the first Meeting of the Board of Guardians, held on Tuesday, the 5th day of November, 1839, at the Flannel-hall, Rathdrum,

On the motion of the deputy vice-chairman, seconded by the Hon. Granville Levison Proby, It was resolved—That the chairman, vice-chairman, deputy vice-chairman, Capt. Hore, Capt. Bury, the Hon. G. L. Proby, Mr. Laurence Greadon, Mr. Laurence Byrne, Mr. Jones, Mr. Ellis, Mr. Matthew Ellis, Mr. Case, Mr. Clements, Mr. Walsh, Mr. M'Donald, and Mr. King, be appointed a Select Committee to inquire and ascertain whether any and what surveys exist, which appear to be available and sufficient for the purpose of estimating the net annual value of the property liable to be rated in the Union, or which with due revision and correction might be made available for such objects, and that the said committee do report the result of their inquiries to the next meeting of the Board of Guardians. Three of the committee to form a quorum.

November 29, 1839.

Ordnance Survey
and Griffith's Valuation not available.

The chairman of the Valuation Committee read a letter from the superintendent of the Ordnance survey, addressed to R. Muggeridge, Esq., Assistant Commissioner, stating, that it was not probable that the survey of the Union or the Government Valuation, under the direction of Mr. Griffith, would be available in time for the valuation of the Union under the provisions of the Poor Law Act for Ireland. He further reported that, the committee having made diligent inquiry on the subject, were of opinion that there were no existing surveys or valuations adequate to the purpose of valuing the rateable property of the Union. Whereupon

It was moved by the Hon. G. L. Proby, seconded by John Synge, Esq., and resolved unanimously,

Advertisement for
Valuator.

That this board will at their next meeting proceed to the election of a valuator of the rateable property of the Union, and that the Assistant Commissioner be requested to insert advertisements to this effect in the public journals, the candidates to be required to name a sum per 1,000 statute acres, to include all rateable property thereon, or a bulk sum for the whole Union; and that it be a condition of the contract for valuation that the valuator should engage at his own expense such professional or other assistance as may be necessary, subject to the approval of the guardians, and that the valuation be proceeded in and completed by electoral divisions, and also that the names and addresses of two persons as sureties should be stated in the tender.

At an Ordinary Meeting of the Guardians, held the 24th day of December, 1839,
Colonel Acton in the chair,

There were present seven ex-officio guardians, 23 elected guardians, and the Assistant Commissioner, R. M. Muggeridge, Esq.

Tenders for the
Valuation.

After the minutes of the previous meeting had been read and confirmed, the board proceeded to the consideration of the several tenders received for the valuation of the rateable property of the Union, as follows:—

1st. From Edward Johnson, proposing to value the whole Union for 450*l.*, or at 2*l.* 2*s.* per 1,000 statute acres, including all rateable property thereon, and to be completed in nine months from the date of tender, 24th December.

2nd. From Edward Byrne, proposing at 2*l.* 7*s.* 6*d.* per 1,000 statute acres.

3rd. From Charles Hanley, proposing to value the whole Union for 400 guineas, to be completed by the 1st September, 1840.

4th. From Robert Hampton, proposing to value at 3*l.* per 1,000 acres, and to complete by 1st August, 1841.

5th. From R. Laurenson, proposing to value at 2*l.* per 1,000 statute acres for the land, and 5*d.* per house, in such towns as Arklow, Rathdrum, &c., to complete in four months.

6th. From Messrs. Neville and Son, proposing to value at 2*l.* 2*s.* 6*d.* per 1,000 statute acres, or 425*l.*, to complete in eight months from signing the bonds.

7th. From J. P. Gaynor, proposing to value at 3*l.* per 1,000 statute acres, and 6*d.* per house, coming under the Act, or for the sum of 698*l.*

Valuator appointed.

It was then unanimously resolved that Mr. Edward Johnson, of Ballynaclash, be appointed valuator of the Union, and that the Board do accept his offer of valuing the Union at 2*l.* 2*s.* per statute acre, to include all rateable property thereon.

At a Meeting of the Board of Guardians, held on the 21st day of January, 1840, Mr. Edward Johnston signed a contract for the due performance of his duties as valuator.

At a meeting on the 14th of April, 1840, the valuator attended and produced for the inspection of the guardians his valuation of the electoral division of Aughrim. No entry appears on the minute-book of any proceeding with respect to the valuation.

May 4, 1840.

Valuator attended and conferred with the guardians on the progress of his valuation of the Union.

June 1, 1840.

Same entry in minute-book.

June 29, 1840.

A copy of the Ordnance survey of the Union and sections ordered for the use of the guardians.

July 27, 1840.

Mr. Johnston, the valuator, having been conferred with on the progress of his valuation,—Resolved,—that the Ordnance survey of the Union be for the present put into his hands.

August 24, 1840.

Mr. Johnston having attended and produced for the inspection of the guardians his valuation of eight of the electoral divisions of the Union completed, resolved, that a committee be appointed to revise the valuation of the electoral divisions of Wicklow, Danganstown, Kilbride, and Glenealy, and that a committee be also appointed to revise the valuation of Rathdrum, Roundwood, Aughrim, and Castle M'Adam; that the elected guardians of each electoral division be appointed members of the committees, together with the ex-officio guardians resident therein, and that the chairman, vice-chairman, and deputy vice-chairman be appointed members of each committee; that the several guardians appointed members of the committees be apprized of their being so appointed, and that the first meeting of committee for revising the valuation of Wicklow, Danganstown, Kilbride, and Glenealy should be held on the 31st of August, 1840; and the first meeting of the committee for revising the electoral divisions of Rathdrum, Roundwood, Aughrim, and Castle M'Adam would be held on the 1st of September, 1840.

Revising Com-
mittees appointed,

At the First Meeting of the Committee they were severally adjourned to the next ordinary meeting of the Board.

At Adjourned Meetings of the Valuation Committees on the 21st September, 1840, those Committees were further adjourned to the 29th day of September and 1st day of October, 1840, respectively.

September 29, 1840.

At an adjourned meeting of the committee for revising the valuation of the electoral divisions of Wicklow, Danganstown, Kilbride, and Glenealy;

Present, Colonel Acton in the chair; 3 ex-officio and 5 elected guardians.

On the motion of Mr. John J. Byrne, seconded by Mr. J. Clements, it was agreed that the valuation proved satisfactory.

Valuation reported
satisfactorily.

October 1, 1840.

At an adjourned meeting of the committee for revising the valuation of the electoral divisions Rathdrum, Roundwood, Aughrim, and Castle M'Adam,

Present, Colonel Acton in the chair; 1 ex-officio and 8 elected guardians.

On the motion of Mr. Gilbert, seconded by Mr. Ellis, it was agreed that the valuation Ditto proved satisfactory.

October 19, 1840.

The valuator having attended a meeting of the guardians, and reported that the revision of the electoral divisions completed had been proceeded with, and that by Monday, the 9th day of November, he would hand in the remaining electoral divisions of Arklow, Newcastle, and Glendalough (Killisky having been already handed in, but not revised.) Whereupon, on the motion of Joseph Dickson, Esq., seconded by Captain Hoare, it was resolved, that the elected guardians of the electoral divisions of Newcastle, Arklow, Glendalough, and Killisky, with the ex-officio guardians resident therein, be appointed a committee to revise the valuation of the said divisions, and that they do meet for that purpose on Monday, the 9th day of November, 1840, at Arklow, and on Thursday, the 12th November, at New Town Mountkennedy, at 11 o'clock on each day. The revision of the Arklow division to be made at Arklow, and that of the remaining divisions at New Town Mountkennedy; the committee to meet and report to the next meeting of the Board of Guardians.

Revising Com-
mittee for Third
District.

November 9, 1840.

At the first meeting of the committee appointed to revise the valuation of the electoral divisions of Arklow, Killisky, Newcastle, and Glendalough, held in Arklow, it was resolved, that none but members of the committee be admitted to the meeting, save the valuator and his assistants; the committee was then adjourned to the 11th November.

Strangers excluded
by Revising Com-
mittee.

November 11, 1840.

The adjourned meeting of the committee having revised the electoral division of Arklow, resolved that its next meeting should be held at New Town Mountkennedy, on the 12th November, 1840.

APPENDIX

Rathdrum.

Extracts from
Minute-Book.

November 12, 1840.

Committee met at New Town Mountkennedy, and adjourned to the 16th November; the meeting to be held in the Board-room, Rathdrum, at 12 o'clock.

November 16, 1840.

No proceedings of the committee of revision on this date are recorded in the minute-book; but at an ordinary meeting of the board.

Present, Colonel Acton in the chair; and 9 elected guardians,

The reports of the committee appointed to revise the valuation of the divisions of Arklow, Newcastle, Killisky, and Glendalough were read; and the division of Glendalough not appearing to be completed, it was ordered that the committee do meet at Roundwood for the revision of Glendalough division on Saturday, the 21st of November, at 11 o'clock.

November 21, 1840.

The committee having met at Roundwood, spent several hours in the revision of the Glendalough division, and adjourned the meeting to Rathdrum, on the 14th December, 1840, at 10 o'clock.

No entry of the proceedings of this adjourned meeting appears in the minute-book.

December 14, 1840.

At an ordinary meeting of the Board of Guardians,

Present, Colonel Acton in the chair, 4 ex-officio, 22 elected guardians, and R. M. Muggeridge, Esq., Poor Law Commissioner.

Valuation adopted,
and opened for
inspection.

It was resolved that the valuation of the Union as delivered in by the valuator, and revised by the guardians, be adopted, and that the clerk do give public notice that it will lie for public inspection for 21 days at the Flannel-hall, Rathdrum.

February 4, 1841.

At an extraordinary meeting of guardians, held this day, at 12 o'clock, for the purpose of considering the several objections lodged against the valuation of the Union,

Present, Colonel Acton in the chair, and 19 elected guardians.

The board having revised the electoral divisions of Newcastle, Killiskey, and Arklow, its sitting was adjourned to 12 o'clock the following day, Friday, the 5th February.

February 5, 1841.

At a meeting of the Board to consider objections lodged against the valuation,

Present, Colonel Acton in the chair, one ex-officio, and 17 elected guardians.

Copper Mine.

The objection made on behalf of the Connoree copper mine having been taken into consideration in the presence of Mr. Thomas, the manager of the mine, the letters received by the clerk from the Poor Law Commissioners on the rating of mines were read, and the Board, after a short conference with Mr. Thomas, decided on adopting the original valuation.

After revising the electoral divisions of Kilbride, Castle M'Adam, Danganstown, and Wicklow, the Board adjourned to the following day at 12 o'clock.

February 6, 1841.

At a meeting of the Board of Guardians, held for the purpose of hearing the objections lodged against the valuation of the Union,

Present, Colonel Acton in the chair, and 10 elected guardians.

The Board having revised the valuation of the electoral divisions of Rathdrum, Roundwood, and Glendalough, adjourned to Monday the 8th February, at 12 o'clock.

February 8, 1841.

At a meeting of guardians convened for the purpose of hearing the objections to the valuation of the Union,

Present, Colonel Acton in the chair, and 9 elected guardians.

Revision completed.

The electoral divisions of Glenealy and Aughrim having been revised, the meeting was adjourned sine die.

March 15, 1841.

At an ordinary meeting of guardians,

Present, Colonel Acton in the chair, 1 ex-officio guardian, and 14 elected guardians and R. M. Muggeridge, Esq., Assistant Commissioner.

The Assistant Commissioner read a letter from the Commissioners, and also a copy of a communication addressed to J. D. Oliver, Castle M'Adam, in reply to a memorial from certain inhabitants of the electoral division of Castle M'Adam, whereupon it was resolved,

Board declines
further Revision.

That the Board having already attentively investigated and revised the several objections lodged against the valuation, decline to enter into the investigation of any further objections.

Mr. Johnston,
Valuator.Employed
Assistants.

Trained them.

Inspected their
Books.

Evidence.

Mr. EDWARD JOHNSTON, Valuator, *examined*.

Was appointed valuator of the Union by the unanimous resolution of the Board of Guardians, after comparing his tender with some others which had been sent in. He employed three assistants, all of whom were selected by himself; they met the approval of the guardians. He valued nearly half the Union himself; he had valued a good deal of it for proprietors previously, which assisted him a good deal in his valuation. Before sending the assistants out to value separately, he kept them with himself for a fortnight, till they perfectly understood the scale which he intended to adopt in the valuation of the Union. He inspected the books of the assistant valutors from time to time afterwards, to see that they were con-

ducting the valuation according to that scale; that scale was intended to be 10 per cent. under the letting value; he would have valued 10 per cent. higher for a proprietor. The rents of some proprietors in the Union are considerably more than 10 per cent. over the valuation. On recent lettings the rents are generally 10 per cent. over his valuation. Witness has been valuing these twenty years; he surveys and values for Lord Meath, Lord Wicklow, and Mr. Gunn Cunningham, and occasionally surveys for Lord Fitzwilliam; the small holdings are valued, generally speaking, at a higher rate than the large ones; he thought it right to do so, as the letting value is higher, owing to the competition which exists; the extent of holdings in the Union valued at 5*l.* varies from three Irish acres to ten. Is the holder of a farm himself, and knows the mode in which small holdings are farmed; the practice with small farms is to have a third in oats, a third in potatoes, and a third in grass for a cow. The net profit would be calculated as follows:—

APPENDIX.

Rathdrum.

Evidence.

Valuation 10 per cent. under letting value.
Small holdings valued higher.

Produce of Oats.

	£.	s.	d.
15 Barrels of oats at 10 <i>s.</i> per barrel	7	10	0
Straw	2	0	0
Total produce of oats	9	10	0

Estimate of net profit of small holding.

Cost of Oat Crop.

Ploughing and harrowing	0	15	0
Seed	1	0	0
Weeding	0	1	0
Reaping, binding, stooking, and stacking a haggard	0	15	0
Thrashing	0	8	6
Marketing	0	7	6
Rent	1	13	4
Taxes	0	3	0
	5	3	4

Total profit on oats 4 6 8

Produce of Potatoes.

Acre of potatoes sold on the foot	£18	0	0
---	-----	---	---

Cost of Potatoe Crop.

Ploughing twice and harrowing	1	5	0
Opening drills for seed	0	6	0
Cost of extra manure beyond what one cow will produce	3	10	0
Carting and spreading manure in drills	0	12	0
Cost of seed	2	0	0
Closing drills	0	6	0
Moulding (twice)	0	12	0
Weeding	0	5	0
Rent and taxes, as in oat crop	1	16	4
	10	12	4

Total profit on potatoes 7 7 8

Produce of Cow.

Milk and butter (reckoning the value at what a farmer could get for the hire of a milch cow for 12 months) 6 10 0

Cost of keep.

Grass, rent and taxes of an acre of land	1	16	4
Hay 2 <i>l.</i> 10 <i>s.</i> , straw 1 <i>l.</i>	3	10	0
	5	6	4

Profit on cow 1 3 8

Total net profit of farm valued at 5*l.* 12 18 0

This calculation was subsequently gone into by Mr. Johnston, with the assistance of Mr. William Manning, one of the assistant valuers of the Union; after making alterations in a few of the items, they agreed on the statement as it is here given, and signed the following memorandum:—

"We think the above sum of 12*l.* 18*s.* is a fair average profit of the class of farms valued at 5*l.* within the Union.

"EDWARD JOHNSTON, Poor Law Valuator,
"WILLIAM MANNING, Assistant Valuator."

APPENDIX.

Rathdrum.

Evidence.

Mr. Johnston stated that "he could support the correctness of the estimate before any tribunal," and both agreed in saying that although the profit might be somewhat less on land of inferior quality, the difference, taking into account the increased number of acres, would not be anything material.

Col. Acton, Chairman of Board.

Valuation accurate.

Tenant's interest.

Estimate of net profit.

COLONEL ACTON, Chairman of the Board of Guardians, *examined*.

Thinks the valuation is 10 per cent. under the fair letting value: it is wonderfully accurate and uniform considering the time and opportunities the valuator had; but he thinks the richer lands are valued on a lower scale comparatively than the poorer lands. The tenant's interest in a farm of 40 to 50 acres would sell from 4*l.* to 10*l.* per acre, if held at a fair letting value and on lease from 21 to 31 years. Small farms would not sell for so much, owing to the poverty of the class of persons who occupy them, and the want of leases; at the same time the competition to rent farms of this size is greater: thinks the calculation of the net profit of farms valued at 5*l.*, made by Messrs. Johnston and Manning, (which has been read to him,) is a moderate one, and that Messrs. Johnston and Manning are persons highly competent to make it; so much so, that he would apply to them for the purpose, if he wanted such a thing done himself: he should think there will be difficulty in getting the landlords to state their rents; men do not like to expose their private affairs, and there may be other reasons which will operate in inducing them to withhold information on the subject.

Pierce Mahony, Esq.

PIERCE MAHONY, Esq., *examined*.

Is one of the trustees of Mr. Gunn Cunningham's estate, in the county of Wicklow, which produces a gross rental of about 15,000*l.* per annum. The number of registered electors at present on the estate is 123, as appears by the tables handed in, which witness had prepared for his own use, showing the occupiers' names—number of acres held by each—the gross and net valuation—the rents payable to Mr. Gunn Cunningham, except where lands are held at small chief rents for lives renewable for ever; from these tables* the following classification has been made by Mr. Mahony:—

Total Number of Holdings.	Number of the preceding Valued.											
	Under £5.	£5 and not £10.	£10 and not £15.	£15 and not £20.	£20 and not £30.	£30 and not £40.	£40 and not £50.	£50 and not £100.	£100 and not £150.	£150 and not £200.	£200 and not £250.	£250 and upwards.
526	227	71	60	35	39	29	17	30	10	2	4	2

Mr. Manning, Elected
Guardian.Mr. GEORGE W. MANNING, an elected guardian, *examined*.

Thinks, as stated by Col. Acton, that the valuation is 10 per cent. below the fair letting value. There are very few leases given in the case of small holdings. Landlords think it desirable to have tenants of that class near the door. Thinks the tenant's interest is worth something more than Col. Acton has stated.

Mr. Comerford,
Elected Guardian.
Tenant's interest.Mr. COMERFORD, an elected guardian, *examined*.

The valuation is 10 per cent below the fair letting value, and the tenant's interest is worth from 4*l.* to 10*l.* per acre, as stated by Col. Acton.

* *Vide* these tables in detail, *post*, page 569 b.

In consequence of the number and extent of the Unions included in the South Leinster district (*vide* Second General Report, page xx.), the Commissioners in charge of it were obliged to return to town, to prepare their Local Reports, before the examination of Shillelagh Union could be completed. This list of electors, prepared with a view to further enquiries, is the only document relative to that Union that has been forwarded for publication.

Valuation of £10 County Electors, (registered 1832 to 1840)—*continued.*

THIRD GENERAL REPORT	xxvii
APPENDIX, PART I.	1 a
APPENDIX, PART II.	1 c

THIRD GENERAL REPORT.

TO THE VISCOUNT MORPETH.

MY LORD,

OUR separate Reports on the State of the Poor Law Valuation and the Elective Franchise in 20 Unions, in addition to those already presented, are now submitted to your Lordship.

The whole number of Unions which have been visited in the progress of the inquiry is 52, which extend into 29 of the counties of Ireland.* Classed according to the provinces in which they are wholly or partly † situate, they are as follows:—

Twelve Unions in Ulster, viz.:—

The Union of Armagh,	-	County Armagh and Co. Tyrone.
„ Dungannon,	-	„ Tyrone.
„ Castlederg,	-	„ Tyrone.
„ Coleraine,	-	„ Londonderry and Co. Antrim.
„ Londonderry,	-	„ Londonderry and Co. Donegal.
„ Newtown-Limavady,	-	„ Londonderry.
„ Banbridge,	-	„ Down and Co. Armagh.
„ Lisburn,	-	„ Antrim and Co. Down.
„ Belfast,	-	„ Antrim and Co. Down.
„ Lurgan,	-	„ Armagh, Co. Down, and Co. Antrim.
„ Kilkeel,	-	„ Down.
„ Cootehill,	-	„ Cavan and Co. Monaghan.

Seven Unions wholly or partly in Connaught, viz.:—

The Union of Sligo,	-	County Sligo.
„ Athlone,	-	„ Roscommon and Co. Westmeath.
„ Ballinasloe,	-	„ Galway and Co. Roscommon.
„ Loughrea,	-	„ Galway.
„ Gort,	-	„ Galway and Co. Clare.
„ Castlerea,	-	„ Roscommon, Co. Mayo, & Co. Galway.
„ Scariff,	-	„ Clare and Co. Galway.

Nineteen Unions wholly or partly in Munster, viz.:—

The Union of Cork,	-	County Cork.
„ Dunmanway,	-	„ Cork.
„ Macroom,	-	„ Cork.
„ Listowel,	-	„ Kerry.
„ Newcastle	-	„ Limerick.
„ Rathkeale,	-	„ Limerick.
„ Kanturk,	-	„ Cork and Co. Kerry.
„ Kilmallock	-	„ Limerick and Co. Cork.
„ Limerick,	-	„ Limerick and Co. Clare.
„ Bandon,	-	„ Cork.
„ Fermoy,	-	„ Cork.
„ Waterford,	-	„ Waterford and Co. Kilkenny.
„ Lismore,	-	„ Waterford.
„ Thurles,	-	„ Tipperary.
„ Tipperary,	-	„ Tipperary and Co. Limerick.
„ Cashel,	-	„ Tipperary.
„ Clonmel,	-	„ Tipperary and Co. Waterford.
„ Carrick-on-Suir,	-	„ Waterford, Co. Kilkenny, and Co. Tip-
„ Dungarvan,	-	„ Waterford. [perary.]

* All the Unions, the valuations of which were ascertained to be complete, or nearly so, were visited. See 2d Report, p. xx. The Inquiry commenced at Balrothery Union, County Dublin, on the 15th October, 1840.

† Some of the Unions extend into two counties in different provinces; these have been classed with the Unions to which they seemed most to belong by geographical position.

THIRD REPORT.

Unions visited.

THIRD REPORT.

*And Fourteen Unions wholly or partly in Leinster:—**Unions visited.*

The Union of Gorey,	-	County Wexford.
„ Roscrea,	-	King's Co., Queen's Co., and Co. Tipperary.
„ Shillelagh,	-	County Wicklow and Co. Carlow.
„ Rathdrum,	-	„ Wicklow.
„ Parsonstown,	-	King's Co. and Co. Tipperary.
„ Edenderry,	-	King's Co., Co. Kildare, and Co. Meath.
„ Naas,	-	County Kildare, Co. Dublin, & Co. Wicklow.
„ Longford,	-	„ Longford and Co. Roscommon.
„ Drogheda,	-	„ Louth and Co. Meath.
„ Dundalk,	-	„ Louth, Co. Armagh, & Co. Monaghan.
„ Rathdown,	-	Dublin and Co. Wicklow.
„ Balrothery,	-	Dublin.
„ North Dublin,	„	Dublin.
„ South Dublin,	„	Dublin.

Scale of Valuation.

In each Union we endeavoured to ascertain with precision the scale of valuation adopted by the valuator, and the relation which it bears to the letting value. We have taken extracts from the minute-books of the Unions, showing all the proceedings of the Board with reference to the valuation. In almost every case we ascertained from the valuator themselves the plan which they have pursued, and the mode in which they have estimated the value of land and house property for the purpose of the poor rate. And in nearly all the Unions we learned from some of the guardians themselves, the manner in which the valuation proceedings of the Board have been conducted. Their evidence, and that of the valuator and others, was taken down in writing, and is inserted in the Appendix.

Ten-pound Electors.

In the progress of the inquiry we have ascertained the sums at which the tenements of 24,886 ten-pound electors for counties, cities, and boroughs, registered since the Reform Act, have been valued in the rate-books. Of these 12,612 are tenements of county electors, and 12,274 those of electors for cities and boroughs.

Of the 12,612 tenements of county electors, there are 3,417 the occupiers of which registered in 1832, and had not up to the period of the inquiry in each Union renewed their registry: 8,676 are county electors registered during eight years, (the period which registry remains valid under the Reform Act,) from 1833 to 1840, both inclusive; * the areas of the holdings of 8,543 of these, as well as the amounts at which they are rated in the poor law books, have been ascertained. With regard to these, the effect of applying qualifications for the franchise, depending on rating fixed at various amounts from 5*l.* up to 40*l.*, have been considered; the number of those electors whom each qualification would admit or exclude; and the class in respect to the area of their holdings, to which those who would be excluded by each qualification belong. In 2,255 cases the rents of the county electors, registered during the years 1833 to 1840, inclusive, have been also ascertained and compared with the sums at which they are rated. With respect to these, we have had an opportunity of ascertaining the effect of applying a qualification depending on the excess of the sum at which the voter's tenement is valued, over the rent. With this view, the electors whose rents have been ascertained, have been classified with a view to ascertain how many would be admitted, and how many excluded, by a test depending on an excess of rating above rent, fixed at various amounts, from a qualification merely requiring that the valuation should exceed the rent, up to one requiring an excess of 10*l.* And we have shown in tables the class of electors, in respect to the extent of their holdings and their rents, who would be excluded on each supposition. With respect to those electors, we have also considered the effect of applying two alternative qualifications, one depending on a certain amount of rating, the other on a certain excess of rating above rent.

We have inserted in detail, in our separate reports on each Union, or in the Appendix, the information we have obtained on the several objects of the Inquiry. Those details may be considered under the following heads:—

1. The course of proceeding with reference to Valuation which has been usually pursued in Poor Law Unions.
2. The test of value which has been adopted in agricultural Unions, and the comparison of the scale of the Valuations with the letting value.

* The remaining 519 County electors are persons registered at various times since the Reform Act, but the particular dates of their registry were not ascertained.

3. The comparison of the Poor Law Valuations with that now in progress under the direction of Mr. Griffith.

4. The comparison of the prices which the tenant's interest in land, held at a rent the same as the Valuation, will sell for in the different Provinces.

5. The practical difficulties of enforcing a Valuation on the scale of the letting price of land in Ireland, and the effect of the application of the "fair rent" as a test of value to large and small farms.

6. The holdings of ten-pound county electors, their average acreable extent, and average valuation: the comparison of those who registered in 1832 and have not renewed their registry, with those registered during eight years from 1833 to 1840 inclusive, and the classification of the latter according to the acreable extent of their several holdings.

7. The effect on the ten-pound county electors, registered during eight years, from 1833 to 1840 inclusive, whose rating was ascertained, of substituting for the present franchise a single qualification depending on a certain amount of *rating* fixed at 5*l.* or other sums; and in cases where the rents of electors were ascertained, the effect of adopting a single qualification depending on a certain *excess* of rating above rent: also the effect of *two* qualifications, with the areas and rents of the holdings of persons who would be excluded by different tests.

8. The number of tenements, whether occupied by electors or others, which it appears have been valued to poor-rate at various amounts, from 5*l.* up to 50*l.*, in the Rate Books of the several Unions in each province, and the proportion of each class of tenements which were ascertained to be now under lease to electors.

9. The Poor Law Valuations in cities and towns, the scale adopted, and the amounts at which 12,274 ten-pound borough electors appear rated in the existing Valuations.

*Usual course of
Valuation pro-
ceedings.*

City and Borough
Electors.

1.—*Usual course of Valuation Proceedings.*

The Valuations have been the work of the local Poor Law authorities and of valuers appointed by them.

Valuations the work
of the local Poor
Law authorities.

In two Unions, those of Naas and North Dublin, we found that previous to the valuation being made, the Board of Guardians had expressed a desire that the Poor Law Commissioners should take on themselves the appointment of the valuers of those Unions. In both cases the Commissioners declined making the appointment, and expressed their opinion that the responsibility rested primarily with the Board of Guardians.

Their letter to the Board of North Dublin Union with reference to the proposal contains the following passage:—"The Commissioners have bestowed their best consideration upon this proposal, and on the circumstances which might possibly have made such a course appear advisable; they are desirous in every arrangement to comply with the express wishes of the Board of Guardians, and they are always ready to afford them such support and assistance in the administration of the law as they may stand in need of; but they do not consider themselves at liberty to supersede, in this instance, the ordinary functions of the Board of Guardians, or relieve them from a responsibility which the law primarily casts upon them, by taking a measure which the Commissioners conceive to be intended by the legislature only as an exception, in very special cases, from the general rule. The Guardians are answerable for the correctness of the rate when made, and it is reasonable and consistent with sound principle, that they should, subject to the sanction of the Commissioners, appoint the valuers, by whose professional assistance it will be their duty hereafter to make and assess the rate."

Commissioners de-
clined to appoint
valuators.

The Board of Guardians, therefore, in the two Unions we have above referred to, as well as in all the other Unions which we have visited, took the responsibility on themselves, and selected the valuers who have been employed.

Though the Commissioners declined to appoint the valuers, they issued printed instructions on the subject of Valuation, which were made use of in every Union. Copies of the Act of Parliament and field-books were furnished to the Valuers, and constant intercourse appears to have taken place between the Boards of Guardians, the Valuers, and the Assistant Commissioners, on the subject. In cases of difficulty the Boards frequently applied for and obtained advice and instructions from the Poor Law Commissioner in Dublin. The course pursued of permitting the Boards of Guardians to frame their own Valuations, does not appear to have been complained of by any class, whether landlords or tenants, in any of the Unions which we have visited. The Guardians, *ex officio* and elected, took a share, more or less active, in superintending the progress of the Valuation, and adapting it for the purpose of a rate for the relief of the poor.

*Usual course of
Valuation proceed-
ings.*

THIRD REPORT.

Usual course of Valuation proceedings.

Committees to report on existing surveys and Valuations.

Appointment of valuers.

Valuation Committees.

Revision by Committees.

Course of proceeding to revise Valuation.

The form of proceeding with reference to the Valuation, adopted by the several Boards of Guardians, appears to have been suggested by the Commissioners, and has been very nearly the same in every part of Ireland. Each Board, immediately after its first election under the Act, appointed a committee to inquire into existing surveys and valuations, with a view to ascertain whether any of them were available or sufficient for the purposes of the Poor Relief Act. In all the Unions which we have visited, any former valuations which existed were found inadequate for the purposes of the poor-rate, either in consequence of their having omitted particular classes of property, or from other causes which rendered it necessary to resort to a new Valuation of the rateable property within the Union.

Each Board of Guardians advertised for valuers, and received tenders for completing the Valuation. The tenders were generally numerous, and the valuers were selected by a vote of the Board. In some cases three valuers were appointed. Sometimes there were two, and in many Unions one person was appointed sole valuator.

The Boards always adopted the step of appointing a committee of Guardians to watch the progress of the Valuation, to assist the valuers with their local knowledge, and to revise the Valuation before its final adoption for the purpose of the poor-rate. In a great many Unions the valuers were directed to lay before the Board, specimen sheets of the Valuation of one division or district, for its approval. In general the Boards approved of the specimen produced, but sometimes considered it too high, and suggested a lower scale of Valuation. However, it was suggested by the Poor Law Commissioners (and it appears to have been a feeling very generally, but not universally, entertained amongst the Boards of Guardians) that as the valuers would have to sustain the Valuation before the magistrates, in case of appeals against it, any interference or alteration without the sanction of his opinion, was to be avoided. In the majority of cases, though alterations were suggested in the progress of the Valuation, they were seldom insisted on by the Guardians without the approbation of the valuers.

When the valuator had completed his draft of the Valuation, the course of proceeding has been for the Board to form committees to revise it. In many Unions the Valuation was revised division by division, as the valuator proceeded with his task. In preparing the Valuation of a district so extensive as a Poor Law Union, containing an area sometimes exceeding 200,000 acres, and often containing upwards of 10,000 tenements, some errors are necessarily committed by the valuator which the local knowledge of the Guardians may enable them to correct. No actual survey of the tenements is made by the valuator. The area of each farm must be ascertained from information obtained from individuals or from former surveys or Valuations. The apportionment to county-cess, or the tithe-composition, have been in general resorted to for this purpose. Errors unavoidably occur both in respect to areas and value, and the Guardians of each electoral division are frequently minutely acquainted both with the holdings of the occupiers and the value of the land. The course pursued for the purpose of revision has usually been to constitute the elected Guardians for each electoral division, and the *ex-officio* Guardians residing within it, a committee for the purpose of revising the Valuation of that division of the Union. In some Unions these local committees called meetings of the rate-payers, for the purpose of obtaining the requisite information to revise the Valuation. The Valuation-books of all the divisions, having been thus revised by the Guardians of each division, were returned for the final approval of the whole Board. The valuator, in the progress of the revision, generally amended errors complained of, or sometimes declined to adopt alterations proposed. Public notices were issued, calling on all rate-payers who might have reason to complain of the quantity of land for which they were rated, or the value set on it, to send in written objections. The Board appointed days for hearing those objections, and frequently sat from day to day for the purpose. In most of the Unions, though differences of opinion occurred, they were generally adjusted. The Valuations having been thus revised, have, in the majority of cases, been delivered in by the valuers with a declaration that they were correct to the best of their skill and knowledge, and were then adopted by the Board as the Valuation of the Union.

The Unions of Balrothery and Scariff, referred to in the first Report on the present inquiry, and those of Naas and Dundalk, are exceptions in this respect. In the Union of Naas the Board rejected the Valuation as prepared by the valuator, and adopted one founded on it with reductions to which the valuator did not accede. Nevertheless, it is stated by Guardians, both *ex-officio* and elected, that the Valua-

tion, even as reduced, is still on a higher scale, and nearer the rents than the Valuations of other Unions. (See Appendix, Naas Report.) In the Union of Dundalk there were two valuers appointed, one for the town and the other for the rural districts. The Valuation of the latter was rejected by the Board, who resolved that a new one should be framed, founded on Griffith's Valuation. (See Appendix, Dundalk Report.)

With these exceptions the Boards and their valuers appear to have finally concurred in the adoption of the Valuations.

The Valuations must be looked on as the work of the Boards of Guardians and their valuers. The Commissioners, as already observed, expressed an opinion that the law cast the responsibility of making the Valuation primarily upon the Boards of Guardians, and that it was only in excepted cases that it was the duty of the Commissioners to take the valuation out of their hands. The course thus pursued has been attended with some marked consequences.

On the one hand the work of the valuation has proceeded in all parts of Ireland with the greatest cordiality and zeal on the part of the Boards. They have found an interest in a work which they have felt to be their own. In the majority of the Unions great good will appears to have prevailed on the subject, amongst the members of the Boards *ex-officio* and elected. With few exceptions the valuation proceedings have been carried on and brought to a conclusion to the general satisfaction of all. *Ex-officio* Guardians, elected Guardians, and rate-payers, are generally satisfied with their valuations.

On the other hand, the tendency to a low valuation has been in full operation. The valuations to poor rate having been looked on as the probable foundation on which other taxes will be eventually levied, both the landlords and the tenants of every Union were, in this respect, interested that their valuation should be at least as low as any other. The operation of the 74th section of the Poor Relief Act, regulating the distribution of the tax between landlord and tenant according to the relation which the valuation bears to the rent, has also had its influence in promoting, among those who are tenants, a wish for a low valuation; and, independently of any immediate interest to tenants, an impression seems to prevail among the latter, that the valuation will in some manner influence the letting of land, and this has had some weight with the majority of the Guardians and rate-payers.

The plan of revision, by which the Guardians of each electoral division, sometimes assisted by the attendance and advice of the rate-payers, became the Committee for revising the valuation of the division, has had an important effect. There has been a degree of competition between the electoral divisions for a low valuation. The rents of the proprietor in the Union who lets at the lowest rate have sometimes become a mark, above which it was considered that the valuation of the electoral division in which his property was situate, ought not to be raised, and to that level all the other electoral divisions felt themselves entitled to be reduced.

2. *Test of Value adopted, and Comparison with Letting Value.*

Comparing the evidence received in all the agricultural districts which have been visited in the progress of the inquiry, it appears that the principle of making the "fair rent" the test by which the valuation of land was to be regulated, has been almost universally adopted in every part of the country. The "rack-rent," which can be obtained in Ireland by exposing a farm to competition, has been invariably repudiated as a test of value. Though there exist differences of opinion as to what is a *fair rent*, yet all classes, landlords as well as tenants, appear to concur in opinion that the rack-rent is not to be thought of as a test. "Not the utmost that a solvent tenant can be got to pay, but the fair rent," is a common phrase in expressing the criterion to which the valuers and the Guardians are desirous to adhere.

In Ireland the letting price of land has been raised by the great competition that prevails, so much beyond the amount which would leave the tenant reasonable remuneration, that it is not looked on as any criterion of its *reasonable* value, which is the test that the whole public appear to have adopted with one consent as the basis of the Poor Law Valuation.

The evidence which we have received in the several Unions exhibits in a strong point of view the circumstances in the condition of property in Ireland, which render any test of value, depending on the letting price of land, subject to so much uncertainty.

THIRD REPORT.

Usual course of Valuation proceedings.

Valuers and Boards generally concurred.

Guardians and rate-payers generally satisfied with the Valuations.

Tendency to a low valuation.

Test of value and comparison with letting value.

The "fair rent."

The letting price an uncertain test in Ireland.

THIRD REPORT.

Test of value and comparison with letting value.

There is not in any part of Ireland any fixed letting price of land. If the rent at which the landlord who lets at the lowest rate in a Union be ascertained, the rents of other landlords in the same Union are found to exceed it by such various per centages that it is impossible to determine what is the letting price in the district. The highest of those rack-rents is considered too extravagant to be a test of value. Competition among tenants has made many of them submit to pay rents which nothing but the sacrifice of nearly the whole produce of the soil to the landlord can enable them to pay. By contenting themselves with a bare subsistence on potatoes, and devoting the whole residue of the produce to the payment of the landlord, tenants pay such rents; and if the letting value is to be measured by the letting price, these rents are evidence of the price that will be charged by landlords and paid by tenants.

The rent which will be thus paid for land in Ireland by tenants who submit to those privations, is limited only by their capacity to obtain it from the soil. That capacity to pay is itself uncertain; it depends on the energy and skill of the particular tenant, on the contingency of favourable or unfavourable seasons, and on the watchfulness with which the agent of the landlord collects from him at fairs and markets the price of his produce as he sells it: the "reasonable expectation" of the payment of the rent depending on these circumstances, makes the application of the test in the Poor Relief Act extremely difficult in its literal sense. The Guardians and valuers have, as we have stated, interpreted that test to mean the "fair rent;" and they probably would have found it very difficult to frame valuations by so uncertain a criterion as the letting price of land. "The landlord can get whatever he chooses to put on the land," is the statement of a Guardian in a northern Union.—(Appendix; Coleraine, Mr. Orr, E. G.) "The people are satisfied to live on dry potatoes, and pay double the value," is the observation of a valuator in the south.—(Appendix First Report, Fermoy, p. 84.) "The rent is 1*l.* on one side of a fence and 2*l.* on the other," are the statements of valuers and Guardians in Connaught.—(Appendix, Ballinasloe, Mr. Cooper; Athlone, Mr. King.) The rents which men pay, and continue to pay, are "no criterion," is the opinion delivered by the Board of one of the midland Unions of Leinster.—(Appendix, Edenderry, Answers of Board.) "There are exorbitant rents paid far beyond what could be set on the land, attending to a fair valuation between man and man," is the statement of the valuator of Rathdown.—(Taylor, Appendix, Rathdown.)

"Solvent tenant."

If the rent at which the tenement may be let to a solvent tenant be inquired into, different interpretations are given to the words "solvent tenant," some considering the phrase to apply to a "man of capital" who can pay his rent whether he derives it from the land or not; (see Appendix to First Report, Bandon, evidence of valuator; and Appendix, Kilmallock, evidence of valuers); while others apply that phrase to every tenant who continues to pay his rent, from whatever source he derives the means of doing so. In the latter sense, the rents which will be paid by solvent tenants are rack-rents. Some from their previous habits or present necessities, are content with mere subsistence as a return for their labour in the cultivation of the soil, and pay any rent that leaves them such a return; others expect a larger share of the produce, and consequently will not undertake or pay so high a rent as their more humble competitors. The estimate of what rent a solvent tenant can afford to pay varies according to the class whom the person making the estimate has in view. The tenants of different proprietors pay rents differing widely in amount. If they pay their rents they are all solvent tenants, in one sense. Whose estate is to be taken as the evidence of what a solvent tenant can afford to pay? If the *highest* rent at which the tenement can be let to a tenant who will pay the rent, and continue to pay it, be suggested as the criterion, it is rejected as unjust for the purpose of taxation.

The fair rent.

In applying the "fair rent" as a standard, the rents of the proprietor in the district, *whose rents are the lowest*, often appear to have been looked to as the level to which the valuation should be reduced. This necessarily brings it below the general letting price of the district. Sometimes it has been reduced still lower than the letting rents even of the landlord who lets at the lowest rate; in some Unions the valuers have valued the land on his estate at the same acreable rate as the rent, and added a small sum for the value of the farm-house. This makes it, in such cases, above his rents, though below the rents of other proprietors. When this is done it creates dissatisfaction amongst those tenants who find that they have been valued above their rent, which they consider a "fair" one. In cases where the rents of a proprietor and the valuation are on a level, we

have found that the tenant's interest will sell for a considerable sum, varying from 7*l.* an acre to 20*l.* an acre. (Appendix, Gorey, Clarke; Ballinasloe, Cooper; Kilkeel, Wilson; Cootehill, Cornelius; Thurles, Maher; Lurgan, Appendix, 1st Report.)

THIRD REPORT.

Test of value and comparison with letting value.

Twelve of the Unions which have been visited in the progress of the inquiry, lie in the province of Ulster. The valuations there are always below the rack rents, but appear to be nearly on a level with rents charged by those proprietors who allow such an interest to their tenants as enables them to maintain a certain degree of comfort and respectability. The tenant-right of farms held under these proprietors may be disposed of at 10*l.* to 20*l.* an acre.

Unions in Ulster.

Thus in Londonderry Union it was stated that the valuation is near the rents charged on the estate of one of the London Companies. (Sir Robert Ferguson, Chairman, Appendix, Londonderry.) But it is lower than Lord Templemore's rents. (Lithgow and Thompson, valuator, *ibid.*) "Knows an estate about five miles from Londonderry, in the county of Donegal, which has been let on lease for about 1550*l.*, and the valuation is about 6 or 7 per cent. under the rent."—(Sir R. Ferguson, Chairman, *ibid.*)

Londonderry Union.

In the Newtown Limavady Union, which occupies parts of the counties of Londonderry and Antrim, it was stated that the valuation is on a level with the rents on the estate of one of the London Companies (the Fishmongers' Company.) It was also stated that those rents are lower than those of other proprietors. (Cather, *ex-officio* Guardian, Appendix, Newtown Limavady.) But a large proprietor, the Marquis of Waterford, lets at rents which are below the valuation. The difference being caused by the valuator having added a small sum for the value of the house on each farm. (Mr. Given, *ex-officio* Guardian, *ibid.*)

Newtown Limavady Union.

In Coleraine Union the valuator states that "in a *high letting* neighbourhood he found it easy to satisfy the tenants with his valuation, because the valuation is below the rent, but in a low letting neighbourhood found it difficult, because it is above the rents." (Cathcart, valuator, Appendix, Coleraine.) "Where tenants live on potatoes and buttermilk, the valuation is one-third to one-fourth below the rent paid;" he "could not consider the rents paid by them as the fair value of the land," (Same witness.) But speaking of the rents paid on the Richardson estate "where the tenants, except those who have very small spots of land, can live very respectably, make a respectable appearance as to clothing, ride to market, and pay their rents with ease;" he considers those rents "one criterion of letting value." (Same witness, *ibid.*)

Coleraine Union.

In Dungannon Union some large proprietors were mentioned whose rents "are about the same as the valuation. Those proprietors let their land fairly." (Wilson, valuator, Appendix, Dungannon.) Another considerable proprietor was mentioned whose rents are above the valuation, and "small proprietors let higher." (Mr. Wilson, valuator, *ibid.*) "A farm let at the valuation would bring 10*l.* to 12*l.* for the tenant-right." (Same witness.)

Dungannon Union.

In Castlederg Union, which lies entirely within the county of Tyrone, it was stated that "the valuation is almost a balance on the letting rents on Lord Abercorn's property." (Montgomery, valuator; Appendix, Castlederg.) But it "is one-fourth or one-fifth under the rents on recent lettings on small properties." (Same witness, *ibid.*) "On the townland of Scavaghan the rents are 314*l.*; his valuation of those lands is on the same scale as on Lord Abercorn's property, and amounts to 262*l.*" (Same witness, *ibid.*)

Castlederg Union.

In Kilkeel Union, which lies entirely within the county of Down, the valuator states that his valuation is perhaps "5 per cent. higher than the rents on Lord Kilmorey's estate," and "from 10 to 15, and in some instances, 20 per cent below the rents on other estates in the Union," and is "in general below the rents paid on late lettings." (Wilson, valuator; Appendix, Kilkeel.) Another witness states that "in general, except on some parts of the Kilmorey estate, the rents are higher than the valuation." (Boyd, *ibid.*) Such is the competition for land among tenants that "land let at the same rate as the valuation would bring 20*l.* an acre for the tenant-right." (Wilson, valuator, *ibid.*)

Kilkeel Union.

In Lurgan Union, which is partly in the county Armagh, partly in Down, and partly in Antrim, land let at the valuation will bring from 10*l.* to 15*l.* an acre for the tenant-right. (Whiteside, valuator, Appendix to First Report.)

Lurgan Union.

In Banbridge Union, county of Down and county of Armagh, the valuator drew a distinction between the rents at which "noblemen and large landed proprietors" let their estates, and those charged by other landlords. He states, that his Valua-

(partly in Connaught).

Loughrea Union.

tion coincided in many cases with the rents actually paid to the former, but in every instance is less than the rack-rent. (Wilson, valuator; Appendix, Banbridge.)

In Lisburn Union, county of Down and county of Antrim, the valuator made a similar distinction between the rents charged by landlords whose estates are not extensive, and those of large proprietors. He states that his Valuation is below the former, and about the same as the latter. He "did not put on such a rent as could be obtained on competition for the land." (M'Arthur, valuator; Appendix, Lisburn.)

In Armagh Union the valuator spoke of three distinct rates of rent, with which he compared his Valuation. He states, that although there are some small proprietors who let their land reasonably, yet he considers that the large proprietors let at a more reasonable rate; and the rent charged when lands are sub-let is still higher than the rate which small proprietors require. He states, that where land was sub-let at 2*l.* an acre, he valued it at 1*l.*; where a "small proprietor" let land at 30*s.* an acre, he valued it at 1*l.*; and he states, that large proprietors (and some small proprietors who let reasonably) let at rents which are nearly the same as his valuation.

In the rural districts of Belfast Union, one portion of which is in the county of Down, the other in the county of Antrim, the valuator considered the rent paid in the townland where one of them resided, a "fair" one, and valued according to that standard throughout. (Orr, valuator; Appendix to First Report, p. 52.) It appeared that whenever the rent and the valuation coincided, the tenant-right would sell for 10*l.* an acre. (*Ibid.*) The Valuation is, in some parts of the Union, 30 per cent. below the rack-rent. (*Ibid.*)

Cootehill Union is situated partly in the county of Cavan and partly in Monaghan. The valuator of the Union succeeded in ascertaining the rents and made a valuation in many instances very near the amount of them. There are a considerable number of proprietors in this Union who are stated to let at "fair rents," but where a townland was described to be let at a "rack rent," it was found to be about one half more than the valuation. (Cornelius, Appendix, Cootehill.) There appears to be a very general correspondence between the rents charged by a great many of the proprietors in this Union and the valuation. (See Comparison of Rents and Valuation, Report, Cootehill.)

Seven of the Unions visited are chiefly situate in the province of Connaught, and the adjoining county of Clare.

In Sligo Union the valuator stated "that the valuation is from 15 to 25 per cent. under the rents."—(Hughes, valuator; Appendix, Sligo.) The Chairman of the Board states "that the valuation is about 15 per cent. under what he considers 'the fair letting-value,' and from 15 to 25 per cent. under the actual rent.—(Mr. O'Hara, Chairman of Board, Appendix, Sligo.)

In Ballinasloe Union, which occupies parts of the counties of Galway and Roscommon, the valuator states that "the valuation and the rents paid by Lord Clancarty's tenants are nearly equal; believes the most of his tenants are registered electors; knows land under one landlord let for 1*l.* per acre, and land of the same value at the other side of the fence let at from 30*s.* to 40*s.*" The valuation is in general 10 to 12½ per cent. below the average actual rents.—(Cooper, valuator; Appendix, Ballinasloe.) Land let at the same rate as the valuation will bring 8*l.* to 10*l.* an acre for the tenant's interest.—(Same Witness, *ibid.*)

In Athlone the valuator states the valuation "to be about 10 per cent. under the actual rent."—(Mr. Hughes, valuator; Appendix, Athlone.) The Vice-Chairman of the Board states "that the valuation of Taghmaconnell electoral division is to the rent as 70 or 75 to 100."—(Mr. Gaynor, Vice-Chairman; Appendix, Athlone.) Another Guardian states that "the net annual value is fully 25 per cent. under the actual rent, but that he sees some holdings valued nearly 35 per cent. under the actual rent. The lettings to which he refers are from year to year."—(Mr. Grey, *ex-officio* Guardian, Appendix, Athlone.) Another Guardian "thinks that the valuation is 30 per cent. under the fair letting value.—(Mr. Hudson, elected Guardian, Appendix, Athlone.)

In Loughrea Union, in the county of Galway, it was stated by the agent of considerable estates in the county, that he "is well acquainted with the value of land in the Union, that he considers the valuation is high, and in some instances higher than the rent at which a landlord, looking to his own interest, the comfort of his tenantry, and the permanent improvement and security of his property, would let his land."—(Mr. Birmingham, Appendix, Loughrea.) An *ex-officio* Guardian of the Union

THIRD REPORT.

Test of value and comparison with letting value.

Unions in Connaught.

Gort Union
(partly in Connaught.)

concurred in that opinion. (Mr. Farrell, *ibid.*) Nevertheless, in the greater number of instances the valuation is lower than the actual rent. (Walsh, *ibid.*) And "some few landlords do not exact as high rents as they might obtain." (Smith, *ibid.*)

In Gort Union, county of Galway and county of Clare, the valuator states "that only in a few instances was the valuation higher than the rent; those were cases of old leases. The average of the valuation is considerably lower than the actual rent." (Bell, valuator; Appendix, Gort.) One of the Guardians is of opinion that the valuation bears the same proportion to the average of the actual rents that 1*l.* bears to 25*s.*, or nearly so." (Mr. Lahiff, elected Guardian, *ibid.*) Another Guardian "thinks the valuation is much below the actual rents, in many cases 25 per cent. below the rents." (Mr. Rosengrave, elected Guardian; Appendix, Gort.)

In Castlereagh Union, the valuator states that the valuation, generally speaking, on the large estates in the Union, is fully up to the actual rents; but the rents of small proprietors and middlemen exceed the valuation, the latter being about 30 per cent. lower than their rents. (Gaffney, Valuator; Appendix, Castlereagh.) And one of the Guardians "considers that the valuation is about 13 per cent. below what the land would bring if it were set up to competition. (Irwin, elected Guardian; Appendix, Castlereagh.)

Castlereagh Union.

In Scariff Union, county Clare and county Galway, the valuation was below the rent in almost every instance. One large proprietor however was mentioned, whose rents were nearly the same as the Valuation. (Sampson, valuator; Appendix to 1st Report, p. 65.) The Chairman of the Board stated, that in general the original Valuation was considerably lower than the rent (Mr. Purdon, *ibid.*, p. 69.) And it was afterwards reduced. (Report, Scariff, *ibid.*, p. 62.)

Scariff Union
(partly in Connaught.)

Nineteen of the Unions visited are situated wholly or in part in the province of Munster.

Unions in Munster.

In Kilmallock Union, the greater part of which lies within the county of Limerick, the Board appears to have suggested a test of value to the valuers. When two electoral divisions had been valued, the Board took them into consideration, and passed a resolution that "the standard of value was too high, and that the rule generally adopted of taking a *third* from the gross produce, including all charges, use of capital, &c., had been found to give much satisfaction."—(Minute Book, 19th October, 1839, Appendix, Kilmallock.) The valuers were therefore requested to revise and modify the valuation of the two electoral divisions then valued, and they promised "to pay attention to the wishes of the Board, as their only object was to make a fair and *bonâ fide* valuation." (*Ibid.*) The valuator, when examined in the progress of our inquiry, stated that he lowered a part of the valuation then completed, upon re-considering it, but that he did not lower or alter the standard of his valuation, in consequence of the resolution of 19th October. He stated that in valuing the land he "considered what it ought in fairness to be let for from year to year to a person paying, in addition to the rent, all taxes, except tithe, and the expense of keeping the land as he found it."—(Roche, valuator; Appendix, Kilmallock.) "He thinks that the rent to be fair, as he understands the word, ought to be such as would leave the tenant *one-third* of what would be a rack-rent for the same land." (*Ibid.* p. 5.) He means by a rack-rent such a rent as the tenant cannot pay out of the produce of the land, without confining himself to bare subsistence, and depriving himself of every comfort and convenience." (*Ibid.*) He added "that some tenants within the Union, holding only two or three acres, and paying between 3*l.* and 4*l.* an acre, contrive to pay the rent and live, but they live very poorly, indeed quite miserably." (*Ibid.*) "Such a rent, therefore, was not his test, but he thought that the fair rent for a tenant, without capital, is about the utmost that can be got from a tenant with capital." (*Ibid.*) Comparing the rents paid in this Union with the valuation, it appears that his valuation is, in the majority of instances, lower. The valuator thinks "that the effect of his valuation, taking one part of the Union with another, is to throw three-fifths, or very nearly three-fifths, of the poor-rate on the landlord, leaving the other two-fifths, or a little more, to be borne by the tenant."—(*Ibid.*)

Kilmallock Union.

Kanturk Union is partly in the county of Cork and partly in Kerry. Three valuers were appointed who made a joint valuation. Two of them are extensive farmers; they stated that "the test of value which they adopted was without any reference to the rent actually paid, or which might be obtained; but after forming an estimate of the value of the produce of a farm, they took the average of the

Kanturk Union.

THIRD REPORT.

*Comparison with
letting value,*

Unions in Munster.

prices for the last three years, and struck the value from such average allowing a reasonable remuneration to the tenant for his labour and expenditure." (Murphy and Sheehan, valuers; Appendix, Kanturk). With regard to the rents actually obtained by landlords, they stated that they had made a comparison of their valuation with the rent actually paid, wherever they could obtain it, and they found, "that the rent was in some cases one-half, and always a great deal higher than the valuation, except on the estate of Lord Arden and that of Lord Lismore." They state that "there are some other owners in fee whose rents are not much higher than the value, but that the greatest portion of the Union is in the hands of middlemen who set their lands far beyond the value." (Murphy and Sheehan, valuers; Appendix, Kanturk).

Macroom Union.

In Macroom Union, in the county of Cork, three valuers were appointed, who made a joint valuation. With regard to the relation which the actual rents are found to bear to the valuation, they stated that "competition has raised the market price at least 30 per cent. above what a solvent tenant can afford to pay, reserving reasonable remuneration for his time, labour, and capital (O'Leary, Good, and Sullivan, valuers; Appendix, Macroom); and the valuation is at least 20 per cent. under the rent of small farms, and 10 per cent. under the rent of large farms." (*Ibid.*)

Cork Union (rural districts.)

The valuers of the rural districts of the Cork Union stated that the competition for land had "raised the market price of land above what a solvent tenant could afford to pay, reserving a reasonable remuneration for his time, capital, and labour;" the latter was the test which they adopted. (Halanan and Ahern, valuers; Appendix, Cork.)

Listowel Union.

The valuator of Listowel Union, which occupies parts of the counties of Cork and Kerry, was the same person who had valued the Cashel Union. He stated that his standard of value was "not the rack-rent, nor the utmost that could be got from a solvent tenant, but a fair and reasonable rent, calculated on the average rents for the last 10 or 20 years, paid by tenants able to meet the demands upon them." (O'Brien, valuator; Appendix, Listowel.) He stated that in every instance he instituted a comparison between his valuation and the rents paid, and that "it differed very little from the rent obtained even on recent settings from the occupying tenant to the owner in fee, but that it was occasionally one-third under, one-half, and even less than one-half of the rent obtained by middlemen from their under-tenants." (O'Brien, valuator; Appendix, Listowel.)

Dunmanway Union.

In Dunmanway Union, the whole of which lies within the county of Cork, the valuation was compared with the rents which landlords receive in that district, and the result of that comparison was thus stated:—"In a very few instances, and those principally where tenants held under old leases, the valuation is as high as the rent; but in by far the greater portion the valuation is below the rent, in some cases nearly one-third, when the lands were held under middlemen." (Pattison, valuator; Appendix, Dunmanway.)

Cashel Union.

Comparing the rents received by the landlords in the Union of Cashel, with the valuation, it appears that the letting rents of different proprietors exceed it by various per centages. The difference between the rents and valuation of small holdings is stated to be 25 per cent. (Mr. Long, *ex-officio* Guardian; Appendix, Cashel.) The "valuation is as high as the rent ought to be, but not any thing like as high as the rent charged to the tenants." (Mr. Keating, *ex-officio* Guardian, *ibid.*)

Thurles Union.

In Thurles Union the letting rents on different estates appear also to vary considerably, and the valuation is stated by the valuator to differ from the rent by various per centages. He gives one instance of a landed proprietor whose rental amounts to 5000*l.* or 6000*l.* a year, and whose rents exceed the valuation by about 7 or 8 per cent. He gives another instance of a landlord whose rental amounts to 300*l.* a year, whose rents exceed the valuation by 15 per cent. (Leahy, valuator; Appendix, Thurles.) The Chairman of the Board, an *ex-officio* Guardian of the Union, states, "that in the part of the Union that he is acquainted with, the valuation is 25 per cent. under the fair letting value." Another Guardian states, "that the valuation is 15 to 20 per cent. under the value, and 20 to 25 per cent. under the rents." (Mr. Maher; Appendix, Thurles.)

Tipperary Union.

Comparing the valuation with the rents in the Union of Tipperary, it is stated by the agent of a landed proprietor to be 25 per cent. below the rents at which landlords, who are not considered to exact very exorbitant rents, would let. (Mr. Bolton; Appendix, Tipperary.)

THIRD REPORT.

*Comparison with letting value.**Unions in Munster.*

Lismore Union.

In Lismore Union, in the county of Waterford, two valuers were appointed, one of whom had previously been employed upon the local valuation of the county of Waterford. They adopted, to a certain extent, the system which had been used in that valuation. They fixed a value of 45s. an acre on certain lands near Lismore, and 50s. for certain lands near Tallow. This being agreed on as the maximum, they valued other lands by comparison with those, using a graduated scale downwards. (Waters, valuator; Appendix, Lismore.) Comparing the rents paid to proprietors in this Union with the valuation, they appear to be in general considerably above it. The valuator states that "his valuation, generally speaking, is 20 per cent. under the rents on recent lettings," except where the Duke of Devonshire is the landlord. (Waters, valuator; Appendix, Lismore.) The Chairman of the Board of Guardians states "the valuation to be 25 per cent. under the rent which he usually gets." (Sir R. Musgrave, Appendix, Lismore.) "He thinks that, generally speaking, the same proportion has been observed throughout the valuation, and that it is lower than the rents in all cases, save in old takes, and where the Duke of Devonshire has let." (*Ibid.*) Another *ex-officio* Guardian stated the relation which the rents generally bear to the Valuation, at the same per centage as the chairman. (Mr. Gumbleton; Appendix, Lismore.)

The whole of Dungarvan Union lies in the county of Waterford. Comparing the rents which landlords receive in this Union with the Valuation, it was stated by the valuator that "he found a great variety of rents in the Union. Some he considered rack-rents, and very high rack-rents." And "the valuation is 20 per cent. under the rents." (Langley, valuator; Appendix, Dungarvan.) (*Ibid.*) But "in very few cases under the rents paid to the Duke of Devonshire." (*Ibid.*)

Dungarvan Union.

In Waterford Union the valuator states that "the rents throughout the Union are high, and some of them enormously high, particularly in the neighbourhood of Tramore;" and, "generally speaking, the valuation in high takes is 20 per cent. under the rents." (Lymberry, valuator; Appendix, Waterford.) The difference between the letting value and the Valuation is stated by one Guardian to be 15 per cent. (Mr. Morris; Appendix, Waterford, p. 6); by other Guardians, 10 per cent. (Mr. Dobyn, Mr. Bogan, *Ibid.*) "From 15 to 20 per cent. under the letting rents." (Mr. Gamble, *Ibid.*)

Waterford Union
(rural districts).

In Carrick-on-Suir Union, parts of which lie in the counties of Tipperary, Waterford, and Kilkenny, the valuator stated that "the lands are generally over-let on account of the competition. He was never guided by the rent in forming his estimate." (Walsh, valuator; Appendix, Carrick-on-Suir.) The Valuation is "under the rents, except on the estates of Lord Waterford and Lord Ormonde." He thinks "it would be more for the interest of the landlord, as well as the tenant, if the lands were let more near his Valuation." (Same witness, *Ibid.*) "The Valuation is generally below the rents paid." (Mr. Anthony, elected Guardian; Appendix, Carrick-on-Suir.)

Carrick-on-Suir
Union.

The valuers of the rural districts of Clonmel Union stated, that in consequence of the various rates at which different landlords let, it would be impossible to make a valuation which would agree with the rents. They mentioned three landlords in the Union with whose rents the valuation nearly agrees, but the valuation of other estates is 30 per cent. lower than the rents. (Egan and Keatinge, valuers; Appendix, Clonmel.)

Clonmel (rural districts).

The valuator of Newcastle Union, county of Limerick, stated the relation between his Valuation and the rents paid in each electoral division of the Union; from which it appears, according to his statement*, that the actual rents, including those paid under old leases, vary from 25 per cent. under the Valuation (these are rents paid under very old leases) to a rate considerably above it. In the electoral division of Killagholehane, where there are late lettings, "the net value is much lower than the new lettings." (Wilson, valuator; Appendix, Newcastle.)

Newcastle Union.

In Rathkeale Union, in the same county, the valuator states, that "the net annual value" fixed by him is not the utmost that could be got from a solvent tenant, the competition for land is so great that, generally speaking, 10s. an acre more than the value fixed by him can be got for land in the Union. In one instance land valued by him at 35s. was let a few days afterwards for 50s." (Potter, valuator; Appendix, Rathkeale.)

Rathkeale Union.

* The answers of this valuator were given to written queries, which were sent to him. There was no opportunity of examining him in person.

THIRD REPORT.

*Comparison with letting value.**Unions in Munster.*

Limerick Union.

In Limerick Union, county of Limerick and county of Clare, the same person valued both the city and the rural districts. Speaking of the latter he says, that it “frequently happens that where the land in two adjoining farms is of the same intrinsic value, a high rent per acre is paid for one, and a low, or comparatively a low, one for the other.” He was never guided by the amount of rent paid by the tenant, but took what was a “fair rent for him to pay.” (Creaghe, valuator; Appendix, Limerick.) A Guardian of the Union, who is agent for a landed proprietor, states, with regard to the rents received by him, that “he receives upon the whole about 3s. per English acre more than the net annual value of the tenements as fixed by the valuator.” (Mr. Allan; Appendix, Limerick.)

Bandon Union.

In Bandon Union, county of Cork, as in other places, “there is a great difference between the rents of large and small holdings, the rents of small holdings being 25 per cent. and upwards over those of large.” (Sealy, valuator; Appendix to First Report, p. 77.) The valuator valued the whole as if let in large farms. (*Ibid.*) One of the valutors, himself a very extensive farmer, stated that the ordinary class of tenants give rents very much above the value. (*Ibid.*) “In some parts of the Union there is a large class of such tenants who, by living in a less comfortable manner, pay rents that they, the valutors, would not pay; those rents are from 2s. to 3s., or 4s., an acre over the valuation.” (Gash, valuator; *Ibid.* p. 76.)

Fermoy Union.

In Fermoy Union, county of Cork, it was stated, that “from the way in which the people generally live, they pay rents much higher than what they, the valutors, considered the value. In some instances they pay one-third more than the value, and in some instances they pay double the value.” (O’Brien, valuator; Appendix to First Report, p. 84.) “There are a great many more rents over the valuation than under.” (*Ibid.*) The rents of a large portion of this Union had been ascertained by the valutors, and taken down in their field books. On referring to the return of all the rents so ascertained, it will be found that they are almost universally above the valuation, exceeding it by various per centages on the estates of different proprietors.” (Appendix to First Report, p. 86 to 132.)

Unions in Leinster.

Gorey Union.

Fourteen of the Unions visited are situated wholly or in part in the province of Leinster. In the Union of Gorey, in the county of Wexford, comparing the Valuation with the rents, a distinction is drawn by the valuator between the “usual letting value with good landlords and the rate at which lands are let when *proposals* for letting are taken.” The difference between the latter class of rents and the Valuation being 25 per cent., while that between the Valuation and the rents of “good landlords” is only 10 per cent. (*Ibid.*) He thinks that if a farm were let on lease at the Valuation, the tenant’s interest would sell for from 5*l.* to 7*l.* per acre. (*Ibid.*)

Roscrea Union

(partly in Leinster).

In the Union of Roscrea, which occupies parts of the King’s County, the Queen’s County, and Tipperary, the valuator states the difference between his Valuation and the rack-rent at 25 per cent., and he knows instances in which a rack-rent of 50 per cent. over the Valuation is charged (Scroope, valuator; Appendix, Roscrea.) One of the Guardians represents it as being from 15 to 20 per cent. below the fair letting value, and adds that his idea of the fair letting value is this, “that if a man had a lease at what he conceives to be the fair letting value he would get 8*l.* and 10*l.* an acre for his bargain.” (Captain Smith; Appendix, Roscrea.)

Edenderry Union.

Edenderry Union is partly in the King’s County, partly in Kildare, and partly in Meath. Comparing the Valuation with the rents in this Union, it was stated, with reference to the case of large farms, that a holding of an extent between 200 and 300 acres, the rent of which was 3*l.* an acre, was valued at about the same amount, although a large fine was offered and refused for it, held at that rent. It is stated, that a solvent tenant would on an average give 10s. an acre more for the lands than they are valued at. (Mr. Wolstenholme; Appendix, Edenderry.)

Rathdrum Union.

In Rathdrum Union, in the county of Wicklow, the valuator states his Valuation to be 10 per cent. below the rents reserved generally on recent lettings. This estimate of the valuator is confirmed by the Chairman of the Board, and by two other Guardians. (Appendix, Rathdrum.)

Naas Union.

In Naas Union, which occupies portions of the counties of Kildare, Dublin, and Wicklow, there was but one valuator, a surveyor by profession, whose principal occupation was the valuation of property. “He endeavoured to make his valuation as nearly as possible what a landlord ought to take from his tenant; he valued as if he had been employed by a landlord. The rent which a landlord ought to take is one-fifth less than the rack-rent, or, as he defined it, the highest rent that will be offered

THIRD REPORT.

*Comparison with letting value.**Unions in Leinster.*

by any one intending to pay it. (Vaughan, valuator; Appendix, Naas.) Comparing the Valuation with the actual rent, the valuator states that "the rents vary so much that the rent is sometimes above and sometimes below the Valuation; but when tenants hold under middlemen, the rents are much higher." If the value of the houses were taken off, the Valuation would in general be below the rents charged upon late lettings; it would be about the rents charged on the Duke of Leinster's estate. On small holdings, the rents paid are so high that even the value of the house does not bring the Valuation up to the rent." (Vaughan, valuator; Appendix, Naas.) The valuator of this Union was complained of for having valued too high, and his Valuation was to some extent reduced by the Board. (See Appendix; Naas Report.) One landed proprietor "thinks that the Union is valued fully up to the rents; it is up to the rent on his own property." (Mr. Carter, Appendix, Naas.) One of the Guardians states that, "On his own property the Valuation is as high as the rent he receives, and, in many instances, above it. Mr. Vaughan's Valuation was 10 per cent. and the revised Valuation is 5 per cent. above the rents paid on his estate. In one instance, where the rent was 200*l.*, the Valuation was 250*l.* and the revised Valuation 225*l.*" (Mr. Mansfield, Guardian; Appendix, Naas.)

In Rathdown Union, which occupies parts of the counties of Dublin and Wicklow, a great portion of the land is occupied by a class of residences which the valutors denominate "villa property." The valuator, who is a civil engineer by profession, stated that he valued "villa property" according to the sum expended, allowing the proprietor an interest of 10 per cent. for his capital laid out on the house, and valued the land about it according to the acreable scale of value which he had adopted in that locality." Comparing the valuation with the actual rents of proprietors, he stated that his valuation is above Lord Powercourt's rent. "But it is not a full valuation, or anything like a full valuation, according to the rents to be obtained from tenants who will pay, and continue to pay." "He knows there are exorbitant rents paid, far beyond what could be put on the land, according to a fair valuation between man and man." (Taylor, valuator; Appendix, Rathdown.) He "never heard of any Union valued up to the letting value." (*Id.*) He thinks that "if the Legislature insisted on the Guardians and the valutors valuing land according to the utmost rent that people could be got to pay, it would create great dissatisfaction." (*Id.*) He is of opinion, "that the valuation of Rathdown is 30 per cent. nearer the real value, *i. e.*, the value at which it ought to be let by a fair man for grazing cattle, or any other agricultural purpose, than any other Union he is acquainted with." (Taylor, valuator; Appendix, Rathdown.)

In Dundalk Union, county of Louth and county of Armagh, "the valuation is low compared with the rents." (M'Cann, valuator; Appendix, Dundalk.) The rate of letting in the several electoral divisions of this Union are stated by the valuator in his evidence, and compared with the rents, which in general appear to vary from one-half to one-third above it. Nevertheless the valuator mentions an instance where land had been lately let by a large landed proprietor at about the same rate as his valuation. In this case the land had been formerly held by lease, and sublet at 45*s.* and 50*s.* an acre: the lease having expired, the owner in fee let it to the occupying tenants at 30*s.* This was about the same rate as the Valuation. (M'Cann, valuator; Appendix, Dundalk.)

In Balrothery Union, County Dublin, there was a difference of opinion as to whether the Valuation was below the rent in a part of the Union, but it appeared to be the opinion of most of the Guardians, that throughout the Union the rent was above the Valuation. (Mr. Corbally, Chairman; Mr. Dillon, Guardian; Appendix to First Report, p. 11.)

In Parsonstown Union, King's County and County Tipperary, where the valutors had compared the Valuation with the rents of an estate, over which one of them had been receiver, they found the rents one-third higher than the Valuation. (Abbott and Mitchell, valutors; Appendix, First Report, p. 28.)

In Longford Union the valuator considered his Valuation "a fourth or a fifth lower than what the tenements would let for." (Wallace, valuator; Appendix to First Report, p. 18.)

In Drogheda Union, which occupies parts of the counties of Louth and Meath, the valuation of the rural districts is stated by one of the elected Guardians "to be a fair one, and something below" what a solvent tenant would give, by about 4*s.* an acre. In no case is the valuation up to the rack-rent. In some instances the valuation is higher than the rent; in such cases the land is held under old leases. Some lands in the Union, valued at 35*s.* 6*d.* under the Poor Law, would, if in the

Unions in Leinster.

North Dublin
Union (rural dis-
tricts.)

the market, bring 50s. the acre." (Mr. Markey, elected Guardian; Appendix, Drogheda.)

The valuator of the rural districts of North Dublin Union also valued those of South Dublin. With reference to the former, he states that in proceeding with the valuation, he "put the same acreable value on small farms as he had already put on large. Thinks it a bad plan to value small farms higher, on the ground that they will fetch a higher rent; therefore valued small farms at the same acreable rent as the large farms. Is aware that small farms bring a much higher rent, and that is the reason why the small farmers did not object to the valuation, the small farms being valued much more under their rent than the large farms. Intended that it should be lower than the actual rent which a solvent tenant could pay. Is now speaking of the rent paid for large farms; but the objections to the valuations of those large farms were so numerous, that he is bound to think that he was nearer the rack-rent than he intended." (Vaughan, valuator; Appendix, North Dublin.) "Confining himself to the highest rent that is constantly paid, thinks that his valuation is about one-fifth under that." (*Id.*) With regard to the valuation of the class of property, called by valuers "villa property," he states that the letting of such houses is so uncertain, that no one can fix a value on them which can be considered as certain. "The safest way is to be decidedly under the mark, so as to avoid objections." (*Id.*)

South Dublin
Union.
(Rural Districts.)

With respect to the valuation of the rural districts of South Dublin Union, the same witness considers it higher than that of North Dublin by the acre, but not so near the rents. He had found so much opposition to his valuation in North Dublin, in consequence of its being high, that he reduced his scale 10 per cent. in valuing the rural districts of South Dublin. (Vaughan, valuator; Appendix, South Dublin.)

Several lists of rents and valuations will be found annexed to our separate Reports; but from the difficulty of distinguishing the rents paid under old leases from late lettings, we found them an uncertain guide as to the relation of the valuation to the letting value. The proportion which the rental of a district bears to its letting value is necessarily dependent on the proportion of leases of old date, and leases for which fines were given, which are outstanding. It is found in many Unions that the average valuation of the tenements in a district does not amount to the average rent, even when tenements held under old leases are included with the rest in the calculation. (See Appendix; Coleraine, Sligo, Athlone, Castle-rea, Dungarvan, Kilmallock, Newcastle, Rathkeale, Fermoy.)

3. Comparison of the Poor Law Valuations with Griffith's Valuation.

Comparison with
Griffith's valuation.Comparison cannot
be made directly.6 & 7 Will. IV. c.
84.

Having stated the relation which the poor law valuations in different parts of Ireland are stated to bear to the letting value, we proceed to state the relation which they appear to bear to the general valuation of Ireland for the purposes of the county cess, now in progress, commonly called "Griffith's Valuation" in those counties where the comparison could be made. An outline of the system pursued in framing that Valuation by Mr. Griffith will be found in the Appendix to this Report, Part II. No direct comparison can be made between the two valuations, several classes of property being omitted in Griffith's Valuation which are included in the valuation to poor-rate. Griffith's Valuation is not intended to be in accordance with the actual letting value of the tenements, but is founded on an assumed scale of prices introduced into the Act 6 and 7 Will. IV. c. 84. the object being to obtain a relative valuation of all the Townlands in Ireland.

A class of property, which is omitted in Griffith's Valuation, are houses under the value of 5*l.* each. In this class is comprised nearly the whole of the ordinary class of farmers' houses. In many townlands no houses appear valued in Griffith's schedules. The omission of this class of houses makes a great difference in the total valuation of a Union in districts, where, as in the North, small farms prevail, and the number of such houses is very great. This omission also makes it difficult to institute a comparison between Griffith's Valuation and that under the Poor Law.

The houses exceeding the value of 5*l.* are not inserted in Griffith's Valuation at their full value, the Act having directed that one-third should be deducted for the purposes of the general Valuation.

There was a disposition to compile their Valuations from that of Griffith in many of the Poor Law Unions in those counties where it existed; it appeared to

supply a ready mode of making an estimate of the value of the Union, without the expense of making a new Valuation. It was considered that this could be done by taking Griffith's valuation of the land and the houses in a townland, and applying three corrections: one, to make the scale of Valuation of land correspond with the actual prices of agricultural produce; a second, by adding 50 per cent. to the value of those houses which appear in Griffith's schedules; and a third, by making a new Valuation of all houses not valued by him, viz., those under the value of 5*l*. each. But it was eventually found necessary in all the Unions to resort to a new Valuation.

In the Appendix to Cootehill Union will be found a return showing the relation which the letting price charged by different landlords bears to Griffith's Valuation. The following seven townlands will show the relation between Griffith's Valuation and rents which are considered to belong to the class of rack rents.

Second Appendix to Local Reports; Cootehill, p. 167 *b*.

Griffith's Valuation appearing in the printed schedules by townlands, there is no opportunity of comparing it with the rack rents paid for particular holdings. The above are cases of whole townlands, portions of which are probably let at a higher rate than the rest. If the rack rents were compared with Griffith's Valuation, by taking the highest rate in each townland, the per centage of excess over Griffith's Valuation would be found to be greater. The principal landlords in this Union do not let at so high a rate. They are spoken of favourably as landlords, who let at low rents, and there is a remarkable correspondence, which is not generally found in other places, between the valuation and the rents of a large portion of this Union.

The following cases of townlands, held at rents which the valuator considered fair, afford an opportunity of comparing Griffith's Valuation with the rents of those proprietors, on whose estates the tenant-right will bring from 10*l*. to 20*l*. an acre:—

COMPARISON OF RENT WITH GRIFFITH'S VALUATION OF FIVE TOWNLANDS.—COOTEHILL UNION.

Names of Townlands.	Area in Statute Acres.			Griffith's Valuation (excluding houses under the value of 5 <i>l</i> . each, &c.)			Poor Law Valuation, (including all classes of houses.)			Rent paid.			Relation of Griffith's Valuation to the Rent of these Townlands.

Second Appendix to Local Reports; Cootehill, p. 168 *b*.

The committee appointed to inquire into existing surveys and valuations in Armagh Union, which occupies parts of the counties of Tyrone and Armagh, reported that "they had ascertained from Mr. Griffith that by adding one-third to the value of the townlands, and one-half to the value of the houses, the fair and liberal value of the property valued by him was at once obtained" (Appendix; Extracts Minute Book, Armagh). And the committee reported that, having fully considered the subject, they were of opinion that Griffith's Valuation afforded the

Armagh Union.

THIRD REPORT.
Comparison with
Griffith's Valuation.

best basis for a Valuation to poor-rate. (*Ibid.*) This Report was adopted by the Board, who subsequently resolved that the valuator should adhere to Mr. Griffith's Valuation, and that it should be for the ultimate consideration of the Board whether any and what addition should be made to it to bring it to the "net annual value." (Appendix; Extracts Minute Book, Armagh.) But it is stated that the Board afterwards "changed their system." The landlords thought that Griffith's Valuation would be too low, there was a difference of opinion between landlords and tenants on the subject, and the valuator was ordered to value the Union on his own responsibility, taking Griffith's Valuation as a basis. (Morton, valuator; Appendix, Armagh.) The valuator being left to his own discretion, added nothing to Griffith's Valuation, except in the towns where he states that he found it necessary to add a third. (*Ibid.*)

Lurgan Union.

In the Appendix to the Report on Lurgan Union (Appendix to First Report, p. 58), will be found a comparison between Griffith's Valuation with that of the Poor Law, but both Valuations not applying to the same classes of property, it is necessary to make some additions to Griffith's Valuation, in order to perceive the relation which they bear to each other. If we apply the rule supplied by Mr. Griffith to the Board of Armagh Union, as above stated, of adding one-third to the value of the townlands, and one-half to the value of the houses above the value of 5*l.*, and if we then add an estimated value for the houses under the value of 5*l.* each, the comparison will be as follows:—

Printed Schedules, Griffith's Valuation of the land, as reduced according to Act prices	£26,763	£.	s.
Add one-third as suggested by Mr. Griffith to the Board at Armagh (see <i>supra</i>)	8,921		
		35,684	0
Printed Schedules, Griffith's Valuation of houses of a value exceeding 5 <i>l.</i> each, reduced, as directed by the Act	6,703 0		
Add one-half to find Griffith's original estimate of their value	3,351 10		
		10,054	10
Total Valuation, exclusive of houses under the value of 5 <i>l.</i> each, and other property not valued by Griffith		£45,738	10

To this amount is to be added the value of the houses under the value of 5*l.* each, which, from the returns obtained, may be estimated to amount in number to upwards of 9000;* adding, therefore, the value of 9000 houses, under the value of 5*l.* each, not included in Griffith's estimate, at 1*l.* 10*s.* each:—

The addition for houses valued to poor-rate, and not included in Griffith's estimate, would be	13,500 0
Total estimated value of Union, founded on Griffith's Valuation, and an estimate of the value of property not valued by him	59,238 10
Valuation by Poor law valuator	48,495 0

Relation of Poor Law Valuation to estimate founded on Griffith's, as 82 to 100

Cootehill, Kilkeel,
and Lurgan Unions.

Comparisons of the Poor Law Valuations of the Unions of Londonderry, Castlederg, Dungannon, Banbridge, Kilkeel, Cootehill, and Lurgan with Griffith's schedules, will be found in the local Reports. Using Griffith's Valuation as a standard, the greatest amount of difference between any two of those Unions appears to be about 15 per cent. This is the result where the whole Valuation of one Union is compared with that of another, but comparing particular townlands or electoral divisions together, they frequently appear to bear a very different proportion to Griffith's Valuation. (See Appendix, Cootehill, comparison with Griffith's Valuation.) The difference in Lisburn Union appears to be somewhat greater.

Coleraine Union.

The valuator of the Coleraine Union, which occupies portions of the counties of Londonderry and Antrim, states that "he compared his Valuation with Griffith's; that in the good land he was almost always above Griffith; in the poor soils was but a

* It appears from a return furnished by the clerk of the Union to the Poor Law Commissioners, that there are 8928 tenements in the Union, rated to the poor at sums under 5*l.* each. (Table S, Appendix, Part I. p. 55 a.) The houses, therefore, standing on those tenements, must be taken to be each under that value, and there are few tenements separately valued on which there is not a house. It appears that there are also in the Union 2046 farms, which are valued to Poor-rate at sums of 5*l.* and upwards, but the extent of which is under 10 acres each. (Table Z, Appendix, Part II. p. 75 c.) The houses on farms of that extent, in general, belong to the class under the value of 5*l.* each. These two items would make the probable number of houses under the value of 5*l.* each in the Union 10,974. The calculation in the text assumes the number to be 9000, and the average letting-value of them to be 1*l.* 10*s.*, which is probably an under estimate.

shade above him, sometimes not at all." (Cathcart, valuator; Appendix, Coleraine.) This refers to Griffith's Valuation reduced to the scale in the Act.

The valuator of Lisburn Union, situate in the counties of Down and Antrim, stated that he "kept the valuation uniform by making it 25 per cent. above Griffith's (reduced Valuation)." He added that "the time within which he was to complete the valuation was so short that he was unable to take any other means for securing uniformity." (M'Arthur, valuator; Appendix, Lisburn.)

The valuator of Kilkeel Union, which is entirely within the county of Down, stated that there are 32,000 acres of mountain in the Union, which he "left at Griffith's valuation," being merely a "nominal value, not more than 2d. or 3d. an acre." (Wilson, valuator; Appendix, Kilkeel.) The same valuator stated that he had found that by adding about 30 per cent. to Griffith's (reduced) Valuation of every townland for houses, improvements, &c., he brings it to what he considers a "fair rent between landlord and tenant." (*Ibid.*)

In Dundalk Union, the greater part of which is within the county of Louth, but which extends into Armagh, a Guardian stated that Griffith's Valuation had been critically examined, and found to be uniform. (Mr. Barrett; Appendix, Dundalk.) The valuator stated that "Griffith's Valuation, on the whole, is uniform;" but adds, that there are some inaccuracies, and that he knows of two townlands where land is, in the estimation of the people, worth 1l. an acre more than the others, and is valued 10s. less. (Mr. M'Cann, Valuator; Appendix, Dundalk.)

Drogheda Union is partly in the county of Louth and partly in Meath. The valutors state that their Valuation pretty nearly corresponds with Griffith's, where the land is good; but that in the Valuation of inferior soils, Griffith's differs very much from theirs. Where a bad sub-soil lies under a rich surface, Mr. Griffith's Valuation is stated by them to be low as compared with theirs. (Mr. Shiel, Valuator; Appendix, Drogheda.)

A valuator, who has valued several Unions, stated that Griffith's Valuation, wherever he has met with it, is about two-thirds of the fair rent. He considers that "in many cases it does not amount to half the rack-rent, and in other cases comes to within one-fourth of the rack-rent." In his opinion there would be more appeals against it than against the poor-law Valuations, were it not for the circumstance that it is on so low a scale that it is below every body's rent, and therefore no individual has a case which appears to be sustainable when the Valuation of his tenement is to be compared with the letting value." (Vaughan, valuator; Appendix, North Dublin.)

4.—Comparison of Prices paid for Tenant's Interest.

The evidence from several Unions furnishes an opportunity of comparing the valuations by a reference to the price which will be paid by an incoming tenant for a farm held on lease at a rent on the same level as the valuation. It appears that in the Northern Unions a farm held at the valuation may be sold to an incoming tenant for sums varying from 10l. to 20l. an acre.

Thus in Kilkeel Union, in the county of Down, the valuator, though his Valuation was "a little more than what he considered the reasonable rent," he stated that he was sure "20l. per acre would be given for the goodwill of land let at his Valuation." (Wilson, valuator; Appendix, Kilkeel.)

In Cootehill Union, partly in the county Cavan and partly in Monaghan, a Guardian stated that "competition has raised the price of land very high:—believes that 10l. to 20l. an acre would be given for the goodwill of land let at the Valuation." (Mr. M'Intosh; Appendix, Cootehill.)

In Dungannon Union the valuator stated that "if a man were to become tenant to a farm at the value he (the valuator) put on it, he would get from 10l. to 12l. an acre for his tenant-right." (Robert Wilson, valuator; Appendix, Dungannon.)

In Londonderry Union the Chairman stated that "the electoral division of Burt has been rated by the valutors considerably below the sum at which it was let on lease a few years ago. The farms in that division are large, and sell at a premium, usually of from 8 to 10 years' purchase." (Sir R. Ferguson; Appendix, Londonderry.)

In Lurgan Union, which occupies parts of the counties of Armagh, Down, and Antrim, the tenant's interest in a farm held at the Valuation would bring 10l. an English acre or upwards. (Whiteside, valuator; Appendix, First Report, p. 43.)

THIRD REPORT.

Comparison with Griffith's valuation.

Lisburn Union.

Kilkeel Union.

Dundalk Union.

Drogheda Union.

Prices paid for tenant's interest.

Unions in Ulster.

THIRD REPORT.

*Prices paid for
tenant's interest.*Unions in Con-
naught.

The Valuations of the other Unions in the north are similar in this respect. It will be observed that in all the cases above referred to, the tenant-right is spoken of as the subject of sale, whether the tenant has a lease or not. This is a well-established customary right in the north.

There is similar evidence given by some of the witnesses respecting the Valuations in the Unions in Connaught. The valuator of the Ballinasloe Union, which is partly in Galway and partly in Roscommon, states that he has known from 8*l.* to 10*l.* an acre paid for land subject to at least 1*l.* an acre, and not held on lease, although the same land is valued at not more than 1*l.* in the Valuation. (Cooper, valuator; Appendix, Ballinasloe.)

One of the Guardians of Gort Union, which is partly in the county of Galway and partly in the county of Clare, stated that "for the possession of small farms of about five acres, held at a fair rent, but not on lease, as much as 10*l.* is often given." (Mr. Mc'Nevin; Appendix, Gort.)

Unions in Leinster.

In the south the tenure of land is more uncertain, and the tenant's interest does not in general appear to be saleable, unless he has a lease. But if a tenant holds by lease, at a rent as low as the valuation, he may sell his interest for a considerable sum. Taking the case of a Union in South Leinster, it is stated by the valuator of Gorey, in the county of Wexford, that, as a general rule, he thinks the different holdings would sell for from 5*l.* to 7*l.* per acre if let on lease at the Poor Law Valuation. (Clarke, valuator; Appendix, Gorey.)

Unions in Munster.

In one of the Unions in Munster it was stated that no such practice as selling the goodwill, where the tenant has no lease, exists. (Appendix to First Report, Bandon, p. 78.) ; but in the Union of Thurles, in the county of Tipperary, a landed proprietor is mentioned in the evidence, with regard to whose property it was stated that a tenant, so long as he pays the rent and conducts himself properly, is never removed, and farms out of lease on his property will sell for as much as if there was a lease; they generally sell for 10*l.* to 12*l.* an acre, (Mr. Maher, guardian; Appendix Thurles.) The Poor Law Valuation is in some instances lower than the rents of that proprietor, (*Ibid.*) A farm held *on lease* at the Valuation would sell, in the Union of Cashel, for 10*l.* an acre. (Mr. Cooper, *ex-officio* Guardian; Mr. Laffan, *ex-officio* Guardian; Appendix, Cashel.)

5. Effect upon Large and Small Farms of the Application of the "Fair Rent" as a test.

*Application of the
test to large and
small farms.*

The condition of property in Ireland, with regard to the letting price of land, is such, that if a valuation assuming the letting price to be the value, were enforced, the poor-rate would fall with greater severity on the occupiers of small tenements than on those of large.

Valuation accord-
ing to the letting
price would press
unequally on small
tenements.

Large farms bring a lower acreable rent than small holdings. The latter, if exposed to competition, will often bring a rent of 2*l.* and 3*l.* an acre in a district where large farms of the same quality are not let for more than two-thirds of that rent. A valuation, therefore, according to the letting price of the tenements, would be subject to this objection, that the humbler class of occupiers would be charged with an unequal proportion of the rate.

Having rejected the letting price as a test, and assumed the fair rent as a criterion, the guardians and valutors have adjusted the burden with more equality. In a great many Unions the valutors fixed a fair acreable value for land of a certain quality, and then applied it to large and small tenements alike. The consequence has been, that when the valuation is compared with the rents at which small tenements will let, it is found to be only one-half, and sometimes less, while the valuation of large tenements in the same Union approaches much more nearly to the actual rent.

Gorey Union.

Thus in Gorey Union, County of Wexford, the valuator stated, that there was a greater difference between the valuation and the rent of small holdings, than between those of large. (Clarke, valuator; Appendix, Gorey.)

Rathdown Union.

In Rathdown Union, county of Dublin, and county Wicklow, the valuation of which is stated to be on a high scale compared with other Unions, the valuator adopted "the same acreable value for large and small holdings: "the effect of this has been, that though the valuation is near the rent in the case of large holdings, the rents of small holdings are about half as much more than the valuation, and the rents of still smaller holdings are double the valuation. (Mr. Taylor, valuator; Appendix, Rathdown.)

In like manner in Dundalk the valuator stated, that "the rents increase as the tenements decrease." (M'Cann, valuator; Appendix, Dundalk.)

THIRD REPORT.

The same peculiarity was observable in the Unions in Munster. The valuation of Macroom Union in the county of Cork was stated to be 20 per cent. under the rent of small holdings, and 10 per cent. under the rent of large farms. (Evidence of valuator; Appendix, Macroom.)

Difficulty of enforcing a valuation at the letting price.

In Fermoy Union in the county of Cork, the valuation of 2,368 tenements subject to rents of 5*l.* and upwards, was 71,829*l.* The total rental of the same tenements was 85,035*l.* showing the relation of the total valuation to the rental of those tenements to be as 100 to 118½. But the total valuation of 1122 small tenements subject to rents not exceeding 5*l.* was 1,088*l.*; their total rental was 2,064*l.*, the proportion being as 100 to 190. (Appendix to First Report, p. 136.)

Dundalk, Macroom and Fermoy Unions.

In Cashel Union the valuation appears to be 25 per cent. below the letting value of small holdings, (Mr. Long, *ex-officio* Guardian; Appendix, Cashel) though the difference is not so great in the case of large holdings. (Mr. Heany, elected Guardian, *ibid.*)

Cashel Union.

In the Unions in Connaught the same fact appears. In Athlone Union a Guardian, speaking of certain lands in the county of Roscommon, stated that it was valued at 23*s.* an acre; and added, "it is worth 25*s.* to a solvent tenant to hold in a large farm; if let in small farms tenants could afford to pay from 35*s.* to 40*s.* for it." (Mr. Gilligan; Appendix, Loughrea.)

Unions in Connaught.

In some Unions it is stated that having applied the same acreable valuation to large and small holdings, a small sum was added for the value of the house, which frequently had the effect of raising the valuation of small holdings, when computed by the acre, higher than that of large; but, notwithstanding this circumstance, the rents of small holdings were found to differ from the valuation by a larger per centage than that of large farms.

Thus the application of the "fair-rent" as a test has had the effect of a graduation of the rate in favour of the occupiers of small holdings. Looking to the valuation as the basis of the franchise, it may also have deprived them of a privilege; but viewing them with reference only to taxation, the evidence is conclusive to show that to enforce a valuation in legal strictness at the letting price of land, would in the present condition of property in Ireland be unjust to the humbler classes of occupiers.

Valuation according to the "fair rent" graduates the tax in favour of small holdings.

The proceedings in Coleraine Union indicate the difficulty of enforcing the adoption of a principle of valuation which the persons who are to apply it consider an unjust one for the purpose of taxation. In that Union the valuation of one division being completed, was submitted to the Assistant Commissioner, Mr. Clements. It was below the rent, and the Assistant Commissioner remonstrated in a letter which was entered on the Minutes of the Board, and contains the following passage:—

"They (the valuers) are bound to give a fair and correct valuation of each hereditament according to the net annual value as explained by the Poor Relief Act. Now what is that value? It is clearly laid down in section 64 of the Act to be an estimate of the rent, at which one year with another the hereditament might in its actual state be reasonably expected to let from year to year. It is not what Messrs. Cathcart and Arthur, or any other valuator conceive to be the fair letting value, but the rent which, from the general letting throughout the Union, may be reasonably expected."

"I think it for the interest of all, and especially the valuers, that the error into which they have fallen should be remedied as soon as possible. I can easily imagine its having occurred, because it has hitherto been the custom to make all public valuations in a certain proportion of the net value, and Messrs. Cathcart and Arthur may have been influenced by this. I would suggest that the Guardians should examine the valuation as far as they have hitherto gone, with a view to ascertain whether the error to be apprehended by the comparison contained in the two summaries which I herewith return exists, in order that the valuers may be warned of the consequence to be apprehended by continuing the valuation on what appears to be too low a scale." (Extracts Minute Book; Appendix, Coleraine.)

When the valuator was examined in the progress of our Inquiry, he was found to have put a construction upon Mr. Clements' letter, such as to permit him to apply what he considered an equitable principle of Valuation. One of the valuers stated in his evidence, given in the progress of this Inquiry, that "after the division of Somerset was finished, Mr. Clements' letter was sent to them. It had been alleged before the Valuation Committee that they had valued too low. The person

THIRD REPORT.
Ten-Pound County
Electors.

who made that objection was agent to a landlord. Mr. Clements' letter was to the effect that they should not put an ideal value, but ascertain the letting value of land in each neighbourhood as far as possible, and to take that into consideration. If the land was more valuable in one neighbourhood than another, they were of course to look to that. Did not understand by that letter that they were to be guided by the letting value altogether; but that if land in one neighbourhood would let for more than in another, they were to put a higher value on it. Did not understand that they were to take the rent that would be paid for land as a criterion of value. Understood that they were to take the reasonable letting value as their standard throughout." (Evidence of James Arthur; Appendix, Coleraine.)

The same tendency has been found in operation in every Union. Valuers and Guardians concur in refusing to confound the yearly price which tenants can be found to pay for land, with the value of it. Whatever be the legal construction of the 64th section of the Poor Relief Act in this respect, this is the sense of all classes of the public. An intelligent witness stated it as his opinion that "if the Legislature insisted on the Guardians and valuers valuing the land according to the utmost rent that people could be got to pay it would create great dissatisfaction. There would be a constant tendency to evade putting down the maximum. He thinks there would be that tendency on the part of the valuers, the Guardians, and the people." (Taylor, valuator, Appendix, Rathdown.)

6. *Holdings of Ten-Pound County Electors whose Rating has been ascertained. Average Area and Valuation. Classification according to extent and value of holdings.*

Ten-Pound electors.
Area and Valuation of Holdings.

Eight years being the period prescribed by the Reform Act, 2 and 3 Will. IV., c. 88, during which the registry of an elector remains valid, the portion of the Ten Pound Electors traced in the Rate-books, who were registered in the years 1833 to 1840 inclusive, may be considered as representing the ordinary class of Ten Pound County Electors now entitled to vote.

Classification of
Ten-Pound County
Electors, according
to the area of their
holdings and the
amount of their
rating.

Of 8543 Ten-Pound County Electors registered during eight years from 1833 to 1840 inclusive, in 47 Unions, we have ascertained from the Rate-books the acreable extent of the holdings for which they are rated, as well the amount at which they have been valued for the purpose of the poor-rate. Detailed lists of the entire will be found in the Appendices to the several Local Reports.

The Rate-books of the Unions usually contain an estimate of the acreable extent of the land in the holding of each occupier, as well as an estimate of the value of the whole tenement. As we already observed, the estimate of the extent of holdings is not founded on an actual survey made by the valuator, but on previous surveys or valuations, and, in their absence, on information obtained from such sources as are available to the valuers. And the estimate of the value of each holding is necessarily founded on this previous estimate of area, combined with the acreable value at which the valuator estimates the land.

The Ordnance Survey, where complete, renders the duty of the valuator in ascertaining the areas of holdings comparatively an easy one. The area of each townland being given, the valuator has merely to applot it on the occupiers. In those Unions where the areas of the townlands had never been ascertained by actual survey, the difficulties which the valuers have had to overcome have been very great, all former public applotments being very imperfect.

Ten Unions in
Ulster.

In 10 Unions, situate in the province of Ulster, the number of Ten-Pound Electors registered during eight years, from 1833 to 1840 inclusive, who were traced in the Rate-books, was 2411. The following Table* shows the area and valuation of their holdings:—

* This and the three following tables are necessarily confined to those Unions where the dates of registry, the Valuation to poor-rate, and also the areas of holdings, were ascertained; all these data being necessary to determine the average area and the average Valuation of electors registered during eight years, from 1833 to 1840 inclusive. On referring to the lists of electors in the Appendix to the separate Reports on each Union, it will be found that instances occur of electors stated to be rated "jointly with another." Where this occurs, the area and Valuation of the holding of the elector has been assumed to be one half, and where stated to be rated jointly with two others or three others, one-third or one-fourth, according to the number of persons jointly rated. In the 15 instances where the area was not ascertained, the Valuation of the holding was of course also rejected for the purpose of ascertaining the average. Electors who are registered in respect of tenements consisting of a house only have been included, as it was impossible to draw a distinction between them and those to whose houses a small portion of land or a garden is attached. The resulting average of the acreable extent of the holdings is of course lower than if none but the tenements comprising land had been included in the calculation. This has also raised the apparent valuation per acre higher than the rate at which agricultural tenements have, in fact, been valued. It is to be observed that the land, the tenements of which are registered, sometimes appears to be of a better quality, and is valued at a higher rate per acre than the average of the Union. See Report, Cootehill.

Appendix to this Report, Table B, p. 2 a.

This gives an average area of 43A. 0R. 25P., and an average Valuation to poor rate of 37*l.* 19*s.* 5¹/₂*d.* And it appears that the average amount at which the holdings of these electors have been valued is 17*s.* 7*d.* per acre.

Viewing together the Ten-Pound County electors registered during a period of 8 years, who have been traced in 47 Unions situate in all the Provinces, and the

areas of whose holdings and their valuations have both been ascertained, the result is as follows:—

THIRD REPORT.

*Ten-Pound County
Electors.*

10 <i>l.</i> County Electors registered 1833 to 1840 inclusive, whose areas and valuations were both ascertained.	Total Area of the Holdings for which they are rated.			Total Valuation of their holdings to Poor Rate.		
	A.	R.	P.	£	s.	d.
8,543	341,729	3	29½	259,156	5	9

Appendix to this Report, Table B, p. 2 *a.*

For the Ten-Pound Electors registered during eight years from 1833 to 1840, whose areas and valuations were both ascertained, this gives an average area of 40*A.* 0*R.* 0*P.* and an average valuation to poor-rate of 30*l.* 6*s.* 8½*d.* The average rate per acre amount at which the holdings of these 8543 electors in all the provinces have been valued is, therefore, 15*s.* 2*d.*

The number of Ten-Pound electors registered in 1832 and not since re-registered, both the area and valuation of whose tenements have been ascertained is 3356. The following Table shews the total area and total valuation of the tenements for which they are rated to the poor.

TABLE of ELECTORS REGISTERED in 1832, and not since RE-REGISTERED.—AREAS and VALUATION.

Ten-Pound County Electors Registered in 1832, and not since Re-registered, the area and valuation of whose Tenements were both ascertained.	Total Area of the Holdings for which they are rated.			Total Valuation of their Holdings to Poor Rate.		
	A.	R.	P.	£	s.	d.
3356	130,860	2	3½	95,229	9	7½

Appendix to this Report, Table C, p. 3 *a.*

The average area of their holdings is therefore 38 acres, 3 roods, 39 perches, and their average valuation to Poor Rate 28*l.* 7*s.* 6*d.* The average valuation per acre, at which their holdings appear to have been valued, is 14*s.* 6¾*d.* A table dividing them according to Provinces is annexed to this Report, *post*, p. 3 *a.*

We have divided the Ten-Pound electors registered during a period of eight years, and traced in the rate-books of 47 Unions, into classes, according to the number of acres which the holding of each elector appears to amount to or exceed.

Of the 2411 Ten-Pound electors traced in ten Unions visited in Ulster, and registered in the years 1833 to 1840 inclusive, it appears that the number of those who hold 10 acres and upwards, amounts to 2206. The entire number of those who occupy tenements of 5 acres and upwards in extent, is 2308. Of the whole it appears that 95 are rated for tenements consisting of a house only, or a house and land under 5 acres.

The following Table classifies the electors traced in these ten Unions, and registered during 8 years according to the areas of the holdings for which they are rated:

1,149	25	100	157	272	541	933	1,035	109	5

Appendix to this Report, Table E, p. 5 a.

Seventeen Unions in Munster (wholly or partly.)

The number of Ten Pound electors traced in the Rate Books of seventeen Unions in the province of Munster, was 2589, of whom the number of those who occupy tenements of 10 acres or upwards, is 2218, and 369 are rated for tenements, of which the land is less than 10 acres. The whole number occupying tenements of 5 acres and upwards in extent, is 2290, and those who are rated for a house only, or a house and land not amounting to 5 acres in extent, are 297.

The following Table classifies the whole number traced in these seventeen Unions, according to the areas of the holdings for which they are rated to the poor :—

TEN POUND ELECTORS in SEVENTEEN UNIONS,* in or partly in MUNSTER. Registries, 1833 to 1840 inclusive.

AREAS OF HOLDINGS.

Appendix to this Report, Table E, p. 5 a.

Fourteen Unions in Leinster (wholly or partly.)

Of the 2409 traced in 14 Unions, situated wholly or partly in the province of Leinster, the number who occupy tenements, of which the land amounts to 10 acres and upwards, are 1869. The number who occupy tenements of 5 acres and upwards in extent, are 1990, and 419 are rated for a house only, or house and land not amounting to 5 acres.

The following table classifies the whole number traced in these Unions, according to the areas of the holdings for which they are rated to the poor.

TABLE of TEN-POUND ELECTORS in THIRTEEN UNIONS,* wholly or partly in LEINSTER. Registries, 1833 to 1840 inclusive.

	100 Acres and upwards.	50 Acres and upwards.	40 Acres and upwards.	30 Acres and upwards.	20 Acres and upwards.	10 Acres and upwards.	5 Acres and upwards.	House, or House and Land, under 5 Acres.	
2,409	257	719	903	1,183	1,514	1,869	1,990	419	..

Appendix to this Report, Table E, p. 5 a.

* For the names of these Unions, see *ante*, p. xlvii and xlviii.

Classifying the whole 8558 Ten Pound electors, registered in 8 years, and traced in the Rate Books of 47 Unions in all the Provinces, according to the acreable extent of the land comprised in their tenements, it appears that 5542, being a considerable majority of the whole number, occupy tenements of 20 acres and upwards in extent. The whole number of those occupying tenements of 5 acres and upwards is 7623; and 920 are rated for tenements consisting of a house only, or house and land not amounting to 5 acres.

The following table classifies these electors according to the acreable extent of the land comprised in the holdings for which they are rated to the poor :—

THIRD REPORT.
Ten Pound County
Electors.
Forty-seven Unions
in all the Provinces.

TABLE of TEN-POUND ELECTORS in 47 UNIONS, situate in all the PROVINCES.—AREAS OF HOLDINGS.—Registries, 1833 to 1840, both inclusive.

Number of £10 Electors traced in Rate Books.	Number of the preceding who appear rated to Poor Rate for Tenements consisting of a House, or House and Land, the Land being of the following extent.								Extent not returned.
	100 Acres and upwards.	50 Acres and upwards.	40 Acres and upwards.	30 Acres and upwards.	20 Acres and upwards.	10 Acres and upwards.	5 Acres and upwards.	Under 5 Acres.	
8558	655	2082	2817	3966	5542	7226	7623	920	15

Appendix to this Report, Table E, p. 5a.

We proceed to the consideration of the holdings of these 8558 Ten Pound electors in regard to the amounts at which their tenements have been valued for the purpose of the poor-rate.

Of the 2411 Ten Pound Electors, traced in the Ten Unions in Ulster, and registered during 8 years, it appears that 1259, being more than one-half, are rated to the poor at sums of 20*l.* and upwards. 2371 are rated at sums of 5*l.* and upwards, leaving 40 who are rated below that amount. The acreable extent of the holdings of those who are rated at small sums, and their rents, in all cases in which they have been ascertained, will be referred to hereafter.

The following Table classifies the whole number traced in these Ten Unions in Ulster, who were registered during 8 years, according to the amounts at and above which they are rated to the poor.

TABLE of TEN POUND ELECTORS in TEN UNIONS in ULSTER.—Registries 1833 to 1840.
VALUATION to POOR RATE.

Number of £10 County Electors traced in Rate Books.	Number of the preceding who are Rated at the following Sums.								
	£40 and upwards.	£30 and upwards.	£25 and upwards.	£20 and upwards.	£15 and upwards.	£10 and upwards.	£8 and upwards.	£5 and upwards.	Under £5.
2411	279	576	844	1259	1680	2163	2278	2371	40

Appendix to this Report, Table F, No. 2, p. 7a.

Referring to the amounts of rating, of the Ten-Pound electors registered during 8 years, who were traced in the Rate Books of Seven Unions, situate wholly or partly in Connaught, it appears that 743, being considerably more than one half, are rated at sums of 10*l.* and upwards. The whole number of those rated at sums of 5*l.* and upwards, is 1061, and 88 are rated under that amount. Some of the latter are in the occupation of tenements of 40 and 50 acres in extent. A classification of their holdings will be found in a subsequent page.

The following Table classifies the whole number traced in the Rate Books of these Seven Unions, and registered during 8 years, according to the amounts at and above which they are rated to the poor :—

THIRD REPORT.

Appendix to this Report, Table F, No. 2, p. 7a.

Munster.

In the 17 Unions, situated wholly or partly in Munster, out of 2589 Ten Pound Electors, traced in the Rate Books, who had been registered during 8 years, 1331, being a majority of the whole, are rated at sums of 25*l.* and upwards. The number of those rated at sums of 8*l.* and upwards, is 2296; and 135 are rated below 5*l.* The holdings of these persons, in some cases, amount to 40 or 50 acres. Their rents in all cases, when ascertained, and the areas of the holdings for which they are rated, will be referred to in a subsequent part of our Report.

The following Table classifies the whole number traced in the Rate Books of these Seventeen Unions, and registered during 8 years, according to the amounts at or above which their holdings are rated to the poor:—

TABLE OF TEN-POUND ELECTORS in SEVENTEEN UNIONS, in or partly in MUNSTER.—Registries, 1833 to 1840 inclusive.

VALUATION TO POOR RATE.

Number of £10 County Electors traced in Rate Books.	Number of the preceding who are rated to the Poor at the following Sums:—

Appendix to this Report, Table F, No. 2, p. 7a.

Leinster.

In the 13 Unions wholly or partly in Leinster, out of 2409 Ten Pound Electors, traced, who were registered during eight years, 1220, being a majority of the whole, are rated at sums of 25*l.* and upwards. The number of those rated at 5*l.* and upwards is 2316, and 93 are rated under that amount.

The following Table classifies the whole number registered during 8 years, who were traced in the Rate Books of these 13 Unions, according to the amount at or above which, they are rated to the poor.

TABLE OF TEN-POUND ELECTORS in THIRTEEN UNIONS, wholly or partly in LEINSTER.—Registries 1833 to 1840 inclusive.

VALUATION TO POOR RATE.

Number traced in Rate Book.	Number of the preceding who are rated to the Poor at the following Sums.								
	£40 and upwards.	£30 and upwards.	£25 and upwards.	£20 and upwards.	£15 and upwards.	£10 and upwards.	£8 and upwards.	£5 and upwards.	Under £5.
2,409	732	1016	1220	1468	1743	2069	2186	2316	93

Appendix to this Report, Table F, No. 2, p. 7a.

Forty-seven Unions in all the provinces.

Of the 8558 Ten-pound Electors, registered during 8 years, and traced in the Rate Books of 47 Unions in all the provinces, 4666, being a majority of the whole, are rated to the poor at sums of 20*l.* and upwards. The number of those who occupy tenements rated at 5*l.* and upwards is 8202, and the number rated under that amount 356.

The following table classifies them according to the amounts at which they appear rated to poor rate.

THIRD REPORT.

TABLE of TEN-POUND ELECTORS, in 47 UNIONS, in all the Provinces.—Registries 1833 to 1840, both inclusive.

Ten-Pound County Electors.

VALUATION TO POOR RATE.

Effect of a single qualification depending on rating.

Number of £10 Electors traced in Rate Books	Number of the preceding who are rated to Poor Rate as follows:—								
	£40 and upwards.	£30 and upwards.	£25 and upwards.	£20 and upwards.	£15 and upwards.	£10 and upwards.	£8 and upwards.	£5 and upwards.	Under £5.
8558	1806	2845	3590	4666	5762	7165	7643	8202	356

Table F, No. 2, p. 7a.

Tables containing a more minute classification, and showing the numbers rated above 9*l.*, 7*l.*, 6*l.*, and other sums, are annexed to this Report. Table F. Nos. 1, 2, 3, &c.

7.—*Effect on the existing Ten-Pound Electors, of a single Qualification depending on Amount of Valuation to Poor Rate—Of a single Qualification depending on excess of Rating above Rent—Of two Qualifications.*

In most of the Unions visited, the areas of the holdings of the Ten-pound electors, as well as the sums at which they are rated, were ascertained. In 47 Unions, some of which are situate in each of the provinces, we had an opportunity of observing the extent of the holdings of Ten-pound electors, and in these Unions the effect of adopting in lieu of the present franchise, a single qualification depending on being rated to the poor at a certain amount, may be perceived, so far as the areas of the holdings of persons whom particular qualifications would exclude, enable us to judge. We shall refer more particularly to the effect on the electors in these Unions, of adopting one of the following propositions:—

Qualification depending on amount of rating.

1. The substitution for the present franchise of a qualification depending on being rated to the poor at 5*l.*
2. The substitution of a like qualification fixed at 8*l.*
3. " " fixed at 10*l.*
4. " " fixed at 20*l.*

In the 10 Unions situate in the province of Ulster, already referred to,* it appears that of the whole 2411 Ten Pound Electors traced in the Rate Books, and registered during 8 years from 1830 to 1840 inclusive, the number who would be excluded, by substituting for the existing franchise a qualification depending on being rated to poor-rate at 5*l.* would be 40; at 8*l.* would be 133; at 10*l.* would be 248; at 20*l.* would be 1152. On referring to the holdings of the 133, who would be excluded by a qualification depending on being rated at 8*l.*, it appears that 2 of them hold 100 acres and upwards, 12 hold 30 acres and upwards, and the number who occupy tenements, of which the land amounts to or exceeds 5 acres, is 89. Referring to the holdings of the 1152 electors, who would be excluded by substituting, for the present franchise, a qualification depending on being rated to the poor at 20*l.*, it appears that 17 of those persons occupy tenements of 100 acres and upwards, and the number occupying tenements of 10 acres and upwards is 980.

Unions in Ulster.

The following Table shows the number excluded by substituting, for the present franchise, a qualification depending on being rated to the poor, the amount being fixed at 20*l.*, 10*l.*, 8*l.*, or 5*l.*; and the classes in respect of the extent of their holdings to which they belong:—

* Ante, p. xlvii.

THIRD REPORT. TABLE of TEN-POUND COUNTY ELECTORS in TEN UNIONS in ULSTER.—Registries 1833 to 1840, both inclusive.

Ten-Pound County Electors.

EFFECT OF A SINGLE QUALIFICATION DEPENDING ON RATING.

Unions in Ulster.

Effect of a single qualification depending on rating.

Number of £10 County Electors traced in Rate Books	Number of the preceding who would be excluded by a Qualification depending on Rating at the following Sums.		Number of the Excluded who are rated to the Poor for Tenements consisting of a House, or House and Land, or Land only, the Land being of the following extent.								Extent not returned.
			100 Acres & upwards.	50 Acres & upwards.	40 Acres & upwards.	30 Acres & upwards.	20 Acres & upwards.	10 Acres & upwards.	5 Acres & upwards.	House, or House and Land under 5 Acres	
2411	£ 5	40	..	2	3	4	7	14	15	24	1
	£ 8	133	2	6	9	12	24	48	89	43	1
	£10	248	4	11	17	24	49	129	198	49	1
	£20	1,152	17	67	101	171	411	980	1,076	72	4

Appendix to this Report, Table G, No. 2, p. 10a.

Tables showing the result for various other sums will be found annexed to this Report, pp. 9a, &c. It will be found, when we come to the consideration of that portion of the electors whose rents have been ascertained, that many of those who appear rated for a house or house and land under five acres, are persons subject to rents exceeding 10*l*. In some cases they appear to be owners of these small holdings, being subject to no rent, and in other cases they appear to be subject to low rents not amounting to the sums at which they are valued to poor rate.

Connaught.

In the Seven Unions, wholly or partly in Connaught, it appears that of the 1149 Ten-pound Electors traced in the Rate Books, and registered during 8 years, the number who would be excluded, by substituting for the present franchise a qualification depending on being rated in the Poor Law books at 5*l*. would be 88; at 8*l*. would be 266; at 10*l*. would be 406; at 20*l*. would be 849. The adoption of a single qualification depending on rating to the poor, fixed at 8*l*. would exclude three electors who hold tenements of 50 acres and upwards. The number holding 10 acres and upwards, who would be excluded, would be 131.

The following table classifies the electors in these Seven Unions, who would be excluded by adopting a single qualification depending on being rated to the poor at 20*l*., 10*l*., 8*l*., or 5*l*., according to the acreable extent of the land comprised in their holdings:—

TABLE of TEN-POUND ELECTORS in SEVEN UNIONS wholly or partly in CONNAUGHT.—Registries 1833 to 1840.

EFFECT OF A SINGLE QUALIFICATION DEPENDING ON RATING.

Number of £10 County Electors traced in Rate Books.	Number of the preceding who would be excluded by a Qualification depending on Rating at the following Sums.		Number of the Excluded who are rated to the Poor for Tenements consisting of a House, or House and Land, or Land only, the Land being of the following extent.								Extent not returned.
			100 Acres & upwards.	50 Acres & upwards.	40 Acres & upwards.	30 Acres & upwards.	20 Acres & upwards.	10 Acres & upwards.	5 Acres & upwards.	House, or House and Land under 5 Acres

	£20	849	..	4	4	40	276	649	751	93	5

Appendix to this Report, Table G, No. 3, p. 10a.

Tables showing the extent of the holdings of those who would be excluded on the supposition of the qualification being fixed at various other amounts are appended to this Report, pp. 9a, &c.

On investigating, in the same way, the holdings of the persons, who, in the 17 Unions, situated wholly or partly in Munster, would be excluded by substituting for the present franchise a qualification depending on rating, similar results ap-

pear. 135 persons in these Unions appear rated under 5*l.*; of those there are three who hold 50 acres and upwards; 37 hold 20 acres and upwards. The number of those rated under 5*l.*, and who appear to occupy tenements consisting of a house only, or house and land not amounting to five acres, is 63. It will be found in a subsequent part of this Report, relating to the rents of the ten pound electors, where ascertained, that some of these persons are owners of their holdings, being subject to no rent, and others being subject to low rents, in comparison with the sums at which they are valued to poor rate, appear to have substantial interests in their tenements.

The following Table classifies, according to the acreable extent of their holdings, the electors who, in these Unions, would be excluded by a single qualification depending on rating fixed at 20*l.*, 10*l.*, 8*l.*, or 5*l.* :—

TABLE of TEN-POUND ELECTORS in SEVENTEEN UNIONS, wholly or partly in MUNSTER. Registries, 1833 to 1840.

EFFECT OF A SINGLE QUALIFICATION DEPENDING ON RATING.

Number of £10. County Electors traced in Rate Books.	Number of the preceding who would be excluded by a Qualification depending on Rating at the following Amounts.		Number of the Excluded who are rated to the Poor for Tenements, consisting of a House, or House and Land, or Land only, the Land being of the following extent.								Extent not returned.
			100 Acres & upwards.	50 Acres and upwards.	40 Acres and upwards.	30 Acres and upwards.	20 Acres and upwards.	10 Acres and upwards.	5 Acres and upwards.	House, or House and Land under 5 Acres.	
2,589	£ 5	135	..	3	6	16	37	62	72	63	..
	£ 8	293	..	9	25	43	86	185	171	122	..
	£10	399	..	12	36	65	119	205	252	147	..
	£20	950	18	74	130	217	417	648	717	232	1

Appendix to this Report, Table G, No. 4, p. 11 *a.*

The extent of the holdings of persons who would be excluded if the qualification were fixed at various other amounts, will be found in the Tables annexed to this Report, pp. 9 *a.*, &c.

Applying the same investigation to the holdings of the Ten-pound Electors in 13 Unions, wholly or partly in the province of Leinster, it appears that of the 2409 traced, who had been registered during 8 years, 93 would be excluded, if for the present franchise a qualification were substituted, depending on being rated at 5*l.*; if the qualification were fixed at 8*l.*, the number excluded would be 223; if fixed at 10*l.*, 340; and if fixed at 20*l.*, it would be 941.

On referring to the extent of the holdings of those who would be excluded by the adoption of a qualification depending on being rated at 8*l.*, it appears that there is one of them who occupies a tenement of the extent of 100 acres and upwards; and the number of those who each occupy tenements of 10 acres and upwards is 41.

The following table classifies according to the areas of their holdings those electors whom qualifications depending on rating fixed at various amounts would exclude :—

TEN-POUND COUNTY ELECTORS in THIRTEEN UNIONS, wholly or in part in LEINSTER.—Registries, 1833 to 1840 inclusive.

EFFECT OF A SINGLE QUALIFICATION DEPENDING ON RATING.

Number of Ten-Pound County Electors traced in Rate Books.	Number of the preceding who would be excluded by a Qualification depending on being rated at the following Amounts.		Number of excluded who are rated to the Poor for holdings of the following extent.								Extent not returned.
			100 Acres & upwards.	50 Acres and upwards.	40 Acres and upwards.	30 Acres and upwards.	20 Acres and upwards.	10 Acres and upwards.	5 Acres and upwards.	House, or House and Land under 5 Acres.

Appendix to this Report, Table G, No. 5, p. 11 *a.*

THIRD REPORT.

Ten-Pound County Electors.

Unions in Munster.

Single qualification depending on rating.

Leinster.

THIRD REPORT.

Ten-Pound County Electors.

Single qualification depending on rating.

Tables, showing the areas of the holdings of those who would be excluded if the qualification was fixed at various other amounts, will be found annexed to this Report, pp. 9 *a*, &c.

Viewing together the whole 8558 Ten-pound county electors in the above 47 Unions, situate in all the provinces, who have been registered during eight years and traced in the rate-books, it appears that the number who would be excluded by a qualification depending on being rated at 5*l*., is 356; if the qualification were fixed at 8*l*., the number excluded would be 915; at 10*l*., the number would be 1393; and at 20*l*., there would be 3892 electors disfranchised.

Of those excluded by a qualification depending on rating fixed at 8*l*., it appears that there are three who each hold tenements of 100 acres and upwards in extent, and 355 each hold tenements of ten acres and upwards in extent.

The following table classifies those excluded by such a qualification, fixed at various amounts, according to the areas of the holdings for which they are rated to the poor.

TABLE OF TEN-POUND ELECTORS IN FORTY-SEVEN UNIONS, situate in all the Provinces.—Registries, 1833 to 1840.

EFFECT OF A SINGLE QUALIFICATION DEPENDING ON RATING.

Number traced in RateBooks.	Number of the preceding who would be excluded by a Qualification depending on being rated at the following Amounts.		Number of the preceding who are rated to Poor Rate for Tenements consisting of a House, or House and Land, or Land only, the Land, being of the following extent.								Extent not returned.
			100 Acres & upwards.	50 Acres and upwards.	40 Acres and upwards.	30 Acres and upwards.	20 Acres and upwards.	10 Acres and upwards.	5 Acres and upwards.	House, or House and Land under 5 Acres

	£ 8	915	3	19	38	66	129	355	580	332	3
	£10	1393	6	28	59	107	204	677	967	423	3
	£20	3892	38	162	268	534	1372	2844	3212	670	10

Appendix to this Report, Table G, No. 1, p. 9*a*.

Tables showing the extent of the holdings of the electors who would be excluded by a qualification depending on rating if fixed at various other amounts, are annexed to this Report, pp. 9*a*, &c.

Effect of a single Qualification depending on Excess of Rating above Rent.

Effect of Two Qualifications.

Of the Unions visited there are twenty where the rents of many Ten-pound Electors were ascertained. These have been compared with the sums at which they are rated, with a view to ascertain the effect which would be produced on them by the adoption of a qualification requiring that their valuation to poor rate should exceed their rent by a certain amount. We succeeded in ascertaining the rents of a portion of the electors in some Unions in all the provinces; and in Munster, where the valuers were more frequently found to have taken down the rents of the occupiers in their field books, the rents of a large proportion of the electors were ascertained.

The Unions in Munster, or chiefly in that province, in which the rents of Ten-pound Electors were ascertained were the following:—Rathkeale, Kilmallock, Limerick, Kanturk, Macroom, Bandon, Fermoy, Listowel, Cashel, Tipperary, Waterford, Lismore, Dungarvan.

In Leinster, rents were ascertained in the Union of Longford and the Union of Roscrea, the greater portion of which is in that province.

In Connaught, the rents of a portion of the electors were ascertained in the Unions of Loughrea and Sligo.

In Ulster, rents were ascertained in the Unions of Cootehill, Armagh, and Londonderry.

In the foregoing Unions the effect of substituting for the present franchise, a qualification depending on the excess of the valuation of the occupier's holding above the rent, will be perceived. The effect on the existing Ten-pound Electors, of substituting for the present franchise *two alternative* qualifications, one depending on a certain amount of rating, and the second on a certain excess of rating above rent, may also be perceived in these Unions by comparing the rents and valuations. We think it material to refer in detail to the effect which the adoption of qualifica-

tions of that nature would have in these Unions, where having the Rent, the Areas of the holdings, and their Valuations, the classes of electors excluded by various qualifications may be more easily perceived. We shall refer more particularly to the effect in these 20 Unions of adopting one of the three following propositions :

1. The substitution for the present franchise, of a single qualification requiring the valuation to *exceed* the rent by 5*l*.

2. The substitution for the present franchise of two alternative qualifications, one depending on being *rated* at 20*l*., the other on an *excess* of rating above rent fixed at 5*l*.

3. The substitution for the present franchise of two such qualifications, the first being fixed at 8*l*., the second at 5*l*.

We find that any of these propositions, if carried into effect, would exclude *bona fide* electors.

In Rathkeale Union, in the county of Limerick, the rents of 197 present 10*l*. electors were ascertained. If a single qualification, depending on excess of rating above rent, fixed at 5*l*., were substituted for the present franchise, the number of existing electors excluded would be 169; and on referring to the tables showing their rents, it appears that there are five of the 169 who each pay rents of 100*l*. and upwards, and 18 who pay rents between 50*l*. and 100*l*. each. (Appendix, Table LL, p. 33*a*), and referring to the extent of their holdings, it appears that five hold 100 acres and upwards, and 33 hold 50 to 100 acres. (Appendix, *ibid*.) The effect of two alternative qualifications in this Union, as regards the numbers excluded, will be perceived from the following table.

RATHKEALE UNION, COUNTY OF LIMERICK.—EFFECT OF TWO ALTERNATIVE QUALIFICATIONS.

Number of £10. Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.				Number of the preceding who would be excluded by adopting a single qualification depending on being <i>rated</i> at the following amounts.			
				£8.	£10.	£15.	£20.
197.				18	35	73	94
				Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.*			
Number of the preceding who would be excluded by adopting a single qualification depending on <i>excess</i> of rating above rent, fixed at, the following amounts viz. :—	£1.	136	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	11	26	47	63
	£3.	156		17	34	61	80
	£5.	169		18	35	67	88
	£8.	182		18	35	73	94
	£10.	185		18	35	73	94

Appendix, Table NN, No. 16, p. 46*a*.

* Thus, if two new qualifications were substituted for the present one, the first depending on the occupier being rated at £20, the alternative qualification irrespective of the amount of rating, provided the latter exceeds the rent by £5, the number excluded would be 88. A qualification depending on being rated at £20, if adopted singly, would exclude 94; a qualification depending on an excess of rating above rent fixed at £5, and adopted as the only qualification, would exclude 169.

KILMALLOCK UNION, COUNTIES OF LIMERICK AND CORK.—EFFECT OF TWO QUALIFICATIONS.

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications

Unions in Munster.

Number of £10. Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.				Number of the preceding who would be excluded by adopting a single qualification depending on being <i>rated</i> at the following amounts.			
				£8.	£10.	£15.	£20.
				23	30	51	69
243.				Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.			
Number of the preceding who would be excluded by adopting a single qualification depending on <i>excess of rating above rent</i> fixed at the following amounts viz.:—	£1.	172	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	17	22	34	44
	£3.	191		20	26	42	53
	£5.	208		22	28	48	62
	£8.	217		23	29	49	64
	£10.	223		23	30	51	66

Appendix, Table (NN), No. 8, p 42 a.

Of the 208 who would be excluded by adopting a single test depending on an *5l. excess*. excess of *5l.* rating over rent, it will appear on referring to the tables that nine* hold 100 acres and upwards, and 38* hold between 50 and 100 acres. (Appendix, Table LL, p. 32 a.) And referring to their rents it appears that 15 pay 100*l.* and upwards each, and 45 pay between 50*l.* and 100*l.* each. (Appendix, *ibid.*)

The rents and areas of the holdings of the 22 who would be excluded if the *8l. rating and 5l. excess*. first qualification was fixed at *8l.*, and the second at *5l.*, will be perceived by the following analysis:—

1 of the 22 pays rent between 10*l.* and 20*l.*, and holds between 5 and 10 acres.

8* of the 22 pay rents from 5*l.* to 10*l.*

Of these, three hold from 5 to 10 acres.

five hold under 5 acres.

13 of the 22 pay under 5*l.* rent.

Of these, there are two who hold from 10 to 20 acres.

two who hold from 5 to 10 acres.

nine hold under 5 acres.

Total 22 (Table X, p. 22 c; and Appendix to Local Reports, p. 469 b.)

Referring to the rents and the holdings of the 62 excluded if the first qualification were fixed at 20*l.*, and the auxiliary qualification at 5*l.*, it appears that:—

20*l.* rating and 5*l.* excess.

2 of the 62 pay rent between 30*l.* and 40*l.*, and hold between 10 and 20 acres.

6* of the 62 pay rent of from 20*l.* to 30*l.* each.

And of these, one holds from 20 to 30 acres.

four hold from 10 to 20 acres.

one holds under 5 acres.

27* of the 62 pay rents of from 10*l.* to 20*l.* each.

Of these, one holds from 50 to 100 acres.

one holds from 40 to 50 acres.

six hold from 20 to 30 acres.

* These numbers, except where they indicate the highest or lowest amounts, are the successive differences of the adjacent columns in the tables referred to. The same is to be kept in mind throughout.

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in Munster.

ten hold from 10 to 20 acres.
six hold from 5 to 10 acres.
three under 5 acres.

14 of the 62 pay rents of from 5*l.* to 10*l.*

Of these, four hold from 20 to 30 acres.
one holds from 10 to 20 acres.
four hold from 5 to 10 acres.
five hold under 5 acres.

13 of the 62 pay rents under 5*l.*

Of these, two hold between 10 and 20 acres.
two hold between 5 and 10 acres.
nine hold under 5 acres.

Total 62 (Table X, p. 23 c ; and Appendix, Kilmallock.)

Limerick Union.

In the rural districts of the Union of Limerick the rents of 139 Ten-Pound County electors were ascertained. If for the present franchise were substituted a qualification depending on an excess of rating above rent, and fixed as high as 5*l.*, it would exclude 131 out of the 139.

The effect of adopting a single qualification, depending either on amount of rating or on excess of rating above rent, and that of adopting two such qualifications will be seen from the following table :—

LIMERICK UNION.—COUNTIES OF LIMERICK AND CLARE.—EFFECT OF TWO QUALIFICATIONS.

Number of £10 Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.			Number of the preceding who would be excluded by adopting a single qualification depending on being <i>rated</i> at the following amounts.			
139			£8.	£10.	£15.	£20.
			13	26	48	66
			Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.			

Number of the preceding who would be excluded by adopting a single qualification depending on <i>excess of rating above rent</i> fixed at the following amounts viz.:-	£1.	117	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	11	23	42	57
	£3.	127		13	25	47	64
	£5.	131		13	26	48	65
	£8.	133		13	26	48	65
	£10.	135		13	26	48	66

Appendix, Table (NN), No. 9, p. 43 a.

5*l.* excess.

On referring to the tables for the rents and the areas of the holdings of the 131 electors who would be excluded by the adoption of a single test depending on a 5*l.* excess of rating above rent, it appears that 5 of the 131 hold upwards of 100 acres, and 23 hold from 50 to 100 acres.—(See Appendix, Table LL, p. 32 a.) Referring to their rents it will be found that 7 of them pay upwards of 100*l.* each, and 16 pay from 50*l.* to 100*l.* each.—(*Ibid.*)

8*l.* rating and 5*l.* excess.

Referring to the rents and the areas of the holdings of the 13 who would be excluded by the adoption of two qualifications, one depending on a rating at 8*l.*, the other on an excess of 5*l.* rating over rent, it will be found that :—

2 of the 13 pay rents between 10 <i>l</i> . and 20 <i>l</i> . each, and hold between 20 and 30 acres.	
7 of the 13 pay rents between 5 <i>l</i> . and 10 <i>l</i> .	
And of these, one holds between 50 and 100 acres.	
two hold between 20 and 30 acres.	
one holds between 10 and 20 acres.	
three hold between 5 and 10 acres.	
4 of the 13 pay rent under 5 <i>l</i> .	
And of these, one holds between 10 and 20 acres.	
three hold under 5 acres.	
Total 13	(Table X, p. 25 c, and Appendix to Local Reports, p. 418 b.)

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in Munster.

Referring to the rents and areas of the holdings of the 65 who would be excluded by the adoption of two tests, one depending on a rating fixed at 20*l*., the other on an excess of rating above rent fixed at 5*l*., it will be found that :—

1 of the 65 pays rent between 30 <i>l</i> . and 40 <i>l</i> ., and holds between 30 and 40 acres.	
14 of the 65 pay rents between 20 <i>l</i> . and 30 <i>l</i> .	
And of these, two hold between 40 and 50 acres.	
four hold between 30 and 40 acres.	
four hold between 20 and 30 acres.	
four hold between 10 and 20 acres.	
30 of the 65 pay rent between 10 <i>l</i> . and 20 <i>l</i> .	
And of these, one holds between 40 and 50 acres.	
one holds between 30 and 40 acres.	
fourteen hold between 20 and 30 acres.	
twelve hold between 10 and 20 acres.	
two hold between 5 and 10 acres.	
15 of the 65 pay rent between 5 <i>l</i> . and 10 <i>l</i> .	
And of these, three hold between 50 and 100 acres.	
five hold between 30 and 40 acres.	
two hold between 20 and 30 acres.	
two hold between 10 and 20 acres.	
three hold between 5 and 10 acres.	
5 pay rent under 5 <i>l</i> .	
Of these, one holds between 10 and 20 acres.	
one holds between 5 and 10 acres.	
three are rated for tenements of which the land, if any, is under 5 acres.	
Total 65	(Table X, p. 26 c, and Appendix, Limerick.)

In Kanturk Union, in the county of Cork and county of Kerry, the rents of 30 county electors were ascertained ; of these, a single qualification depending on being rated at 8*l*. would exclude 1 ; a single qualification depending on a 5*l*. excess of rating above rent would exclude 26.

The effect of two such qualifications, fixed at other amounts adopted singly or as auxiliary to each other, will be seen by the following table :—

THIRD REPORT.

KANTURK UNION, COUNTIES OF CORK AND KERRY.—EFFECT OF TWO QUALIFICATIONS.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in Munster.

Number of £10 Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.				Number of the preceding who would be excluded by adopting a single qualification depending on being rated at the following amounts.			
				£8.	£10.	£15.	£20.
30				1	1	2	8
				Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.			
Number of the preceding who would be excluded by adopting a single qualification depending on excess of rating above rent fixed at the following amounts, viz. :—	£1.	19	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	1	1	2	4
	£3.	26		1	1	2	7
	£5.	26		1	1	2	7
	£8.	26		1	1	2	7
	£10.	26		1	1	2	7

Appendix, Table (NN), No. 7, p. 42 a.

5*l.* excess.

Referring to the tables for the rents and holdings of the 26 who would be excluded by adopting a qualification depending on an excess of 5*l.* rating above rent, it appears that 10 of them hold 100 acres and upwards, 5 hold between 50 and 100, and referring to their rents, it appears that 1 pays upwards of 100*l.*, and 6 pay from 50*l.* to 100*l.* (Appendix, Table LL, p. 32 a.)

8*l.* rating and 5*l.* excess.

Only 1 out of the 30 whose rents were ascertained in the Union would be excluded if two qualifications were adopted, the first being fixed at 8*l.* and the second at 5*l.* That elector pays a rent between 5*l.* and 10*l.*, and holds between 5 and 10 acres. Seven would be excluded if the first qualification were fixed at 20*l.* and the second at 5*l.* Of those 7,

20*l.* rating and 5*l.* excess.

1 pays a rent between 30*l.* and 40*l.* and holds between 40 and 50, acres.

5 pay rents between 10*l.* and 20*l.*, and hold between 30 and 40 acres.

1 pays a rent between 5*l.* and 10*l.* and holds between 5 and 10 acres.

Total 7 (Table X, pp. 19 c, 20 c, and Appendix to Local Reports, p. 533 b.)

Macroon Union.

In Macroon Union, in the county of Cork, the number of 10*l.* electors, of whom the rents, the areas of their holdings, and the valuations were ascertained, were 60. Of them, 2 would be excluded by a single qualification depending on a rating at 8*l.*, 35 would be excluded by a single qualification depending on a 5*l.* excess of rating above rent, 2 would be excluded by adopting those two tests as auxiliary qualifications. The following table gives the result for other amounts :—

MACROOM UNION, COUNTY OF CORK.—EFFECT OF TWO QUALIFICATIONS.

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in Munster.

Number of £10 Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained. 60.				Number of the preceding who would be excluded by adopting a single qualification depending on being rated at the following amounts.			
				£8.	£10.	£15.	£20.
				2	4	11	15
				Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.			
Number of the preceding who would be excluded by adopting a single qualification depending on excess of rating above rent fixed at the following amounts viz.—	£1.	19	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	1	1	3	4
	£3.	27		2	2	6	9
	£5.	35		2	4	10	13
	£8.	40		2	4	11	14
	£10.	44		2	4	11	15

Appendix, Table (NN), No. 15, p. 46 a.

Referring to the tables for the rents and holdings of the 35 who would be excluded by adopting a single qualification depending on excess of rating above rent fixed at 5*l.*, it will be found that 8 of the 35 hold 100 acres and upwards each, and 11 hold between 50 and 100 acres; and, referring to their rents, it appears that 3 pay rents of 100*l.* and upwards, and 6 pay between 50*l.* and 100*l.* (Appendix, Table LL, p. 33 a.)

Of the 2 who would be excluded if two qualifications were adopted, the first being fixed at 8*l.*, and the second at 5*l.*, it appears that—

- 1 pays rent between 5*l.* and 10*l.*, and holds under five acres.
- 1 pays under 5*l.* rent, and is rated for a tenement of which the land is under 5 acres.

Total 2 (Table X, p. 43 c, and Appendix to Local Reports, p. 528 b.)

Of the 13 who would be excluded if the first qualification was fixed at 20*l.*, and the second at 5*l.*—

- 7 pay rent between 10*l.* and 20*l.*
 - Of these, three hold between 50 and 100 acres.
 - two hold between 30 and 40 acres.
 - one holds between 20 and 30 acres.
 - one holds between 10 and 20 acres.
- 4 of the 13 pay rent between 5*l.* and 10*l.*
 - Of these, one holds between 5 and 10 acres.
 - three hold tenements, of which the land is under 5 acres.
- 2 of the 13 pay rents under 5*l.*, and hold tenements of which the land is under 5 acres.

Total 13 (Table X, p. 44 c, and Appendix, Macroom.)

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in Munster.

In Bandon Union, the rents and rating of 153 Ten-Pound electors were ascertained. Of these, 6 would be excluded by an 8*l.* rating adopted singly; 79 would be excluded by a 5*l.* excess of rating over rent, if adopted singly; 5 would be excluded if those tests were adopted as auxiliary qualifications. The following table gives the result of adopting other qualifications.

BANDON UNION, COUNTY OF CORK.—EFFECT OF TWO QUALIFICATIONS.

Number of £10 Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.				Number of the preceding who would be excluded by adopting a single qualification, depending on being rated at the following amounts.			
				£8.	£10.	£15.	£20.
153.				6	6	16	30
				Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.			
Number of the preceding who would be excluded by adopting a single qualification, depending on excess of rating above rent fixed at the following amounts viz.—	£1.	55	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	2	2	3	11
	£3.	60		3	3	4	12
	£5.	79		5	5	12	24
	£8.	93		6	6	13	27
	£10.	99		6	6	13	27

Appendix, Table (NN), No. 2, p. 39 a.

5*l.* excess.

Of the 79 who would be excluded by a qualification depending on an excess of rating above rent, there are 4 who hold 100 acres and upwards, and 27 who hold from 50 to 100 acres; 7 hold from 40 to 50 acres. (Appendix, Table LL, p. 31 a.)

8*l.* rating and 5*l.* excess.

Tracing the holdings and the rents of the 5 who would be excluded if the first franchise were fixed at 8*l.*, and the second at 5*l.* it appears that—

2 of the 5 pay rents between 5*l.* and 10*l.*

Of these, one holds between 5 and 10 acres.

one holds under 5 acres.

2 of the 5 pay rents under 5*l.*, and hold tenements of which the land is under 5 acres.

1 of the 5 pays no rent, and holds between 10 and 20 acres.

Total 5

(Table X, p. 4 c, and Local Reports, Appendix, p. 80.)

20*l.* rating and 5*l.* excess.

Referring to the rents and holdings of the 24 who are rated under 20*l.*, and who would not be admitted by a franchise depending on a 5*l.* excess of rating over rent, it appears that—

3 pay rents between 20*l.* and 30*l.*

And of these, one holds between 40 and 50 acres.

two hold between 20 and 30 acres.

10 of the 24 pay rents between 10*l.* and 20*l.*

And of these, one holds between 40 and 50 acres.

one holds between 30 and 40 acres.

two hold between 20 and 30 acres.

five hold between 10 and 20 acres.

one is rated for a tenement, of which the land is under 5 acres.

8 of the 24 pay rents from 5*l.* to 10*l.*

And of these, one holds between 40 and 50 acres.
 two hold between 20 and 30 acres.
 one holds between 10 and 20 acres.
 two hold between 5 and 10 acres.
 two are rated for tenements, of which the land is
 under 5 acres.

2 of the 24 pay rents under 5*l.*, and are rated for tenements, of which
 the land is under 5 acres.

1 of the 24 pays no rent, and holds between 10 and 20 acres.

Total 24

(Table X, p. 5 c, and Appendix, Bandon.)

THIRD REPORT.

Ten-Pound County
 Electors.

Effect of a Quali-
 fication depending
 on Excess of Rating
 above Rent.

Effect of Two
 alternative
 Qualifications.

Unions in Munster.

In Fermoy Union the rents of 118 10*l.* electors were ascertained. Of these it appears that a qualification depending on an 8*l.* rating would not exclude any. A qualification depending on a 5*l.* excess of rating above rent would exclude 95. The following table gives the result of adopting tests at other amounts :—

FERMOY UNION, COUNTY OF CORK.—EFFECT OF TWO QUALIFICATIONS.

Number of £10 Electors, registered 1833 to 1840, whose rents and rating were ascertained. 118.				Number of the preceding who would be excluded by adopting a single qualification, depending on being rated at the following amounts.			
				£8.	£10.	£15.	£20.
				..	4	17	27
				Of whom there would remain excluded, notwithstanding an alternative qualification, as fixed in margin.			
Number of the preceding who would be excluded by adopting a single qualification, depending on excess of rating above rent fixed at the following amounts, viz. :—	£1.	78	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	..	3	13	20
	£3.	85		..	3	14	22
	£5.	95		..	4	16	25
	£8.	105		..	4	17	27
	£10.	108		..	4	17	27

Appendix, Table (NN), No. 6, p. 41 a.

Of the 95 who would be excluded by a qualification depending on a 5*l.* excess of rating over rent, there are 12 who pay rents of 100*l.* or upwards ; 29 who pay rents from 50*l.* to 100*l.* ; 5 who pay rents from 40*l.* to 50*l.* ; 11 who pay rents from 30*l.* to 40*l.*—(Appendix, Table LL, p. 31 a.)

Of the 4 in this Union who are rated at sums under 10*l.*, and who would not be admitted by a qualification depending on a 5*l.* excess of rating above rent, it appears that,—

1 pays rent between 10*l.* and 20*l.*

3 pay rents between 5*l.* and 10*l.*

Total 4

(Table X, p. 16 c ; and Local Reports, Appendix, p. 133.)

Referring to the rents of the 25 who are rated at sums under 20*l.*, and who would not be admitted by the second qualification if fixed at 5*l.*, it appears that,—

8 of the 25 pay rents between 20*l.* and 30*l.*

5*l.* excess.

8*l.* rating and 5*l.*
 excess.

20*l.* rating and 5*l.*
 excess.

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualification

Unions in Munster.

13 of the 25 pay rents between 10% and 20%.

4 of the 25 pay rents between 5% and 10%.

Total 25

(Table X, p. 17 c; and Appendix, Fermoy.)

In Listowel Union the rents, valuations, and areas of the holdings of 217 10% electors were ascertained. A single qualification, depending on a rating of 8%, would exclude 38. A single qualification, depending on a 5% excess of rating above rent, would exclude 179. Those two tests adopted as auxiliary qualifications would exclude 35.

LISTOWEL UNION, COUNTY KERRY.—EFFECT OF TWO QUALIFICATIONS.

Number of £10 Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.				Number of the preceding who would be excluded by adopting a single qualification, depending on being rated at the following amounts.			
				£8.	£10.	£15.	£20.
				38	54	90	115
217.				Of whom there would remain excluded notwithstanding an alternative qualification, fixed as in margin.			
Number of the preceding who would be excluded by adopting a single qualification, depending on excess of rating above rent fixed at the following amounts viz. :—	£1.	108	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	14	23	37	51
	£3.	154		30	42	70	88
	£5.	178		34	48	80	102
	£8.	193		38	54	90	112
	£10.	203		38	54	90	114

Appendix, Table (NN), No. 11, p. 44 a.

5% excess.

Of the 178 who would be excluded by a test depending on a 5% excess of rating above rent, 17 hold 100 acres and upwards, 48 hold between 50 and 100, and 19 between 40 and 50.

And referring to the rents to which they are subject, it appears that 2 pay rents of 100% and upwards, 11 from 50% to 100%, 9 from 40% to 50%, and 5 are not subject to any rent. (Appendix, Table LL, p. 32 a.)

8% rating and 5% excess.

Referring to the rents and the areas of the holdings of the 34 who would be excluded by an 8% rating, with an auxiliary franchise, depending on excess of rating above rent, fixed at 5%, it appears that of the 35 electors who would be in that case excluded,—

9 pay between 5% and 10% rent.

Of these, one holds between 30 and 40 acres.

one holds between 20 and 30 acres.

three hold between 10 and 20 acres.

two hold between 5 and 10 acres.

two hold under 5 acres.

20 pay under 5% rent.

Of these, one holds between 30 and 40 acres.

one holds between 20 and 30 acres.

eight hold between 10 and 20 acres.

one holds between 5 and 10 acres.

nine are rated for tenements of which the land is under 5 acres.

5 are subject to no rent.

Of these, five hold tenements of which the land is under 5 acres.

Total 34 (Table X. p. 31 *c*; and Appendix to Local Reports, p. 236 *b*.)

The areas and rents of the 102 who would be excluded if the first qualification were fixed at 20*l*. and the second at 5*l*., are as follows:—

- 5 of the 102 hold 100 acres and upwards.
Of these, one pays a rent between 20*l*. and 30*l*.
four pay rents between 10*l*. and 20*l*.
- 11 of the 102 hold between 50 and 100 acres.
Of these, four pay rents between 20*l*. and 30*l*.
six pay rents between 10*l*. and 20*l*.
one pays a rent between 5*l*. and 10*l*.
- 4 of the 102 hold between 40 and 50 acres.
Of these, each pay rents between 10*l*. and 20*l*.
- 11* of the 102 hold between 30 and 40 acres.
Of these, five pay rents between 10*l*. and 20*l*.
five pay rents between 5*l*. and 10*l*.
one pays a rent under 5*l*.
- 20 of the 102 hold between 20 and 30 acres.
Of these, two pay rents between 20*l*. and 30*l*.
fourteen pay rents between 10*l*. and 20*l*.
three pay rents between 5*l*. and 10*l*.
one pays a rent under 5*l*.
- 29 of the 102 hold between 10 and 20 acres.
Of these, two pay rents between 20*l*. and 30*l*.
eight pay rents between 10*l*. and 20*l*.
eleven pay rents between 5*l*. and 10*l*.
eight pay rents under 5*l*.
- 4 of the 102 hold between 5 and 10 acres.
Of these, three pay rents between 5*l*. and 10*l*.
one pays a rent under 5*l*.
- 18 of the 102 hold under 5 acres.
Of these, one pays a rent between 30*l*. and 40*l*.
one pays a rent between 10*l*. and 20*l*.
two pay rents between 5*l*. and 10*l*.
nine under 5*l*.
five appear to be owners of their holdings being subject to no rent.

Total 102

(Table X, p. 32 *c*; and Appendix, Listowel.)

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in Munster.

In Cashel Union, the rents, valuations, and areas of the holdings of 141 Cashel Union. 10*l*. electors were ascertained. Of these 11 would be excluded by a test depending on a rating at 8*l*. if adopted singly; 122 would be excluded by a test depending at 5*l*. excess of rating above rent, 11 would be excluded, if those two tests were adopted as auxiliary qualifications.

THIRD REPORT.

CASHEL UNION, COUNTY OF TIPPERARY.—EFFECT OF TWO QUALIFICATIONS.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in Munster.

Number of £10 Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.				Number of the preceding who would be excluded by adopting a single qualification, depending on being rated at the following amounts.			
				£8.	£10.	£15.	£20.
141				11	18	41	54
				Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.			
Number of the preceding who would be excluded by adopting a single qualification, depending on excess of rating above rent fixed at the following amounts viz.—	£1.	109	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	10	17	35	42
	£3.	118		11	18	38	48
	£5.	122		11	18	39	49
	£8.	125		11	18	40	53
	£10.	132		11	18	40	53

Appendix, Table (NN), No. 3, p. 40 a.

5*l.* excess.

Of the 122 who would be excluded by a test depending at a 5*l.* excess of rating above rent, 10 hold tenements of 100 acres each and upwards, and 21 hold from 50 to 100 acres each. Referring to the rents of those excluded, it appears that there are 5 who each pay rents amounting to 100*l.* and upwards, and 22 who each pay rents from 50*l.* to 100*l.*—(Appendix, Table, LL, p. 31 a.)

8*l.* rating and 5*l.* excess.

Referring to the rents and areas of the holdings of the 11 who would be excluded by adopting two tests, one depending on an 8*l.* rating, and the other on a 5*l.* excess of rating over rent, they appear to be as follows:—

2 hold between 20 and 30 acres.

Of these one is subject to a rent under 5*l.*, the other pays between 5*l.* and 10*l.*

2 hold between 10 and 20 acres. For which they pay rents between 5*l.* and 10*l.*

2 hold between 5 and 10 acres.

Of these, one pays rent between 5*l.* and 10*l.*, one pays rent under 5*l.*

5 hold under 5 acres.

One of these pays a rent between 10*l.* and 20*l.*, three pay rent between 5*l.* and 10*l.*, one pays a rent under 5*l.*

Total 11 (Table X, p. 7 c, and Appendix to Local Reports, p. 205 b.)

20*l.* rating and 5*l.* excess.

Referring to the rents and areas of the holdings of the 94 who would be excluded by the adoption of two such qualifications, the first being fixed at 20*l.* and the second at 5*l.*, it appears that—

1 of the 49 holds 100 acres and upwards, for which he pays a rent between 10*l.* and 20*l.*

1 holds between 50 and 100 acres, for which he pays a rent between 10*l.* and 20*l.*

1 holds between 40 and 50 acres, for which he pays a rent between 10*l.* and 20*l.*

1 holds between 30 and 40 acres, for which he pays a rent between 5*l.* and 10*l.*

11 of the 49 hold between 20 and 30 acres.

Of these, three pay rents between 20*l.* and 30*l.*

six pay rents between 10*l.* and 20*l.*

one pays rent between 5*l.* and 10*l.*

one pays rent under 5*l.*

22 of the 49 hold between 10 and 20 acres.

Of these one pays rent between 20*l.* and 30*l.*

sixteen pay rents between 10*l.* and 20*l.*

five pay rents between 5*l.* and 10*l.*

2 of the 49 hold between 5 and 10 acres.

Of these, one pays rent between 5*l.* and 10*l.*

one pays rent under 5*l.*

10 of the 49 hold under 5 acres.

Of these, one pays rent between 20*l.* and 30*l.*

four pay rents between 10*l.* and 20*l.*

four pay rents between 5*l.* and 10*l.*

one pays rent under 5*l.*

Total 49

(Table X, p. 8 c, and Appendix, Cashel.)

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in Munster.

In Tipperary Union, of 103 10*l.* electors whose rents and valuations were ascertained, 6 would be excluded by a single test depending on a rating at 8*l.*; 93 would be excluded by a single test depending on 5*l.* excess of rating above rent; 6 would be excluded by adopting these two tests as auxiliary qualifications.

Tipperary Union.

TIPPERARY UNION, COUNTIES OF TIPPERARY AND LIMERICK.—EFFECT OF TWO QUALIFICATIONS.

Number of £10 Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.			Number of the preceding who would be excluded by adopting a single qualification, depending on being <i>rated</i> at the following amounts				
103			£8.	£10.	£15.	£20.	
			6	12	21	33	
			Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.				
Number of the preceding who would be excluded by adopting a single qualification, depending on <i>excess of rating above rent</i> fixed at the following amounts viz.—	£1.	85	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	6	12	19	27
	£3.	90		6	12	20	30
	£5.	93		6	12	20	31
	£8.	95		6	12	20	31
	£10.	100		6	12	21	32

Appendix, Table (NN), No. 19, p. 48 a.

Referring to the rents and the areas of the holdings, of the 93 who would be 5*l.* excess. excluded by adopting a single test depending on a 5*l.* excess of rating above rent, it appears that 5 of them hold each upwards of 100 acres, and 18 hold from 50 to 100 acres each. Referring to their rents, it appears that there are 7 of them who each pay a rent of 100*l.* and upwards, and 25 pay each from 50*l.* to 100*l.* (Appendix, Table LL, p. 34 a.)

THIRD REPORT.

*Ten-Pound County
Electors.*

Effect of a Qualifi-
cation depending
on Excess of Rating
above Rent.

Effect of Two
Qualifications.

Referring to the extent of the holdings and the rents of the 6 who are rated under 8*l.*, and who would also be excluded by a qualification depending on an excess of 5*l.* above rent, there are,—

2 who pay rents between 10*l.* and 20*l.*

Of these, one holds between 20 and 30 acres.

one holds between 5 and 10 acres.

4 of the 6 pay rents between 5*l.* and 10*l.*

And of these, one holds between 10 and 20 acres.

one holds between 5 and 10 acres.

two hold under 5 acres.

Total 6 (Table X, p. 55 *c*, and Appendix to Local Reports, p. 134 *b*.)

20*l.* rating and 5*l.*
excess.

The rents and holdings of the 31 who are rated under 20*l.*, and who would also be excluded by a qualification depending on an excess of rating above rent, there are,—

2 who pay rents of from 30*l.* to 40*l.*

And of these, one holds between 10 and 20 acres.

one holds under 5 acres.

6 of the 31 pay rents of from 20*l.* to 30*l.*

And of these, two hold between 30 and 40 acres.

two hold between 20 and 30 acres.

two hold between 10 and 20 acres.

17 of the 31 pay rents of from 10*l.* to 20*l.*

And of these, one holds 100 acres and upwards.

one holds from 50 to 100 acres.

three hold from 40 to 50 acres.

two hold from 20 to 30 acres.

five hold from 10 to 20 acres.

one holds from 5 to 10 acres.

four are rated for tenements, of which the land is under 5 acres.

6 of the 31 pay rents of from 5*l.* to 10*l.*

And of these, two hold between 10 and 20 acres.

two hold between 5 and 10 acres.

two are rated for tenements, of which the land is under 5 acres.

Total 31 (Table X, p. 56 *c*, and Appendix, Tipperary.)

Waterford Union.

In Waterford Union, the number of tenements of 10*l.* electors, of which the rents, valuations, and areas were ascertained, is 43. Of these, only 2 would be excluded by adopting a single test depending on a rating of 8*l.*; 32 of the 43 would be excluded by adopting a single test depending on 5*l.* excess of rating over rent. By adopting these two tests together as auxiliary qualifications, the number excluded would be 3.

WATERFORD UNION, COUNTIES OF WATERFORD AND KILKENNY.—EFFECT OF TWO QUALIFICATIONS.

Number of £10 Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.				Number of the preceding who would be excluded by adopting a single qualification, depending on being <i>rated</i> at the following amounts.			
				£8.	£10.	£15.	£20.
				3	5	8	11
43				Of whom there would remain excluded, notwithstanding an alternative qualification in margin.			
Number of the preceding who would be excluded by adopting a single qualification, depending on <i>excess of rating above rent</i> fixed at the following amounts viz.—	£1.	30	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	2	3	6	9
	£3.	32		3	5	8	11
	£5.	32		3	5	8	11
	£8.	33		3	5	8	11
	£10.	34		3	5	8	11

Appendix, Table (NN), No. 20, p. 48 *a*.

Comparing the rents, valuations, and areas of the holdings of the 32 who would be excluded by adopting a single qualification depending on an excess of 5*l.* rating over rent, it appears that 3 of the 32 hold tenements each of 100 acres and upwards; 7 hold tenements each of 50 to 100 acres.—(Appendix, Table LL, p. 34 *a*.) And referring to their rents, it appears that 5 pay rents each of 100*l.* and upwards, and 8 pay rents each from 50*l.* to 100*l.*—(Appendix, *ibid.*)

On referring to the rents and the areas of the holdings of the 3 who are rated under 8*l.*, and who would not be admitted by the second qualification if fixed at 5*l.*, it will be found that there are,—

- 2 who pay rents from 5*l.* to 10*l.*, and hold under 5 acres.
 1 pays under 5*l.* rent, and is rated for a tenement, of which the land is 5 acres.

Total 3 (Table X, p. 58 *c*, and Appendix to Local Reports, p. 439 *b*.)

The rents and areas of the holdings of the 11 who are rated under 20*l.*, and who would not be preserved by a franchise depending on an excess of rating above rent,—

- 1 pays a rent exceeding 40*l.*, and holds between 10 and 20 acres.
 1 pays a rent exceeding 20*l.*, and holds between 10 and 20 acres,
 5 of the 11 pay rent from 10*l.* to 20*l.*

Of these, one holds between 20 and 30 acres.

four hold between 10 and 20 acres.

- 3 of the 11 pay rents from 5*l.* to 10*l.*, and hold under 5 acres.
 1 of the 11 pays rent under 5*l.*, and holds under 5 acres.

Total 11 (Table X, p. 59 *c*, and Appendix, Waterford.)

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in Munster.

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in Munster.

In Lismore Union the number whose rents were ascertained was 83; of these a single qualification by rating fixed at 8*l.* would exclude 7. A single qualification depending on excess of rating above rent, fixed at 5*l.*, would exclude 25. If both qualifications were adopted the number excluded would be 5.

LISMORE UNION, COUNTY OF WATERFORD.—EFFECT OF TWO QUALIFICATIONS.

Number of £10 Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.				Number of the preceding who would be excluded by adopting a single qualification depending on being rated at the following amounts.			
				£8.	£10.	£15.	£20.
83				7	16	25	39
				Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.			
Number of the preceding who would be excluded by adopting a single qualification, depending on excess of rating above rent fixed at the following amounts viz. :—	£1.	8	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	1	1	1	2
	£3.	13		1	2	2	4
	£5.	25		5	8	8	11
	£8.	38		7	16	18	24
	£10.	48		7	16	24	31

Table (NN), No. 10, p. 43 *a.*

5*l.* excess.

Referring to the tables, for the areas and rents of the holdings of the 25 who would be excluded by adopting a single qualification, depending on an excess of 5*l.* rating over rent, it will be found that 3 hold 100 acres and upwards, and 2 hold between 50 and 100 acres. Referring to their rents it appears that 1 pays 100*l.* and upwards, and 5 pay between 50*l.* and 100*l.* each.—(Appendix, Table LL, p. 32 *a.*)

8*l.* rating and 5*l.* excess.

The 5 in this Union who are rated under 8*l.*, and who would also be excluded by a test depending on an excess of 5*l.* rating over rent, are rated for tenements of which the land is under 5 acres, and they are subject to rents not amounting to 5*l.*

20*l.* rating and 5*l.* excess.

The holdings and the rents of the 11 who are rated under 20*l.*, and who would not be preserved by the second qualification if fixed at 5*l.* :—

3 pay a rent from 10*l.* to 20*l.*, and hold between 20 and 30 acres.

1 of the 11 pays from 5*l.* to 10*l.*, and holds under 5 acres.

7 of the 11 are rated for tenements, of which the land is under 5 acres; the rents to which they are subject are under 5*l.*

Total. . 11

(Table X, pp. 28 *c*, 29 *c*; and Appendix to Local Reports, 316 *b.*)

In Dungarvan Union, in the County of Waterford, the number of tenements of 10*l.* electors, of which the rents, valuations, and areas could be ascertained, is 62. Of these, 59 would be excluded by adopting a single test depending on a rating of 8*l.*; 32 of the 43 would be excluded by adopting a single test depending on 5*l.* excess of rating over rent. By adopting these two tests together as auxiliary qualifications, the number excluded would be 3.

DUNGARVAN UNION, COUNTY OF WATERFORD.—EFFECT OF TWO QUALIFICATIONS.

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in Munster.

Number of £10 Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.				Number of the preceding who would be excluded by adopting a single qualification depending on being rated at the following amounts.			
				£8.	£10.	£15.	£20.
62				59	61	61	62
Number of the preceding who would be excluded by adopting a single qualification depending on excess of rating above rent fixed at the following amounts viz.				Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.			
				£1.	40	40	40
				£3.	56	54	56
				£5.	60	58	60
				£8.	61	59	61
				£10.	61	59	61

Appendix, Table (NN), No. 5, p. 41 a.

Comparing the rents, valuations, and areas of the holdings of the 60 who would be excluded by adopting a single qualification depending on an excess of 5*l.* rating over rent, it appears that 9 of the 60 hold tenements each of 50 acres and upwards; 8 hold tenements each of 40 to 50 acres.—(Appendix, Table LL. p. 31 a.) And referring to their rents, it appears that 14 pay rents each from 5*l.* to 10*l.*—(Appendix, *ibid.*)

On referring to the rents and the areas of the holdings of the 58 who are rated under 8*l.*, and who would not be admitted by the second qualification if fixed at 5*l.*, it will be found that none of them hold less than 10 acres of land.

8 of the 58 hold 50 acres and upwards.

7 between 40 and 50 acres.

11 between 30 and 40.

20 between 20 and 30.

12 between 10 and 20.

Total 58 (Table X, p. 13 c; and Appendix to Local Reports, p. 305 b.)

Unions in Leinster.

Roscrea Union.

In Roscrea Union, the greater part of which is in the province of Leinster, there was an opportunity of ascertaining the rents, areas, and valuation of 111 tenements of 10*l.* electors. Of these an 8*l.* rating adopted as a single test would exclude 13. A 5*l.* excess of rating over rent if adopted as a single test would exclude 96. If these two tests were adopted as auxiliary qualifications the number excluded would be 13.

THIRD REPORT.

ROSCREA UNION, KING'S COUNTY, QUEEN'S COUNTY, AND TIPPERARY.—EFFECT OF TWO QUALIFICATIONS.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating

Effect of Two alternative Qualifications.

Unions in Leinster.

Number of £10 Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.					Number of the preceding who would be excluded by adopting a single qualification depending on being rated at the following amounts.			
					£8.	£10.	£15.	£20.
111					13	16	35	62
					Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.

	£10.	107			13	16	35	61

Appendix, Table (NN), No. 17, p. 47 *a*.5*l*. excess.

Referring to the areas of the holdings of the 96 who would be excluded by a test of 5*l*. excess of rating above rent, it appears that 5 of them hold upwards of 100 acres each, and 14 hold from 50 to 100 acres each; and referring to their rents it appears that 10 pay from 50*l*. to 100*l*. each.—(Appendix, Table LL p 34 *a*.)

8*l*. rating and 5*l*. excess.

The extent of the holdings and the rents of the 13 who are rated under 8*l*., who would not be admitted by the second qualification if fixed at 5*l*., there are :—

- 2 pay rents of from 10*l*. to 20*l*., and hold between 10 and 20 acres.
- 8 pay rents of from 5*l*. to 10*l*.

And of these, one holds between 10 and 20 acres.
four hold between 5 and 10 acres.
three hold under 5 acres.

- 3 pay rents under 5*l*., and are rated for tenements of which the land is under 5 acres.

Total 13 (Table X. p. 49 *c*; and Appendix to Local Reports, p. 171 *b*.)

20*l*. rating and 5*l*. excess.

The holdings and the rents of the 55 who are rated under 20*l*., and who would not be admitted by the second qualification if fixed at 5*l*., are as follows :—

- 10 of the 55 pay rents of from 20*l*. to 30*l*.

And of these, two hold from 40 to 50 acres.
six hold from 20 to 30 acres.
one hold from 10 to 20 acres.
one is rated for a tenement, of which the land is under 5 acres.

- 31 of the 55 pay rents of from 10*l*. to 20*l*.

And of these, three hold from 50 to 100 acres.
two hold from 40 to 50 acres.
one holds from 30 to 40 acres.
seven hold from 20 to 30 acres.
fourteen hold from 10 to 20 acres.

one holds from 5 to 10 acres.
three are rated for tenements, of which the land
is under 5 acres.
11 of the 55 pay rents of from 5*l.* to 10*l.*
And of these, two hold from 10 to 20 acres.
four hold from 5 to 10 acres.
five hold under 5 acres.
3 of the 55 are subject to rents under 5*l.*, and are rated for tene-
ments of which the land is under 5 acres.

Total 55 (Table X, p. 50 c ; and Appendix, Roscrea.)

THIRD REPORT.
Ten-Pound County Electors.
Effect of a Quali-
fication depending
on Excess of Rating
above Rent.
Effect of Two
alternative
Qualifications.
Unions in Leinster.

In the Longford Union, the greater part of which is in the county of Longford, Longford Union.
but which extends into the county Roscommon, the rents of 127 10*l.* electors were
ascertained.

Of these 82 would be excluded by substituting for the present franchise a single
qualification, depending on an excess of 5*l.* rating above rent.

The effect of adopting two qualifications, one depending on amount of rating, the
other on excess of rating above rent, will be seen from the following table :—

LONGFORD UNION, COUNTY LONGFORD.—EFFECT OF TWO QUALIFICATIONS.

Number of £10. Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.				Number of the preceding who would be excluded by adopting a single qualification depending on being <i>rated</i> at the following amounts.						
				£8.	£10.	£15.	£20			
				2	8	25	57			
127				Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.						
Number of the preceding who would be excluded by adopting a single qualification depending on <i>excess of rating above rent</i> fixed at the following amounts viz. :—				£1.	24	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	1	1	5	13
				£3.	49		1	4	12	24
				£5.	82		2	5	19	41
				£8.	110		2	8	24	54
				£10.	121		2	8	25	57

Appendix, Table (NN), No. 13, p. 45 a.

Referring to the table showing the areas of the holdings of the 82 electors who 5*l.* excess.
would be excluded by adopting a single qualification, depending on a 5*l.* excess of
rating above rent, it appears that four hold between 50 and 100 acres, and five hold
from 40 to 50 acres.

One pays rent between 50*l.* and 100*l.*, and three pay rents between 40*l.* and 50*l.*
each.—(Appendix, Table LL, p. 33 a.)

Referring to the table showing the rents and the areas of the holdings of the two 8*l.* rating, and 5*l.*
who would be excluded by the substitution for the present franchise of two quali- excess.
fications, one depending on an 8*l.* rating and the other on an excess of 5*l.* rating over
rent, it appears that of those two voters one pays rent between 10*l.* and 20*l.*, and
holds between 10 and 20 acres ; the other holds between 10 and 20 acres, and is
subject to a rent under 5*l.*—(Table X, p. 37 c ; and Local Reports, Appendix, p. 20.)

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in Connaught.

Referring to the tables for the rents and holdings of the 21 who would be excluded by adopting a single qualification depending on excess of rating above rent fixed at 5*l.*, it will be found that 20 of the 21 hold 10 acres and upwards each; and, referring to their rents, it appears that 1 pays a rent of 50*l.* and upwards, and the number who pay upwards of 10*l.* each is 14. (Appendix, Table LL, p. 34 *a.*)

Of the 7 who would be excluded if two qualifications were adopted, the first being fixed at 8*l.*, and the second at 5*l.*, it appears that—

6 of the 7 hold between 10 and 20 acres.

Of these, one pays a rent between 10*l.* and 20*l.*

three pay rents between 5*l.* and 10*l.*

two pay rents under 5*l.*

1 holds between 5 and 10 acres.

He pays a rent between 10*l.* and 20*l.*

Total 7 (Table X, p. 52 *c.*; and Appendix to Local Reports, p. 123 *b.*)

Of the 15 who would be excluded if the first qualification was fixed at 20*l.*, and the second at 5*l.*—

4 of the 15 hold between 20 and 30 acres.

Each of these pays rents between 10*l.* and 20*l.*

10 of the 15 hold between 10 and 20 acres.

Of these, three pay rents between 10*l.* and 20*l.*

five pay rents between 5*l.* and 10*l.*

two pay rents under 5*l.*

1 of the 15 holds between 5 and 10 acres.

He pays between 10*l.* and 20*l.* rent.

Total 15 (Table X, p. 53 *c.*; and Appendix, Sligo.)

*Unions in Ulster.**Armagh Union.*

In the Union of Armagh the number of electors whose rents were ascertained, is 33. Of these, it appears that by substituting for the present franchise a single qualification depending on rating at 8*l.*, the number excluded would be two. By substituting a single test depending on an excess of rating above rent, fixed at 5*l.*, there would be 15 excluded.

If two qualifications were substituted for the present franchise, one depending on a rating at 8*l.*, and the auxiliary qualification depending on an excess of rent above rating fixed at 5*l.*, two of the 33 whose rents were ascertained would be excluded.

If the qualification by amount of rating were fixed at 20*l.*, and the auxiliary qualification at 5*l.*, there would be 14 excluded out of the 33.

The following table will show the effect of adopting two such qualifications fixed at various amounts.

ARMAGH UNION, COUNTY ARMAGH.—EFFECT OF TWO QUALIFICATIONS.

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualification.

Unions in Ulster.

Number of £10. Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.			Number of the preceding who would be excluded by adopting a single qualification depending on being <i>rated</i> at the following amounts.				
33.			£8.	£10.	£15.	£20.	
			2	4	14	20	
			Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.				
Number of the preceding who would be excluded by adopting a single qualification depending on <i>excess of rating above rent</i> fixed at the following amounts, viz:—	£1.	8	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	1	2	6	7
	£3.	12		2	4	9	11
	£5.	15		2	4	10	14
	£8.	22		2	4	14	19
	£10.	23		2	4	14	19

Appendix, Table (NN), No. 1, p. 39 *a*.

Of the 15 who would be excluded by the adoption of a single test depending on an excess of 5*l.* above rent, it appears that one pays a rent of 50*l.* and upwards, and another pays a rent between 40*l.* and 50*l.* (Appendix, Table L L, p. 30 *a*.)

On referring to the rents and the extent of the holdings of the two who are rated at sums under 8*l.* and who would not be admitted by the second qualification if fixed at 5*l.*, it appears that one of them pays a rent exceeding 10*l.* The other is subject to a rent not amounting to 5*l.* and holds from 5 to 10 acres.

With regard to the rents and the areas of the holdings of the 14 electors who would be excluded by substituting for the present franchise two qualifications, one depending on a rating at 20*l.* and the other on an excess of rating above rent fixed at 5*l.*, it appears that,—

1 pays a rent exceeding 50*l.*

9 pay rents from 10*l.* to 20*l.*

3 pay rents from 5*l.* to 10*l.*

Of these, two hold from 10 to 20 acres each,
one holds from 5 to 10 acres.

1 is subject to a rent under 5*l.* and holds from 5 to 10 acres in this Union, but it appears that his qualification arises partly out of land in another Union.

Total 14

(Table X, p. 2 *c*; and Appendix to Local Reports, p. 85 *b*.)

In the Union of Londonderry, the only electors whose rents were ascertained are persons on one estate who hold under leases 70 years old; and on referring to the table of electors in the Appendix to that Union, it will be found that the rents to which they are subject appear to be merely head rents, frequently not amounting to one-fifth of the sums at which they are valued: upon these electors, therefore, a qualification depending on an excess of rating above rent would not

Londonderry Union

THIRD REPORT.
 Ten-Pound County
 Electors.
 Effect of a Qualifi-
 cation depending
 on Excess of Rating
 above Rent.
 Effect of Two
 alternative
 Qualifications.
 Unions in Ulster.

operate with the same severity as upon 10*l.* electors in general. It appears that of the 46 10*l.* electors whose rent was ascertained in this Union, only 2 would be excluded by substituting for the present franchise a qualification depending on an excess of rating above rent fixed at 5*l.*

The effect on these 46 electors of adopting two qualifications, one depending on amount of rating, the other on excess of rating above rent, will be seen from the following table :—

LONDONDERRY UNION, COUNTY OF LONDONDERRY AND COUNTY OF DONEGAL.—EFFECT OF TWO QUALIFICATIONS.

Number of £10 Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.				Number of the preceding who would be excluded by adopting a single qualification depending on being rated at the following amounts.			
				£8.	£10.	£15.	£20.
				1	2	4	8
46.				Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.			
Number of the preceding who would be excluded by adopting a single qualification depending on excess of rating above rent fixed at the following amounts, viz. :—	£1.	1	Of whom there would remain excluded notwithstanding an alternative qualification fixed as above.	1	1	1	1
	£3.	1		1	1	1	1
	£5.	2		1	2	2	2
	£8.	5		1	2	4	4
	£10.	7		1	2	4	5

Appendix, Table (NN), No. 12, p. 44 a.

As these 46 electors hold under leases 70 years old, it may be inferred from this result that the effect on the other electors in this Union, whose rents were not ascertained, of a qualification depending on an excess of rating above rent would be to exclude a larger proportion.

5*l.* excess.

Referring to the table showing the areas of the holdings of the 2 electors who would be excluded by adopting a single qualification, depending on a 5*l.* excess of rating above rent, it appears that one holds between 30 and 40 acres, for which he is only subject to a rent between 4*l.* and 5*l.*, and the other holds between 8 and 10 acres, and pays between 9*l.* and 10*l.* (Appendix, Table L L, p. 33 a.) The former would be admitted by a qualification depending on being rated at 8*l.*, but the latter would remain excluded.

If the qualifications adopted were a 20*l.* rating and a 5*l.* excess of rating above rent, both would be excluded. (Table X, pp. 34 c, 35 c ; and Appendix to Local Reports, p. 54 b.)

Cootehill Union.

In Cootehill Union the number of Ten-pound electors whose rents were ascertained is 249. If for the present franchise a qualification were substituted depending on the valuation of the tenement of the occupier exceeding the rent by 5*l.*, it appears that out of the 249 there would be 149 excluded from the elective franchise.

If two qualifications, one depending on being rated at 8*l.*, and the other on an excess of rating above rent fixed at 5*l.*, the number excluded would be 9. If the first qualification were fixed at 20*l.*, and the second at 5*l.*, the number excluded would be 98. The effect in respect of the numbers excluded of adopting two such qualifications, fixed at these and other amounts, will appear from the following table :—

COOTEHILL UNION, COUNTY CAVAN and COUNTY MONAGHAN.—EFFECT OF TWO QUALIFICATIONS.

THIRD REPORT.

Number of £10. Electors, registered 1833 to 1840, whose rents, rating, and areas of their holdings were ascertained.			Number of the preceding who would be excluded by adopting a single qualification depending on being <i>rated</i> at the following amounts.			
249.			£8.	£10.	£15.	£20.
			10	24	91	136
			Of whom there would remain excluded, notwithstanding an alternative qualification fixed as in margin.			

Number of the preceding who would be excluded by adopting a single qualification depending on <i>excess of rating above rent</i> fixed at the following amounts viz. :—	£1.	93	Of whom there would remain excluded, notwithstanding an alternative qualification fixed as above.	5	15	44	61
	£3.	125		5	16	54	80
	£5.	149		9	23	69	98
	£8.	180		10	24	80	113
	£10.	206		10	24	87	127

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications

Unions in Ulster.

Appendix, Table (NN), No. 4, p. 40 a.

Referring to the areas of the holdings of the 149 who would be excluded by substituting for the present franchise a test depending on a 5*l.* excess of rating above rent, it appears that four of those electors hold 50 acres or upwards, and five hold from 40 to 50 acres each. The number who hold 10 acres and upwards is 133. (Appendix, Table LL, p. 31 a.) Referring to their rents, it appears that one pays 50*l.* and upwards, four pay between 40*l.* and 50*l.*, and the number who pay rents of 10*l.* and upwards is 119. (Appendix, *ibid.*)

On referring to the rents and the areas of the holdings of the nine electors who would be excluded by substituting for the present franchise, two qualifications, one depending on being rated at 8*l.* the other on a 5*l.* excess of rating above rent, it appears that of those nine :—

5 pay rents between 5*l.* and 10*l.*

Of those, one holds from 10 to 20 acres.
three hold from 5 to 10 acres.
one under 5 acres.

4 pay rents under 5*l.*

Of those, two hold between 10 and 20 acres.
one holds between 5 and 10 acres.
one under 5 acres.

Total 9 (Table X, p. 10 c; and Appendix to Local Reports, p. 156 b.)

Referring to the tables for the holdings of the 98 who would be excluded by substituting for the present franchise two qualifications, one a 20*l.* rating, and the other an excess of rating over rent of 5*l.*, it appears that of those 98 there are :—

2 who pay rents between 20*l.* and 30*l.*

And of those, one holds between 10 and 20 acres,
and one holds under 5 acres.

66 of the 98 pay rents of from 10*l.* to 20*l.*

And of those there are, three who hold from 30 to 40 acres.
fifteen who hold from 20 to 30 acres.
forty-four who hold from 10 to 20 acres.
three who hold from 5 to 10 acres.

And one who holds under 5 acres.

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in all the Provinces.

26 of the 98 pay rents of from 5*l.* to 10*l.*

And of those there are, two who hold from 20 to 30 acres.
seventeen who hold from 10 to 20 acres.
six who hold from 5 to 10 acres.
And one who holds under 5 acres.

4 of the 98 pay rents under 5*l.*

And of those there are, two who hold from 10 to 20 acres.
one who holds from 5 to 10 acres.
And one who holds under 5 acres.

Total 98

(Table X, p. 11 c; and Appendix, Cootehill.)

Combining the results obtained from the above 20 Unions, the number of electors registered during eight years in those Unions from 1833 to 1840 inclusive, whose rents and rating were ascertained, amounts to 2,255. Of these it appears that about three-fourths would be excluded by substituting for the present franchise a qualification depending on an excess of rating above rent, fixed at 5*l.* If fixed at 10*l.* it would exclude about nine-tenths of the whole.

By substituting for the present franchise two alternative qualifications, one depending on being rated at 8*l.*, and the other on an excess of rating above rent fixed at 5*l.*, the number excluded would be 219, being not quite one-tenth. By fixing the first qualification at 20*l.*, and the second at 5*l.*, the number excluded would be 828, being more than one-third. The numbers excluded by adopting two such qualifications, fixing them at other amounts, will be seen by the following table:—

SUMMARY OF 20 UNIONS.—EFFECT OF TWO ALTERNATIVE QUALIFICATIONS.

Number of £10 Electors, registered 1833, to 1840, whose rating and rents were ascertained.			Number of the preceding who would be excluded by adopting a single qualification depending on being rated at the following amounts.			
			£8.	£10.	£15.	£20.
2,255			229	352	689	979

			147	226	400	541
			197	295	532	719
			219	330	607	828
			229	351	662	912
			229	352	680	946

Appendix, Table (N), p. 38 a.

5*l.* excess of rating above rent.

The areas of the holdings of the 1687 who would be excluded by the adoption of a single test depending on a 5*l.* excess of rating above rent will be found on referring to the tables annexed to this Report.—Table L, p. 30 a. It appears that—

87 of the 1,687 hold tenements of 100 acres or upwards each.
267 hold from 50 to 100 acres each.
142 hold from 40 to 50 acres each.
213 hold from 30 to 40 acres each.
366 hold from 20 to 30 acres each.

330 hold from 10 to 20 acres each.

66 hold from 5 to 10 acres each.

120 are rated for tenements consisting of a house only, or house and land under 6 acres.

In 96 instances the rents and valuations, but not the areas of the holdings, were ascertained.

Total 1,687

Viewing these 1,687 electors with reference to the rents paid by them it appears that there are—

65 of the 1,687 who each pay rents of 100% or upwards.

222 who each pay from 50% to 100%.

112 who each pay from 40% to 50%.

176 who each pay from 30% to 40%.

315 who each pay from 20% to 30%.

456 who each pay from 10% to 20%.

211 who each pay from 5% to 10%.

124 who are subject to rents not amounting to 5% each : and .

6 who appear to be owners of their holdings, being subject to no rent.

Total, 1,687

(Appendix, Table L, p. 30 a.)

Such being the effect on the present electors of substituting for the existing franchise a single qualification depending on a 5% excess of rating above rent, it will probably not be considered necessary to consider in detail the effect of such a qualification if fixed at 10%. It will be found on referring to the tables in the Appendix, that the 1,960 electors who in that case would be excluded occupy tenements of which the areas and the rents do not appear to be inferior to those of the 252 who would remain on the register. (Table L, p. 30 a.)

If it were resolved to substitute for the present franchise two alternative qualifications, one depending on being rated at 20%, the other depending on a 5% excess of rating above rent, the number excluded out of the 2,255, as already observed, would amount to 828. The areas and rents of their holdings will be found on referring to the tables in the Appendix. The following analysis will show with regard to nearly every one of those electors, the class to which his holding belongs in respect of its extent and the rent which he pays for it. It appears that—

7 of the 828 each hold 100 acres and upwards.

Of these, one pays a rent between 20% and 30%
six pay rents between 10% and 20%.

41 of the 828 each hold between 50 and 100 acres.

Of these, four pay rents between 20% and 30%
twenty-three pay rents between 10% and 20%
thirteen pay rents between 5% and 10%
one pays a rent under 5%.

31 of the 828 each hold between 40 and 50 acres.

Of these, one pays a rent between 30% and 40%
five pay rents between 20% and 30%
fourteen pay rents between 10% and 20%
five pay rents between 5% and 10%
six pay rents under 5%.

56 of the 828 each hold between 30 and 40 acres.

Of these, one pays a rent between 30% and 40%
six pay rents between 20% and 30%
twenty-four pay rents between 10% and 20%
thirteen pay rents between 5% and 10%
twelve pay rents under 5%.

207 of the 828 each hold between 20 and 30 acres.

Of these, one pays a rent between 50% and 100%
twenty-one pay rents between 20% and 30%.

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in all the Provinces.

THIRD REPORT.

*Ten-Pound County
Electors.*

Effect of a Qualifi-
cation depending
on Excess of Rating
above Rent.

Effect of Two
alternative
Qualifications.

*Unions in all the
Provinces.*

one hundred and thirty-three pay rents between
10*l.* and 20*l.*

twenty-five pay rents between 5*l.* and 10*l.*

twenty-seven pay rents under 5*l.*

289 of the 828 each hold between 10 and 20 acres.

Of these, one pays a rent between 40*l.* and 50*l.*

three pay rents between 30*l.* and 40*l.*

seventeen pay rents between 20*l.* and 30*l.*

one hundred and fifty-nine pay rents between 10*l.* and
20*l.*

eighty-one pay rents between 5*l.* and 10*l.*

twenty-seven pay rents under 5*l.*

and one pays no rent.

64 of the 828 each hold between 5 and 10 acres.

Of these, one pays a rent between 20*l.* and 30*l.*

nineteen pay rent between 10*l.* and 20*l.*

thirty-four pay rents between 5*l.* and 10*l.*

ten pay rents under 5*l.*

108 of the 828 are each rated for a house or house and land under
5 acres.

Of these, two pay rents between 30*l.* and 40*l.*

five pay rents between 20*l.* and 30*l.*

twenty pay rents between 10*l.* and 20*l.*

thirty-five pay rents between 5*l.* and 10*l.*

forty-one pay rents under 5*l.*

and five of them are owners of their holdings being
subject to no rent.

25 of the 828 hold tenements of which the rents were ascertained,
but not the areas.

Of these eight pay rents between 20*l.* and 30*l.*

thirteen pay rents between 10*l.* and 20*l.*

four pay rents between 5*l.* and 10*l.*

—
Total 828
—

(Appendix, Table M, p. 36 a.)

The adoption, therefore, of two alternative qualifications in lieu of the present franchise, one requiring the occupier to be rated at 20*l.* or upwards, the other a 5*l.* excess of rating above rent, would exclude many, the areas and rents of whose holdings indicate that they belong to as high a class of occupiers as many of those who would remain on the register.

8*l.* rating and 5*l.*
excess,

If the first of the two qualifications proposed to be adopted were fixed at 8*l.* and the second at 5*l.*, the number excluded, as we have already observed, would be 219. On referring to the rents and the areas of their holdings it appears that :—

9 of the 219 hold between 50 and 100 acres each.

Of these eight pay rents between 5*l.* and 10*l.*

one pays a rent under 5*l.*

8 of the 219 hold between 40 and 50 acres each.

Of these, two pay rents between 5*l.* and 10*l.*

six pay rents under 5*l.*

14 of the 219 hold between 30 and 40 acres each.

Of these, three pay rents between 5*l.* and 10*l.*

eleven pay rents under 5*l.*

35 of the 219 hold between 20 and 30 acres each.

Of these, three pay rents between 10*l.* and 20*l.*

five pay rents between 5*l.* and 10*l.*

twenty-seven pay rents under 5*l.*

51 of the 219 hold between 10 and 20 acres each.

Of these, four pay rents between 10*l.* and 20*l.*

nineteen pay rents between 5*l.* and 10*l.*

twenty-seven pay rents under 5*l.*

one pays no rent.

35 of the 219 hold between 5 and 10 acres each.

Of these, four pay rents between 10*l.* and 20*l.*
twenty-two pay rents between 5*l.* and 10*l.*
nine pay rents under 5*l.*

67 of the 219 hold under 5 acres each.

Of these, one pays a rent between 10*l.* and 20*l.*
twenty-three pay rents between 5*l.* and 10*l.*
thirty-eight pay rents under 5*l.*
five pay no rent.

Total 219

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two alternative Qualifications.

Unions in all the Provinces.

(Appendix, Table M, p. 35 *a*, and see the Appendix to Local Reports, Tables of Electors, in the above 20 Unions.)

Comparing the foregoing county electors whose rents were ascertained in 20 Unions, with the rest of those registered during those years, who were traced in the rate books, we find that those of whom we succeeded in ascertaining the rents, do not appear to differ in any material respect from the rest. The following tables afford an opportunity of comparing the extent of the holdings of those whose rents were ascertained with the others.

Electors whose rents were ascertained, belong to the ordinary class of electors.

TABLE OF TEN-POUND ELECTORS in FORTY-EIGHT UNIONS, Registries 1833 to 1840, inclusive.—
AREAS OF HOLDINGS.

Number traced in Rate Book whose Valuations were ascertained, in 48 Unions.	Of whom there are holding tenements consisting of a House, or House and Land, or Land only, the land being of the following extent.								Extent not returned.
	100 acres and upwards.	50 acres and upwards.	40 acres and upwards.	30 acres and upwards.	20 acres and upwards.	10 acres and upwards.	5 acres and upwards.	House only, or House and Land under 5 Acres.	
8,676*	655	2,082	2,817	3,966	5,542	7,226	7,623	920	133†

Appendix, Table (G), No. 1, p. 9 *a*.

The following table classifies the persons whose rents were ascertained, as well as their valuations, with reference to the areas of their holdings.

TABLE OF TEN-POUND ELECTORS, Registries 1833 to 1840, inclusive, areas of the holdings of those whose Rents were ascertained in 20 of the foregoing Unions.

Number whose rents were ascertained in 20 of the 48 Unions in preceding table.	Of whom there are holding tenements consisting of a House, or House and Land, or Land only, the land being of the following extent.								Extent not returned.
	100 acres and upwards.	50 acres and upwards.	40 acres and upwards.	30 acres and upwards.	20 acres and upwards.	10 acres and upwards.	5 acres and upwards.	House only, or House and Land under 5 Acres.	
2,255	149	533	731	1,032	1,480	1,890	1,962	174	119*

Appendix, Table (K), p. 29 *a*.

We have no reason to think, therefore, that the electors whose rents we did not succeed in ascertaining, would be affected in a less degree by the adoption of a qualification depending on an excess of rating above rent, than those whose rents were ascertained.

Two classes of electors who are rated at low amounts.

It will be perceived, on a view of the electors, with reference to their rents and the extent of their holdings, who would be excluded by the adoption of a single qualification depending on being rated at a certain amount, that the persons excluded are of two classes, first, those who hold farms of considerable extent,

* The number in the Table at p. 15, *ante*, which comprises only 47 Unions, is 8,558. The Union of Fermoy was not included in that Table, the rents and Valuations only, and not the areas of the holdings of the Electors, having been ascertained in that Union.

† 118 of these are Electors in Fermoy Union, whose rents and valuations were ascertained, but not the areas of their holdings. For their rents, see Tables LL, p. 31 *a*; X, p. 16 *c*, and Appendix, Fermoy, p. 133.

THIRD REPORT.

Ten-Pound County Electors.

Effect of a Qualification depending on Excess of Rating above Rent.

Effect of Two Qualifications.

Unions in all the Provinces.

sometimes exceeding 100 acres, in localities, apparently mountain districts and places distant from towns, where land is cheap, rents low, and the valuation still lower; secondly, the owners of smaller tenements subject to no rent or one of trifling amount. Thus of the persons excluded by a qualification depending on being rated at 8*l.*, it appears that there are some who occupy tenements of 100 acres and upwards in extent, and many who occupy from 30 to 50 acres (*ante* p. liv); these persons may be well entitled to register, as deriving a profit of 10*l.* a-year from their farms, under one of the two prevailing constructions of the Reform Act, even if not under that which requires the claimant to show that if he were to become a landlord and let his tenement, he could obtain a profit of 10*l.* a-year as an additional rent. The second class of persons who appear rated at low amounts, as we have already observed, are those who are owners of small tenements for which they pay no rent, or one of trifling amount. They have been considered entitled to the franchise under the Reform Act, and admitted to register. The same qualification that would exclude electors, whose tenements belong to the two classes we have referred to, would necessarily prevent from obtaining the franchise in future, classes of persons similarly situated, who under the provisions of the Reform Act would be entitled to register. A qualification depending on rating to the poor, unless fixed at a low amount, would therefore, operate as a transfer of the franchise from classes of occupiers, some now enjoying it and others entitled to obtain it under the Reform Act, to any new class who might be admitted. With respect to the sums at which, as we have stated, many of the electors are rated, it is unnecessary for us, having detailed the evidence, to observe that those amounts are in every Union in Ireland, which we have visited, an underestimate of the letting value of their holdings.

The Poor Law Valuers have used a test of value different from either of those which are adopted by Assistant Barristers and Judges in administering the Reform Act. And in detailing the facts relating to the low amounts at which some of the registered electors are rated, and having had full opportunities of forming an opinion, we are bound to state that any imputation, founded on the facts which we have detailed, that those electors have obtained the franchise without being legally entitled to it, would be unjust. Voters whose tenements have been rated at low amounts in the Poor Law valuations, are found in every Union. The extent of their holdings and the rents they pay satisfactorily account for their possession of the franchise. They have been admitted by Assistant Barristers holding different constructions of the Reform Act. Some of them have been registered on appeal before judges of assize, in presence of advocates for and against the franchise, after a contested claim in the Court of the Assistant Barrister. Judges, holding contrary opinions on the construction of the Reform Act, have presided at the admission of some of these electors. In the Union of Naas we find several 10*l.* electors rated to the poor at sums under 10*l.*, who are marked, in the Clerk of the Peace's lists, as registered on appeal before a learned Judge, who holds that the test prescribed by the Reform Act was intended by the Legislature to be the same as that of the 10 Geo. IV. And in the Union of Sligo we find several 10*l.* electors rated at sums under 10*l.* who were registered on appeal before another learned judge, who holds that the Legislature, in prescribing a new test, intended to alter the old one. The Poor Law valuations, founded on another and a different principle, are made by law the test of the occupier's liability to poor-rate. But they do not indicate with precision the letting value of the tenement, nor the value of the tenant's interest under any construction of the Reform Act. Looking to the scale on which the valuations have been framed, and having referred to the extent of the holdings and the rents paid by county electors who would be excluded by any of the three propositions which we have above considered in detail, we find that the adoption of any of them as a substitute for the present franchise, if intended to operate on the present constituency, would be a measure of disfranchisement to many *bonâ fide* electors of Ireland.

County Franchise.

Number of tenements valued above certain amounts.

Classification of tenements.

8. *Number of Tenements, whether occupied by Electors or others, which have been valued to poor-rate.*

Returns have been obtained* which classify the tenements in 50 Unions according to the sums at which they have been valued for the purpose of the poor-rate.

* The returns here referred to were furnished by the Clerks of the several Unions to the Poor Law Commissioners.

Twelve of those Unions are in Ulster, 19 wholly or partly in Munster, 14 wholly or partly in Leinster, and five wholly or partly in Connaught. These returns will be found in detail in the Appendix. Part II. Table Y, p. 61 c.

Of the 12 Unions, situate in the province of Ulster, from which returns have been received, there are five which contain boroughs returning members to parliament, and seven which may be looked on as entirely rural. There are separate returns from the rural districts of the Unions which contain boroughs.* The following table unites the returns from the seven Unions which do not contain boroughs returning members to parliament, with those from the rural districts of the Unions which contain such boroughs.

Appendix, Part I. Table (SS), No. 3, p. 58 a.

It will be perceived from the foregoing table that the number of tenements valued in these 12 Unions in Ulster at sums under 5*l.* exceeds the number of those valued above that amount. Those rated under 8*l.* appear to be more than double the number of those at 8*l.* and upwards.

The Unions in Connaught not containing boroughs, from which we have returns classifying the tenements, are Ballinasloe, Castlereagh, and Gort. We have also separate returns from the rural districts of the Unions of Sligo and Athlone. Part of the latter Union extends into the province of Leinster. The following table shows the number of tenements rated in the three first Unions and the rural districts of the two last, classified according to the amounts at which they are valued.

TABLE of FIVE UNIONS wholly or partly in CONNAUGHT.—CLASSIFICATION of TENEMENTS.

Unions in Connaught.

Names of Unions.	Area.	Population, 1831.	Number of Tenements valued to Poor Rate at					Total Number Valued.

Appendix, Table (SS), No. 3, *ibid*.

It appears, therefore, that in these Unions also the number of tenements valued under 8*l.* exceeds one-half of the entire number.

It appears from the foregoing tables, that in Ulster, comparing the entire number of tenements valued at 8*l.* and upwards with the population, they are about one-eighteenth of the number of the population. In Connaught, they only amount to one twenty-eighth, in Munster, one-twentieth, and in Leinster, one-nineteenth, or nearly those proportions.

Tables containing a more minute classification of the tenements are annexed to this Report, and also a list of the Unions in Ireland, in number 130, the boundaries of which have been all declared, with the area and population of each according to returns obtained from the Clerks of Unions, or at the office of the Poor Law Commission.*

The foregoing returns merely give the number of tenements which have been treated as separate holdings by the valuator for the purpose of the poor rate, without regard to any inquiry, how many are held from year to year and how many by lease, or whether any two or more of them may be in the occupation of the same person, and also without any deduction for those of which the interest is vested in women and persons under age.

The number of these different classes of tenements which are now under lease to Ten Pound electors, have been ascertained as far as any authentic information on the subject can be obtained. The Clerk of the Peace's list shows the number who have registered or renewed their registries from time to time, and the rate-books in general, (so far as the identity of the electors and their tenements can be traced,) show how many of these are still in occupation of their tenements. Assuming that the leases of tenements, of which the lessees have registered within eight years (the period during which registry remains valid under the Reform Act), are still subsisting, we have ascertained that out of 12,667 tenements rated at 8*l.* and upwards, in five Unions in Ulster (not containing boroughs returning members to Parliament,) there are 1147, being about one-eleventh, under lease to persons who are registered electors. To this amount is to be added a certain number which may be vested in lessees who are not electors. The evidence in general is to the effect that few leases beyond those made with a view to the tenant being registered, are now granted. And in many Unions it was found that landlords are not generally disposed to grant any leases. (Mr. Given, ex-officio Guardian; APPENDIX, Newtown Limavady. Mr. Kavanagh, Valuator, *Ibid.* Mr. Sproul, Vice-chairman; APPENDIX, Castlederg.) With regard to small tenements in particular it is stated in many Unions, that no leases of them are granted, the great desire being to consolidate the farms. (*Ibid.*) The following Table shows the proportion of tenements rated at 20*l.* and upwards, at 10*l.* and upwards, at 8*l.* and upwards, and at 5*l.* and upwards, which are now under lease to registered electors, so far as we have been able to ascertain in the following five Unions in Ulster.

THIRD REPORT.
County Franchise.

Appendix, Table (SS), No. 13, p. 71 *a*.

* The total population of the 130 Unions will be found by that return to be stated at 7,704,086, being less by 63,315 than the total population, according to the returns of 1831. (*Vide* note, post, p. 77 *a*.) This would indicate that the population of the Unions, as stated in the above Tables, from the returns in the hands of the Poor-Law Commissioners, is an under estimate. For the purpose, therefore, of estimating the probable number of tenements of any given class, which all the Unions would produce, founding the calculation on the returns of the population of the Unions which have been valued, the total 7,704,086 must be assumed as the total population of the Island.

† See note next page.

THIRD REPORT.

County Franchise.

Number of Tenements Valued above certain Amounts.

Connaught.

In the province of Connaught there are three Unions not containing boroughs returning members to Parliament, in which the tenements have been classified. The number rated at 8*l.* and upwards in those Unions is 6240, of which there are 417 under lease to registered electors. It is stated that few other leases are now granted. An ex-officio Guardian of one of those Unions concurred with the valuator in opinion that there is "decidedly a greater indisposition now than formerly among landed proprietors to grant leases: he thinks that the motives which induce landlords not to grant them vary in different parts: in some places the motive is political; in others the landlords, either from an objection to having their estates cut up into small holdings, or from an impression that the value of land is likely to rise, have a disinclination to grant leases."—(*Mr. Irwin*, APPENDIX, Castlereagh.) The following Table shows the proportion of tenements rated at 20*l.*, 10*l.*, 8*l.*, and 5*l.*, which are now leased to registered electors, so far as we have been able to ascertain by tracing in the rate-books the Ten Pound electors registered during eight years, from 1833 to 1840 inclusive, who could be found still in occupation.

Appendix, Table (SS), No. 14, p. 72 *a*.

Munster.

In Munster the number of tenements valued at 8*l.* and upwards, in eight Unions not containing boroughs returning members to Parliament, appears to be 26,569. Of these there are 1164, which were ascertained to be under lease to Ten Pound electors. To these are to be added such tenements as may be supposed to be held by lessees who are not registered. The following Table shows the number of tenements rated at 20*l.*, 10*l.*, 8*l.*, and 5*l.* or upwards, which are now under lease to Ten Pound electors, so far as we have been able to ascertain from the Clerk of the Peace's lists of electors, and the rate-books.

MUNSTER.*—TABLE OF TEN UNIONS. NUMBER OF TENEMENTS RATED AT CERTAIN AMOUNTS UNDER LEASE TO ELECTORS, SO FAR AS ASCERTAINED, COMPARED WITH THE WHOLE NUMBER RATED.

Name of Union.	Population.	Number of Tenements in the foregoing Unions rated at and above the following amounts.					Number of the preceding now under lease to Registered Electors so far as ascertained.				Total Number now under lease to Registered Electors so far as ascertained

Appendix, Table (SS), No. 15, p. 72 *a*.

* These Tables for the Four Provinces comprise the only Unions (except those containing boroughs returning members to Parliament) in which there are returns classifying the tenements, and also returns of the valuation to Poor-rate of 10*l.* electors, with the dates of their registry, all these data being necessary for making this comparison. The rural divisions of Unions containing boroughs returning members to Parliament are not included in this or the three following Tables, some of the tenements leased to county electors being in some cases within those divisions and in others within the electoral division containing the borough. See note post, p. 71 *a*.

An ex-officio Guardian of one of the Unions in Munster states, that "The motives which induce himself, and, as he believes, the landlords of the Union generally, to refuse leases, are, that he would not give his tenants the power of going against him at elections or elsewhere." (Mr. Long, Appendix—Cashel.)

In 8 Unions in or partly in Leinster there are 20,433 tenements which are rated at 8*l.* or upwards; the number which were ascertained to be leased to Ten Pound electors was 1550. The following Table shows the number of tenements rated at or above 20*l.*, 10*l.*, 8*l.*, or 5*l.*, which were ascertained to be now under lease to Ten Pound electors.

THIRD REPORT.

County Franchise.

Number of Tenements Valued above certain Amounts.

Leinster.

LEINSTER.—TABLE OF EIGHT UNIONS; NUMBER OF TENEMENTS RATED AT CERTAIN AMOUNTS UNDER LEASE TO ELECTORS—SO FAR AS ASCERTAINED.

Parsonstown . . .	56,001	882	1,741	2,112	2,950	6,786	80	143	173	213	235
Rathdown . . .	39,933	1,853	2,698	3,013	3,623	6,283	158	212	234	249	251
Roscrea . . .	61,529	1,143	2,464	2,942	4,098	7,925	85	163	177	203	215
Shillelagh . . .	31,596	807	1,567	1,865	2,533	4,314	259	364	379	386	390
Total . . .	347,579	9,254	16,542	19,337	25,660	54,183	996	1,454	1,550	1,658	1,714

Appendix, Table (SS), No. 16, p. 72 *a*.

In some of the Unions in Leinster, the number of leases are stated to be diminishing. In other Unions in this province where the farms are large, they are stated to be generally held on lease. In Parsonstown the deputy-chairman of the Union says, "The usual mode of tenure is from year to year. Leases do not prevail in farms of from 7 to 12 acres. As to the large farms, they are generally held for lives and years;" but, he adds, "those leases are old leases: the tendency is not to grant leases." (Mr. O'Driscoll. Appendix to 1st Report, p. 31.) In Naas Union, where the farms are large, it is stated that they are generally held by lease, though some landlords do not grant any. (Mr. Carter, ex-officio Guardian; Appendix, Naas.) In Longford Union it is stated that "few leases are granted now; much fewer than formerly. The prevailing disposition is not to grant a lease." Appendix to 1st Report, p. 19.)

In most of the Unions visited in all the provinces, there appears to be a general tendency on the part of landlords to refuse or to suspend the granting of leases; and this disposition is more general with respect to small farms than large.

9. Valuations in Towns, and Rating of Borough Electors.

In Unions containing any considerable town, it has in general been found necessary to appoint a different valuator to value the town district. Persons, whose habits render them good judges of land, and who are considered quite competent to the valuation of an agricultural district, are often little adapted to make a valuation of house property in a town.

Valuation in towns.
Borough electors.

The valuations in towns are found, in many instances, to differ in some of their features from those in rural districts.

The test so usually adopted in valuing land, the "fair rent," or "the rent which a tenant can pay and support his family comfortably on the produce of the land," is inapplicable in the towns where the letting-price of the tenements becomes a test more definite and easy of application. Unlike the rural districts where no definite market letting value can be fixed, in the towns, the rent at which the tenement may be let is capable of being ascertained, and the public, who have drawn a marked distinction between the letting price of land and the real value of it, have drawn no such distinction as applied to houses and property in towns. It is therefore not repulsive to Valuers and Guardians to estimate the value of a house by the letting

THIRD REPORT.

County Electors.

Number of Tenements Valued above certain Amounts.

Coleraine.

price of it. But they consider that when the letting price has been ascertained, per centage should be deducted in making a valuation for the purpose of the poor-law rate.

In Coleraine, the valuers state that "they ascertained the rents of several of the best houses in the town, measured their length and height in front. They then inspected the other houses, and deducted 20 per cent. from the letting-value, for repairs and insurance, and the residue constituted the net value." (Cathcart, valuator; Appendix, Coleraine.) The poor-law valuation is below the valuation to town-rate under 9 Geo. IV. c. 82. (Same witness; *ibid.*)

Dungannon.

In Dungannon the poor-law valuation is lower than the valuation for the purposes of town rate, under 9 Geo. IV. c. 82. (Moore; Appendix, Dungannon.)

Dundalk.

In Dundalk Union also a separate valuator was appointed for the town, and it is stated that the valuation is 10 per cent. under the letting value of the houses. (M'Allister, elected Guardian; Appendix, Dundalk.) The poor-law valuation is lower than the valuation to town-rate under 9 Geo. IV. c. 82, (*id.* See Table I, p. 261 *b.*)

Athlone.

In Athlone it was stated that "the valuation of the houses in the borough is generally from 20 to 25 per cent. under the rents actually paid." (Mr. Gay, Vice-Chairman; Appendix, Athlone.)

Dungarvan.

In Dungarvan the valuator "applies the same scale in the town as in the country portion of the Union. His valuation is, he thinks, generally 20 per cent. under the rents in the town." (Langley, valuator; Appendix, Dungarvan.)

In Belfast the valuator stated that he "kept near the letting value, but still a little under it. If he thought a tenement would let for 10*l.* he put it down in his valuation from 9*l.* to 9*l.* 10*s.* He wished to be a little under the real letting value, rather than over it, and therefore he did generally put down the value 1*l.* less than the real letting value of 10*l.* houses, but where he thought the house good value he put down that without deducting anything. On all houses over 10*l.* he kept near the actual letting rent, but still a little under it." (Richey, valuator; Belfast Supplementary Report, Appendix.) Another witness stated that 7*l.* and 8*l.* rents in houses bring a rent of about 10*l.* (Gilmer, *ibid.*)

Drogheda.

In Drogheda the valuator of the town district stated that "his principle was to value the houses one-sixth below the letting value." (Clarke, valuator; Appendix, Drogheda.) Another witness states that the difference is at about one-fifth. (Worth, *Ibid.*)

Sligo.

In Sligo the poor-law valuation of the town is below an existing local valuation for municipal purposes, and the latter is below the rents. (See Evidence of Mr. Farrell, *ex-officio* Guardian; Appendix, Sligo.)

Limerick.

In Limerick many houses are let at rents above the Valuation. (Appendix, Table I, Limerick.)

Cork.

In Cork the valuers of the city state that the valuation was generally lower than the rent. (Barry and Foley, valuers; Appendix, Cork.)

Clonmel.

In Clonmel the valuers of the town stated that they "estimated the value of the tenements according to the prices for which they were likely to be let to a solvent tenant. Their test was the rent which a solvent tenant would pay, but not the utmost which could be got from a solvent tenant." The value of the tenements was generally estimated by them under the rent paid." (Thornton and Graham, valuers; Appendix, Clonmel.) "The difference between the value which they placed upon the tenements, and the rents actually paid for them was greater in proportion in small tenements than in large." The valuation of houses of a more respectable class was stated to be about 15 per cent., and "the valuation of small tenements, ranging from 5*l.* to 15*l.*, not less than 20 per cent. below the rents." (*Ibid.*)

Waterford.

In Waterford, the Chairman of the Board states that he considers the city valuation higher than that of the rural districts, but both are under the rents. He thinks the city valuation "not much under the rents; he would say, from 8 to 10 per cent." (Mr. Alcock, Chairman; Appendix, Waterford.) Another witness gives the valuation of his own house, which he considers a fair specimen of the valuation of houses of the same class, and which is lower than the rent in the city portion of 28 to 30. The same witness states that houses from 5*l.* to 15*l.* were valued somewhat lower in proportion to the rent, "as they did not think it right to lay heavy taxation on the poor for the relief of the poor." (Mr. Moore, Appendix, Waterford.)

Dublin.

In the city portion of North Dublin Union, comparing the valuation with

ents of 175 houses taken in all the wards, the valuation of those houses appears below the rent by a proportion varying from 20 to 40 per cent. (Appendix, North Dublin; Comparison of Rents and Valuation); and in the city portion of South Dublin Union, comparing the valuation with the rents of 105 houses taken in all the wards, their valuation appears to be below the rent by a proportion varying from 38 per cent. to 17 per cent. (Appendix, South Dublin; Comparison of Rents and Valuation.)

The boroughs in which the tenements of the Ten-Pound electors have been traced in the rate-books are the following:—

Armagh.	Dublin.
Athlone.	Dundalk.
Belfast.	Dungannon.
Cootehill.	Limerick.
Clonmel.	Lisburn.
Coleraine.	Londonderry.
Cork.	Sligo.
Drogheda.	Waterford.

THIRD REPORT.
County Electors.
Number of Tenements Valued above certain Amounts.

The number of Ten-Pound Borough Electors registered during a period of eight years, from 1833 to 1840 both inclusive, whose rating was ascertained in the books of the foregoing Unions, is 12,274. Of these, it appears that 10,117 are rated to the poor at sums of 10*l.* or upwards. The number who are rated at sums of 8*l.* and upwards is 11,067, and 1,207 are rated at sums under 8*l.* The whole number who are rated at sums of 5*l.* and upwards is 11,895, and the number rated under 5*l.* is 379. The following table classifies those whose rating was ascertained in each borough, according to the sums which the sums at which they are rated amount to or exceed.

TABLE of £10 ELECTORS in SIXTEEN BOROUGHs, (Registries 1833 to 1840, both inclusive).
VALUATION TO POOR-RATE.

Names of Boroughs.	Number whose rating ascertained.	Number of the preceding who are rated to the Poor at or about the following sums.						
		£10 and upwards.	£9 and upwards.	£8 and upwards.	£7 and upwards.	£6 and upwards.	£5 and upwards.	Under £5.
Armagh	535	298	317	357	406	465	497	38
Athlone	163	118	121	137	141	152	158	5
Belfast	2,057	1,608	1,802	1,930	1,994	2,023	2,043	14
Cashel	237	166	172	187	194	204	211	26
Clonmel	247	189	206	224	229	242	244	3
Coleraine	173	99	101	116	131	142	156	17
Cork	1,751	1,390	1,445	1,568	1,606	1,654	1,694	57
Drogheda	354	304	318	341	347	351	352	2
Dublin	4,227	3,978	3,992	4,044	4,077	4,105	4,156	71
Dundalk	320	212	214	252	266	289	294	26
Dungannon	133	112	115	122	125	127	130	3
Limerick	727	577	593	631	649	668	685	42
Lisburn	140	122	129	131	131	132	138	2
Londonderry . . .	343	302	317	321	324	334	338	5
Sligo	415	259	278	303	328	356	374	41
Waterford	452	383	387	403	416	421	425	27
Total	12,274	10,117	10,507	11,067	11,364	11,665	11,895	379

Appendix, Table I. No. 1. p. 19.

Above four-fifths therefore of the existing electors whose rating has been ascertained, appear to be rated at sums of 10*l.* and upwards. The number who would be excluded by substituting for the present franchise a qualification depending on being rated at 8*l.*, is 1,207. If at 5*l.*, the number would be 379.

The same observations that we have made on the subject of County Electors who are found rated at low amounts, apply also in the Boroughs. The valuations are a test of the liability to poor-rate, and sufficiently accurate to give general satisfaction to the rate-payers, but, applied to individual tenements, they cannot be referred to as indicating the rent at which they might be let. All the valuations are on a scale below the letting value, and it would be more in accordance with the evidence

THIRD REPORT.
 County Electors.
 Number of Tenements Valued above certain Amounts.

which we have received on the subject, to attribute the lowness of the sums which some of the electors are rated to the low scale on which the valuation has been framed, and in some instances, perhaps, to error in the valuation of the particular tenement, than to assume, that the elector has improperly obtained the franchise.

In our separate Reports, and in the Appendix, will be found more minute details on the state of the Valuation and the Elective Franchise in each Union that has been visited. In these details will be found the fullest information we have been enabled to collect on the subject of the Inquiry directed by your Lordship. We now submit them to your Lordship's consideration.

We have the honour to be,

Your Lordship's obedient Servants,

CHARLES HAIG,
 RICKARD DEASY,
 JOSEPH LENTAIGNE,
 HENRY O'HARA,
 W. JEFFCOTT,
 W. P. LEATHEM,
 ISAAC S. O'CALLAGHAN,
 T. KENNEDY LOWRY,

* This number expresses those electors, the sums of both the areas and valuations of whose holdings are given in the succeeding column. The totals in the last column include also the valuation of those tenements whose extent has not been ascertained, with the exception of 15 (marked with an asterisk), which have been rejected in striking the averages of Extent and Value, for the electors registered 1833 to 1840. In preparing this and the two following tables, tenements rated jointly have been divided, and the holdings of electors appearing to be dead or removed have been rejected. See Report, ante, p. xli., and note to table (C), post, p. 3 a.

† Marked thus † defective, and not included in the general classifications and averages. Vide notes, pp. 3 a, 4 a, 15 a, 28 a; and ante, pp. xxviii. and lxxv.

COUNTY ELECTORS.

(B).—AVERAGE AREA and VALUATION of the Holdings of TEN-POUND ELECTORS.*—Registered 1833 to 1840, both inclusive.

Names of Provinces and Unions.	Total Area of Unions.	Total Population of Unions, 1831.	Number of £10 County Electors traced. Registries 1833 to 1840.	Areas not returned.	Number whose Areas and Valuations were both ascertained.	Total Area of Holdings of which extent ascertained.	Total Valuation of the same to Poor Rate.

* In preparing this and the preceding table the same rule has been applied; and, accordingly, the tenements of those electors who appeared to be dead or removed have been rejected. Tenements rated jointly have been divided; and two or more tenements, when in the occupation of the same individual, have been treated as one. See *ante*, p. xlvii. The numbers in the last column correspond with those in the 6th column of the preceding table, and comprise those only whose areas, valuations, and dates of registry were all ascertained. For the purposes of these two tables, therefore, the instances where an elector appears on the lists affixed to the local reports, the area or the valuation of his holding, or the date of his registry not being stated, the holding has been rejected, and the number of electors in each such case reduced by one, for the purpose of obtaining the averages in these tables.

† This table comprises all the Unions where the areas and valuation of the tenements of electors of 1832, who were not re-registered, were traced in the rate-books, and are distinguished from the rest in the local reports and appendices. The class of electors entitled to vote having been the chief object of the inquiry, and the electors of 1832 being in some counties in separate lists, which were often defective, were not traced in some Unions. This table comprises 3,358, the number mentioned in the Report, *ante*, p. 2, is 3,417. Of those there were 59, the areas of whose holdings were not ascertained, which rendered it necessary to exclude them in preparing this table.

COUNTY ELECTORS.

(D.)*—£10 COUNTY ELECTORS (Registries 1833 to 1840).

Classification according to Amount of Rating, and Extent of Holding.

Summary of 47 Unions† in all the Provinces, viz. :—

Ten Unions in Ulster:—

Armagh, *post*, p. 13 a.—List of Electors, App. p. 85 b.
 Dungannon, *post*, p. 13 a.—List of Electors, App. p. 99 b.
 Castlederg, *post*, p. 13 a.—List of Electors, App. p. 112 b.
 Coleraine, *post*, p. 12 a.—List of Electors, App. p. 67 b.
 Londonderry, *post*, p. 12 a.—List of Electors, App. p. 54 b.
 Newtown Limavady, *post*, p. 12 a.—List of Electors, App. p. 35 b.
 Banbridge, *post*, p. 14 a.—List of Electors, App. p. 7 b.
 Lisburn, *post*, p. 14 a.—List of Electors, App. p. 22 b.
 Kilkeel, *post*, p. 14 a.—List of Electors, App. p. 150 b.
 Cootehill, *post*, p. 15 a.—List of Electors, App. p. 156 b.

Seven Unions in Connaught (wholly or partly):—

Sligo, *post*, p. 15 a.—List of Electors, App. p. 123 b.
 Athlone, *post*, p. 16 a.—List of Electors, App. p. 189 b.
 Ballinasloe, *post*, p. 16 a.—List of Electors, App. p. 178 b.
 Loughrea, *post*, p. 16 a.—List of Electors, App. p. 194 b.
 Gort, *post*, p. 17 a.—List of Electors, App. p. 202 b.
 Castlereagh, *post*, p. 17 a.—List of Electors, App. p. 215 b.
 Scariff, *post*, p. 17 a.—List of Electors, 1st App. p. 71.

Seventeen Unions in Munster (wholly or partly):—

Cork, *post*, p. 18 a.—List of Electors, App. p. 411 b.
 Dunmanway, *post*, p. 18 a.—List of Electors, App. p. 230 b.
 Macroom, *post*, p. 18 a.—List of Electors, App. p. 528 b.
 Listowel, *post*, p. 19 a.—List of Electors, App. p. 236 b.
 Newcastle, *post*, p. 19 a.—List of Electors, App. p. 487 b.

Rathkeale, *post*, p. 19 a.—List of Electors, App. p. 516 b.
 Kanturk, *post*, p. 20 a.—List of Electors, App. p. 533 b.
 Kilmallock, *post*, p. 20 a.—List of Electors, App. p. 469 b.
 Limerick, *post*, p. 20 a.—List of Electors, App. p. 418 b.
 Bandon, *post*, p. 21 a.—List of Electors, 1st App. p. 80.
 Waterford, *post*, p. 21 a.—List of Electors, App. p. 446 b.
 Lismore, *post*, p. 21 a.—List of Electors, App. p. 316 b.
 Tipperary, *post*, p. 22 a.—List of Electors, App. p. 134 b.
 Cashel, *post*, p. 22 a.—List of Electors, App. p. 208 b.
 Clonmel, *post*, p. 22 a.—List of Electors, App. p. 551 b.
 Carrick-on-Suir, *post*, p. 23 a.—List of Electors, App. p. 460 b.
 Dungarvan, *post*, p. 23 a.—List of Electors, App. p. 298 b.

Thirteen Unions in Leinster (wholly or partly):—

Gorey, *post*, p. 23 a.—List of Electors, App. p. 139 b.
 Roscrea, *post*, p. 24 a.—List of Electors, App. p. 171 b.
 Shillelagh, *post*, p. 24 a.—List of Electors, App. p. 577 b.
 Rathdrum, *post*, p. 24 a.—List of Electors, App. p. 565 b.
 Parsons Town, *post*, p. 25 a.—List of Electors, 1st App. p. 32.
 Edenderry, *post*, p. 25 a.—List of Electors, App. p. 343 b.
 Naas, *post*, p. 25 a.—List of Electors, App. p. 280 b.
 Longford, *post*, p. 26 a.—List of Electors, 1st App. p. 22.
 Drogheda, *post*, p. 26 a.—List of Electors, App. p. 332 b.
 Dundalk, *post*, p. 26 a.—List of Electors, App. p. 263 b.
 Rathdown, *post*, p. 27 a.—List of Electors, App. p. 245 b.
 North Dublin, *post*, p. 27 a.—List of Electors, App. p. 367 b.
 South Dublin, *post*, p. 27 a.—List of Electors, App. p. 401 b.

Number registered 1833 to 1840, traced in Rate- Books.†	Number of the preceding who are Rated at the following Amounts, viz. :—		Of whom there are holding tenements consisting of a house, or house and land, or land only, the land being of the following extent.

* This table was compiled in order to ascertain the proportion of the present £10 electors, whom a qualification depending on being rated to the poor, at any amount, from £5 up to £40, would admit, and the areas of the holdings of the persons admitted. See the areas of the holdings of those excluded *post*, Table G.

† This Summary comprises all the Unions where Areas, Rating, and Dates of Registry have been ascertained, all these data being necessary in order to include the Union in this Summary.

‡ For the purpose of this and the subsequent classifications, none but electors registered during a period of eight years (*viz.*, 1833 to 1840 inclusive) have been considered; eight years being the period during which registry remains valid under the Reform Act. It was necessary in order to ascertain the operation which a new qualification would have on the constituency, to select the electors registered during a complete period of eight years. The years 1833 to 1840 appeared better adapted for this purpose than a period commencing in February 1833 and ending February 1841, few voters having been found registered in 1841. The period comprising the eight years, from 1833 to 1840, both inclusive, afforded a larger number of electors for classification. In the Tables of Electors, in the Appendices to the Local Reports, those registered in 1832, and not re-registered, are marked with an asterisk. These have been of course omitted in the classifications intended to ascertain the effect, on the *present electors*, of adopting a new qualification. Instances will be found, in the lists of electors in the Appendices to the local Reports, of persons marked in the observations as “rated jointly;” the tenements of these have been divided, for the purpose of these classifications, wherever the number of persons jointly rated was stated. Where the number was uncertain, the tenement was rejected for the purpose of these tables. Where two tenements, separately rated, appear to be in the occupation of the same elector, the sums of their areas and valuations have been taken as one holding. Wherever a tenement appears by those tables to be now in the occupation of the widow of the elector, it has been excluded; so likewise wherever an elector is merely stated to be “dead,” or “removed.” The object being to ascertain the effect of a new qualification upon *present electors*, those who are still in occupation, and registered during a complete period of eight years (the time during which registry remains valid under the Reform Act), from 1833 to 1840, both inclusive, have been taken as adapted for the purpose of ascertaining the operation of the Reform Act. These tables, therefore, are calculated to show the effect on the £10 constituency, who would have been entitled to vote on the 1st January, 1841, of adopting a new qualification depending on a certain amount of rating.—See Report, *ante*, p. xlvii.

COUNTY ELECTORS.

(E.) AREAS OF HOLDINGS.—Ten Pound County Electors in 47 Unions, registered 1833 to 1840, both inclusive. Classification showing the number in each Union holding tenements of and exceeding various Areas.

Names of Provinces and Unions.	Number of £10 Electors registered 1833 to 1840 whose Rating was ascertained. COUNTY ELECTORS.

(N.)—Effect of Two alternative Qualifications, one depending on amount of *Rating*, the other on *excess* of Rating above Rent.—Numbers excluded.

TEN POUND COUNTY ELECTORS, Registries 1833 to 1840, both inclusive.

SUMMARY OF TWENTY UNIONS,* *viz*:—

Armagh.
Bandon.
Cashel.
Cootehill.
Dungarvan.
Fermoy.
Kanturk.
Kilmallock.
Limerick.
Lismore.

Listowel.
Londonderry.
Longford.
Loughrea.
Macroom.
Rathkeal.
Roscrea.
Sligo.
Tipperary.
Waterford.

Number of Ten Pound County Electors

Registered 1833 to 1840,

whose

Rents and Rating were ascertained in 20 Unions.

2,255.

Number of the 2,255 who would be excluded by substituting for the present Franchise a single Qualification depending on a certain amount of *Rating*, fixed at the various amounts following.

£8.	£10.	£12 10	£15.	£17 10	£20.	£25.	£30.	£35.	£40.
229	352	545	689	855	979	1,309	1,499	1,661	1,782

Number of the above respectively who would remain excluded, notwithstanding an alternative Qualification depending on an *excess* of Rating above Rent, the excess required being fixed as in the margin.†

Number of the 2,255 who would be excluded by a single Qualification depending on an *excess* of Rating above Rent, the excess required being as follows:—

A mere excess‡

1,133

£1 1,236

£2 1,377

£3 1,494

£4 1,588

£5 1,687

An excess of

£6 1,753

£7 1,815

£8 1,861

£9 1,908

£10 1,960

Number of the foregoing who would remain excluded notwithstanding an alternative Qualification depending on amount of *Rating* fixed as above.

115	187	275	343	418	472	634	720	801	858
147	226	325	400	481	541	714	808	892	952
175	263	374	468	566	638	832	934	1,022	1,084
197	295	427	532	640	719	928	1,033	1,125	1,192
209	315	457	570	684	773	995	1,110	1,206	1,281
219	330	485	607	734	828	1,066	1,192	1,298	1,375
225	342	503	630	764	862	1,110	1,241	1,353	1,431
226	347	518	649	788	891	1,146	1,287	1,404	1,487
229	351	528	662	803	912	1,174	1,322	1,440	1,526
229	352	539	676	822	934	1,204	1,356	1,478	1,569
229	352	542	680	831	946	1,228	1,388	1,515	1,613

* The Unions where the rents of £10 electors were not ascertained, are necessarily excluded from this classification. This Table includes all the Unions where the rents of £10 electors were ascertained. For the separate tables relating to each of these 20 Unions, see *post*, p. 39 a to p. 48 a. For the lists of the electors comprised in these tables, with the sums at which they are rated and their rents, see the Appendix to the Local Reports, under the head of the Union required.

† Thus, assuming a single qualification depending on being rated at £20, the number excluded would be 979. Assuming a single qualification depending on the occupier's holding being rated at a sum exceeding his rent by £5, the number excluded would be 1,687. If both these were adopted as alternative qualifications, the number excluded would be 828.

‡ This supposes the qualification fixed so that all those rated at sums above their rent, however small the excess, would be admitted.

COUNTY ELECTORS.

(NN.)—Effect of Two alternative Qualifications, one depending on amount of *Rating*, the other on *excess* of Rating above Rent.—Numbers excluded—*continued*.

TEN POUND COUNTY ELECTORS, Registries 1833 to 1840, both inclusive.

* This table is entitled "Tenements in Rural Districts," to distinguish it from table, post, p. 57 a, entitled, "Tenements in town divisions of Unions, containing Boroughs." The returns comprise 50 Unions. Of these 18 are Unions in which Boroughs returning members to Parliament are situated. Each of these contains from 7 to 20 electoral divisions, called the rural districts of the Union, independent of the division in which the borough is situated. The returns, therefore, relating to the division of each of the 18 Unions, containing Boroughs, in which the Borough is situated, have been formed into a separate table, post, p. 57 a. And the 32 rural Unions, with the rural districts of the 18 Unions, containing boroughs, have been united in this table under the head of "Tenements in Rural Districts." These tables, probably, afford materials for making a nearly correct estimate of the proportion which the number of tenements of a given class bears to the population in different parts of Ireland. See a summary of these tables, ante, p. 54 a and post, p. 64 a, and see a list of the Poor Law Unions in Ireland, the boundaries of which have been all declared, with the area and population of each, and also a separate list of those containing boroughs, with the area and population of the borough division, distinguished from those of the rural districts, post, p. 76 a, 77 a. See also pp. 78 a, 79 a.

* The Tables, of which this is the summary, were annexed to the Second Report. They are now repeated with the addition of the Unions of Belfast and Cotehill, which have been since received. The Union of Dundalk has been omitted, part only of that Union being comprised in the 32 Unions not containing Boroughs, and also a separate result for the 18 Unions containing Boroughs, the value of property in which is in many cases affected throughout their entire extent by the proximity of the City or Borough.

CLASSIFICATION OF TENEMENTS.

* This and the following Tables, to p. 70 a, were annexed to the Second Report. Since that Report was presented, returns have been obtained from the Unions of Belfast and Cootehill, which have been introduced into these Tables. The Union of Dundalk, the return from which was defective, has been omitted. The whole of these tables have been carefully revised and compared with the original returns of the Clerks of the Unions. The above Table of 32 Rural Unions comprises 459 electoral divisions. By adding to these the rural electoral divisions of the 18 Unions containing boroughs, the tenements in 774 rural electoral divisions may be made the basis of an estimate of the probable number in all the rural districts of Ireland. Tables thus formed will be found ante, p. 54 a, &c.

† See Note, ante, p. 56 a.

CLASSIFICATION OF TENEMENTS.

TENEMENTS in 18 UNIONS CONTAINING BOROUGHs.*

* Since the Second Report was presented, the return for the year 1831 has been received, and is now incorporated in the above table.

* Since the Second Report was presented, the return from the Union of Belfast has been received, and has been introduced into this Table, which is also corrected by omitting the Union of Dundalk, the return from which was defective.

† This return of the area of North Dublin Union does not comprise that of the city division of the same, no return having been made of the area of that division. † Vide Note, ante, p. 56 a.

CLASSIFICATION OF TENEMENTS.

TENEMENTS IN 32 RURAL UNIONS.

(SS.) No. 9.—Classification (b), showing the Number Valued *at and above* certain Amounts.
 and the Number of Tenements in Thirty-two Unions, which do not include Cities or Boroughs returning Members to Parliament.

* This comparison could only be made for tenements rated at £5 and upwards.

* This comparison could only be made for *twenty-six* out of *thirty-two* Rural Unions included in the preceding Tables, as the Inquiry was not prosecuted in the Unions of Carrickmacross, Celbridge, Clogheen, and Dunshaughlin; and in the Unions of Balrothery and Lurgan, the Electors registered in 1832, have not been distinguished from those registered in subsequent years.

* This Table has been compiled from returns made by the Clerks of Unions. *Vide post*, Appendix, Part II., Table Z, pp. 74 c to 85 c. The totals in the eighth column differ in many instances from those in Tables (SS), Classification (b). This may be accounted for, partly by the fact that some of the returns were made at different periods, the valuations meanwhile undergoing revision; and partly because the Clerks of the Unions have not always agreed in their interpretation of the words, "tenement without land."

† Marked thus (†), and enclosed in brackets, do not include tenements without land.

APPENDIX to THIRD GENERAL REPORT—

(U).—No. I. List of all the Unions in Ireland, with the Area and Population of each.†

* The Unions in which the cities and towns returning members to Parliament are situate are marked with an asterisk. See a separate list of these Unions next page.

† The items of Extent and Population in this Table have been taken from the latest returns of the Clerks of Unions, so far as they extended. Where these were not available, recourse was had to the Appendices to the Fifth and Sixth Reports of the Poor Law Commissioners, or to tabular returns supplied from their office. *Vide post*, p. 79 a, Note, and Appendix, Part II., p. 73 c, Note.

(U).—No. 2. SEPARATE TABLE of UNIONS in IRELAND, containing Cities and Towns returning Members to Parliament, with the Area and Population of the Electoral Division in which the City or Town is situate, distinguished from the Area and Population of the Rural Districts.

No.	Name of Union.	Borough Division.		Rural Districts.		Total Area of each Union.	Total Population of each Union.

* The borough of Carrickfergus is situate within this Union.

† The borough of Youghal is situate within this Union.

‡ The borough of Portarlington is situate within this Union.

(U).—No. 3. TOTAL AREA and POPULATION of UNIONS in IRELAND, distinguishing Rural Unions and Rural Electoral Divisions of Unions containing Boroughs, from the Electoral Divisions which contain the Boroughs.

Rural Divisions and Borough Divisions.	Area.	Population.
Total of 96 Rural Unions and Rural Divisions of 34 Borough Unions in Ireland	16,924,508	6,870,791
Total Town Divisions of 34 Borough Unions	357,974	833,295
Total of all the Unions in Ireland	19,282,482	7,704,086*

* The total population of Ireland in 1831, according to the summary in the population returns (dated July 23rd, 1833), was 7,767,401, exceeding the above total by 63,315. As the whole of Ireland is now divided into Unions, this discrepancy must be attributed to the difficulty—especially where the Ordnance Survey is not complete—of ascertaining the exact population of the parishes or parts of parishes included in the several Unions, owing to variances in the denominations of the Townlands composing them.

(V.)—LIST of UNIONS in IRELAND, showing their EXTENT, POPULATION, NUMBER of GUARDIANS, &c.

NOTE.—A number of the returns of Area in this table, which are chiefly the estimates of extent of rateable land, made previously to the Valuation have been, throughout the previous tables, rejected to make room for the later returns from the clerks of Unions, taken from the Valuation Books, wherever the latter were available; *Vide* the details in Tables Y and Z, App. Part II., pp. 61 c to 85 c. The population of seven Unions, viz. Bandon, Clogher, Dundalk, Gorey, Gort, Newry, and Waterford, has been taken from the same authority. The remainder are from the same source as those in the above table, and where discrepancies arise, it is owing to errors of totting in the Appendices to the Reports of the Poor Law Commissioners. *Vide post*, p. 73 c. Not

(W.) No. 1.—TOTAL NET ANNUAL VALUE OF FORTY-FOUR UNIONS,

With their AREA and POPULATION; and GROSS ANNUAL VALUE, so far as ascertained, according to Returns made by the Clerks of the Unions.

NOTE.—The areas in the foregoing tables, which, it must be remembered, give the aggregate only of the rated land, have been, with few exceptions, made by the clerks of the Unions, as the latest estimates made by the Valuers; where they did not supply the required information, recourse was had to the Appendices to the Fifth and Sixth Reports of the Poor Law Commissioners. From the latter source also the items of population for each Electoral Division have been derived, with six exceptions, viz., Bandon, Clogheen, Gorey, Gort, Newry, and Waterford, for which the clerks of the Unions made returns. The totals of these items have been taken as the aggregate population of the several Unions, though differing in many instances from those in the Reports made to.

**Z.—MISCELLANEOUS RETURNS furnished by the CLERKS of UNIONS.
ULSTER.**

Returns from Clerks of Unions.

SUPPLEMENT.

GENERAL VALUATION OF IRELAND.

SUPPLEMENT.

Outline of Mr. Griffith's System.

OUTLINE of the SYSTEM according to which the GENERAL VALUATION of IRELAND, under the 6 and 7 Wm. IV., c. 84, is carried into effect.

By RICHARD GRIFFITH, Esq., Commissioner of Valuation.

THE general valuation of Ireland, placed under my direction, is regulated by a scale of prices for agricultural produce, introduced into the Valuation Act, 6 and 7 Wm. IV., c. 84, which scale of prices was founded on the average prices of agricultural produce throughout the principal maritime markets of Ireland, during a given period, when the value of agricultural produce was considered to be low. Thus, the scale of prices being taken from the *actual average value* of each commodity may be considered to be relative, whether the average prices at the present, or a future time, be higher or lower.

Scale of Prices.

In carrying the valuation into effect, the object to be attained was, that all lands throughout Ireland should be valued relatively, according to the standard prices for agricultural produce contained in the Act; and, consequently, that the same scale of value adopted in the northern counties should be continued throughout, so that the lands of the counties of Derry and Antrim, which were first valued, and those of Cork and Kerry, which will be the last, shall be found on the completion of the work to be relatively valued, all the peculiar local circumstances of each being taken into consideration.

Uniformity of valuation.

Previously to commencing the valuation of the counties of Derry and Antrim, in the year 1830, I ascertained that the general average prices for agricultural produce throughout the principal markets of Ireland for the preceding *five years*, were one-eighth, or 2s. 6d. in the pound, higher than those contained in the Act, and, consequently, the amount of valuation, according to Act prices, should in each case be one-eighth less than if the valuation were made according to the then prices.

Average for five years preceding 1830, one-eighth higher than standard in Act.

In order to carry out this principle, I found it necessary to relieve the minds of the valuers from all care, except the determination of the value of the land under consideration, the land in every case being supposed to be in an ordinary situation, that is, from 10 to 15 miles distant from an export market, without reference to the scale of prices contained in the Act, or to local circumstances, whether in addition or deduction. The object to be obtained being, that the scale of value for certain qualities of land, in an ordinary situation, adopted in the counties of Derry and Antrim, should be preserved; and to ascertain that this has been effected, I am in the habit of sending some of the best valuers, who had not been employed in the commencement, from the midland counties, where they are now employed, to the counties of Derry and Antrim, and other northern counties, to value certain townlands, the value of which had been well ascertained, and, having received their recent valuations, to compare them with the original; and I have the pleasure to state that these checks have in all cases proved satisfactory. and I have no doubt that the valuers at present employed in the western and midland counties, are valuing the land on the same scale as that on which we commenced.

The general instructions given by me to the valuers were, that they should value the land on a liberal scale, that is to say, in the same manner as if employed by one of the principal landlords of the country, who was about to let the land to a solvent tenant on a lease, say, of 21

Additions.

Vicinity to cities
and towns.

years. That they were to judge of the value of the land, not by its appearance to the eye, but by digging up the surface, and, by this means, ascertaining the nature, quality, and depth of the soil, and the quality of the subsoil. That land of the same quality and circumstances, though badly farmed, was to be valued at the same rate as similar land well farmed, clean, and in good order, but that all permanent improvements, such as drains, good fencing, good roads, &c., were to be taken into consideration. By this means the industrious farmer, who tilled and manured his land well, would not be taxed more than his indolent neighbour, who was similarly circumstanced, but who did not take advantage of his situation.

It is to be observed, that land, clean, and in a high state of cultivation, may, by imperfect tillage, and a succession of white crops, be deteriorated in a few years; and, consequently, it would be unjust in a *permanent valuation* to rate the land high, solely on account of its being well cultivated at the time the valuation was made. On the other hand, land which is in a bad state, owing to mismanagement, should not be valued quite as low as its present condition would suggest.

Lands which have never been tilled are valued as pasture, though, from the nature of the soil and subsoil, they may be capable of being tilled and improved. Such land is valued at a price per acre proportioned to the number of cattle, sheep, &c., it may be capable of grazing during the year, the price per head being regulated according to the usual price per head paid in the neighbourhood for grazing, the quality of herbage being taken into consideration. Of course, where the soil and subsoil are good, the quality of the herbage will be superior, and the value will be regulated accordingly. I have entered into this detail in consequence of an erroneous opinion having prevailed, that in the General Valuation, the land was valued at the same rate, according to its natural quality, whether improved and cultivated, or in a state of nature; but this is not the fact, the land being valued in each case at the rate it would reasonably let for by lease to a solvent tenant in the state in which it is found.

It will not be necessary to enter into all the detail of the system that I have found it necessary to adopt in carrying the valuation into effect, as such detail is given at length in my book of instructions to the valuers. It will be sufficient to observe generally, that in commencing the valuation of a county, it is usual to divide it among a certain number of valuers in proportion to its extent, giving to each a barony or district to value. Every barony is divided into parishes and townlands* on the Ordnance maps, in addition to which these maps distinguish all bogs, lakes, rivers, and streams, all roads, bye-roads and plantations, together with all the principal fences dividing fields.

In commencing the valuation, the valuator divides the townland under consideration into a number of *lots* according to the variation of the qualities of the soil and subsoil, taking care, in arable districts, that no lot shall contain more than 30 acres statute measure, and that the boundaries of each of the lots shall, as far as possible, coincide with the boundaries of farms. Having dug up the soil in many places in the first lot, and made up his mind as to its value, from a careful inspection of the quality and depth of the soil, and the nature of the sub-soil, he enters his opinion of its value in the field book, and marks it lot No. 1; he at the same time dots round the boundaries of the lot on the map, and marks it also No. 1. In this manner he proceeds through the townland, and in continuation through the barony or district.

When the valuation of a barony is completed, the field books and field maps are sent to my office in Dublin, and subsequently, on the receipt of the field books and maps of an entire county, the second operation or check valuation is commenced, by my sending down a valuator in whose experience and judgment I place great reliance, to re-value a *certain portion* of each of the districts within the county. This valuator uses the same maps as the first, and values each townland according to the same lots or sub-divisions adopted by the first valuator; but he has no access to the *field books* which contain the prices of the first valuator.

The check valuator, according to circumstances, re-values from one-fourth to one-sixth part of each barony or district; and when he has completed his work, his valuations are placed in a tabular form opposite to those of the original valuator for comparison.

When considerable differences occur between the original and check valuations, which sometimes though rarely happens, a second check valuator is sent to re-value the same townlands in the district in which the differences occur, and if the two check valuations agree, which is almost unusually the case, the prices of the first valuation are altered relatively, and thus made to agree with those of the check valuations. By this means the valuations of the several baronies of the county are reduced to one relative scale, for land in an ordinary situation.

The next consideration is the allowance to be made for local circumstances, all of which, whether they be in addition or deduction, are considered.

Allowances in addition:—

1st. They are made in consequence of vicinity to cities or towns.

2nd. Vicinity to limestone quarries, to sea manure or turbarry.

3rd. Good roads to market, to sea manure or turbarry.

4th. Climate, which includes a moderately elevated situation and shelter from injurious winds.

In maritime districts, say, within eight miles of a good market and seaport, land in an ordinary situation, for the reasons already mentioned, is reduced 2s. 6d. in the pound to bring it to the scale of the Act: approaching within, say, four miles of a considerable town, an increase of, say, 1s. in the pound is made on account of superior advantage of situation arising from the facility of procuring manure, vicinity to markets, &c.: approaching still nearer, the value on account of town influence is proportionably increased—within two miles to 8s. 6d.; at one mile to 14s.; at half a mile to 26s.; and the gardens close to the town to 40s. in the pound; that is

* A townland is similar to a township in England, and usually contains from 200 to 500 acres.

to say, land which in an ordinary situation is valued at 20s. per acre, is increased to 60s. when close to a maritime town containing from 70,000 to 100,000 inhabitants.

In like manner additions, though on a more moderate scale, are made for land approaching smaller towns and villages, and tables for this purpose, referable to towns of all sizes, have been constructed to assist, but *not absolutely to limit*, the judgment of the valuers.

It is to be observed that the scale of addition for town influence does not reach the full rent paid for *convenience*, or what is called *accommodation* land, the land being valued as if rented by a farmer for the production of ordinary crops under the most favourable circumstances. Deductions to be made on account of local circumstances.

The principle upon which deductions are made from the value of land, as compared with land of the same quality in an ordinary situation, is similar to that which regulates the increase. The circumstances tending to diminish the value, being—

- 1st. Distance from markets for the sale of produce.
- 2nd. Difficulty of access to markets on account of bad roads.
- 3rd. Distance from lime, sea manure, or turbary.
- 4th. Elevation, aspect, exposure to injurious winds, &c.

In regard to markets: as the average of the seaport markets were those from which the scale for agricultural produce contained in the Act was formed; in determining the amount of deduction to be made from land in an ordinary situation, say, five miles from a market town in the interior of the county, the difference between the market value of agricultural produce at that town, as compared to the seaport markets is first determined. Thus in many interior markets the prices vary from 1s. to 1s. 6d. in the pound below the maritime markets; for example, when the difference is 1s. 6d. in the pound, the deduction from land, in an ordinary situation in the neighbourhood of such a town, instead of being 2s. 6d. will be 4s. in the pound to bring it to the Act price; and where the distance from the local market is, say, ten statute miles, the deduction will be about 5s. in the pound, and so on in proportion.

Similar deductions are made for land in elevated and exposed situations, varying from 2s. to 5s., and in some cases as much as 10s., in the pound over and above the other deductions. Thus arable land, of similar quality and depth of soil, one situated within 10 miles of the city of Derry, and the other at an elevation of 600 feet in the mountains of the western part of the county of Tyrone, would each be valued in the first instance at, say 16s. an acre; to reduce that in the neighbourhood of Derry to the scale of the Act, one-eighth, or two shillings would be deducted, making the valuation according to the Act, 14s. per acre; but from the other the deduction would be, first, on account of distance from market 1s. 6d. in the pound over and above that near Derry; next for elevation and bad climate, say 2s. 6d. in the pound, making altogether a deduction of 6s. 6d. in the pound; and thus the land, originally valued at 16s. per acre, is reduced on account of local circumstances to 9s. 6d.

According to this system allowances, whether in addition or deduction, are made in all districts on account of local circumstances; and to ensure uniformity, tables have been calculated for the vicinity of towns, dividing them into ten classes according to their size and population.

The whole of the allowances, whether in addition or deduction, on account of local circumstances being made for an entire barony or county, a schedule of the amount of the valuation of each townland so corrected is prepared; but as only one-quarter to one-sixth of the whole lands are checked, and fearing lest any error of importance should have escaped the observation of the valuator, I am in the habit of sending an intelligent valuator into the county under consideration, who is directed to show the schedule of the valuation to the principal landed proprietors or agents of the district, and to ask their opinion as to whether, in their judgment, the relative value of the different townlands has been preserved; as in the course of this investigation many persons are consulted, several opinions will be given respecting the relative value of certain of the townlands; and if it appears that some particular townlands are considered to have been unequally valued as compared to others, the valuator proceeds to those townlands, and, having examined them with care, reports to me his opinion as to whether any alteration should or should not be made in the amount of the value of the townlands in question.

Having gone through this ordeal, schedules containing the several parishes and townlands in each barony are printed and distributed as prescribed by the Act. Special vestries are then summoned to meet in each parish to consider the propriety of appealing against any part of the valuation as compared with another, and subsequently the committees of appeal, appointed by the grand jury to hear and determine appeals in each barony, meet for that purpose; but owing to the pains that have been taken to ensure relative accuracy in the valuation, appeals are rarely made, or at least few, which are not abandoned on explanation being given at the meeting of the committee of appeal.

In regard to the difference between the valuation of land adopted by me under the Act, and the *actual letting value*, I have to observe that our valuation is *about 25 per cent. under the full or rack rent value*; but very near that of many of the principal landed proprietors of the country. Thus, in the parish of Aghanloo, county of Derry, the valuation of the townlands, as contained in the printed schedule, rarely differed so much as 1s. in the pound from the proprietors' rental; the same fact was observed respecting the rentals of the different London companies, as well as of other proprietors in the county of Derry, while the full rents, under ordinary small proprietors, were usually 25 per cent. above the amounts given in the printed schedules; similar facts were observed in other counties, and I have lately noted several remarkable coincidences of the same kind in the counties of Tyrone, Cavan, and Monaghan; so that it would appear that the scale of value, adopted by me under the Act, is nearly that of the great landed proprietors of Ireland, but considerably below the rack rents. Acting on

Classifications of
houses.

this knowledge, I have uniformly replied to applications from the Guardians of Poor Law Unions in different parts of the country, respecting the addition that should be made to the amount contained in the printed schedules of the general valuation, to bring it to a rent value, that if one-third be added, the result will give very nearly the full rent value of the land under ordinary proprietors.*

In regard to houses, the value is determined by measurement according to the nature, quality, and state of repair of the building, and the result is deduced from tables calculated for the purpose. In these tables, houses are divided into three principal classes, namely, new, medium, and old; but each class is again subdivided into three.

Thus, the 1st subdivision of the new class consists of houses built or ornamented with cut stone, of very superior solidity and finish.

2nd. Very substantial building and finish, without cut stone ornament.

3rd. Ordinary building and finish.

Medium.—1st. Not new but in sound order, and in good repair.

2nd. Slightly decayed, but in good repair.

3rd. Deteriorated by age, and in tolerable repair.

Old.—1st. Old, but in repair.

2nd. Old and out of repair,

3rd. Old and dilapidated, scarcely habitable.

Having ascertained the cubical contents of the house, the valuator next determines to which class it belongs; whether new, medium, or old, and to which division, if any class. If to the first of the new, he will find the price, in proportion to the content, to be five times greater than if it had been the last of the old.

On the above principle six tables have been calculated, each of which is adapted to a particular variety of building, the price being reduced in proportion to the reduction in the value of the materials used. Thus, there are three tables for dwelling houses.

Dwelling-houses.

1st. Slated dwelling houses built of stone or brick, with lime mortar.

2nd. Thatched houses built of stone or brick, with lime mortar.

3rd. Thatched houses having dry stone or mud walls.

Office buildings.

In like manner there are tables of a similar kind for *office buildings* the prices being proportioned to the diminished cost of building offices as compared to dwelling houses.

The valuation of houses by measurement according to the above system has given very general satisfaction. And in consequence, appeals against the valuation of dwelling houses or other buildings are rarely made. In fact all houses are measured and valued at different times by *two* independent valuers. And when the first and second valuations agree, and they rarely differ so much as one shilling in the pound, there can be little danger of want of uniformity in the scale.

The house valuation tables are calculated for *houses in the country*, but they are likewise available for houses in cities or towns; the prices according to the cubical contents being increased in proportion to the actual rent paid.

Houses in towns.

Houses in towns are always more valuable, in proportion to their cubical contents, than houses in the country, and houses in the principal streets of the same town much more valuable than in the inferior. Thus, in the best shop-street of a considerable town, it is usual to multiply the prices given in the tables by five, to equal the average rents, in the second class streets by three; and in the back streets by two; and so on.

Shop-streets.

According to the Act, one-third of the amount of the value of all buildings is deducted previously to their insertion in the printed lists, and consequently to determine the full value of any house or building, one-half is to be added to the amount given in the printed schedules. With a knowledge of the above facts, there can be no difficulty in using the General Valuation as the ground-work for all local taxation, but as this valuation does not subdivide the townlands into farms and tenements by name, though the valuation lots as already mentioned, are usually co-extensive with farms, a sub-applotment will be required within each townland, which sub-applotment for the purpose of the *county assessment*, has already been made in most of the Northern counties.

RICHARD GRIFFITH.

General Valuation Office, Dublin,
April 21st, 1841.

* In the districts of the counties of Antrim, Derry, Tyrone, Armagh, and Down, in which the linen manufacture prevails, owing to the industrious habits of the people, and the extensive cultivation and manufacture of flax, the rent value of land is higher in proportion to the General Valuation than usual.

This *commercial* value, which amounts to about 2s. 6d. in the pound, was not taken into consideration, because flax is not included in the schedule of agricultural commodities contained in the Act; the basis of local taxation for county assessment, being founded on those kinds of agricultural produce which are *equally cultivated* in all parts of the country.

R E P O R T

FROM THE

SELECT COMMITTEE

ON

TOWNLAND VALUATION OF IRELAND;

TOGETHER WITH THE

MINUTES OF EVIDENCE,

APPENDIX AND INDEX.

*Ordered, by The House of Commons, to be Printed,
18 July 1844.*

Martis, 14^o die Maii, 1844.

Ordered, THAT a Select Committee be appointed to inquire whether the present Townland Valuation of Ireland, made by the Commissioner of Valuation, under the Act 1 & 2 Vict. c. 32, can be made available for the Imposition of Poor Rate and other Local Rates in that Country; and also, whether it be not desirable to alter the principle on which the Townland Valuation is now constructed.

Lunæ, 20^o die Maii, 1844.

Committee nominated :

Lord Eliot.
Sir Denham Norreys.
Mr. Parker.
Mr. Shaw.
Mr. French.
Mr. Young.
Sir Henry Winston Barron.
Viscount Jocelyn.

Mr. Philip Shirley.
Mr. Colquhoun.
Lord Courtenay.
Mr. Carew.
Mr. Vesey.
Sir Edmund Hayes.
Mr. Morgan John O'Connell.

Ordered, THAT the said Committee have power to send for Persons, Papers, and Records.

Ordered, THAT Five be the Quorum of the said Committee.

Jovis, 18^o die Julii, 1844.

Ordered, THAT the Committee have power to report their Observations, together with the Minutes of Evidence taken before them, to The House.

INDEX	-	-	-	-	-	-	p. 197

RESOLUTIONS, AGREED TO BY THE COMMITTEE,
UPON WHICH THE FOLLOWING REPORT IS FOUNDED.

No. 1. THAT the Valuation of Ireland for the County Cess, which is in progress under the superintendence of the Commissioner of Valuation appointed under the provisions of the Act, cannot in its actual form be made available for the assessment of rates under the Poor Relief Act :

1st. Because it contemplates no smaller division of land than the "Townland."

2d. Because its purpose being simply to ascertain the relative ability of the several townlands into which a county is divided to contribute towards county expenditure, a standard of value was adopted which fails to indicate the positive or letting value required by the Poor Relief Act.

3d. Because much property which is liable to Poor Rates, but not to County Rates, has been omitted from this Valuation.

No. 2. THAT the Valuations which have been made under the provisions of the Poor Relief Act, though framed upon a sound principle of Assessment, are not sufficiently uniform to afford a fair basis for the imposition of County Rates.

No. 3. THAT there ought to be only one Valuation for all purposes of Local Taxation in Ireland. That such Valuation should distinguish the Value of each Tenement separately. That it should include all Property liable to any Local Rate. That in framing this Valuation, the Value of Rateable Property should be "the net annual value to let," determined on the principles laid down in the Poor Relief Act.

No. 4. THAT, in order to secure a correct, fair, and uniform Valuation, it is expedient that the Valuation be made by Valuers appointed and superintended by a responsible Officer, having a special acquaintance with the subject, and independent of the Local Authorities. That there should be an easy Appeal given to some Tribunal competent to decide on questions of Value, and that means should be provided for periodical revision at proper and convenient intervals.

No. 5. THAT it is desirable to draw the attention of The House to the following questions, which have suggested themselves during the course of the Inquiries of Your Committee :

1st. Whether Property, liable to any Local Tax, should not be made liable to every Local Tax ?

2d. Whether the principle of the Rate apportioning the burthen of the Rate between Landlord and Occupant, adopted in the Poor Relief Act, should not be extended to County Cess and other Local Taxes ?

3d. Whether all the Local Rates and Cesses should not be collected as one Rate by the same officers, and whether the times of collection could not advantageously be limited by law ?

No. 6. THAT the Chairman be requested to draw up a Report conformable with the Resolutions.

R E P O R T.

THE SELECT COMMITTEE appointed to inquire whether the present TOWNLAND VALUATION of IRELAND, made by the Commissioner of Valuation under the Act 1 & 2 Vict. c. 52, can be made available for the Imposition of Poor Rate and other Local Rates in that Country; and also whether it be not desirable to alter the Principle on which the TOWNLAND VALUATION is now constructed;—HAVE agreed to the following REPORT:

YOUR Committee, in pursuance of the Order of The House, have considered the matters referred to them, and have examined Witnesses on the subject, whose Evidence is annexed.

Your Committee find that three Valuations exist in Ireland; viz.

1. The Tithe Valuation.
2. The Townland Valuation (6 & 7 Will. 4, c. 84).
3. The Poor Rate Valuation (1 & 2 Vict. c. 56).

1. The Tithe Valuation is found to be so defective in principle, and to be so wanting in uniformity, that Your Committee have felt it their duty to dismiss this Valuation from their consideration.

2. A Valuation of Ireland for the purposes of the County Cess was commenced by Mr. Griffith, as Commissioner of Valuation, in the year 1830, and has been continued to the present time. The Valuation was set on foot in consequence of the recommendations of a Select Committee of The House of Commons in 1824 (on the Survey and Valuation of Ireland, 1824), No. 445.—(See Appendix.) The Valuation is now conducted under the provisions of the amending Act of 6 & 7 Will. 4, c. 84. Mr. Griffith states, in his evidence given before Your Committee, that on March 27th, 1844, he had completed the valuation of 8,776,087 acres, consisting of 20 Counties. That the valuation of the Counties of

Mayo,
Galway,
King's County,

Queen's County,
Wexford, and
Wicklow,

comprising 4,777,497 acres, is in a forward state, and that the valuation of the Counties of

Tipperary,
Cork,
Kerry,

Limerick, and
Dublin,

comprising 5,189,766 acres (one-fourth of Ireland) is yet untouched.

Mr.

R. Griffith, 308,
309, 310, 311.

R. Griffith,
24 May 1844, 6.

R. Griffith,
24 May 1844,
6, 7, 8, 9, 10, 11,
12.

Mr. Griffith also states that the sum expended in the Valuation up to March 27, 1844, was 126,475 *l.*, and that about 77,772 *l.* remains to be expended in the completion of the Valuation. 14, 15.

The expense of this Valuation is defrayed by the county valued, and is charged upon the County Cess. 16, 17.

The only rules for the construction of the County Cess Valuation, and for the guidance of the Commissioner of Valuation, which are laid down by the Valuation Act, are contained in s. 9-14 of that Act (6 & 7 Will. 4, c. 84). These rules are as follow :—

1. The valuation of all lands is to be made with reference to certain prices of grain, potatoes, butter and meat, specified in the Act; these prices are stated by Mr. Griffith to have been taken from the average prices of the years 1816 or 1817. 25.

2. Houses above 5 *l.* of annual value are to be valued at two-thirds of that value; houses of less than 5 *l.* annual value are to be omitted. 31, 32, 33.

3. Outbuildings are to be valued with the house. 34.

4. Water-power is to be valued only so far as it is used, and machinery in a mill or manufactory is to be omitted. 36.

Mr. Griffith states also that copses cut for profit are valued as if in pasture. 39.

The County Cess being imposed upon townlands, and afterwards distributed or (as it is termed) apportioned amongst the occupiers of the townland, it was deemed sufficient to make this valuation a valuation of townlands; accordingly, the lowest unit of value is a townland (equivalent to an English township); the value of the separate tenements or occupations is not stated. 19.

The mode by which the annual value of the land valued was to be estimated not having been clearly laid down in the Valuation Act, the Commissioner was therefore left to exercise his own discretion in the matter. The following explanation of the principle which Mr. Griffith has followed in the estimate of the value, is extracted from a communication (dated 20th April 1841), addressed by him to the Commissioners of Inquiry into the Grand Jury Laws, and appended by them to their Report (App. G., p. 81): 328, 329.

R. Purdon,
14 June 1844,
695, 696.

“I beg to state that in the general valuation placed under my direction, the valuers in each case value the land according to the nature and depth of the soil, and the quality of the sub-soil, all the local circumstances being taken into consideration, which include permanent improvements of every kind. In fact, the land is valued at the rate it would reasonably let for to a solvent tenant, on a lease of 21 years, if the standard prices for agricultural produce contained in the Act, were the average prices at the principal markets of Ireland, at the time the valuation was made.”

“The general instructions given by me to the valuers were, that they should value the land on a liberal scale, that is to say, in the same manner as if employed by one of the principal landlords of the country, who was about to let the land to a solvent tenant, on a lease, say of 21 years; that

they were to judge of the value of the land, not by its appearance to the eye, but by digging up the surface, and by this means ascertaining the nature, quality, and depth of the soil, and the quality of the sub-soil; that land of the same quality and circumstances, though badly farmed, was to be valued at the same rate as similar land well farmed, clean, and in good order, but that all permanent improvements, such as drains, good fencing, good roads, &c. were to be taken into consideration. By this means, the industrious farmer who tilled and manured his land well, would not be taxed more than his indolent neighbour, who was similarly circumstanced, but who did not take advantage of his situation.

“ It is to be observed, that land clean and in a high state of cultivation may, by imperfect tillage and a succession of white crops, be deteriorated in a few years, and consequently it would be unjust, in a permanent valuation, to rate the land high, solely on account of its being well cultivated at the time the valuation was made. On the other hand, land which is in a bad state, owing to mismanagement, should not be valued quite as low as its present condition would suggest.

“ Lands which have never been tilled are valued as pasture, though, from the nature of the soil and sub-soil, they may be capable of being tilled and improved. Such land is valued at a price per acre proportioned to the number of cattle, sheep, &c. it may be capable of grazing during the year, the price per head being regulated according to the usual price per head paid in the neighbourhood for grazing, the quality of the herbage being taken into consideration; of course, where the soil and sub-soil are good, the quality of the herbage will be superior, and the value will be regulated accordingly. I have entered into this detail in consequence of an erroneous opinion having prevailed that in the General Valuation lands were valued at the same rate, according to their natural quality, whether improved and cultivated, or in a state of nature; but this is not the fact, the land being valued in each case at the rate it would reasonably let for by lease to a solvent tenant, in the state in which it is found.” * * *

“ In regard to the difference between the valuations of land adopted by me under the Act, and the actual letting value, I have to observe, that our valuation is about 25 per cent. under the full or rack-rent value; but very near that of many of the principal landed proprietors of the country. Thus, in the Parish of Aughaloo, County of Derry, the valuation of the Townlands, as contained in the printed Schedule, rarely differed so much as 1 s. in the pound from the proprietors' rental; the same fact was observed respecting the rentals of the different London Companies, as well as of other proprietors in the County of Derry, while the full rents, under ordinary small proprietors, were usually 25 per cent. above the amounts given in the printed Schedule. Similar facts were observable in other counties, and I have lately noted several remarkable coincidences of the same kind in the Counties of Tyrone, Cavan, and Monaghan, &c.; so that it would appear that the scale of value adopted by me, under the Act, is nearly that of the great landed proprietors of Ireland, but considerably below the rack rents. Acting on this knowledge, I have uniformly replied to applications from the Guardians of Poor Law Unions in different parts of the country, respecting the addition that should be made to

to the amount contained in the printed Schedules of the General Valuation, to bring it to a rent value, that if one-third be added the result will give very nearly the full rent value of the land under ordinary proprietors." * *

"In the districts of the Counties of Antrim, Derry, Tyrone, Armagh, and Down, in which linen manufacture prevails, owing to the industrious habits of the people, and the extensive cultivation and manufacture of flax, the rent value of land is higher in proportion to the General Valuation than usual.

"This commercial value, which amounts to about 2 s. 6 d. in the pound, was not taken into consideration, because flax is not included in the schedule of agricultural commodities contained in the Act; the basis of local taxation for county assessments being founded on those kinds of agricultural produce which are equally cultivated in all parts of the country."

It is difficult to reconcile, perfectly, the statements in different parts of these extracts; but it is evident that Mr. Griffith does not estimate the annual value according to the amount for which the land would probably let, supposing that amount to be determined by competition, and the land to be cultivated in the ordinary mode, with an average amount of capital and skill.

Mr. Griffith says, in reply to Question 28, that the value which he has adopted in the Counties of Derry and Antrim, is "under from 20 to sometimes 40 per cent. the rents of the middle landlords or small landed proprietors." He also states, that "that scale has been preserved throughout Ireland, and is the very same in the several counties that he is now valuing." He adds, "I find that where I get a very large landed estate let by valuation particularly, it is generally near the scale which I adopted, but that I am fully 25 per cent. under what I should call the full or high rents of the country:" and in reply to Question 54, he says, "that the lettings which exceed the valuation by 25 or 40 per cent., comprise more than three-fourths of the whole acreable extent of Ireland;" and that, in answer to applications from Guardians of Poor Law Unions, he has uniformly stated that the addition of one-third to his valuation, would give very nearly the full rent value of the land under ordinary proprietors. Now, if the Poor Law Guardians have added a third to Mr. Griffith's Valuation, it may be assumed as certain that Mr. Griffith's valuation is considerably under the fair letting value; for the Poor Law Valuations have, in a great number of cases, been made by tenant-farmers, and the majority of the Board of Guardians generally belongs to the same class, so that (looking to the provision in the Irish Poor Relief Act regulating the deduction made by the tenant from the landlord) it is not likely that those valuations should have been unreasonably high.

R. Griffith,
24 May 1844,
28.

54.

Mr. Purdon states in his evidence, that he has observed a very considerable difference between the value placed by Mr. Griffith upon lands adjoining towns and the actual letting value, and he adds, "perhaps I am not far from correct, when I say, I have observed a difference so great as 70 per cent. between the highest letting value and Mr. Griffith's value." And in reply to question 783, he says, that this 70 per cent. difference "exists between the valuation and the rents which are actually and *bonâ fide* paid for the occupation of those lands."

R. Purdon,
13 June 1844,
783.

It appears to Your Committee that no practical standard can be safely assumed for estimating the annual value of land, other than the probable sum at which it could be let, to a tenant with ordinary skill and capital, under the average existing circumstances of the country, and with its actual advantages and disadvantages. If this criterion is not adopted, the valuator is left to mere conjecture. One person may proceed upon the assumption that the land is let at too high a rate, and may fix his ideal value below the average rents actually paid. Another person may consider the existing rents to be unduly low owing to the want of skill and capital in the cultivators, and may therefore fix a value superior to the average of the actual rents. Each of these persons might allege specious and plausible reasons in favour of his view, but both would be erroneous, and attended with their respective inconveniences.

Now the principle of valuation employed by Mr. Griffith is not founded upon an estimate of the probable letting value, and therefore it appears to be open to the objections just alleged.

It is to be observed, further, that Mr. Griffith is not only now working upon a scale of prices derived from an average of prices in the years 1816-17, and fixed by the 6 & 7 Will. 4, c. 84, but that the Act contains no powers for revising the Valuation when made. No Valuation, however, which is founded on just principles, can retain its applicability for many successive years; and in order to secure its accuracy, a machinery for its revision from time to time is indispensable.

3. Since Mr. Griffith's Valuation has been in progress, the whole of Ireland has been valued by separate Unions, for the purposes of the Poor Rate, under the Irish Poor Relief Act (1 & 2 Vict., c. 56). This Valuation has been made under the provisions in sections 63-65 of the Act, which accord substantially with the law of rating in England. Under these provisions, each occupier is rated separately, according to the net annual value of the land to let. Some sorts of property, such as tithes and mines, fisheries and quarries, which are not rateable to the County Cess, are rateable to the Poor's Rate. The principles upon which the Poor Rate Valuation has been constructed appear to Your Committee to be sounder than those which have been followed in the formation of Mr. Griffith's Valuation; but it has, for the most part, been executed by persons of inferior skill, who have not applied these principles uniformly in the different unions.

It appears, therefore, that in the counties of Ireland which have not yet been valued by Mr. Griffith, there is in existence a Valuation for poor law purposes, which has been recently made, and is constructed on a good principle, though that principle may not always have been uniformly or skilfully applied. The extension to these counties of Mr. Griffith's Valuation will create a Second Valuation for the imposition of another local tax, framed uniformly, but upon an unsound principle. With respect to the Counties of Cork and Waterford, there is less reason for subjecting them to this additional expense, inasmuch as each of them obtained, not many years ago, a Valuation for the County Rate, made under the Local Act; so that the proposed new Valuation by Mr. Griffith would be the Third Valuation for the imposition of the local taxes, defrayed out of the local funds, which would have been made within about 12 years.

R. M. Muggeridge,
24 June 1844,
1178, 1179, 1181.
1182.

Sir R. Keane,
527.

All the Witnesses examined before Your Committee concur in recommending that there should be only one Valuation for all purposes of local taxation in Ireland, and that such Valuation should distinguish the value of each tenement separately.

Mr. Griffith assigns a gross value for each townland. If the townland is in one holding, the occupier or owner can judge of the accuracy of the valuation, but if (as is almost invariably the case) the townland is divided into numerous tenements, it is impossible for any occupier of the townland to judge from his own case of the correctness of the valuation, because his tenement is only a small portion of the aggregate value. An owner of a portion of the townland would be similarly situated; if the fee simple of the entire townland belonged to the same owner, he would be able to judge of its agreement or disagreement with the rent. But Mr. Griffith professes to disregard the rent, so that practically there is scarcely any tangible criterion of the accuracy of his valuations. It is to be observed, moreover, that the occupier is the person immediately interested, and that even if the rent was adopted by Mr. Griffith as his standard of valuation, the occupier of a single tenement in a townland, composed of numerous tenements, would be unable to judge from his own holding of the accuracy of the total valuation.

R. Griffith,
315. 319.
Sir R. Ferguson,
501.
Sir R. Keane,
563-648.

The Committee, therefore, are of opinion that, unless the Valuation imposes a separate value on each tenement, there cannot be any effectual redress to the ratepayer, or effectual responsibility on the part of the valuator.

The Witnesses, therefore, concur in opinion, that the Valuation should be constructed upon the principle laid down in 1 & 2 Vict. s. 64, viz., "the net annual value."

Doubts, however, have been expressed as to whether the terms of the Poor Relief Act, defining "net annual value," are sufficiently definite, and precise, and also whether the term, "from year to year," sufficiently indicates that the rent to be assumed is the amount of rent which a landlord could reasonably expect, if letting for such a term as would allow the profitable cultivation of the land. The words of the Act are as follows, viz.: "That every such rate shall be a poundage rate, made upon an estimate of the net annual value of the several hereditaments rated thereunto; that is to say, of the rent at which, one year with another, the same might, in their actual state, be reasonably expected to let from year to year; the probable annual average cost of the repairs, insurance, and other expenses, if any, necessary to maintain the hereditaments in their actual state, and all rates, taxes, and public charges, if any, except tithes, being paid by the tenant."

If these terms, "net annual value" and "from year to year," be not sufficiently precise, it might be enacted that the annual value should be taken as the letting value for a fair average term of years (such as a landlord usually lets his land for), and not for a single year.

Mr. Griffith states that the cost of making a Tenement Valuation, upon the above principle, in that part of Ireland in which the County Valuation is completed, would be about a halfpenny per acre, and that where the County Valuation is not completed, the extra cost would be less than a halfpenny per acre.

R. Griffith,
172-191.

653. 656. 1033.
1279. 1376, 1377.

All the Witnesses examined before Your Committee also concur in opinion that the Valuation thus to be applied to all purposes of local taxation in Ireland, should be constructed by valuator appointed, and superintended by a responsible officer, independent of all local authorities or influence. They also agree in thinking that an easy mode of appeal should be given to some tribunal competent to decide on questions of value, and that means should be provided for a revision of the Valuation, as circumstances and the altered condition of property may require.

In order therefore to obviate the disadvantages arising from the existence of two independent Valuations, or the imposition and levy of the local taxes upon distinct principles, and by separate authorities, the following plan has appeared to Your Committee to be deserving of consideration :

That Mr. Griffith be instructed not to continue his Valuation under the Act 6 & 7 Will. 4, upon the principles which he has hitherto followed.

That he be instructed, with respect to the Counties of which the Valuation has not yet been commenced, or is in progress, to revise the existing Poor Law Valuations according to the standard herein recommended, so as to convert them into Valuations which can be used for the assessment of the County Cess.

That in revising these Valuations so as to bring them to a uniform standard, he should adopt the tenement as the unit of valuation, and value each tenement according to its net annual value for a fair average term of years.

211.

Mr. Griffith has stated to Your Committee his opinion that he is bound by the terms of the Act to make his Valuation a Valuation of Townlands. Your Committee entertain no doubt that this is the intention and effect of the Act; but there appears to Your Committee to be nothing in the Act which prohibits the valuator from specifying the values of the several tenements comprised in each townland. In like manner the valuator may, if he think fit, state the net annual letting value according to the existing prices, in addition to the value estimated according to the prices laid down in the Act.

There appears, therefore, to be nothing in the above plan which is inconsistent with the provisions of the Valuation Act, and consequently nothing which could not be effected by an instruction from the Lord Lieutenant to the Commissioners of Valuation under Sect. 8 of the Valuation Act.

This change (though desirable in itself) would, however, be mainly intended to be preparatory to the following changes, which could only be effected by new legislation.

It is urged by most of the Witnesses examined, that the County Cess and the Poor Rate should be levied together, and that the same principle of payment between landlord and tenant should be applied to both taxes.

The application of this principle to the payment of County Cess has long been recommended. In the Report of the Select Committee on the State of the Poor in Ireland, printed by Order of the House of Commons 16th July 1830, No. 667, the Committee state, in reference to the payment of County Cess, as follows :—

“ The first consideration that presents itself is the question of the apportionment of the expense. These taxes are imposed by the grand jurors or
“ principal

“ principal landed proprietors ; they are paid by the occupying tenants, in
 “ many cases the poorest classes of cottier peasantry ; they are expended to
 “ a certain extent in roads and bridges, which frequently add a considerable
 “ value to the estates of the grand jurors and other inheritors of land ; but
 “ the pecuniary means of completing these improvements are furnished by
 “ those who have a less direct and permanent interest in the soil. It is true
 “ that these, like other burdens, cannot be altogether lost sight of by the
 “ tenant at the time he takes his lease, but the extreme eagerness to obtain
 “ possession of land renders such calculations but an insufficient protection ;
 “ besides which, the rapidity with which this branch of taxation has aug-
 “ mented, and the various subjects to which it has been applied by subsequent
 “ Laws, and which could not have been taken into consideration, make it quite
 “ impossible for either landlord or tenant to form any accurate estimate on the
 “ subject. In 1790 the grand-jury rates of Limerick amounted to 7,422 *l.* ;
 “ in 1829 the same tax had reached 34,324 *l.* Such augmentation was not
 “ accompanied by any proportionate rise in agricultural produce, nor could it
 “ have been in the contemplation of a lessee entering into a contract in 1790.
 “ Your Committee have no hesitation in expressing their decided opinion, that
 “ as a check upon expenditure, and a security for the rigid examination of
 “ accounts in the execution of public works, the occupying tenant should, in
 “ the case of all future contracts, be relieved from the burden of paying the
 “ entire county assessments ; and that such assessments should in the whole
 “ or in part, be imposed upon the landlords. It may be expected that this
 “ arrangement will render grand jurors more vigilant in preventing an
 “ undue increase of taxes, which will fall directly on themselves ; and it will
 “ be their interest to have the public works executed with skill and with
 “ economy, in order to obviate the necessity of new and augmented expendi-
 “ ture for repairs. Under this alteration of system, the imposer will also be
 “ the payer of the tax, and the person who is permanently benefited by the
 “ work will be compelled to furnish the means for its execution. The policy
 “ of making this change has been more than once recommended to the consi-
 “ deration of Parliament. Your Committee not only adopt the principle with
 “ a view to the relief of the occupying tenants, and to the more perfect and
 “ economical execution of public works, but they venture to express their
 “ extreme anxiety that no time should be lost in carrying it into practical
 “ effect, with the least delay. As some slight difference of opinion has been
 “ expressed on this subject, Your Committee feel it their duty to refer to some
 “ of the more striking parts of the Evidence, illustrating the recommendation
 “ that they felt it their duty to make. Among the suggestions submitted to
 “ the Committee of 1827, on the state of the Grand Jury Laws, is the fol-
 “ lowing :—

“ ‘ As to the best means of providing a check upon the unnecessary expen-
 “ diture of the public money, and as a stimulus to the rigid examination of
 “ every application for a grant of money, it is proposed, in all future contracts,
 “ to release the occupying tenant from the burden of the county assessment,
 “ and to impose it on the landlord. Thus the persons who impose the tax
 “ will be cautious in increasing the public burden, and it will be their interest
 “ to have the work executed in such a permanent manner as to lead to less
 “ frequent demands for repair.’ A committee of the grand jury of the
 “ county of Cork, in 1825, adopt the same opinion : ‘ We also think that
 “ when the levies shall be equalized, the landlord should accept the receipt

“ for the payment of the county rates, on account of the rent received, in all “ future contracts.’ General Bourke, in 1825, stated to the Committee on “ the Condition of Ireland, ‘ that it would be an improvement on the “ present system, if in case of all future contracts the county rate was “ charged on the landlord.’ ‘ I conceive,’ observes Mr. Godley, ‘ that the “ grand juries are bodies of men who have it in their power to put their “ hands in other people’s pockets, without at the same time considering how “ far those pockets may be filled, so as to enable the owners to spare any- “ thing out of them. If the grand jury rates became a charge on the land- “ lord, I am sure there would be more economy.’ ”

It is proposed, therefore, that measures be taken for assessing the County Cess and the Poor’s Rate upon the same basis, and for collecting them by the same officers.

For this purpose it must be declared that the County Cess should be (as in England) levied with the Poor’s Rate, and paid over to the county treasurer, upon order made by the grand jury.

A considerable annual saving (estimated by the Commissioners on the Grand Jury Laws at 23,000*l.*) would be effected by the combined collection of the two rates.

It is furthermore desirable that the powers relating to the revision of Valuations and the appointment of valuers, which are now vested in the Poor Law Commissioners, be vested in the Commissioners of Valuations, or some competent authority, for the revision of the Valuations upon which the consolidated rate would be assessed.

If the County Cess and the Poor’s Rate were consolidated, it would be necessary that both rates should, with respect to small tenements, be imposed and levied on the same principle. At present the Poor’s Rate is charged upon the owners, and not the occupiers of tenements under 4*l.* value in rural districts, and 8*l.* value in certain towns and boroughs; whereas the County Cess is always imposed upon the occupier, with the single exception of houses under 5*l.* a year, which may be altogether exempted (Sect. 11 of the Valuation Act).

Your Committee anticipate that, from the changes above recommended, the following beneficial effects would result :

1. In the place of two Valuations, one constructed on a faulty principle, and the other deficient in uniformity, would be substituted a single Valuation, uniform in its construction, and based upon a correct estimate of value, and likewise susceptible of revision from time to time.

2. By the substitution of one Valuation for two or more Valuations, additional securities for the correctness of the Valuation would be created, inasmuch as there would be stronger inducements to revise it from time to time, and a better justification for incurring expense in its improvement.

3. The direct advantages of a correct and trustworthy Valuation for the imposition of the local taxes would be, that their assessment would be rendered fairer, and their collection would thus be facilitated.

4. The indirect advantages of such a Valuation would be to furnish a safe criterion for any municipal or Parliamentary franchise, or other public right, in which a property qualification might be an ingredient.

Your

Your Committee will observe, finally, that the above recommendations are in substance contained in the Report of the Commissioners on the Grand Jury Laws, which was presented in 1842. The consolidation of the County Cess with the Poor and other Rates is likewise recommended by many of the persons whose evidence is appended to that Report.

18 *July* 1844.

EXTRACT from REPORT of COMMITTEE which sat in 1824.

In considering the subject referred to them, Your Committee have not felt themselves called upon to enter into a prolonged examination of witnesses to prove the necessity of a New Survey and Valuation of Ireland. Such a measure has been recommended by former Committees, and its expediency admitted by The House. It has formed the subject of various petitions to Parliament, and has been looked to by the people of Ireland as a remedy for the inequalities of the present mode of apportioning the taxation levied under the authority of grand juries and vestries. The expediency of proceeding in this great national work is apparent, from a consideration of the sums annually levied under the Presentment Laws. By Returns laid on the table of The House during the present Session, it appears that the amount of the grand jury taxes imposed in the last year has exceeded £.750,000. The obscurity and want of uniformity of the general system, as well as the inequality incidental to the mode of apportioning these local taxes, have been admitted by the Parliament of Ireland at remote periods. In some parts of Ireland the assessment is made by the civil division of Ploughlands, varying in size and value, but rated at an equal sum. In other cases a division by Townland has been established, each Townland contributing according to its assumed area, which bears no defined proportion to its actual contents. Gneeves, cartrons, tates, and other sub-denominations of land are recognized in other parts of Ireland; but however the names may vary, the evil seems universally the same; and the inequality complained of in the middle of the last century by Sir William Petty, continues without correction to the present times. This subject has frequently occupied the attention of the Legislature. A Select Committee, in the year 1815, after a minute investigation, reported, "That some mode should be taken to render grand jury assessments more equal, by correcting the defects arising from apportioning the county rate according to old surveys, calculated on the measure of land formerly deemed profitable, and not comprehending the great improvements which have subsequently taken place." Extracts from the Evidence taken before the Select Committee of 1815, will be found in the Appendix to the present Report. In the following year a second Report was presented to The House, stating, "that the various modes of levying the grand jury presentments, from the inequality of their pressure, arising out of the distant periods of time, and unsettled state of the country where such arrangements were made, require immediate and complete alteration." In 1819, a Bill was introduced to provide for the Survey and Valuation of Ireland, but the measure was not persevered in. During the present Session, a vote of 5,000*l.* was agreed for the purpose of a Trigonometrical Survey, and The House resolved, "That it is expedient, for the purpose of apportioning more equally the local burthens of Ireland, to provide for a General Survey and Valuation of that part of the United Kingdom." The utility of the proposed measure, as well as the necessity of its immediate commencement, appear, on a review of the records of Parliament, to be established beyond the possibility of doubt.

“ for the payment of the county rates, on account of the rent received, in all ‘ future contracts.’ General Bourke, in 1825, stated to the Committee on ‘ the Condition of Ireland, ‘ that it would be an improvement on the ‘ present system, if in case of all future contracts the county rate was ‘ charged on the landlord.’ ‘ I conceive,’ observes Mr. Godley, ‘ that the ‘ grand juries are bodies of men who have it in their power to put their ‘ hands in other people’s pockets, without at the same time considering how ‘ far those pockets may be filled, so as to enable the owners to spare any- ‘ thing out of them. If the grand jury rates became a charge on the land- ‘ lord, I am sure there would be more economy.’ ”

It is proposed, therefore, that measures be taken for assessing the County Cess and the Poor’s Rate upon the same basis, and for collecting them by the same officers.

For this purpose it must be declared that the County Cess should be (as in England) levied with the Poor’s Rate, and paid over to the county treasurer, upon order made by the grand jury.

Report presented
in 1842.

A considerable annual saving (estimated by the Commissioners on the Grand Jury Laws at 23,000*l.*) would be effected by the combined collection of the two rates.

It is furthermore desirable that the powers relating to the revision of Valuations and the appointment of valuers, which are now vested in the Poor Law Commissioners, be vested in the Commissioners of Valuations, or some competent authority, for the revision of the Valuations upon which the consolidated rate would be assessed.

If the County Cess and the Poor’s Rate were consolidated, it would be necessary that both rates should, with respect to small tenements, be imposed and levied on the same principle. At present the Poor’s Rate is charged upon the owners, and not the occupiers of tenements under 4*l.* value in rural districts, and 8*l.* value in certain towns and boroughs; whereas the County Cess is always imposed upon the occupier, with the single exception of houses under 5*l.* a year, which may be altogether exempted (Sect. 11 of the Valuation Act).

Your Committee anticipate that, from the changes above recommended, the following beneficial effects would result :

1. In the place of two Valuations, one constructed on a faulty principle, and the other deficient in uniformity, would be substituted a single Valuation, uniform in its construction, and based upon a correct estimate of value, and likewise susceptible of revision from time to time.

2. By the substitution of one Valuation for two or more Valuations, additional securities for the correctness of the Valuation would be created, inasmuch as there would be stronger inducements to revise it from time to time, and a better justification for incurring expense in its improvement.

3. The direct advantages of a correct and trustworthy Valuation for the imposition of the local taxes would be, that their assessment would be rendered fairer, and their collection would thus be facilitated.

4. The indirect advantages of such a Valuation would be to furnish a safe criterion for any municipal or Parliamentary franchise, or other public right, in which a property qualification might be an ingredient.

Your

Your Committee will observe, finally, that the above recommendations are in substance contained in the Report of the Commissioners on the Grand Jury Laws, which was presented in 1842. The consolidation of the County Cess with the Poor and other Rates is likewise recommended by many of the persons whose evidence is appended to that Report.

During the present Session, a vote of 5,000*l.* was agreed for the purpose of a Trigonometrical Survey, and The House resolved, "That it is expedient, for the purpose of apportioning more equally the local burthens of Ireland, to provide for a General Survey and Valuation of that part of the United Kingdom." The utility of the proposed measure, as well as the necessity of its immediate commencement, appear, on a review of the records of Parliament, to be established beyond the possibility of doubt.

PROCEEDINGS OF THE COMMITTEE.

Jovis, 23^o die Maii, 1844.

MEMBERS PRESENT :

Mr. Parker.
Mr. Young.
Sir Edmund Hayes.
Sir Denham Norreys.
Lord Eliot.

Mr. Carew.
Mr. F. French.
Mr. R. Shaw.
Lord Jocelyn.
Sir H. W. Barron.

Mr. Young was called to the Chair.

The Committee deliberated on the course of their future proceedings.

Sir Denham Norreys delivered in a copy of a letter from himself to Sir William Becher, dated 13 March 1844.

[Adjourned till To-Morrow, at Ten o'clock.]

Jovis, 11^o die Julii, 1844.

PRESENT :

Mr. YOUNG, in the Chair.

Sir Denham Norreys.
Sir H. W. Barron.

Mr. Vesey.
Lord Eliot.

The Committee proceeded to the consideration of the Resolutions proposed by the Chairman.

Motions made, and questions severally put and agreed to, as follows :—

No. 1. THAT the Valuation of Ireland for the County Cess, which is in progress under the superintendence of the Commissioner of Valuation appointed under the provisions of the Act, cannot in its actual form be made available for the assessment of rates under the Poor Relief Act :

1st. Because it contemplates no smaller division of land than the "Townland."

2d. Because, its purpose being simply to ascertain the relative ability of the several townlands into which a county is divided to contribute towards county expenditure, a standard of value was adopted which fails to indicate the positive or letting value required by the Poor Relief Act.

3d. Because much property which is liable to Poor-rates, but not to County-rates, has been omitted from this Valuation.

No. 2. That the Valuations which have been made under the provisions of the Poor Relief Act, though framed upon a sound principle of Assessment, are not sufficiently uniform to afford a fair basis for the imposition of County-rates.

No. 3. That there ought to be only one Valuation for all purposes of Local Taxation in Ireland. That such Valuation should distinguish the Value of each Tenement separately. That it should include all Property liable to any Local Rate. That in framing this Valuation, the Value of Rateable Property should be "the net annual value," determined on the principles laid down in the Poor Relief Act.

No. 4. That, in order to secure a correct, fair, and uniform Valuation, it is expedient that the Valuation be made by Valuers appointed and superintended by a responsible Officer, independent of Local Authorities. That there should be an easy Appeal given to some Tribunal competent to decide on questions of Value, and that means should be provided for periodical revision at proper and convenient intervals.

Motion

Motion made and question proposed :—

No. 5. That it is desirable to draw the attention of The House to the following questions, which have suggested themselves to Your Committee in the course of their Inquiries :

1st. Whether Property, liable to any Local Tax, should not be made liable to every Local Tax ?

2d. Whether the principle of the Rate apportioning the burthen of the Rate between Landlord and Occupant, adopted in the Poor Relief Act, should not be extended to County Cess and other Local Taxes ?

3d. Whether all the Local Rates and Cesses should not be collected as one Rate, by the same officers, and whether the times of collection could not advantageously be limited by law ?

Mr. Shaw's notice of amendment, after "Property" to insert, "except Tithe," read.

Motion made (Mr. Vesey), That the words "except Tithe," be there inserted. Motion, by leave, withdrawn.

Original question put and agreed to.

Resolved, That the Chairman be requested to draw up a Report conformable to the Resolutions.

[Adjourned till Thursday, 18 July, at Two o'clock.

Jovis, 18^o die Julii, 1844.

PRESENT :

Mr. YOUNG, in the Chair.

Sir Denham Norreys.
Lord Eliot.

Sir Edmund Hayes.
Mr. Parker.

The Chairman read a Report which he had drawn up upon the Resolutions agreed to at the last Meeting of the Committee [*Vide* Report]; which was considered, and agreed to.

[To Report.

MEMBERS PRESENT.

Sir Henry Barron.
Mr. Colquhoun.
Lord Eliot.
Mr. French.
Sir Edmund Hayes.

Viscount Jocelyn.
Sir Denham Norreys.
Mr. Vesey.
Mr. John Young.

JOHN YOUNG, ESQ. IN THE CHAIR.

Richard Griffith, Esq., called in; and Examined.

1. *Chairman.*] YOU are the Commissioner for the Valuation of Ireland?— *R. Griffith, Esq.*
I am.

2. Under what Act of Parliament are you acting?—Under the 6 & 7 Will. 4, c. 84. *24 May 1844.*

3. The first Act on the survey and valuation of Ireland was passed in 1824?—It was.

4. It is amended by the 6 & 7 Will. 4, c. 84?—It is.

5. That Act was passed in consequence of a recommendation of a Select Committee of the House of Commons?—It was.

6. Will you state what progress has been made in the valuation?—Here is a Paper representing the progress (*producing the same*). The Return in my hand was called for by the House of Commons, it contains data relative to the valuation. When this Return was made, which is dated the 27th March 1844, there were 8,776,087 acres valued, comprising 20 counties. There were 4,777,497 acres in a very forward stage of valuation, the whole of which will be completed during the present year; those consist of the counties of Mayo, Galway, King's County, Queen's County, Wexford, and Wicklow. The whole of those counties will be completed during the present, or very early in the next year. The counties in progress consist of Kilkenny, Clare, Waterford, and Tipperary. The counties not yet commenced are Dublin, Cork, Kerry, and Limerick.

7. What progress have you made in Kilkenny, Clare, Waterford, and Tipperary?—Kilkenny is a small county, and I think it will be finished by the end of next year. We have not made much progress, but since this Return was made the valuers who have been employed in Queen's County have been transferred to Kilkenny, and they are in full operation in that county at present. Clare is in the same state. There have been several additional valuers put into Clare since the Return was made.

8. Waterford?—That is only just commenced.

9. Tipperary?—Tipperary is only just commenced.

10. Will you name those counties that are yet untouched; how many are they, and what acreage do they contain?—I might almost include Tipperary in the counties which are untouched; Tipperary, Cork, Kerry, Limerick, and Dublin.

11. What is the acreage of those counties?—Tipperary contains, 1,048,130; Cork contains, 1,786,560; Kerry, 1,443,360; Limerick, 681,600; Dublin, 240,113.

12. Would that be about one-fourth of Ireland?—There is rather more than four millions of acres, out of 20 millions, not begun; or less than a quarter.

o.63.

B

13. It

R. Griffith, Esq.

24 May 1844.

13. It would take about a year and a half to complete such counties as Kilkenny, Kerry, and Waterford?—I think it will take that time to complete them. The valuation is in a very forward state, but the check valuation of the county, which is done by one individual, though it does not cost much money, takes a great deal of time, and, in consequence, there is always a considerable delay in completing the work, though the principal expense is incurred in the commencement.

14. Of the sum expended, or to be expended, on the valuation, how much has been actually expended?—When this Return was made, the sum expended amounted to 126,475 *l*.

15. Remaining to be expended, how much?—About 77,770 *l*.

16. From what source is the expense defrayed?—It is paid out of the Treasury, but it is repaid by the counties.

17. Charged upon the county cess?—Charged upon the county cess.

18. What were the rules which were laid down for the construction of this valuation; were there any rules laid down in the Act of Parliament?—The Act prescribed that the valuation should be made in the townlands, and that the scale of value should be according to a fixed standard contained in the Act.

19. Was the townland to be the unit of valuation?—Yes. I can mention to the Committee the cause: the townland of Ireland is the lowest denomination which has permanent boundaries. The valuation was intended to be a permanent one, for the purposes of the applotment of the county assessment. It was desirable that the townland should be taken, because the county assessment is made in two different parts, one called the baronial assessment and the other the county at large assessment; and if the valuation had been made on farms or tenements liable to change in size or in value, the moment a change was made the baronial assessment would vary and its proportion to the county would vary; but by having it fixed by the townland, whose boundaries were not liable to change, the proportion which the barony bears to the county at large will be permanent. But though the valuation was directed to be made in townlands, and though it is published in each case as the amount of townlands, still the valuers, acting under my direction, subdivided each townland into a great number of divisions, each of which divisions are bounded by fences marked on the ground, and as far as is practicable, those fences are the boundaries of farms, where they are of sufficient size. In some localities, where the farms are very small, three or four farms, consisting of from one to four acres, may be included in a lot; but, generally speaking, the boundaries of lots are either the boundaries of farms, or, if the farms be large, three or four lots may be contained in one farm; and the result of this system has been, that no difficulty has been found in applotting the county assessment from the general field-book upon the farms, and it has, in fact, been done in several counties; it is now being carried into effect in the county of Mayo by the county surveyor. It has been effected in the county of Kildare by persons, several of whom had been employed in my office, but who, at the request of the gentlemen of the county, were allowed to be employed in the temporary purpose of applotting; and I have myself tried the system in one or two parishes, the detail of which I have brought for the information of the Committee.

20. In those counties in which the sub-applotment has been made in the way you have mentioned, it has not in any way altered the relative proportion of the townlands to each other?—No. I am directed by the Act to give the relative value between one townland and another, which has been effected by dividing the townland into a number of parts or divisions. If the valuator be equal to value a townland as a whole, he is equal to divide the parts; and the applotments made under the general valuation, and divided according to lots made by the valuers, has given general satisfaction.

21. *Mr. French.*] Generally speaking, there have not been many appeals against the relative value of townlands?—Very few.

22. *Chairman.*] The sum applotted upon the townland is fairly distributed, according to your view, upon the separate tenements in the townland?—It has, where the applotment has been made from the valuation field-books and field-maps; but where it has not been so made, which in nine cases out of ten has been the case, but by applotters employed by the parish, the greatest dissatisfaction has arisen. I have received numerous letters, requesting me to interfere, but I had not authority to do so.

23. The

23. The Committee understand, that though in certain cases the sub-applotment in townlands has been made under different auspices, the smallest quantity contemplated as the unit in valuation by the Act is a townland?—It is.

R. Griffith, Esq.

24 May 1844.

24. And no provision has been made for going below that?—There has not.

25. Upon what principle, with regard to prices, has the valuation been made?—The valuation has been made according to the scale of prices contained in the Act, which scale of prices was taken from the average market prices for a certain year; I cannot at the moment remember the year, but it was immediately after the conclusion of the French war, in the year 1816 or 1817; it was taken by myself with great pains, referring to the market lists of the principal markets in Ireland for one year; I made it out for every county; but afterwards there was found to be so little difference in any part, that it was found better to make one general scale for Ireland.

26. Did not you afterwards test those prices by the average of subsequent years?—I did. When I commenced the valuation in the year 1830, in the counties of Derry and Antrim, I ascertained the prices of agricultural produce throughout Ireland for the five previous years, and I found that the average of those prices was one-eighth, or 2s. 6d. in the pound, higher than the prices contained in the Act; consequently, in valuing that land according to the then prices, to bring it to the scale in the Act, it was necessary to deduct one-eighth; the prices in the Act were 2s. 6d. in the pound lower than the actual prices, and as I was to value according to the prices contained in the Act, I was obliged to reduce the valuation one-eighth from what it would have been had the then prices been taken. I shall mention to the Committee the system on which I acted: the lands of the North of Ireland are usually let by valuation, and that system is confined to the North of Ireland; for, generally speaking, in other parts it is let by tender: the people offer so much for a farm that is to be let, but in the North of Ireland, particularly in Derry, Antrim, and Down, and other neighbouring counties, the landlords are in the habit of employing valuers to value the land previously to letting. I inquired when I came into the county, from the landlords, the names of the valuers upon whom they placed the greatest dependence for valuing lands for letting, and having collected the whole of those men together, I took them into the field, and worked with them myself every day for about a month, sometimes each man giving his opinion of the land, and sometimes valuing silently, for a week, without giving any opinion, and by the constant comparison of their different prices, we fixed a relative scale, which we considered to be a fair letting scale between landlord and tenant, at the then prices.

27. Mr. Colquhoun.] Did you take one specific field of one barony, or take each field in each barony?—Each field in each barony as we went on.

28. Going through each barony and each field of the barony?—Yes; the valuers were directed by me when I divided them into parties of three, which was required by the Act, in the first instance, to value as if they were employed by one of the principal landlords of the county to let the land, say on a lease of 21 years. I desired them to pay no attention whatever to the scale of the Act; I knew that that would confuse them. They had their own system of valuing according to the scale they usually adopted. They valued by that, and after they gave me the valuation I took off 2s. 6d. in the pound where the land was in an ordinary situation; if it was in an extraordinary situation and they said they had not taken that into consideration, something was added to bring it as near as possible to what was considered to be the true scale of value of the principal estates of the county reduced to the Act. Having completed the valuation of the counties of Derry and Antrim, and afterwards comparing it with the rents which I had an opportunity of ascertaining, I found that, generally speaking, the results of the valuations made under my direction corresponded very nearly with the great landed proprietors' rents, but that they were from 20, and sometimes 40 per cent., under the rents of the middle landlords or small landed proprietors of the country. And I may say that the scale commenced upon has been preserved throughout Ireland, and is the very same in the several counties I am now valuing. I find, generally, that landed estates let by valuation, are generally near the scale which I adopted, but that I am fully 25 per cent. under what I should call the full or high rents of the country.

29. Chairman.] Did you adopt those measures for fixing a principle upon which the annual value of the land should be estimated, in consequence of

R. Griffith, Esq.

24 May 1844.

having no clear directions in the Act?—There was no clear direction in the Act, except to value the land at a certain fixed scale of value for agricultural produce; and the system I adopted is, I think, the best means of carrying that object into effect.

30. The only directions in the Act are contained in sections 9, 10, 11, 13, 14, of the 6 & 7 Will. 4, c. 84?—Yes.

31. With regard to the valuation of houses, what were the directions of the Act?—The directions in the Act were, that houses were to be valued at two-thirds of the rent for which they could be reasonably let by the year.

32. How did you carry that into effect?—The great difficulty in the valuation of houses, particularly houses in the country, was, that the houses were not usually let, and the Act required that houses should be valued at the sum they would reasonably let for by the year, deducting one-third from such valuation. The system I adopted was this: I ascertained the rents of all the houses of ordinary quality in the counties of Antrim and Derry, which I could hear of, as having been let for the last 10 or 20 years. I looked at the houses very carefully myself, and with the best valuers, and we put what we considered the fair value on them; we knew also the rent that had been paid for them. I measured the houses, ascertained their cubical contents, looked at their quality, as whether they were new houses or medium houses (neither new nor old), or old houses; and on those data, on nearly 200 examples of houses of different classes, I formed tables, which were to guide the valuers in making their valuations; according to which tables the houses are valued, in proportion to their cubical contents and qualities.

33. Is there not a certain class of houses omitted from the valuation?—All under 5*l.* annual value are omitted.

34. How were outbuildings valued?—Outbuildings were valued according to the same system as the houses; they were valued by tables, but a less price, according to their contents, was put on them, owing to the difference in the quality of building.

35. Was not the direction of the Act that they should be valued along with the house?—They were valued along with the house; the values were added together; made one sum.

36. How was water-power valued?—Water-power is required by the Act to be valued according to its effects: the Act states, “that all flour, corn, flax, or other mills or buildings erected for manufacturing or other purposes shall be included in such valuation, provided that the water-power of any such mill or manufactory be only valued so far as it may be actually used, and that such valuation shall not extend to or include the value of any machinery contained within such mill or manufactory.”

37. How were bogs valued?—They were valued as pasture, but no value was put on them as turbary.

38. How did you value plantations?—They are valued by ascertaining the quality of the soil on which they grow; but no value is put on the timber.

39. How were copses cut for profit valued?—As if in pasture.

40. Did your valuation include tolls corporate or private?—No.

41. Did it include fisheries?—It did not.

42. Or quarries?—It did not.

43. Did it include tithes?—No.

44. Or ferries?—No.

45. Or sea strands, or the right of cutting weeds?—I must observe as to the right of cutting weeds, that a price was put on the land adjoining the sea shore, where the right of cutting weed extended, for the agricultural value on account of the facility of procuring manure. The increase varied from 4*s.* to 6*s.* an acre; and this increase was carried into the interior of the county, as far as it was used. It was considered as one of the favourable local circumstances.

46. What you mean is, that the facility of procuring sea-weed was added as an additional value to the land in the vicinity?—It was. On the same principle that vicinage to a town, from the facility of procuring manure, would increase the value of land; or the vicinity to a limestone quarry for procuring lime.

47-8. Sir H. W. Barron.] Is the landlord's right of strand valued?—No, it is not.

49. Sir D. Norreys.] Would a strand from which kelp is obtained be valued?—No.

50. Chairman.]

50. *Chairman.*] According to this principle, in certain cases you placed an additional value on the land on account of its being attended by profitable incidents?—I did.

R. Griffith, Esq.

24 May 1844.

51. But the valuation was really extended to nothing except lands, houses, outbuildings, and water-power?—It was confined to them.

52. You have stated that your valuation corresponded very nearly with that of some of the larger landowners?—It did.

53. But that it was below that of the smaller landowners and middlemen to the amount of 25 or 40 per cent.?—It varied from 25 to 40 per cent.

54. What proportion would those larger landholders at low lettings bear as regards the whole of Ireland, or the province of Ulster, to those whose lettings exceeded your valuation by 25 or 40 per cent.?—I should think it would be under one-fourth of the entire country.

55. Does your answer refer to the acreable extent?—It does.

56. Would you say that the tenants paying 25 to 40 per cent. over your valuation were in a condition to be able to pay those rents, or, to use the expression used in the valuation under the Poor Law Act, were they able to pay them and live?—They do pay them and live; but they do not live so well, or nearly so well, as those who pay more moderate rents.

57. *Sir H. W. Barron.*] Could the tenants, under a good system of farming, pay the rents on an average that they are actually paying at the present moment?—I am certain that they could, and more.

58. *Chairman.*] Can you give any instances of the difference, or an approximation to it, between the valuation of the land adopted by you under the Act and the actual letting value?—I hold in my hand tables which have been made of portions of different counties, which I have collected rather in a hurry; but they show that there are great variations between the letting rents and the valuation in different parishes; on the whole, from that data it would appear that the valuation is between 5s. or 6s. in the pound under the rents.

59. How would you account for the fact that, in three-fourths of Ireland, your valuation is 25 per cent. at least below the usual amount of the rent?—Because, as I mentioned to the Committee in the beginning, my directions to the valuers were, to value the land as they would do for the great landed proprietors. In the north of Ireland, though lands are let lower than the usual scale, we have continued that scale throughout. To be certain that I have continued that scale, I am now in the habit of sending valuers, and I have done so this year from Mayo, to value lands over again which had been valued several years ago in Derry, to see whether they had preserved the scale, and I found that they had. But I should observe, that the valuation in each case is modified according to the state of the agriculture of the country. The system of agriculture which prevails in the counties of Derry, Antrim, and Down, and other northern counties, is so superior to that which prevails in the west, as to amount to full 50 per cent. difference in the value of land; that is, the same quality of land in the county of Down, which was valued at 30s. an acre, is only valued at 20s. an acre in the county of Mayo; that is, land under the same circumstances and of the same value; because the system of agriculture in the one is so different from the other. In the county of Down, the usual five-course system prevails; in the west of Ireland, the system is five crops of potatoes and grain, and then, generally, from 10 to 12 years of pasture, no grass seeds being sown.

60. You are now contrasting the agriculture of the county of Down with the agriculture of counties in Connaught; not with the southern or midland counties?—I am stating that as an example of the principle. I go down myself with the best valuers; we take two or three farms and see what each farm has produced for the last 10 or 15 years, say in the west, and make the best calculation we can as to the produce of 100 acres there and in the county of Down, and I say that there is, owing to the difference in the state of agriculture, full 50 per cent. difference in the produce between the north and the west. There is less so in other districts.

61. Not in the real value?—In the produce of 100 acres.

62. Are you aware that in Scotland, Belgium, Tuscany, and other countries that are under a good system of cultivation, similar land to that you are just now speaking of lets for much higher prices than in Ireland?—I am aware that it would be let much higher in Scotland; and in the county of

R. Griffith, Esq.

24 May 1844.

Down, where the tenants pay 50 per cent. more than in the west of Ireland, the people live better.

63. Mr. Colquhoun.] So that there is a difference between that part of Ireland and Scotland of 50 per cent. ?—Yes, and more.

64. Chairman.] Is there any agricultural commodity not included in the schedule?—There is one. Flax has not been included in the schedule of agricultural prices, because it is not universally grown in Ireland; and as the valuation was intended to be made universal, only crops which were universally used were included.

65. Would flax, where it is grown, add to the value of the land?—It does, owing to the industry of the people; it creates a manufacturing industry, and that industry increases the value of land in proportion of about 2s. 6d. in the pound.

66. You stated that the average of the prices given in the Act is about half a crown in the pound below the actual prices of the last few years?—Below the actual prices of the five years previous to 1830.

67. But that, in order to make your valuation, you deducted about one-eighth from the price at which liberal landlords let their land?—At that time; and I continue that scale. Still, as this is considered to be a permanent valuation, it was necessary to have it continued as if it was made at one time.

68. What additional value would the cultivation of flax cause upon land, say in the county of Down?—I think it amounts to 2s. 6d. in the pound. In those parts where the flax is much cultivated, I think the difference between the usual rents, and in the districts of the same county where it is not cultivated, amounts to 2s. 6d. in the pound.

69. If the scale of prices be one-eighth below what they fairly might have been assumed at, and flax adds one-eighth to the value of that land, it will follow that your valuation in the county of Down is one-fourth below what a liberal landlord might fairly let his land for?—It is so.

70. Sir H. W. Barron.] You valued land in every case according to the scale laid down in the Act?—It is reduced to that.

71. Not the actual present value?—No, it was not intended to do so; we are always to be guided by the scale of the Act. We value the land under all the circumstances in which it is placed of good farming or good roads, supposing that the produce sells for the scale of prices contained in the Act.

72. You have in every instance made a deduction from the real value of the land where bad farming is usual in the immediate vicinity?—In the district. I do not mean that I would make a difference where there was a good farmer and a bad farmer in the same district, because in that case it might only arise from slovenliness; but we take the general system of agriculture of the county. If a very clever farmer came into the county of Mayo and adopted the five-course system, we would not increase his valuation on that account.

73. Under a good system of farming, do you believe that the farmers in Ireland might not only pay much higher rents, but live much better than they do?—Certainly.

74. Chairman.] In stating that your valuation is 25 per cent. below the usual rents of Ireland, to what causes do you ascribe the higher average rate of rent?—In a great degree to the system of letting, which is not by valuation, but by tender; where a farm is to be let, it is usual to take the highest tender, provided the person offering is considered a respectable person. It is owing partly to the great competition for land, arising from the number of persons engaged in agriculture.

75. Is it your opinion that competition makes the tenants not only offer but pay higher rents?—They are obliged to pay what they offer. If the land were let by valuation, I am sure it would have a tendency to reduce it.

76. In that case, would it not be that the landlord would merely make the tenant a present of a portion of the rent which he would otherwise receive?—It amounts to that. The great landlords of the county do let at considerably lower rents than others receive for lands immediately adjoining.

77. Mr. Colquhoun.] Do those great landlords let upon the same system?—Almost always by valuation.

78. In all parts of Ireland?—In many parts; not so much in the south.

79. In those parts which you have valued, the great proprietors have let by valuation, and the smaller by tender?—Generally speaking. I know several instances,

instances, in almost all counties, where lands are let by valuation, and I know of large estates which are let considerably below the valuation; there is one in the county of Wicklow.

R. Griffith, Esq.

24 May 1844.

80. *Chairman.*] In those cases where land is let by valuation, can you state whether, to your knowledge, the custom called tenant-right exists or not?—The tenant-right exists in all places where the land is let from year to year, whether by valuation or otherwise.

81. Does not tenant-right exist in cases where it is let on lease?—Not to the same degree; in some districts in the south it may; but in the north it is considered fair to change the tenant at the termination of a lease; but where there is no lease, it is very unusual to change the tenant, unless by an agreement between the landlord and the tenant.

82. Do you mean that in the north, at the expiration of a lease, the tenant who has held it is not considered to have the tenant-right?—He is considered to have the best right; but there are many instances of the tenant being changed.

83. Would it not be considered a harsh thing upon the part of the landlord to eject that man without allowing him to receive from the incoming tenant the value of the tenant-right?—He would be allowed to receive the tenant-right, certainly, particularly if he had made any improvements.

84. Suppose that to be the case, would not the effect of letting by valuation instead of competition be this, that the outgoing tenant will receive from the incoming one a larger sum for his tenant-right?—It would have that effect, certainly; but the tenant-right and the customs of the north of Ireland are so peculiar in that respect, that it is difficult to account for the sums of money that will be given. A man will frequently give 20*l.* an acre, where the land has been let from year to year, though the land may be nearly let at its true value; the anxiety to get possession of land is so great that persons will give for tenant-rights more than the real value.

85. Do you know it to be the fact, that where land is let at 25 or 30 per cent. above the value put upon it in your valuation, persons will give for that land from 10*l.* to 15*l.*, or even 20*l.* an acre to get into possession?—I am not aware of that fact.

86. You stated that they sometimes give 20*l.*?—Wherever I have known that to occur, the land was moderately let, though not so moderately as some landlords let it. I know instances in Armagh where that amount was given, and also in the county of Fermanagh.

87. *Mr. Colquhoun.*] You speak of small holdings chiefly?—I do speak of small holdings of three or four acres.

88. *Chairman.*] What is the average size of farms in the county of Down?—They are very various; they are generally small.

89. Have you ever seen the Appendix to the Report of the Commissioners appointed to inquire into the state of the Poor in Ireland?—I have, but I do not remember the particular point you allude to.

90. Do you recollect that it was stated that the average size of farms in the county of Down was from three to six acres?—I would say that small tenements in the counties of Down, Armagh, and Tyrone, are about four Irish acres.

91. Do you know what proportion your valuation bears to the valuation made under the Poor Law Act?—In most cases the poor law valuation is considerably above the general valuation; but in some cases it is under it.

92. *Viscount Jocelyn.*] Generally, you say, it is above?—Yes; but in some instances it is below.

93. *Mr. Vesey.*] In the Downpatrick Union, can you state how that was valued?—I do not know the boundary of the Downpatrick Union; and I know nothing of the poor law valuation.

94. *Chairman.*] Did you make any statement to the Poor Law Commissioners, as to the amount that ought to be added to your valuation, to get at the usual letting value?—I made a statement to Mr. Gulson, in Dublin, that I thought that it would be necessary to add 33 per cent. to the general valuation, to bring it up to the high letting rents of Ireland, that is one-fourth under the letting rents.

95. *Mr. Colquhoun.*] When you speak of the high letting rents, you mean the higher class of letting rents, as explained by you before?—I do.

96. *Chairman.*] By that last answer you mean the rents which would be obtained

R. Griffith, Esq.

24 May 1844.

obtained by competition, suppose the land was cultivated in the ordinary mode?—I do.

97. Are not those rents generally paid in Ireland?—They are.

98. Do you consider those rents unreasonably high?—I think they are higher than I would say myself, if I were asked by a landlord to value what he should let for, they ought to be.

99. Mr. French.] Have you known a reduction take place in those rents, where the landlord has adopted the principle of valuation?—I have.

100. Mr. Colquhoun.] Those rents are higher than would be fixed by those valuers of whom you spoke before, as assisting you with their advice and opinion?—Considerably.

101. Sir W. H. Barron.] You speak of them as high rents, on account of the system pursued in farming?—I do.

102. Chairman.] Are you prepared to say, that in three-fourths of Ireland it is the pressure of the rent which renders the people poor?—That question is compounded of so many subjects, that it is difficult to answer. The people, if they exerted themselves, could pay the rent extremely well; but they do not. There are many districts I know of, in the west of Ireland particularly, where the lands are let extremely low, and the tenants are worse off than where they are let a great deal higher, though in the same neighbourhood.

103. Mr. French.] What proportion does the rent bear to the produce where the lands are low let?—That depends entirely on the quality of the land; where the land is good; it is generally one-third; where it is inferior, one-fourth; and where it is very bad, one-sixth of the produce. That is for tillage lands. Two-thirds of the produce in pasture where the land is good, and one-half in pasture where the pasture is inferior.

104. Mr. Colquhoun.] When you said before that the rent in many cases is unreasonably high, you meant, considering the want of industry, and the indolent and bad cultivation of the tenant?—I did, certainly.

105. It would be quite reasonable to exact that, or even a higher rent, if, without capital, the tenant were to apply his industry to the cultivation?—Yes; I am certain that the tenants upon the eastern coast of Ireland, who pay 50 per cent. higher rent, the quality of land being taken into consideration, are far better off than the people in the west.

106. Viscount Jocelyn.] Owing to the industrious habits of the people?—Certainly.

107. Sir D. Norreys.] In the returns you have handed in from Cavan there appear 23 townlands belonging to the same proprietor; there appears to be a general variation between your valuation and the rents; would you call this gentleman one of the large proprietors of Ireland?—I would.

108. You would class this gentleman among those whom you would call the large proprietors of Ireland?—Yes. The gentleman who sent me the list wrote me a letter with it, saying, "I have compared your valuations with my rents, and I acknowledge them to be too high, and am determined to make large allowances to the people for improvements in draining, to enable them better to pay the rents."

109. In these returns, taking four townlands in the parish of Laver, and two townlands in the parish of Mullagh, and three townlands in the parish of Annagelliff, all belonging to the same proprietor, is there any reason to suppose that there are peculiar circumstances to account for the variance between your valuation and the payment there, which variance appears to be from 1*s.* 8*d.* in the pound to 5*s.* 5*d.*?—It is owing to the inequality at which the lands are let, no valuation has been made.

110. Is your opinion, taking the three townlands of Annagelliff, which were valued by you at 367*l.*, and let by the proprietor at 505*l.*, that he has let his land at too high a rent?—I think the rents are perhaps high, but they are not above nor so high as some of the neighbouring small landlords.

111. Even the large proprietors cannot be considered as assuming that your valuation is a correct test of value?—Not universally.

112. Would you consider the individual I named to you one of the large proprietors of whom you have spoken?—I am not perfectly certain whether he is a large proprietor; he appears to hold 14 townlands.

113. I find that in one parish the variance between the valuation and the letting rent is 3*d.* in the pound, and that in nine townlands belonging to this same

same proprietor in an adjoining parish, the difference is 4s. 2d. in the pound, between the valuation and the letting rent; how would you account for this?—The inequality of the letting.

114. Your valuation, even with respect to a proprietor who holds 14 townlands, is no guide to the letting rent?—The general valuation where the letting rents are very irregular, cannot be any positive guide. It is a guide to the relative value of the land.

115. Is it to be presumed, that the difference of correctness of the valuation can be so great as the difference of 4s. 2d. in the pound?—I have no doubt of it.

116. Would you call the individual now named to you, a large proprietor?—Certainly.

117. In the parish of Drum I find 12 townlands belonging to one individual; I find a difference of 3d. in the pound only between your valuation and the letting value. In the parish of Kilmena there are 34 townlands, of which the valuation appears to differ 3s. 1d. from the letting rent; in the parish of Aghagower there are 11 townlands under the same landlord, in which the difference is 4s. 8d. between the valuation and the letting; and in the same barony there appear to be five townlands, in which the difference is 7s. 11d. between the letting value and your valuation. Can you explain to the Committee those very great variations between the valuation and the letting value; you can scarcely suppose that the lands can be let at 7s. 11d. in the pound above their value?—The answer to that is, that the valuation was made by the very first valuers which the country produces, and men who have done nothing else for the last 14 years. The first valuation was checked by a second set of valuers of great experience and talent, and the whole was submitted to the gentlemen of the country in a printed list, for them to find fault with if they saw occasion. Where they did find fault with any part of it I employed another valuer to go over that part of it, and having done so, the whole was printed. Subsequently, there were parish vestries held in every parish to take the valuation into consideration, and in the barony of Burrishoole there was no appeal, in the barony of Cara there was no appeal. I think that is a tolerable proof of accuracy; the parties interested examined the lists in detail, the agents also having examined them, being present with me, and sitting on the bench in the committee of appeal, and all appeared to consider that the valuation was fair; so that I am warranted in saying that the relative scale of value has been preserved in that district.

118. *Chairman.*] Would not that satisfaction being expressed, and there being no appeal against it, rather lead to the opinion that the valuation was a fair valuation relatively, and not that it closely approximated to the real letting value?—It certainly did not approximate to the usual letting value, I admit.

119. All that these parties wanted was, that they should be taxed fairly *inter se*, and that uniformity should be preserved?—If they thought that the valuation upon the Townland (A.) was too low as compared with the Townland (B.), they would complain.

120. *Mr. Vesey.*] You consider that it is a fair relative valuation?—I sent it down to the gentlemen, and intreated them to find fault with it; I said to the people at the committee-room, we are here to do justice; no trouble shall be spared to make the valuation correct, and where there were any errors or doubts, a very detailed investigation took place.

121. *Mr. French.*] Is it not the general opinion that the valuation is supposed to be one-fourth under the real value?—Certainly.

122. And that if it came near that, there would be no objection?—Yes.

123. *Mr. Vesey.*] You stated that you sat with the agents in the court?—I did.

124. Was it an open court?—It was.

125. Were the tenants present?—They were.

126. Was any appeal made by any of the tenants as to the valuation?—Not in those baronies; but several appeals were made in others.

127. Is it your opinion that the tenants consider it a fair relative valuation?—It is my opinion.

128. *Mr. Colquhoun.*] If the tenants had thought it not merely a fair relative valuation, but a fair actual valuation, would they not immediately have demanded

R. Griffith, Esq.

24 May 1844.

R. Griffith, Esq.

24 May 1844.

manded a large deduction from the landlord?—No; they are aware that the scale of valuation is lower than the scale of rents generally.

129. In the case where there was a difference of 7*s.* 11*d.* between your valuation and that on which the lands were let, would not the tenant have felt himself greatly aggrieved, and demanded a deduction from his landlord?—If he thought he would have succeeded, he might have done so.

130. *Sir D. Norreys.*] Will you state to the Committee the class of persons who are the tenants, and who would have to determine the accuracy of the valuation of those different townlands; do the tenants, in general in the north, know more than the relative value of their own farms, as compared with the farms adjacent, and would they not be of a class that would be very little likely to know the value of a plough-land as compared with an adjoining plough-land?—They are a very intelligent body of men, and are in the habit of reasoning and comparing a great deal more than might be supposed; in cases of appeal they frequently show considerable knowledge.

131. They have not that individual interest in correcting the amount of the townland valuation as they would have in correcting the differences between the tenement valuations?—They would not have the same power certainly; but I may mention to the Committee that I am in the habit, for the purpose of giving the people information, of appending to the Parliamentary list the average amount per acre in Irish acres of the value of every townland, and I add the proportion of five-and-twenty per cent., and thus put down the rent value beside it, and they know then what the rent value will be. If the rent value happens to be higher than the man actually pays, he will say, “Oh, you are too high; my land is very bad.” I then inform him he is to pay according to the quality of the land; and if his land be of an inferior value, the amount will be settled by the applotment.

132. *Chairman.*] In publishing that tabular statement, you have given out to the tenants of the country generally that 25 per cent. above your valuation would be a fair letting value?—I put it at the high-rent value.

133. The ground on which you state that it is a high-rent value is rather the want of skill and industry on the part of the tenants than any want of value in the land?—The land, if properly tilled, would be cheap at the present rent.

134. Would not the fair inference from that be, that competition has not so much raised the rent, as it has lowered, chiefly from faults of his own, the condition of the tenant?—The competition has forced that tenant to give more than he would wish to give for the land.

135. Is it not the fact, that suppose there was less competition and a much smaller number of tenants in Ireland, with a better system of agriculture, the landlords might receive much higher rent?—There can be no doubt of it; if the farms were larger, the capital employed would be greater, and the system of farming better, and the tenants would be able to pay higher rents.

136. *Sir H. W. Barron.*] And live much better?—Certainly.

137. *Chairman.*] Those rents, though high, are paid?—They are.

138. Do you think that it is a safe thing to assume, as the standard for a valuation in a country, anything but the probable sum at which land actually lets under average existing circumstances, and cultivated with ordinary skill?—It would be better if the full letting rent were placed, instead of one according to the scale of the Act, which is lower, and taken on the principle of the letting rents of the country where the valuation was commenced; namely, the counties of Antrim and Derry: but for the general purposes for which the valuation was made, namely, the county assessment, no practical inconvenience could arise from it.

139. The purpose to which your attention was directed was to secure the uniform valuation of townlands throughout Ireland, and for that purpose your operations have been effectual?—I think so.

140. But if any other objects were contemplated, it might be better to make a valuation which should be more practical and less what might be called ideal?—No doubt in any case where two persons were to pay a proportion, as in the case of the Poor Law, it is absolutely necessary that what might be considered the letting value of the land should form the scale of valuation.

141. *Sir D. Norreys.*] What proportion of the great landlords whom you have spoken of are contained in these returns?—Hardly any of them; only two or three.

Shewing the subdivisions made by the Valuers

GENERAL VALUATION OF IRELAND.

142. Sir *E. Hayes*.] About what possession do you consider to constitute a great landlord?—A gentleman with from 6,000 to 10,000 acres of good arable land.

R. Griffith, Esq.

24 May 1844.

143. Mr. *Vesey*.] When you spoke of valuing according to the relative value of each townland, or what proportion the proprietor should pay, you stated that you would take a different basis for your valuation in different parts of Ireland?—No, I would take the same basis, but I would value the same quality of land differently according to the different system of cultivation.

144. In the west you would value land differently from what you would do in the south?—Yes, according as a better or worse system of agriculture prevailed.

145. In the present instance you value all parts of Ireland in the same way?—I value each part in the same manner, taking the same scale of agricultural prices.

146. Suppose land to be very highly improved, you do not put the whole amount of improvement upon it; and if it is very bad, you do not give credit for that, and put a low valuation upon it on that account?—Not if it be in the same immediate locality: if one man is very industrious or puts plenty of manure upon the land, I would not place a value upon his industry or upon his manure, nor would I deduct from the value of the land on account of his indolence, provided that on digging I find the quality of the soil to be the same. That applies to the same locality; if I go to the north, or the south, or the west, and I find the same quality of land differently farmed, I put a different value upon it in proportion to the value of the produce obtained.

147. Might not this case occur in the same locality, that a landlord might let to one tenant a farm in a bad condition at a low rent, and let to another tenant another farm immediately adjoining of the same quality of land in a very high condition, and with very good farm buildings; your valuation of those two would be very nearly the same?—It would, except the farm buildings.

148. And the real difference in the rent might be very great?—It might. If the quality of the soil were intrinsically the same in the adjoining farms, I would put the same value upon it.

149. Suppose any gentleman were to attempt to test your valuation by the rent in those two cases, to show that it was not uniform, you would not admit that to be a fair test?—No; because in a permanent valuation, such as mine is supposed to be, the tenant that was farming it well might turn out badly; he might put half a dozen white crops in it, and reduce it to the scale of the other; and another tenant might come in at a low rent, and have to pay the high tax. It is an accidental circumstance, the land being in a high or in a low state of cultivation; and I have taken the average system of the district as my criterion.

150. *Chairman*.] Suppose it were considered desirable to raise your valuation, and make it approximate to the actual lettings in Ireland, what steps would you take for that purpose?—In the first instance, I would carefully consider all the data which I possess, and see whether there were any localities in which it would be necessary to make any variation from this general principle which I have stated, namely, adding one-third, to bring it up to the letting rents. Having done that, I would alter the field-books in the detail, adding one-third part to every quality of land, taking it for granted that every variety of soil has been relatively valued, from which applotments can be made; and I have here maps and documents to show how the applotment has been made and can be made, and at what expense. I would then send a land surveyor from my office into the country, to ascertain from the Ordnance map the boundaries of the different farms. Having done so, we would see what was the valuation of each farm, as given in the valuation lots contained in the valuation field-book. This system has been adopted by me already; and I have within the last six weeks sent down a person to applot the parish of Ardoyne, in the county of Carlow. The copy of the map and applotment I here beg to hand in, by which the tenements contained in the several townlands in that parish have been distinguished and applotted, according to the valuation; and I conceive that by adding one-third to that applotment, it would bring them up to the letting rents.

151. According to your last answer, before you could make a tenement valuation it would be necessary for you to have perfected your townland valuation?—I think they could be both done at the same period, by employing a surveyor of an inferior class, at an inferior salary to the valuers, who should be sent

R. Griffith, Esq.

24 May 1844.

in the first instance into the parish to mark the boundaries of the different tenements on the Ordnance Map, and enter their names in a book; those documents being handed to the valuator, he could then, in the first instance, value the tenements, and there would be no occasion to go back.

152. *Mr. Colquhoun.*] What would be the expense of that previous survey?—It would amount to about a halfpenny an acre or perhaps less on the general expense.

153. What has been the expense of the general valuation?—The general expense may be about 3*d.* an acre; the expense in the counties last done varies from 2*d.* to 2½*d.* an acre.

154. Is that difference owing to greater economy in the management, or to local advantages existing in the counties lately valued?—Principally owing to the greater experience of the valuers, and the consequent rapidity of their progress.

155. *Chairman.*] Suppose it were thought desirable to reduce the expenditure of the valuation, could you, in those counties which have not been commenced, or which are now in progress, so revise the existing poor law valuations as to convert them into valuations which could be used for the assessment of the county cess?—I think not. The poor-law valuations are not made by persons having any concert, or upon any scale; and so far from making the valuations agree, for the greater part, I could not even come to an approximation. I should state to the Committee, that on comparing the general valuation made under my direction with the poor law valuations in different districts, I find the discrepancies so great, that either the one or the other must be very erroneous.

156. *Mr. Vesey.*] Have you ever examined any of the principles on which the poor law valuation has gone?—I have read the instructions which were given; whether they were followed or not I cannot say.

157. *Chairman.*] Supposing their instructions to have been followed, what would be the valuation?—The present fair letting value of the country.

158. Suppose the parties to have been competent, and the instructions to be followed out, would not the valuation have been a perfectly good one?—I think it would.

159. *Mr. Colquhoun.*] Do you mean the present letting value, or the fair letting value?—The instructions would give the fair letting value.

160. There would be a difference of 25 per cent. between your valuation and theirs, if the instructions in their case had been fully followed out?—There would, excepting in districts where the rents are low.

161. Independently of the scale of prices there would have been a difference of 25 per cent. between the poor law valuation and yours?—I should think in the poor law valuation, as carried out, the difference is not more than 12½ per cent.

162. *Mr. Vesey.*] Do you mean that the poor law valuation should be the same as if a landlord were to call upon one of your valuers to value his estate, and take his value as the basis upon which he should let it?—I think the instructions were to give the full letting value.

163. Even more than what a liberal landlord would let it at?—I think what I have called the great landlords of the country let their land lower than the average scale of the country, consequently in this view the poor law valuation would be higher than their rents.

164. *Sir D. Norreys.*] Suppose that the law under which you would have to complete a poor law valuation required you to value at a rate according to the actual letting value of the land, and that the law under which you were to carry on your townland valuation required that the valuation should be made with reference to certain prices of agricultural produce, how would you proceed in order to make your valuation correspond with both those principles of valuation, or would it not be requisite to adopt either one of them, to the exclusion of the other?—I think the original one, the townland valuation, could be carried out, and by adding a per-centage equal to the difference between the letting rents and the townland valuation scale, the desired result would be obtained.

165. Would not the amount of per-centage which you would have to add in each case be the actual valuation of the land at the actual letting value?—It would.

166. Then what object would there be in having the two valuations?—According to the question, it was required to have two valuations.

167. My question is, would it not be requisite to adopt one or the other principle exclusively?—I do not think it is absolutely necessary; I could carry out both.

R. Griffith, Esq.

24 May 1844.

168. What object would there be in carrying out both; would not the adoption, as the principle of value, of the letting value of the ground, be a simple principle, and give you what you want, the value of the land, or the value of the subject of taxation on which the taxation was to fall, without any reference to this scale of prices?—If you alter the law, of course.

169. Would it not be requisite to alter the law, for the purpose of having one valuation on which the poor law rates and the county rates should be collected?—Certainly.

170. In case it should be requisite to alter the law relative to the valuation, what objection is there to adopt the poor law basis in preference to the townland basis?—No objection.

171. What advantage do you conceive adopting the townland basis would have over the poor law basis, or would there be any advantage?—There would be no advantage, excepting that the low valuation would give more general satisfaction.

172. *Chairman.*] Suppose you were called upon to make a tenement valuation for the purposes of the poor-rate in those counties in which your valuation has been completed, would not you be able to do so at a very small expense?—About a halfpenny an acre.

173. In those counties which are in progress, and have not been completed, you would not undertake to make a valuation which could be relied upon without going through a similar process to that which you have gone through in your townland valuation?—Just the same.

174. Whether it is to be townland or tenement valuation, it would cost the same money, and the same steps must be taken to insure accuracy?—Yes, the same steps would be taken, but there would be an additional expense incurred in marking out the tenements, which, in ordinary cases, would amount to about a halfpenny an acre.

175. *Sir D. Norreys.*] But you must adopt either the one principle or the other?—The principle of valuation is the same.

Lunæ, 3^o die Junii, 1844.

MEMBERS PRESENT.

Sir H. W. Barron.
Lord Eliot.
Mr. French.
Sir Denham Norreys.

Mr. Parker.
Mr. Vesey.
Mr. John Young.

JOHN YOUNG, ESQ. IN THE CHAIR.

Richard Griffith, Esq. called in; and further Examined.

176. *Chairman.*] HAVE you prepared any papers which would show that you have the power of converting the townland valuation into a tenement valuation?—I have. I have prepared the field-books of two townlands in the parish of Ardoyne, in the county of Carlow. One is a copy of the field-book as originally made, and the other the applotment which is made from the detail contained in that field-book. But in order to make this applotment it was necessary to send down a surveyor to the lands to ascertain the boundaries of the farms, and the names of the occupants, and having obtained this information, no difficulty was found in forming the applotment from the data originally contained in the valuation field-book.—(*The same were delivered in.*)

R. Griffith, Esq.

3 June 1844.

Vide Appendix.

177. *Sir D. Norreys.*] You put in these as an exemplification of what you could do in the parts which have been already completed?—Exactly so.

R. Griffith, Esq.

3 June 1844.

178. *Chairman.*] Number 1 is the valuation made for the purpose of a general survey?—It is.

179. It contains the subdivisions of land made by the valuator, not according to the boundaries of the farms, but according to the quality?—They are, as near as possible, according to the boundaries of the farms. My instructions to the valuator are to inquire, when they go into a townland, the general boundaries of the farms, and, unless the tenements are very small, to make their valuation lots coincide with the boundaries of the farms. Consequently, on the person going in to ascertain the names of the occupants, and the detail of the farms, if any be smaller than a lot, he will find it out; where there is a correspondence, there is no difficulty. Where the division of the original valuator is larger than a tenement, of course it must be subdivided, but that does not occur unless the tenements are very small.

180. Is it not the fact, that in the Map No. 1 the subdivisions made by the valuator do not correspond with the boundaries of farms?—Generally speaking, they do; I doubt whether there are more than one or two instances where they do not in these townlands.

181. What is the difference between No. 1 and No. 2?—The difference is, that one is a transcript from the original field map, the other is one made by the person who went afterwards to determine the boundaries of the farms; and frequently the boundaries of farms comprehend three or four divisions of the valuator.

182. Is not the difference between No. 1 and No. 2, that No. 1 contains certain subdivisions made by the valuator for the purpose of valuing the land, and No. 2 actually contains the divisions of the farm tenements?—Exactly; but in some instances on that map one farm contains four or five divisions of the original valuation.

Vide Appendix.

183. Do you not put in those two maps to show that it is in your power to reduce the townland valuation to a tenement valuation?—That was my object.

184. You are able to do that with only the additional cost of a halfpenny an acre in all those countries in which the Ordnance maps give the boundaries of the farms?—Certainly.

185. But in the northern counties, in which the maps are less complete, greater time would be taken in ascertaining the boundaries, and the expense might be increased to a penny an acre?—That may probably be the case.

186. *Mr. French.*] In the part of Ireland already valued would it not be necessary for you to send down surveyors again to make applotments?—It would be necessary to send down surveyors to ascertain from the field-valuation map the boundaries of the farms and the names of the occupants.

187. Have you documents in your office from which you could make out a tenement valuation?—Except in the northern counties; in those counties, or in several of them, the Ordnance map was not executed in the same detail as at present; formerly the division of fields was not shown on the map, and consequently the valuation was made according to the qualities of the soil; arbitrary lines were drawn between one quality of soil and another, and though I believe it is possible to make an applotment even in this case, it would require considerably more time, and also considerably more expense, to form a detailed applotment in the northern counties; for instance, in the counties of Antrim, Derry, Donegal, Tyrone, Down, and Armagh; I am not sure whether there are any others.

188. *Chairman.*] Are the maps in all those counties you have named defective in the particular of not giving the farm boundaries?—They are defective in not giving the boundaries of farms or fields.

189. Previous to making the tenement valuation, it would be necessary that the maps should be amended in that particular?—It would be very desirable, though not absolutely necessary.

190. *Mr. French.*] What do you calculate would be the expense of turning the townland valuation into a tenement valuation in the counties in which you have already concluded the valuation?—That is a question which would require great consideration and actual trial to reply to with certainty; in some districts it would be necessary to make lines of survey to ascertain the boundaries; but, generally speaking, in small townlands and cultivated lands there are sufficient details on the maps already to enable the valuator or surveyor appointed to trace

trace the lines of the boundaries of farms on the map, and then make the applotment; the cost would be more than double where that was not the case.

R. Griffith, Esq.

3 June 1844.

191. *Mr. Vesey.*] You stated that it would cost a halfpenny an acre additional to make a tenement valuation for those counties not yet valued?—About that, or probably rather less.

192. There are six counties where the valuation is in progress, but not finished; what expense would it be in those counties to finish them according to a tenement valuation?—I suppose altogether, including the valuation, about $2\frac{1}{2}d.$ an acre.

193. According to the estimate you have made here, it would be nearly $2\frac{1}{2}d.$ an acre for the townland valuation?—If you take the average of what has been done, that is true; but I think, on the present system, the counties last completed have been valued at $2d.$

194. You think that to make a tenement valuation for those counties now in progress, the cost would not exceed the estimate given in the Parliamentary return, namely, $2\frac{1}{2}d.$?—I should hope not.

195. You remember a correspondence last March with the secretary of the grand jury in the Queen's County, on the subject of valuation?—I do.

196. You stated there that several baronies of counties had been valued, and a calculation made by your valuator, but that the check valuator had to go about after him?—I did.

197. Would that check valuator be able to make a tenement valuation without the first valuator having to go over it again?—Not according to the system adopted. The check valuator is the most expensive. The person I should employ to do the business of an applotter would be a mere surveyor, who is capable of ascertaining on the map the boundaries of the farms and ascertaining the names; and he will find abundant detail from the original valuation, as checked by the check valuator, to ascertain the value of each farm or tenement.

198. According to that, in the counties now in progress a tenement valuation cannot be made cheaper than in the counties not begun?—Not otherwise than that the maps are so very perfect, and the persons employed in the valuation being the same, they get on more rapidly than they did; and, in consequence, the valuations now being made are made at less expense than those done in the three years previously.

199. *Sir D. Norreys.*] Can you state your precise directions to the valutors in reference to the divisions of qualities?—The following is extracted from my instructions to the valutors: "Under such circumstances, with a view to facilitate the equal apportionment of the gross valuation of each townland on every farm or tenement it may contain, it is desirable that the valuator should ascertain by inquiry the boundaries of one or more of the farms or holdings then under view, previously to determining the limits of any valuation lot, and adopt the farm boundaries as the boundaries of the valuation lots. Where the farms or tenements are small, say under 10 acres, or where the soil is of a uniform quality, two or more of such tenements may be included in one lot, and noted down at the same price per acre, taking care that all the boundaries of the lot shall correspond with the boundary of one or other of the farms."

200. Therefore the lot which has been valued may not correspond with the boundaries of the farms which are valued; for instance, if the valuator shall value in a certain lot 50 statute acres, such lot or valuation may contain any number of small divisions of farms?—The valuator acting under my instructions would not value a quantity of land of 50 acres in one lot, except it was contained in a large demesne, or where it was of a uniform quality; so that there would be no difference, where the whole of the farms contained in it were of one value.

201. Do you not state in an outline of your principle of valuation, which you have handed in to the Committee, that, "in commencing the valuation, the valuator divides the townland under consideration into a number of lots, according to the variation of the qualities of the soil and sub-soil, taking care, in arable districts, that no lot shall contain more than 50 acres, statute measure, and that the boundaries of each of the lots shall, as far as possible, coincide with the boundaries of farms"?—I do.

202. Does not that leave it to the discretion of the valuator to adopt, as a quantity, 50 acres?—It does; but in that case, the valuator must consider that

R. Griffith, Esq

3 June 1844.

the whole of the lands contained within the limits of 50 acres are of the same value.

203. Those 50 acres of the same value may contain five or ten different tenements or farms?—They may; but I would observe, in explanation, that as the fields are laid down on the Ordnance map, there can be no difficulty in the applotment being made, though the lot may have been 50 acres, because it may have been let in farms of ten or five acres each; and as they are all of the same value per acre, the applotment would be correct.

204. The boundaries of those 50 acres might intersect a farm?—It might intersect a farm, but it would be bounded by a fence.

205. In the evidence that you gave before the Committee on the County Cess, in the year 1836, you appear to have answered the following questions thus: “Q. Is the book now shown to you a copy of an original valuation field-book? A. It is a copy of the original field-book of the parish of Templemore, in the county of Londonderry.—Q. Taking the townland of Coshquin, what is the meaning of the numbers from one to twenty? A. Those are the numbers of the valuation lots, or the portions into which the land has been divided for the purpose of being valued, as already alluded to in my evidence.—Q. Take, for instance, No. 1, 44 acres; is that necessarily land in the possession of two or three individuals? A. It may contain land in the possession of two or three individuals.—Q. This book being made public, does it contain any mode by which individuals can ascertain how far they have been correctly valued, in comparison with their neighbours? A. It does; the valuation map, which is lodged in the office of the county treasurer, together with this book, has the boundaries of the several valuation lots laid down in it, each lot being numbered on the map, to correspond with the numbers contained in this book, and any person having a territorial map of the townlands on which the boundaries of the several farms are shown, can transfer the lines of the valuation lots to the territorial map, and by that means can ascertain what portion of each farm or holding is contained in every lot.—Q. Does not it require that the occupier should have a better understanding of a map than it would be likely that the class of persons that would be affected by the question of over or under valuation would possess? A. None but land surveyors could effect it, but a single individual cannot well appeal for himself; but the whole or the greater number of the occupants of a townland must unite together.” Do those answers hold good as to the present time?—They do not; and the reason is, that in the parish of Templemore, in the county of Londonderry, which is one of the counties already mentioned by me, in which the farm boundaries are not marked, the valuation was made previously to the issuing of my present instructions; it was made subsequently to the Ordnance map having the fields marked on them.

206. In what year did you commence your new system of valuation?—I believe in 1839.

207. To all valuations between 1830 and 1839 your present system does not apply?—Not altogether; some of the maps that were made previously to the alteration in the system had the boundaries laid down on them, and though the farm boundaries were not so much attended to as at present, it would be easier to applot them from the valuation field-book than in the counties where the farm boundaries are not laid down.

208. Another question was, “Is not the system of survey which you have adopted such as to prevent individuals from knowing the inequalities of valuation by which they themselves may be individually affected?” The answer is, “The valuation, according to the Act, is directed to be given in the townlands only, and not in applotments of the townlands; and if any individual in any townland holds only a portion of a townland, he cannot, without difficulty, ascertain the value put on his portion of it.” Does that answer hold good now?—It does; the law is the same.

209. Another question was, “Does not that show that it will be almost impossible for a set of parishioners, without the assistance of a land surveyor, to make use of this valuation as the basis of the sub-applotment? A. Certainly it does; but if there be a territorial map, such as I have described, a surveyor would make the sub-applotment in a short time.” Does that hold good now?—It does.

210. Another question is, “Would it not have been an advantage to the country if such an arrangement had been made in the survey that the relative value

value of particular farms should be ascertained, whereby sub-applotments for the subdivisions of the townlands might have been made? *A.* If all the boundaries of farms had been surveyed and engraved, the moment a farm was subdivided or altered, the map would cease to be correct. If the survey went down so far as to show the boundaries of the fields, certainly the valuation might be applotted according to those fields; but then the Ordnance survey must be made on a scale of 24 inches to the mile instead of six, and much greater expense would have been incurred." In what way would you now qualify that answer?—I would qualify it by observing that from experience I find that the map, being laid down on a scale of six inches to a mile, answers the purpose sufficiently; my original view was erroneous.

211. Do you consider that you are authorized, under the existing law, to make your valuation a valuation of separate tenements?—I do not; I am bound by law to make a townland valuation, and to print a townland valuation; I am bound also to lodge in the county treasurer's office the detail of the valuation; but I am not required by law to give the detail as to the farms.

212. *Chairman.*] What is there in the present law to prevent your making the subdivisions which your valuers do make for the purpose of valuing the land, correspond with the boundaries of farms?—There is nothing, except that there is an additional expense incurred in ascertaining the boundaries of farms and the names of the occupants, and calculating them afterwards.

213. That being the case, is it not at present in your power, without any change in the law, to make a tenement valuation?—I think it is not, but there might be legal doubts on the question. My own feeling is, that I am not authorized to have additional surveyors to mark out the farm boundaries and calculate the detail.

214. *Sir D. Norreys.*] Would you be justified, under the Act of Parliament which regulates your townland valuation, in making such a valuation as should be fitted for levying the poor-rates; would you be justified in valuing property which is not subject to county rates?—I think not; the Valuation Act limits me to houses and farm produce; and of course as the poor law assesses property not contained in the Act under which the valuation is carried on, I could not do so.

215. *Mr. Vesey.*] Under the Poor Law Act turbary is to be rated?—I believe so.

216. Would you consider yourself warranted under the Act to value turbary?—Not as turbary.

217. I see that, under your instructions, it is to be valued as pasture?—That is the law.

218. Do you include in the additional halfpenny an acre which it would require for a tenement valuation, the valuation of turbary?—Certainly not; it has never been valued by me, and I should have to send down a valuator for that purpose.

219. Therefore in those counties where bogs abound, if you had to value turbary, a valuation for the purposes of the poor-rate would be more than a halfpenny additional?—By the addition of the expense incurred in valuing the turbary.

220. In your former answer, when you spoke of a tenement valuation as distinguished from a townland valuation, did you mean only a tenement valuation of those properties mentioned in the general Valuation Act, and not of those which are to be valued under the poor law?—It was confined entirely to the tenement valuation of land and houses, which are required to be valued for the purposes of the county assessment.

221. In that case, in order to make a tenement valuation available for the purpose of the poor-rate, as well as the raising of the county cess, it would require a greater sum than a halfpenny an acre?—It would in those districts where mills, mines, and other subjects liable to taxation under the poor law occurred, which are not included in the county valuation.

222. Would not property so liable, occur in every county in Ireland?—Mills do; in mills, according to the Valuation Act, water power alone is to be valued, whereas in the poor law, the machinery is to be valued, and consequently a new scale must be formed altogether, different from the instructions given by me to the valuers.

223. How much would it cost to convert your townland valuation into such a
 .063. D tenement

R. Griffith, Esq.

3 June 1844.

R. Griffith, Esq.

3 June 1844.

tenement valuation as should be available for the poor law as well as for county purposes?—I am not prepared to answer that question; I have never considered it, and I do not know sufficient of the detail of the poor law to say the amount it would come to, but I do not think it would be very considerable.

224. *Sir D. Norreys.*] Did you include houses under 5*l.* value in the estimate you made of a halfpenny an acre?—I did not. In regard to that I should observe that a great number of houses were valued by me, which are not included in the valuation, because they were thrown out as being under value; but still a very considerable revision would be required in all counties if the whole of the houses were included. During the last few years a very considerable deterioration has taken place in the value of houses in towns, and in consequence the valuation made by me in a great number of the smaller towns of the north of Ireland, is high and higher than they would be if valued now by me. In some of the committees of revision that have sat, for instance, in the county of Cavan, there were very heavy complaints made to the committee that the valuations of the towns were far too high; not that they were incorrect at the time that the valuation was made, but owing to the deterioration of house property in towns which had taken place subsequent to that valuation.

225. *Chairman.*] What are the causes of that deterioration?—It is chiefly in public-houses, owing to the introduction of temperance societies.

226. Is it in some towns to be attributed to the houses being charged higher to the county cess than they were before?—I should hardly think that a small charge of that kind would be sufficient to make any difference.

227. What has been the effect of that in the town of Armagh?—I do not know.

228. *Sir D. Norreys.*] With the exception of houses under 5*l.* value, would the necessity of valuing the other properties, which are liable to poor rates, but not at present liable to county rates, be likely to entail much additional expense, inasmuch as they are generally properties of considerable extent, such as mines, tolls, fisheries, slate quarries, woods and copses, tithes, strand and ferries, and so on; being generally of a large amount?—It would not, for it would be matter of investigation, and a great deal would be done by correspondence. It would involve me in a great deal of trouble personally, but I do not think that the expense would be considerable.

229. *Sir H. W. Barron.*] Are not tenements constantly changing in size in Ireland?—They are, in consequence of the subdivisions of the farms by the subletting among a family of a large farm; and, occasionally, by the landlord adding to, or taking portions from, a farm, where held at will.

230. In the course of your examination of property in Ireland have not you found that farms are very irregular in both their shape and dimensions in every sense of the word?—The older farms, like the townland boundaries, are very irregular; the landlords in letting, have been in the habit of squaring their farms.

231. Are not you aware that tenants' holdings are running one into another in the most extraordinary manner; in some parts of the country in a manner most irregular and most inconvenient to each party?—Certainly they are.

232. Will not, therefore, any tenement valuation made at the present moment in Ireland necessarily be a very confused one in a very short time?—I conceive that in any tenement valuation, owing to improvements and alterations similar to what the late questions have implied, it would be necessary to have a revision of the applotment once in every five or six years; and it would be very desirable, I think, for the peace of the country, that it should be limited to five or six years, and that there should not be an applotment every year, as at present.

233. *Sir D. Norreys.*] Does your valuation contain any system of revision?—The detail valuation gives you the power of altering the boundaries of farms where they have been made.

234. Does the principle of townland valuation involve any principle of occasional revision?—It does not.

235. *Chairman.*] Then although at the present moment townlands may be uniformly valued, might it not happen that, in consequence of a house being built or other improvements taking place in one townland, its value in relation to the next might be altered in a few years?—Certainly.

236. And there is no provision for remedying that difference?—There is no provision made for revision.

237. Sir *D. Norreys*.] You commenced your valuation in 1830, and will probably finish it about 1848?—About that time.

238. Eighteen years will have elapsed between the commencement and the termination of your valuation?—Yes.

239. You will have proceeded on the same principle throughout, and what will be the result? Is it probable that the valuation of lands in the south of Ireland will be really given relatively to the valuation of the lands in the north, 18 years having elapsed between the valuations?—I think, taking the quality of the land into consideration, and the state of farming in the different districts valued, that it will.

240. Will not all the improvements which have taken place, and the improvement in the system of agriculture which has been introduced into the north of Ireland, have rendered the valuation unequal?—I think the improvements in the north of Ireland, though considerable, are not greater in proportion than those throughout the country; I think the land is gradually improving, and in consequence the scale will be nearly preserved.

241. It will be an approximation to an equal valuation?—As near an approximation as can be made.

242. Do you consider that such an improvement is going forward in the south of Ireland as rapidly as in the north?—I think it is; I think that a general spirit of improvement has been excited within the last eight or ten years, and that it is now more striking than it has been at any former period. It is not confined, I believe, to the north, or to any particular portion of Ireland.

243. Admitting such improvement to have taken place both in the north and the south of Ireland, will not the fact be this, that, taking a district which may be valued at 1,000*l.* in the north of Ireland, and another district which may be valued at 1,000*l.* in the south of Ireland, although they may appear in your valuation to be relatively equal, yet, from improvement having taken place in one district, and none having taken place in the other, they may be really exceedingly unequal in value?—Under the circumstances described, certainly they may; but the valuers can do no more than take the value of the land in the state in which they find it when the valuation is made.

244. Then what practical object is to be attained by continuing the uniform valuation, when the result will be that in point of fact the valuations may not be really equal in point of quality at the termination of the period of valuation?—That may be the case to a certain extent; but still I do not conceive that the improvements which have taken place will very materially affect the relative value of land throughout the country.

245. Do you mean that no such improvement has taken place since your valuation commenced, as will materially affect the valuation of land in the north of Ireland?—I do not think that any such improvement has taken place as would render it advisable for any landlord considerably to raise his rents.

246. *Chairman*.] Supposing a great improvement to take place in agriculture all over Ireland, between the years 1830 and 1848, that improvement would not be taken into account of course in the lands valued in the first county which you valued; but in the lands valued in the last county which you valued, it would be taken into account, would it not?—Certainly.

247. In that case, therefore, the uniformity would not be complete?—The uniformity would be injured, as respects those parts which were last valued, in proportion to the improvement which had taken place. I have to observe here, that the valuation, as conducted under my directions, is guided in a great measure by the intrinsic quality of the soil in each place, in addition to the state of agriculture; the intrinsic quality of the soil will remain permanently the same.

248. You stated in your examination on a former day, that you were guided in your valuation by the state of agriculture in the district?—I did, and I would state so still; but I am also, and mainly, guided by the intrinsic quality of the soil.

249. Will you explain to the Committee how you reconcile the taking into consideration the state of agriculture with the geological principle which you say is the main element of your valuation?—My instructions to the valuers are to ascertain the quality and depth of the soil in the first instance, and then to consider what, under the state of agriculture of the county, that soil is capable of producing.

R Griffith, Esq.

3 June 1844.

R. Griffith, Esq.

3 June 1844.

250. Suppose two pieces of land in different parts of Ireland not in the same locality, but to be of an exactly equal quality, one in the highest possible state of cultivation, the other in a state of nature or badly cultivated, what difference would there be in the valuation of those two pieces of land, and how will you apply your principle?—They would both be valued as the best quality in the district in which they were situated, but the amount of value put on each would be calculated according to the state of agriculture under which the valuers found them.

251. Would they bear any comparison to each other?—No further than the quality of the soils bear relation to each other; it is to be the best quality of the soil. I have stated in the Paper I handed in to the Committee, that some quality of land, as ascertained by digging up the soil in the western districts of Ireland, was valued at 50 per cent. under a similar soil in the province of Ulster, owing to the different state of agriculture; but still the guide to the intrinsic value of the soil was the quality.

252. *Sir H. W. Barron.*] You deduct 50 per cent. on account of the inferior tillage?—I do.

253. *Chairman.*] Would not the result be this, that though your valuation is uniform in particular districts, it is not uniform as regards the whole of Ireland?—It would be uniform if no alteration had taken place; but where improvement has taken place, that improvement tends to create a want of uniformity.

254. *Sir D. Norreys.*] So that the result will not be an uniform valuation?—Not exactly uniform; but still it will approximate to it.

255. *Sir H. W. Barron.*] The only way to remedy that would be a quinquennial revision?—It would.

256. *Chairman.*] What time would it take to complete such a quinquennial revision?—The time and expense would not be considerable, because, if the valuation had been made originally in great detail, it would be only necessary to send one of the principal valuers whom I employ into the country, to value a certain number of townlands, say, for instance, in the county of Derry, in different baronies of the county of Derry, to see what relative improvements had taken place; and if the original valuation was relative, it will be sufficiently accurate for the purposes of a general applotment.

257. *Mr. Vesey.*] You would not require the valuator to go over the whole country, to ascertain the value of the improved state of agriculture in each particular district?—Not the detail of all the applotments; only a certain portion of each district.

258. To ascertain the improved state of agriculture?—The relative average improvement.

259. *Chairman.*] What length of time would it take to complete such a revision, the present valuation requiring 18 years?—It would not be necessary to employ more than one person in each county, and one county could be done within one year.

260. *Sir D. Norreys.*] Have you considered whether it would be possible for the whole of the valuations of Ireland to be revised under the superintendence of one individual, supposing that a good valuation were obtained in the first instance?—I think it would; the manner I would carry it into effect would be to employ the persons I now employ as check valuers in different counties, who compare the valuations made by different valuers, each of whom values one barony, to compare the whole of one county, and bring them to one scale. I would employ such persons, who are very experienced and clever, to investigate by a similar system the valuation that had been made in any one county, and by comparing his valuation with the state of improvement of agriculture at the time of the revision, he would be able to alter the valuation so as to bring it up to the then state.

261. *Chairman.*] Do you think that any person who had not been engaged in the primary valuation could sufficiently master all the details so as to be competent to complete the revision in the time you mentioned?—I think so; it takes about one year on the average of a county, to revise the original valuations, to make the comparison between the different valuers employed in the first instance, and bring them to one scale, and I think the same system, if adopted in the revision, could be accomplished in about the same time.

262. Does not that contemplate permanently retaining the official staff, and all the machinery now employed in the valuation?—It contemplates a portion of it,

it, namely, the principal valuator; and if there were a great number of counties to be done at the same time, it would contemplate a considerable staff.

R. Griffith, Esq.

3 June 1844.

263. *Sir D. Norreys.*] Are not the unions under the Poor Relief Act obliged to revise their valuations previous to striking new rates?—I believe they are.

264. Such revisions entail a certain expense upon the unions. Do you think that when once the valuation of the several unions within a county were fairly made, the periodical revisions would be a source of much expense?—I think not, if they were done once in five or six years; I would limit it to that; I think it would be injurious to have them more frequent.

265. Will not the alterations which take place from time to time be generally so small in each union within the year, that very slight expense would be entailed upon the union if there were a proper staff for such revision?—Of course the expense would be in proportion to the alteration that was made; but I would suggest that the annual applotment made by the Poor Law should be discontinued, and that an applotment once perfectly made should stand for five or six years. The doing so would, I have no doubt, tend to an advancement in building, and also in agriculture, as persons building or improving, knowing that they would not be taxed additionally for five or six years, would be more likely to do so than if they were certain that at the moment the improvement was made the assessment would be increased.

266. *Mr. Vesey.*] Did I understand you that that quinquennial revision could be made by one man in each county, on an average?—I think so.

267. What would be the expense, should you say, for a year?—Somewhere about 300*l.*

268. That would be 300*l.* once in five years?—About that.

269. *Chairman.*] What is the general size of townlands in Ireland?—They vary from 100 to 500 or 600 acres; in arable counties about 300 English acres would be the average.

270. Was not 300 acres the smallest quantity you valued?—The smallest average quantity that was given in the townland valuation.

271. The sub-applotment was made by other parties?—It was made under the Grand Jury Act, not under the Valuation Act.

272. The proportion which each townland was to pay was fixed by the occupiers?—It was.

273. Then, when the sum to be levied from the townland was fixed by the grand jury, it was communicated to certain parties in the townland, who proceeded to sub-applot the same themselves; was not that the course?—Sometimes that was the course, but generally a parish applotter was appointed, or two applotters were appointed for the parish.

274. Did not the Grand Jury Act give power to the townland to meet?—By chapter 116, you will see the course stated.

275. Was that generally done?—It has been generally done, but not universally.

276. As this sub-applotment was to be made by other parties, and not under your valuation, did you consider yourself in any way responsible for its fairness?—Certainly not.

277. Might it not follow that though the sum fixed upon the whole townland might be perfectly fair, relatively to other townlands, the burden falling upon any particular occupier in the townland might be most unequal?—Certainly, and that was very often the case.

278. *Sir H. W. Barron.*] Has it ever come under your knowledge that in the same parish one tenant holding land precisely similar to his neighbour, has been applotted as much as 2*s.* 6*d.* an acre, while his neighbour has not been applotted more than 3*d.* an acre?—That was previously to the valuation; according to the old system it was so.

279. There is nothing in the present law to prevent such an inequality?—No; if the applotter acts unjustly, the circumstance might occur under the present law.

280. Are not you aware that under townland divisions townlands which were formerly worth comparatively little money per acre are now become very valuable; that what were considered mere mountainous districts have now become good arable land?—In the progress of improvement, lands which were formerly mere pasture have become arable land by cultivation, and have been valued by me as such. There are instances of large townlands, amounting to

R. Griffith, Esq. 700 or 800 acres, which were originally uncultivated mountains, and are now cultivated; there are several of this kind in the county of Down.

3 June 1844.

281. Are you aware that there is an instance in the county of Waterford of one townland as large as 3,000 acres, which is now in a high state of cultivation, but which 20 years ago was a mere wild district?—I know that a great improvement has taken place in the county of Waterford, but I was not aware of that fact.

282. *Chairman.*] In many parts of Ireland are there not townlands of 1,000 English acres?—There are; but they are either mountains, or they have been waste lands which have been cultivated in modern times.

283. Are not they now good arable land?—They are.

284. In your former examination, you stated that it would not be in your power so to revise the poor law valuations as to render them a proper basis upon which to levy the county cess?—I did. My reason for saying so is, that on comparing the poor law valuations with my own, I find such a great discrepancy between them. Sometimes, in their scale, the poor law valuation is under mine; sometimes it is 20 or 30 per cent. above; so that, without making a valuation myself, I could not tell even as to its general scale; and as to detail, I find such discrepancies in the detail between the poor law valuation and that made under my directions, that though of course there are several exceptions, generally speaking, I could place very little dependence upon it.

285. Are you acquainted with the valuations made in certain counties in Ireland under local Acts?—I am acquainted with one instance in the county of Cork.

286. Could you so revise that valuation in the county of Cork as to make it available for county purposes without a preliminary townland valuation?—I am not quite prepared to answer that question without having an opportunity of comparing the area of the townlands as contained in the original valuation of Cork, which was made a good deal from local documents with the Ordnance Survey; but I know that a great deal of pains was taken with the valuation, and I think that an approximation might be made to accuracy by a simple revision of the townland valuation made for the county of Cork, under the special Act.

287. Do you think that the valuation is so nearly accurate as to afford you a basis upon which you could proceed, and so very materially diminish the cost of your valuation?—It would not be my valuation; I could revise the Cork valuation in the same manner as I revised my own; if there proved to be great inequalities there would be no saving in the expense. I can only speak of the Cork valuation as knowing that a great deal of pains were taken with it, but I know nothing of its intrinsic merits.

288. *Sir H. W. Barron.*] Are you aware that the poor law valuation is most irregular, even as to its principle, in many districts?—I am.

289. That there is no uniform principle, in fact, acted upon in the poor law valuation?—Judging from the documents I have had before me, I think not.

290. Are you aware that it is, generally speaking, a mere relative valuation; that is, of one house as relatively compared with another, and one farm as compared with another; but not a valuation *bonâ fide* of the real value of the property?—I think that in many cases it has been more a valuation taken from the rents, than from any actual valuation.

291. Are you aware that in different counties, and even in the same county, the valuers have acted upon quite different principles?—I do not know what principles they acted on; but they do not correspond with my valuation.

292. Are you aware that in some districts the valuers were persons who were themselves principal tenants or holders of property in the districts, and that they valued the land considerably under its real value?—I am not aware of that circumstance.

293. *Chairman.*] Is it not a fact within your knowledge that the valuers under the Poor Law Act, generally speaking, were tenant farmers and holders of land under landlords?—In many instances, I believe they were; but in some instances they were surveyors of the country.

294. Is it not within your knowledge that the elected guardians who formed the majority of the Boards, by which they were appointed, were, generally speaking, all tenant farmers?—In many instances, I believe they are.

295. What ground have you for saying that the valuers appointed under the Poor Law rather assumed the rents as the basis of their valuations, than a value

value which they were themselves supposed to put upon the land?—By comparing their valuations with the documents which I procured from several agents myself, for the purpose of checking inaccuracies in my own valuation.

R. Griffith, Esq.

3 June 1844.

296. How does that show it?—There was a great relative correspondence; they were generally below the rents, but there was a relative correspondence.

297. Do you mean that in those parts of the union where the land was very high, the poor law valuation was proportionably raised?—In many instances I think it was.

298. And where the rent was low the valuation was made low also?—I think so; but this applies only to certain districts.

299. Is it your opinion that, generally speaking, throughout Ireland the valuers under the Poor Law were guided in their estimate of the value of land by the rent which the landlords had previously set upon it?—In many instances I believe that was the case, but not in all; comparing it with my own, which was always my criterion, I find that they were sometimes very relative with mine, and not corresponding so much with the rents, and in that case I am sure that an original valuation was made; but in other cases, from the correspondence between the rents and the valuations, I am of opinion that they were guided by the rents in a great degree.

300. Were the number of cases such as to enable you to say that they were only exceptional cases, or so numerous as to allow you fairly to assume that that mode of stating the value of land was general throughout Ireland?—I have not seen nearly the whole of the poor law valuation, and I have not paid any attention to the valuations which were made by the poor law valuers subsequent to my valuation; in the counties now in progress only have I paid any attention to it. In those I think in many cases the poor law valuation was in a great degree guided by the rents.

301. *Mr. Vesey.*] You stated the other day that the Poor Law Commissioners consulted you as to the proportion which the poor law valuation should bear to yours?—They did.

302. Did not you say that 33 per cent. should be put on in the north?—I did.

303. Has that been acted on?—I believe that in some instances it has.

304. Are you aware whether it has been acted on with success or not?—I think I have heard that it has been in the county of Down.

305. As it has been acted on with success, do not you think that, by advising the Commissioners as to what per-centage should be added to your valuation, for the purpose of the poor law valuation, the necessity of sending down an express valuator, as you have stated, for the purpose of the poor law valuation might be avoided?—I think the applotment would not be made from the general valuation in that case, but from the poor law valuation.

306. Do not you think that the poor law guardians could appoint valuers for that purpose?—I think that valuers so appointed would be more expensive, if the work were done accurately, than if effected under my direction.

307. You think that you can do it cheaper than valuers appointed by poor law guardians?—I think you could do it accurately. Taking accuracy into consideration, I have no doubt I could do it cheaper.

308. *Chairman.*] With regard to the tithe valuation in Ireland, could that be so amended as to form the basis of a general valuation?—I think not.

309. Do you know on what principle the tithe valuation has been conducted?—Generally speaking it has been framed upon the rents; I think in many instances the agents have been appointed Tithe Commissioners, and they assessed according to the rents of the estates.

310. Are you aware of any cases which have come under your own knowledge where that was actually done?—Such cases have come under my knowledge.

311. Is it your opinion that that valuation is not such as to give any hope that it could be made the basis of a general tenement valuation?—I think not, for I believe that it was rarely an actual valuation made. Where the rents were not followed, it was done by qualities, not by actual valuations, and we could not assess in detail from qualities, and act justly.

Mercurii, 5^o die Junii, 1844.

MEMBERS PRESENT.

Mr. Colquhoun.
 Lord Eliot.
 Mr. French.
 Sir Edmund Hayes.
 Viscount Jocelyn.

Sir Denham Norreys.
 Mr. Parker
 Mr. Shaw.
 Mr. Vesey.
 Mr. John Young.

JOHN YOUNG, ESQ. IN THE CHAIR.

*Richard Griffith, Esq., called in; and further Examined.**R. Griffith, Esq.*

5 June 1844.

312. Sir *D. Norreys.*] SINCE your last examination, have you read those clauses of the Poor Relief Act which relate to valuation?—I have.

313. Have you referred to the 9th of George the 4th, c. 82, the rates under which must now be levied according to the Poor Relief Act?—I have read the 35th and 38th sections.

314. Are you aware that, under the Irish Drainage Act, valuations are required to be made of lands and tenements?—I am.

315. Do you conceive that it would be possible to have one valuation which would suffice for all those purposes, as well as for the levying of the county rates?—I think it would be very desirable; but at the same time, where lands are to be assessed for improvements arising from drainage, very great caution and accuracy will be required to determine their value at the present time, with a view to its being compared with their value at a future time, after the improvements have been made; and possibly, under such circumstances, though a new valuation altogether might not be required, still it might be very desirable to direct a revision or examination of that valuation previously to its being used for the purposes of the Drainage Act.

316. Mr. *French.*] The proportion of money to be levied is according to the value received for the improvement of the land?—It is.

317. The only use that could be made of the valuation would be as a check on the value of the land before the improvements were commenced?—Certainly; but as I have mentioned already, that being a very nice question to be determined, it would be very necessary that a valuation made only for general purposes, should be looked over for that specific purpose previously to its being acted on.

318. Sir *D. Norreys.*] Is the amount of contribution which would be ultimately to be paid by those lands to be governed by the difference between the improved value and the value at the time of the improvement commencing?—It is.

319. Confining your answer to the Poor Law Act and the 9th of Geo. 4, for county rates, would it be desirable to have one valuation on which the several rates should be levied?—Very desirable, I think.

320. In those districts in which your townland valuation has not been commenced, have you considered whether it would be possible to carry on the townland valuation so as to make it applicable to poor law purposes, or would it be requisite so to alter the law which regulates the two valuations, that in point of fact, the valuation which you would have to carry on would be to a great extent a valuation on a new principle?—I do not conceive there would be any change in the principle; there would be merely a difference in the scale, taking care that the new valuation should approach to or be fully up to the average rental.

321. The basis of the poor law valuation being the letting value, and the basis of the townland valuation being certain fixed prices, how would you correct the valuation made on the townland principle, so as to make it applicable to the poor law principle?—By adding to the amount of the valuation proportionably.

322. *Chairman.*]

322. *Chairman.*] Do you consider that the scale of prices assumed in the Act are low or high prices as compared with the last four or five years?—The prices of the last four or five years in most commodities very nearly approach the scale of the Act.

323. Would you consider the scale of the price of wheat, as laid down in the Act, as a low or a high price in the maritime markets of Ireland, at the present moment?—The price of wheat is rather higher at present than the price in the Act; the price of oats is about the same, rather lower, I believe.

324. The price of oats, as given in the Act, if converted into the usual Irish measure of a barrel, would be 10s. 6d. a barrel?—It would.

325. Is not that considered a fair remunerating price to the farmer in Ireland?—At present it is.

326. Is it not considered so generally, taking an average of 15 years?—I think it is.

327. Then would it not follow, that if the farmers consider it a fair remunerating price, and are able to pay the rents, no change of the prices in the Act could alter the principle of the valuation?—No, the change of prices would not alter the principle of the valuation; but I would beg to observe, as I have done more than once during this examination, that the principle laid down by me was to value the land at the lowest rate that it was let for by the lowest-letting landlords, and carry on that scale; and it appears to me that, according to the principle of the poor law valuation, that scale is too low, and it would be necessary to raise it; but I thought that it was desirable for the townland valuation to have the scale low, because I was perfectly certain that if it were considerably raised, then the estates of some landlords would be valued higher than the rents, and in consequence, the tenants would be very much dissatisfied; that is not the case at present; every one is satisfied; because, though the land that is let high pays no more tax than the land which is let low, the quality being the same and the valuation the same, no difficulty has arisen in consequence.

328. Are the Committee to understand, that not finding a sufficient principle to guide you in the Act, you, after much reflection, adopted one for yourself?—I adopted one, and I stated in my last answer the grounds on which I had adopted it.

329. *Sir D. Norreys.*] In point of fact, you have not been able to follow the instructions of the 6 & 7 Will. 4?—I think I have; I took my own view of it.

330. If your previous answer be correct, that the prices at the present time are generally about equal to the prices of the Act, how is it that you justify the reduction of one-eighth from the valuation which you state that you made?—I stated early in my examination, that in the year 1830, the period at which I commenced the valuation, I ascertained that the prices of agricultural produce in Ireland were 2s. 6d. in the pound higher than the scale of the Act; and having commenced on that scale, I have continued it throughout.

331. You have adopted a scale of 2s. 6d. in the pound higher than the scale of the Act, and carried it through, founding that deviation on the fact of the prices having altered to that extent in 1830?—The field valuation is made on the scale of 2s. 6d. in the pound higher than those contained in the field-books as finally completed, for the reasons I have given.

332. You deducted from the field-books 2s. 6d. in the pound, because you found the prices altered to that extent?—I found that at the time the valuation was commenced the average prices of Ireland were, in that proportion, higher than the scale contained in the Act.

333. You continue that mode of deducting 2s. 6d. in the pound at the present time?—I do, because I wish to have the valuation uniform.

334. Although the cause of your having made that deviation has ceased, inasmuch as the prices you now state are equal to those in the Act?—That is the fact.

335. *Mr. Vesey.*] You stated that your valuation was about what a liberal landlord would let his land for?—What I found that the principal landlords in the north, including the London companies, did let their land for.

336. Did not you state the other day, that the Poor Law Commissioners consulted you as to the mode of valuation under the Poor Law Act?—They consulted me as to what difference there was between the full letting prices and my valuation.

R. Griffith, Esq.

5 June 1844.

337. What per-centage did you advise them to put on your valuation?—I said that an addition of 33 per cent. would bring it up to the high-letting rents in most districts.

338. Do you consider that the general scale of letting in the north is 33 per cent. over and above what the London companies let their land for?—In many cases it is.

339. You say some of the landlords of that district, but not generally, you think?—Some few of the landlords let their land as low as my valuation, but generally they do not.

340. *Sir D. Norreys.*] In your previous answer you have stated that if you were about to make a valuation which was to be applicable to poor law purposes, you would proceed as you now proceed for your townland valuation, but that you would add per-centage?—I would raise the scale of valuation.

341. You would then ascertain the per-centage which it would be requisite to add in order to bring the valuation up to what the poor law requires the fair letting value of the land?—I have in the outline of the system that is adopted by me in carrying on the valuation, given a table according to which I have been in the habit of valuing lands; and I have also given a table according to which it is usual for the landlords to let them, and I would change from one of these tables to the other.

342. Those tables are applicable equally to all parts of Ireland?—They are, because it depends upon the produce; they are calculated upon the produce, which is consequent upon the system of farming.

343. May not local circumstances, such as the increasing prosperity or otherwise of a neighbouring town, greatly interfere with the uniform application of those principles?—The accommodation land approaching a town could not be calculated according to those principles; and in the general valuation I have only valued land in such situations as used for farming purposes, under the most favourable circumstances, namely, the having the facility of procuring manure, and a rapid or easy sale for all the commodities; but I have never brought the valuation up to what is actually given for convenience; and I doubt whether, even under the Poor Law, that system should be pursued.

344. *Viscount Jocelyn.*] You make no allowance for convenience attaching to any particular land?—I make an allowance for land under the most favourable circumstances, and sometimes it is three times as much as the same land would be 10 miles from the town; but it does not amount to what may be called a fancy or accommodation value.

345. *Sir D. Norreys.*] May not local circumstances interfere with the applicability of those principles; one town, of a certain population, may be in a more prosperous state than another town of the same population, and larger prices be given for the use of land in the neighbourhood?—That is always ascertained by inquiry.

346. You do not consider those general directions that have been given as universally applicable?—It is particularly mentioned in my instructions that they are only to be used to assist the valuers, and not absolutely to guide them.

347. What, then, is to guide them as to the actual value of the land, according to the local demand?—The actual value of the land, according to the produce that is given, and in the neighbourhood of towns, modified, in a great degree, by local demand.

348. Are your valuers obliged to make you returns of the average value of the land, as affected by local demand?—They make notes, by my directions, in their field-books, stating the prices which they understand certain lands let for in the neighbourhood of the towns, and that is used by me as an assistance in regulating those prices; but the greatest onus in that respect is left on the shoulders of the check valuator, who is generally a very superior man, on whose experience and judgment I can rely; and he it is that finally arranges what is to be the relative price imposed on land approaching a town.

349. Your direction appears to be this: "Approaching within, say four miles, of a considerable town, an increase of, say 1s. in the pound, is made on account of superior advantage of situation, arising from the facility of procuring manure, vicinity to markets, &c." Is this a general rule applied to all districts?—It is a rule applied to districts, according to the nature of the circumstances. The instructions themselves are much more detailed than the statements contained in the outline;

outline; and if the system on which the valuation is carried out be referred to, it is necessary to look into the detail of the instructions to the valuers, which assists their judgment.

R. Griffith, Esq.

5 June 1844.

350. Are there other instructions given to the valuers besides those which are handed in to the Committee?—I have handed in to the Committee an outline of the system adopted, and I have referred in that outline to my general instructions, many copies of which I have laid upon the table.

351. Suppose a case, that land within four miles of a town of a population of 10,000 individuals was of the same quality for a certain distance all round the town, but that owing to the intervention of a river or a mountain, which rendered the access more difficult on one side than the other; will you point out the instructions to your valuers which would meet a case of that kind?—I know they are in the instructions, and I know that, in calculating the increase of value to be placed on land in approaching a town, the valuers are required to state the road by which they carry manure, and to calculate accordingly, not measuring in a direct line.

352. Have you referred to certain Returns of the number of 10*l.*, 20*l.*, 30*l.*, 40*l.*, and 50*l.* houses contained in different towns of Ireland, presented this Session?—I have not.

353. You will find that in towns of the same population, or nearly the same population, the number of houses of the value of 50*l.* and upwards varies greatly; would not the fact of the existence of a greater number of houses of large value be an evidence of the greater wealth and greater prosperity of such a town?—Yes; that is always taken into consideration by the valuers. The following are extracts from the instructions to the valuers: "The classification of towns by the population cannot be strictly adhered to as a principle of increase in the value of land in its vicinity; some towns, having a large population, are poor when compared with others, in which, owing to commercial industry, the population though small are wealthy. In fixing on the class for a town of the latter description, the valuator must use his judgment, combining the comparative wealth with the population, and raise it one class in the table, or even more. If there be a large poor population, he shall take a class lower than it would be requisite under ordinary circumstances. The above rule is applicable to the highly improved lands easy of access in the neighbourhood of towns. In hilly or mountainous districts, it will frequently happen that steep, hilly, or rocky land, difficult of access, will occur close to a town. In such cases, the addition for local advantages will be regulated according to the peculiar circumstances of the lot or lots under consideration. When steep land occurs close to a town, the per-centage lines must be drawn in or shortened, according to the judgment of the valuator: thus, if a ton of manure can be easily drawn by a horse on one side of a town, but, owing to steepness, only half that quantity on the other, the first line of increase should extend but half the distance on the steep side that would be requisite on the level."

354. If taxation is to fall on the subject valued, in proportion to its value, should not the valuation by which the taxation is to be levied represent the average profits of the owner, or the person by whom the tax is to be borne?—Certainly; the value of the land must be calculated in a great degree by what may be considered the final profits, after the expenses incurred in agriculture, and the maintenance of the family on the farm have been deducted.

355. In a system of taxation, a proportion of which was to fall on the landlord, would it not be right that, as nearly as possible, the actual amount which he received from lands or from tenements should be made the basis on which the taxation should rest?—Certainly; in that case the full or equitable value of the land should be the amount of the valuation.

356. Does not the basis of the poor law valuation establish, that the actual fair letting value of the land should be the standard of the amount of taxation which should be borne by it?—It does.

357. You have stated that, if you were required to bring up your valuation to the actual fair letting value, you would add a per-centage to the valuation made on the townland principle?—I would.

358. That per-centage would be an ascertainment of the additional value which local circumstances gave to the land over and above the general value which would be derived from your valuation?—That would be the mode of ascertaining it in the neighbourhood of a town.

R. Griffith, Esq.

5 June 1844.

359. Would not that extend to every description of tenement, be it far from or near to a town?—Provided that, by the term local circumstances, we are to understand that the system of agriculture which prevails should be taken into consideration; the local circumstances in that case would be the system of agriculture, and the prices at the neighbouring markets.

360. Whether the subject of taxation be near to or distant from a town, the average amount which would be paid for the use of that subject would be a fair basis on which the taxation should be calculated for it?—Certainly.

361. Will you refer to the Table you have handed in to the parish of Boystown, in the barony of Talbotstown, in the county Wicklow, where it appears that the rents at which the lands are let are 8 s. 3 d., or about 42 per cent. higher than your valuation; if a tax were imposed on the entire barony of Talbotstown, would it not be more reasonable that that tax should be borne in proportion to the rents which are received than in proportion to your valuation?—I think not. I cannot at this moment state what is the cause of such an unusual difference, the rents being so high as 8 s. 3 d. in the pound over the general valuation, but I conceive that there must be some considerable subletting, or something of that kind, which has created a difference more than usual. I see in the parish of Donard the word “sublet” is mentioned; there the difference is 8 s. 7 d., and it was ascertained that it was let in small divisions near the town; and every gentleman who knows Ireland must be aware that land let in small divisions often pays double what a reasonable landlord would let the land for in larger divisions.

362. Would not the fact of that note having been put to a particular town-land lead to the inference that the same cause for the difference did not exist in other cases?—I know something of the one myself, but I do not know the other; I had a knowledge of the town of Donard; and besides that, a large portion of that land surrounded the town, and the accommodation value was included in the 8 s. 7 d.

363. If the portion of the tax were to be laid on according to your valuation, it would appear that the proprietor who received 8 s. 3 d. in the pound above your valuation would pay a much smaller proportion than the proprietor in the adjoining parish, the rents of which were only 5 s. 2 d. in the pound over your valuation; so that the tax would not fall equally in proportion to the profits received by the owner from the lands?—He would.

364. Would not the result virtually be that the person who lets his land highest and derives the greatest profit from the land would be the individual who would pay the proportionably smallest amount of tax?—That would certainly be the case, and it cannot be avoided.

365. You do not take the average letting of the country as your standard?—I would if I were acting under the poor law.

366. *Mr. Vesey.*] In those columns of the Table referred to where the high rents are put, are those rents paid by the occupiers, or by the tenants immediately holding under the head landlord?—I am not able to answer that question with certainty; but my opinion is, that the rents inserted are in all cases the rents paid by the occupiers. Where the tenements are very small, the rent is always a great deal higher. Sometimes the occupiers hold directly under the landlord, and where they do the rents are more moderate than when they are held under a middleman.

367. Am I to understand that those tables are not a fair test of the rents that are paid to the head landlords?—They are not; in fact, they were taken in a hurry, in coming to this Committee, from such documents as I found in the office. They were taken from returns received from various sources; some of them from agents, but many acquired by the valuers in the country.

368. *Sir D. Norreys.*] Were they not rather brought to show the correctness of your estimate that a per-centage of 25 per cent. would give the actual value?—They were brought here to give information to the Committee, and actually I had not read them when I brought them over.

369. There is a heading of “High rent” in one part of the return, and of “Rent” in another part of the return; is there any distinction to be drawn between the rents put down in this column?—No; the word rent might have been used throughout.

370. Are not the Committee to understand that those are the rents which you

you have ascertained to be actually paid in those townlands?—They are the rents which the occupying tenants actually pay.

R. Griffith, Esq.

371. Have you considered what alteration of the law will be requisite in order to enable you to complete your valuation, as a valuation applicable to poor law purposes?—No alteration, further than to desire that I was not to follow the standard of prices contained in the Act, but to take the fair letting value between the landlord and tenant in lieu of it.

5 June 1844.

372. Then in order to make your valuation for poor law purposes, it will be necessary to get rid of the standard of valuation required by the 6th and 7th of William the 4th, and to adopt the standard laid down in the Poor Law Act?—It would.

373. The standard required by the Poor Law Act is, “the rent at which, one year with another, the same might in their actual state be reasonably expected to be let from year to year, the probable annual average cost of the repairs, insurance, and other expenses, if any, necessary to maintain the hereditaments in their actual state, and all rates, taxes, and public charges, if any, except tithes, being paid by the tenant.” Do you conceive that those words are sufficiently accurate as an indication of value, so as to enable you to form a correct valuation upon them?—I do.

374. Taking the words, “the rent at which, one year with another, the same might in their actual state be reasonably expected to be let from year to year,” do not those words appear to require that the value of a property shall be the rent which would be paid for it by what is called a yearly tenant, by a person to whom it is let from year to year?—It might convey that idea; and hence those words would be better corrected; if land be let from year to year, unless the landlord makes large allowances, no improvements can take place.

375. Do you conceive that the amount at which land could let from year to year is a true indication of the actual value of that land?—If you confine it to the express words, I do not; but I would observe, that the same words were in the general Valuation Act, with regard to houses, and I considered it necessary to value the houses as if they were let for 21 years; I took that into account to cover the repairs. In one case the landlord paid the repairs, and in the other not, and in consequence I valued houses as if they were let on a lease of 21 years.

376. And so with land; if you wanted to ascertain the real value of the land, or its real capability of bearing taxation, you would not value it as it would be let from year to year, but as it would be let on the average tenure in that part of the country?—I think the general tenures should form the basis of valuation.

377. *Chairman.*] Is the construction you put upon those words, that is to say, “the rent at which, one year with another, the same might in their actual state be reasonably be expected to be let from year to year,” that this does not mean an average of years?—I have already mentioned that the same words were used in the general valuation, and I have construed them into a 21 years’ lease; and if the question had not been raised, I would have considered it as the usual tenure of the country; but the question having been raised, and doubts being entertained on the subject, my answers were given accordingly.

378. *Sir D. Norreys.*] Are you aware that this difficulty has arisen in the valuations of different unions in Ireland, that the valuers did not feel themselves competent to value up to that value which would have been received had the Act allowed the valuation to be made on the supposition of a tenure of a certain period?—I am not aware of that fact.

379. *Chairman.*] Are you aware that any legal construction by any competent authority has ever decided that those words meant a tenure for a single year, and not for several consecutive years?—I never heard the question discussed.

380. *Sir D. Norreys.*] In ascertaining the value for the townland valuation, when you have calculated the amount which land of any given quality may be expected to produce, how do you arrive at the valuation at which that is to be put down?—By calculating the proportion of the produce, and if it were of the first quality at one-fourth.

381. *Chairman.*] Suppose it were a medium soil?—If it were a medium soil it would be one-sixth.

382. What is it on the third class, poor soil?—One-eighth; that is for arable lands; there is a different scale for pasture.

383. *Mr. Vesey.*] Will you have the goodness to turn to page 31 of the instructions

R. Griffith, Esq.

5 June 1844.

structions to the valuator; you there speak of stiff clays, which would be called poor soil?—Stiff clay may not be a poor soil; sometimes the very best soils are stiff clay.

384. You stated that clay land by judicious culture may become very much better?—I did.

385. Would it be required to be moved if its intrinsic quality were altered to a higher class?—If you take a stiff clay soil that is at this moment valued at 10 s. an acre, and drain it, and subsoil plough it, and expose it to the winter frosts, it would be double its value after that expenditure, and should be raised very likely from the third to the second, and possibly to the first class.

386. Would it not follow that, even with regard to that which is the principal ground of ascertaining the value of land, its intrinsic quality, cultivation may make such great difference as would require frequent revision of the valuation?—During the present improving state of agriculture that must frequently take place. Where a person expends 5*l.*, 10*l.*, or 15*l.* an acre in its improvement, if he does not raise the value from a low to a high one, his money will have been badly expended.

387. *Chairman.*] Suppose a man expends 4*l.* an acre, by which he could thoroughly drain his land according to Mr. Smith of Deanstown's plan, would not that bring his land to a high quality?—Not unless he used the subsoil plough with a stiff clay; if a friable soil, and not a stiff clay, it would not require a subsoil plough.

388. Is not your whole valuation based on the supposition, that no regular routine of cultivation is observed by the small farmer?—My valuation is based on the state of agriculture in the district in which the valuation is made; but it does not follow from that that there is no system of agriculture adopted by the smaller farmers. In the counties of Down, of Armagh, and Antrim, in certain instances, the five-course, and sometimes a four-course system is adopted.

389. Generally speaking, is it not based on the assumption that, after taking one or two crops of potatoes, they take grain till the land is exhausted?—Out of the province of Ulster that is generally the case in small farms.

390. Sir D. Norreys.] In ascertaining the value of lands, your first object is to ascertain the capability of the land to produce a crop; you take the value of that crop, and place a certain proportion of the gross value of the produce as the amount which would be payable for the rent?—I take the average value of the produce of say 100 acres for 10 or 15 years, and on that form a scale for the district.

391. Does not that presume that certain taxes should be paid by the landlord, and others paid by the tenant?—Hitherto I have paid no attention to that view, for I was valuing for the county assessment, where the occupier pays the whole.

392. Does not the value of land, or the profit which it brings to the owner or occupier of it, depend upon the amount of outgoings and other expenses?—It depends upon the quality of the land and the outgoings.

393. Consequently a larger amount of outgoing or expense from land of the same quality would diminish the amount at which it ought to stand in your valuation?—If the outgoing was badly applied, certainly, because that would indicate a bad system of farming.

394. Do not you conceive, that by the terms of the 6 & 7 Will. 4 you are bound to value the lands as if a tenant were taking the land, being insured certain fixed prices of produce?—I do.

395. Would you not, in fixing such valuation, consider such a tenant as liable to certain expenses, as incident to the use of the land or the house?—Certainly; I conceived he was liable to pay the county assessment and the tithe, and that was the only assessment he was liable to at the time the valuation was made.

396. Since the passing of this Act, an Act has passed which removes the payment of tithe from the occupying tenant; what alteration have you made in your instructions to the valuator, or in your mode of ascertaining the value, in consequence of the passing of that Act?—I have made no alteration.

397. Consequently the valuation is one as if the tenant were subject to tithe, whereas he is actually not so, provided he be a tenant who has taken the land subsequently to 1836?—I conceived I was making an uniform valuation, and on the scale I began upon, I intended to carry it through; and that may be one reason

reason why my valuation is lower in proportion than it should be, on account of the landlord paying the tithe since.

R. Griffith, Esq.

398. That has raised the value of land in proportion?—It has; but I wanted to make an uniform valuation, and having begun on one system, I intended to persevere in it.

5 June 1844.

399. The same answer would refer also to the increased taxation of land arising from poor rates, that those have not been taken into consideration?—They have not.

400. Consequently, in the present state of the law, your valuation, however correct according to your original terms, cannot be as correct now as it was when it was commenced?—I am not aware that any material alteration has been made in the rents in consequence of those changes.

401. If you were to make the valuation for poor law purposes, you would, as you state now, ascertain, as nearly as you could, the actual letting value of the lands in the district valued?—I would take the average letting value of the lands according to the quality in the district.

402. What object would there be in having reference to the scale of prices contained in the 6 & 7 Will. 4?—I would have no reference to that scale, if the Act was changed.

403. Would it, in your opinion, be advisable now to consolidate all the valuations, and to adopt the standard on which the poor law valuation is to be made?—I do not know why I should adopt the standard of the poor law, for I could use the principle on which I am now carrying on the valuation, and afterwards raise it. I would wish to carry it on on the same system; for then, I conceive, by making the allowances which may be necessary, in consequence of improvements in agriculture throughout the country between the beginning and end of the townland valuation, a uniform valuation of Ireland would be obtained, which would be totally lost if the system were altered.

404. Your object would be to carry on your present system of townland valuation throughout, but to accompany it by a second valuation, or a second calculation, which should form an actual second valuation for the purposes of the poor-rate?—And that second valuation might be employed for county rates also, if it were thought fit.

405. Are not you thereby incurring the expense and trouble of making two valuations, whereas, by your own statement, the one valuation for the poor-rates might be made the basis of taxation?—There would be only one valuation; it would be merely a matter of addition; there would be no alteration in the expense. I would have two columns in the field-book.

406. If the object were that the valuation should be made a valuation according to the terms of the poor law, namely, an ascertainment of the value of land, calculated at the rent which could reasonably be expected for it, what advantage would there be in your continuing a valuation upon your present mode of carrying it on?—My people are accustomed to a certain scale; there are between 60 and 70 in the field, who are valuing according to a certain system or rule. I know what that system is, and what the valuers can do. If I changed the system, I would totally derange their proceedings, and I would have no confidence in their valuations; but if they be allowed to proceed in the usual way, I can raise the scale in the office to anything, by secondary investigations made by myself, not costing the public anything. I am sure of producing a uniform system in the one case, and of deranging the whole in the other; and that is the reason why I should wish to carry on the system which has hitherto been followed.

407. You feel confident that you could accommodate your present arrangements to the system of valuation which has been suggested for the poor law?—I have no doubt of it.

408. *Mr. Vesey.*] Have you since your last examination looked at 1 & 2 Vict. c. 56?—I have.

409. Have you ascertained from that Act that all hereditaments are rated to the poor-rate?—I have.

410. Are not many hereditaments rateable under that Act which are not liable to county cess?—Yes, many.

411. Can you state what they are?—Mines, commons, and rights of common; everything, in fact, mentioned in the clause except the two first, lands and buildings.

R. Griffith, Esq.

5 June 1844.

412. In looking over the Act, do you conceive that machinery is rateable?—I cannot, in looking over the Act, see that in the general clause machinery is mentioned; it mentions buildings only.

413. Have you been able to make a calculation as to what the probable additional expense would be of making a valuation for the purposes of the Poor Law, in addition to your valuation?—I think it would be trifling, because, though the additional subjects of taxation are numerous, most of them are only met with in particular parts of the country, consequently the great mass of the valuation would still consist of houses and lands.

414. You stated, the other day, that it would cost about a halfpenny an acre to make your valuation a tenement valuation. Without taking into calculation the valuation of the different tenements rateable under the poor law, can you state what addition there would be from that?—I am not prepared to state it; I do not think that it would be considerable.

415. Can you state the probable amount?—I can hardly do so.

416. What do you conceive the greatest additional expense would be?—The valuing of houses under 5*l.*, which are now excluded.

417. Am I to understand that that would be the only serious additional expense, in addition to the halfpenny an acre?—I think that would be the only serious expense.

418. Do you conceive that you could value, for the purposes of the poor law, cheaper than could be done by the valuers appointed by Boards of Guardians?—Taking into consideration the accuracy with which the valuers employed by me are in the habit of proceeding, I think I could.

419. Will you state your reasons for saying that?—My reasons are, that I have a corps of trained valuers, who have done nothing else for the last 12 or 14 years, and who are fully competent to the trust reposed in them, and who are very industrious, and required by me to be so. I require them to be seven hours in the field every day, and produce a certain quantity of work, which is carefully noted in the progress returns laid before me every month.

420. *Chairman.*] Suppose you were going to take a farm from year to year, would you not calculate not only the probable produce of the land, but also the prices it was likely to fetch in the market, before you offered a rent for it?—Certainly.

421. Suppose those prices were to be the same as those laid down in the 6 & 7 Will. 4, the rent you would then offer for the land would be the same as the valuation you put on it?—No, it would not, because the valuation I put on it was studiously on a low scale, but it was still founded on a scale of prices which certain landlords in the north of Ireland did actually let their land for.

422. So that even suppose the actual selling prices of produce to be the same as those in the Act, still the rent must be assumed at a higher rate than your valuation?—It must.

423. *Sir D. Norreys.*] You have made a great distinction between what you call large landlords and the other landlords of the country, and stated that you mean by large landlords, landlords holding 8,000 or 10,000 acres; do you mean that no other landlords in the country let their lands at a fair rent than those large landlords?—I do not mean any such thing, but that such landlords usually arrange their estates on a regular system, and in the north usually by valuation, and I have always observed that those landlords who let their estates by valuation, let their lands lower than those who let by tender.

424. You do not intend to confine the fact of letting lands at a fair rate solely to the larger landlords of the country?—No; I know many instances of smaller landlords who let their lands as low as the large landlords.

425. *Mr. Vesey.*] Do the large landlords in the north generally let their lands much above your valuation?—In certain districts they do; take the county of Down, for instance.

426. Do they let them 33 per cent., in the county of Down, above your valuation?—I think they do.

427. Was that the ground of your advising the Poor Law Commissioners to add 33 per cent.?—It was.

428. In the county of Derry do they generally let 33 per cent. above your valuation?—Some landlords do, but the London companies and several landlords do not.

429. If

429. If you were consulted as to what per-centage you would add in the county of Derry, what would you put?—If I were asked what was considered the full letting rent, I would say, add 33 per cent.; but if I were asked what was the average letting of the country, I would say, far below that.

430. If they consulted you as to what per-centage should be put on for the purposes of the poor law, what should you recommend?—Being guided in that case, as I conceive the poor law valuation must be, by the letting rents, I would say that they should not add more than 20 per cent.

431. Sir *D. Norreys*.] That answer is only a general one in respect of the average, but would not be correct as respects portions of the district to be valued?—It refers to the average, and not to particular portions.

432. Mr. *Vesey*.] If you were employed for a poor law valuation, would you value for the purposes of the poor law in Derry lower than you would value in the county of Down?—I think I would not, for I think conscientiously I should not; but I doubt whether the construction of the Act would not almost render it necessary.

433. If you were called upon by a private individual to value two estates, one in the county of Derry and the other in the county of Down, how would you value those estates relatively?—If a landlord in the county of Derry desired me to value his land I would see how the large landed proprietors in the neighbourhood let their land, and I would value it lower in the county of Derry than the county of Down.

434. Suppose he desired you to value it so that a tenant should pay a just and fair rent for his land, irrespective of what the neighbouring properties were let at, how would you value it?—At the same rate, except that I think the people in the county of Down are more industrious than in any other part of Ireland, and can afford to pay a higher rent there than in the county of Derry or elsewhere.

435. Would you value each estate, for the purposes of the landlord, in the same relation to each other as you would for the purposes of the poor law?—I think so; I think the poor law valuation should be conducted in the same manner.

436. Will you state why you would value in the county of Down higher than in the county of Derry?—Because I think the people are better farmers and more industrious, and get a greater produce out of the land in the county of Down than in Derry.

Veneris, 7^o die Junii, 1844.

Sir Denham Norreys.
Mr. Shaw.
Mr. Vesey.
Mr. Young.

JOHN YOUNG, Esq. IN THE CHAIR.

Sir *Robert Alexander Ferguson*, Bart. a Member of the House; Examined.

437. *Chairman*.] HAS your attention been called to the subject of the valuation of Ireland?—My attention has been directed to the subject of the Townland Valuations in Ireland, for a considerable number of years. The Committee are aware that the county of Londonderry was the first county in which that valuation was commenced. Being a magistrate of that county, and also frequently on the grand jury, as well of that county as of Tyrone, which was the second county, and in which I have also property, it came occasionally before me as a member of the committee of appeal or of revision. The valuation of the county had scarcely begun before I was in Parliament, and the various changes that were obliged to be made in the law, for the purpose of making that Act of Parliament efficient, made me pretty well acquainted with it.

R. A. Ferguson,
Bart. M.P.

7 June 1844.

Sir
R. A. Ferguson,
 Bart. M. P.
 7 June 1844.

438. Were you Chairman of the County Cess Committee?—I was Chairman of the County Cess Committee in 1836; and upon the recommendation of that Committee, the Act was carried, under which the valuation is at present conducted. The Committee are aware that the Valuation Act appears to have been introduced on the recommendation of the Committee of 1824, of which I believe the present Lord Monteagle was Chairman. They were a Committee appointed on the survey and valuation, and their attention seems to have been directed particularly to the survey. With respect, however, to the valuation, I will read the recommendation of that Committee: "In effecting the valuation, your Committee conceive that three principles must be adhered to and combined: first, a fixed and uniform principle of valuation applicable throughout the whole work, and enabling the valuation, not only of townlands, but that of counties, to be compared by one common measure; secondly, a central authority, under the appointment of Government, for direction and superintendence, and for the generalization of the returns made in detail; thirdly, local assistance regularly organized, furnishing information on the spot, and forming a check for the protection of private rights. In a future session it will be the subject of consideration how far these principles are accurate, and in what manner it will be the pleasure of Parliament to carry them into effect."

439. As regards the second and third of those recommendations, do not they appear only to have been the means pointed out by the Committee for carrying the first into effect?—It would appear so, if you take the beginning of the resolution, where they conceive that three principles must be adhered to and combined; but in the conclusion of it they state, "In a future session it will be the subject of consideration how far those principles are accurate."

440. As far as that resolution goes, is there only one principle, or one object, apparently aimed at; namely, uniformity?—There is uniformity, central authority, with local assistance: all three principles seemed aimed at by the recommendation; but there was very little examination about the valuation, and their ideas seem "crude," to use the words of one of the members examined. There appears, however, to have been no further consideration, as far as we can see, on the part of Parliament; but in the year 1826 the first Valuation Act was introduced, and received the Royal assent on the 26th of May 1826. On looking at that Act, it appears as if the framers of it contemplated a commissioner for each county; that he was to give a general attention with the valuers through the county, and go through a large part of it with them. There does not appear to have been anything done under that Act for some time, and in the county of Londonderry they do not seem to have commenced much before 1830 or 1831. Next the Act of 1831, the 1 & 2 Will. 4, cap. 51, was passed to exempt houses under 3*l*., and make some regulations about houses liable to claim exemption; that passed in the latter end of 1831. There was a blunder as to the houses exempted, which made it necessary to pass the 2 & 3 Will. 4, cap. 73, in the beginning of 1832; and those laws were all existing at the sitting of the Committee on County Cess, in 1836. They were repealed, and the whole system simplified, and some changes made. By that Act of 1836, one sole commissioner was to be appointed for all Ireland, to superintend the valuation.

441. The change seems to have been, that the central authority was retained, but the local assistants appear to have been discontinued?—The central authority seems to have been vested with almost all the power. The only local assistance derived was from the committees of appeal, and the committee of revision; but these committees do not seem to me to be the kind of local assistance contemplated by the resolutions of the Committee of 1824.

442. The object of the valuation appears to have been to produce a uniform valuation of townlands, but of no lower denomination of land?—Before the Committee of 1824, when the survey was very particularly discussed, the question was, whether the survey might not be sufficiently minute by going merely into parishes. They, however, extended it to townlands; but the maps of those townlands were without any subdivisions of fields, or many subdivisions of any kind, appearing on the face of the map; the roads and houses were laid down correctly, but there was no subdivision of fields in the first maps published: the valuation of the townland was then made by what were called quality lines; that is, lines dividing the land according to the quality of it. Those division lines still continue to be used in the valuation; but from the improved

improved mode of making the maps, and the greater quantity of information given by them, those lines are, by one of the recent regulations to the valuers, by Mr. Griffith, directed to be drawn as much as possible according to the division of the farms; thereby giving up altogether the quality lines, and the valuation of townlands by qualities.

443. Are the Committee to understand that though at first it would not have been in the power of valuers to give a less unit of valuation than a townland, yet now, from the alteration which has taken place in the system, and the abandonment of quality lines, it is in their power to give each tenement in the townland?—I think, from looking to the maps, that it would be in their power to give each tenement. It might increase the expense giving every tenement, where they were very small; but I understand the 310th and the 311th sections of Mr Griffith's instructions to the valuers, for the uniform valuation of lands and tenements in Ireland, to alter entirely the 16th and 19th sections of the same instructions. From the field books of a townland formerly valued with what I call quality lines, which were the ones first laid down, it was almost impossible to tell the valuation of any particular farm, unless its boundary agreed exactly with that quality line. The line ran, in many cases, across three or four farms, including a portion of land, say 30 acres, of which 25 would be of one uniform quality, and the other five of less value, or of greater value; it would be impossible, without a surveyor upon the spot, to say in which of the farms those five acres were to be found; but if the lines are drawn now according to the division of the farms, of course each farm or tenement will be in one number.

444. Are the boundaries of farms given in the maps of the counties lately mapped or now in progress?—There seem to me not only the boundaries of farms, but the fences of fields; and from that the boundaries of farms might easily be ascertained by the valuator when on the ground.

445. In the maps of the earlier counties, those boundaries of the fields were not given?—No, they were not.

446. Then in order to enable the valuers to make a field or tenement valuation in the counties which were first mapped, would it not be necessary that the surveyors should go over the ground again, and mark in the boundaries of farms and fields?—It would be certainly very advisable; and upon that subject there were directions from some of the northern grand juries that an application should be made to Government, that in going over the country to put in the contour lines, the Government surveyors should have directions also to put in such divisions as would make those maps as complete as the southern ones. Of course it could be done also by local surveyors; but it is believed that if the contour lines are to be put in, the same expense nearly would do the other also. There are a number of points which would enable a surveyor to put the lines in with sufficient exactness on the ground.

447. The main object that the Committee of 1824 seem to have had in view was uniformity; do you think the object is attained by Mr. Griffith's valuation?—On reading the evidence of Lord Monteagle before the Committee of 1824, p. 23, he presses uniformity strongly, but thought that the valuation would be six years in progress; now supposing uniformity to be the main object they had in view, it is very difficult to understand the uniformity of a valuation which has now been going on for 13 or 14 years, and is likely to last three or four years more. From the evidence of Mr. Griffith, given at different times, he seems to make every exertion to have it as uniform as possible; but I very much doubt if that uniformity has been attained. The system, as I understand it, is to employ valuers, in the first place, for the valuation of the lands, not according to the prices of the Act, but according to the value which he, from other prices, put upon certain lands in the county of Londonderry; their object is to bring everything as nearly as they can, in their valuation, to that value. Those valuations so made are then sent up to the office; and in the office, after being checked by the check valuers, they are then altered and reduced there, according to what they call local circumstances. Now one of those local circumstances seems to be the system of agriculture in the neighbourhood; and it appears to me, that if that local circumstance is taken into consideration, it is almost impossible to conceive that it can be uniform over the kingdom.

448. Why should taking the system of agriculture into consideration injure
0.63. the

Sir
R. A. Ferguson,
Bart. M. P.

Sir
R. A. Ferguson,
 Bart. M.P.

7 June 1844.

the uniformity?—Because the uniformity, I think, must be on the one basis of the quality of the ground; if you get off that basis, I do not see how the uniformity can continue; the system of agriculture changes very quickly.

449. Do you mean that, suppose the system of agriculture in the country to have greatly improved between the time the valuation was commenced and the time at which it was completed, the uniformity is destroyed by full credit not being given to the improvement that has taken place?—I think the uniformity will be destroyed by that, certainly; but what I conceive is, that if you value lands according to what may be called their geological properties, you may make a uniform valuation; but if you take anything so shifting as the nature and mode of agriculture into it, I think the uniformity must be very much overset. I cannot see how it is possible to make it uniform, if you take that into consideration.

450. Sir *H. W. Barron.*] There is another consideration which affects all lands, besides that which you have alluded to, the quality of the ground or its geological formation; namely, its local position and circumstances, such as rivers, roads, and proximity to towns?—Their proximity to towns and elevation in the country would of course affect the value, and perhaps the roads also. I do not think, however, that the question of its being well or ill roaded could be taken into consideration in a uniform valuation; the proximity to towns of course would.

451. One circumstance would certainly be; namely, navigable rivers?—Any feature of the country which gives proximity to a town would be.

452. Mr. *Shaw.*] Any permanent circumstance?—Yes.

453. *Chairman.*] Under that view, would you value two lands of equal quality, one being in the highest state of cultivation, and the other almost in a state of nature, equally?—I do not see how you can compare two things of that kind: suppose lands of the same quality, but one of them very well cultivated, it is completely drained, whereas the other is wet and spongy; that of itself makes a great difference.

454. In that case you would have taken into consideration the labour which has been expended upon it, and which is not a permanent incident to the land?—Yes; when laid out in draining, I do consider it a permanent incident of the land; but it seems to me that the consideration is not the agriculture of one particular farm, but the agriculture of the district.

455. To what extent do you think those causes have injured or destroyed the uniformity of Griffith's valuation?—I cannot judge of that; of my own knowledge I know nothing of it, except the three counties in the north in which I am particularly interested; those were done at the beginning of the valuation, and they certainly were not so well done as to enable us to make any use of them in the way of any other local valuation. The complaint of the irregular pressure of the county cess was so great, that we were glad to get any relief whatever; but when we afterwards came to make use of this for our poor law valuations, we found that we really could make nothing of it. The Committee will find in the report made in 1841 by some Commissioners, in reference to valuations for poor rates, at the end of the report of the valuation of Londonderry, a comparison of seven townlands which the committee of valuation selected to have examined by the persons whom they had appointed for the valuation of the union, in the hope that if they found that different townlands in different districts required a nearly similar addition to be made in order to bring them to the fair letting value, then that a certain per centage might have been added to Mr. Griffith's valuation of the townlands, to be taken as the general valuation of the union. When we came, however, to examine the valuations, we found such a difference in them that it was quite impossible to make any use of them at all. "At a meeting of the Board of Guardians, held on the 26th of September 1839, the new valuation of seven townlands was laid before the Board, read, and compared with Mr. Griffith's field books. The valuers requested permission from the Board to put the same per centage of rise in value on townlands of similar character to those now submitted by them." These seven townlands are as follows: Ling, that was in the parish of Upper Cumber, a district of mountainous country, the increase in the per centage on that was $7\frac{1}{2}$ per cent.; Ardnabrochey was 17 per cent.; Gortinure, in Glendermot, 27 per cent.; and Kilfenan was 10 per cent. These were all in the county of Londonderry. Baylit, in the island of Inch, was 17 per cent.; Moness,

Moness, in the parish of Bart, was 12 per cent.; and Sappogh, in the parish of Muff, 14½ per cent. The difference in the county of Londonderry appeared so large, that the Board of Guardians came to the resolution that they would not in any way interfere with the valuator in fixing the per centage, by which to raise Mr. Griffith's valuation.

456. Was their reason for doing so, that the differences between the estimate of the value of the townlands by the poor law valuator, and that by Mr. Griffith, were so different, that they could not fix upon the average to be added?—They could not fix upon the average to be added; in fact they considered that the valuation could not be equitably made by an addition on a general scale.

457. Are the Committee to understand that Mr. Griffith's was considered a great improvement on all former valuations?—The former mode by which the county cess was apportioned was by the key, as it was called; which had been settled, I believe, as early as the time of the division of the county of Londonderry among the 12 companies, about 220 years before; because the proportions which were laid down there were not proportions by baronies at all, but proportions by which each of the 12 companies' property paid so much. The consequence was, that both upon the city of Derry, and upon some of the districts which had been at that time improved, the county cess had risen to an enormous amount, far disproportionate to that paid for lands separated from them by what may be termed an ideal line. Mr. Griffith's valuation was felt to be an extreme improvement upon that; but it was felt, that there was a great mistake in the valuation of the county: all the mountain lands were raised too high; all the very superior lands were put too low; and the middling lands, average arable land, were nearer the relative value than the others; but it was found out, a little too late perhaps, that the mountains were rated a great deal too high. That is borne out by this valuation. On Ling, which is land lying high, the increase is only 7½ per cent.; whereas in Gortinure, which is within a few miles of it, but lower land and good land, the rise is no less than 27 per cent. The same thing, when they endeavoured to make the valuation applicable to the levy for the poor rate in Newton Limavaddy, was found to be the case in reference to that district.

458. With those exceptions, did the valuation give satisfaction as long as it was used for raising the county cess?—It gave great satisfaction, for it gave great relief, except the mountains; there they found it was considerably too high, and they complained a good deal, and there was one appeal I know tried; but that appeal, according to the state of the law, only altered the cases appealed against; we could not get a general alteration of the district.

459. But when you came to levy the poor rate, a tax which was to be apportioned between two parties, the difficulties were insurmountable?—A very great inequality appeared, and that inequality was carried on also through the county of Tyrone, as far as my own property in that county went. Upon looking into that and comparing it with the best valuations, and after the greatest trouble I could take in valuing, I found that while my setting was in some low-lying townlands 30 per cent. above Mr. Griffith's valuation in the mountains, it was above what I could get, although I had reduced his mountain lands upon appeal.

460. So that it would appear, both from the poor law valuation and from the letting by landlords, that Mr. Griffith's valuation under-estimated the good lands, and over-estimated the wild and uncultivated lands?—He did that at first. At first the valuation was carried on by three valuator, who were supposed to check each other; he afterwards confined it to one, and then the valuation was a great deal better; but in the county of Donegal, when he got there he exactly reversed the mistake he had made in Derry; there he has placed the lowlands high; and the mountains extremely low. Donegal is a very extensive county. In one barony of that county, the barony of Raphoe, tolerably good land is valued in the printed list of valuations very close indeed upon the letting value of the land. It is the only district in which I know that it is so valued, seeing that in other districts of Donegal the letting value is considerably higher; but in the mountains I am convinced the value must be very far below it, and for this reason, that the county cess has in one of those mountainous districts been for two or three years in succession from 25 to 33 per cent. upon the valuation, and it is quite impossible that any tenantry, or any set of people in Ireland could pay a county cess of from 25 to 33 per cent.

Sir
R. A. Ferguson,

upon a valuation equal to the letting value. I felt this so strongly that I would have brought it before the committee of revision upon its meeting a short time ago, but unfortunately I did not hear of it till it was too late to lodge the appeal; but at the same time there would have been a great difficulty in proving such an appeal in reference to such very large districts as those are.

461. What is the greatest difference which you have stated as between Mr. Griffith's valuation and the poor law valuation?—Twenty-seven per cent. in one case.

462. And there was one of seven-and-a-half?—Yes, but in parts of Donegal, it varies from 17 per cent. to 12 per cent.

463. In the case in which the poor law valuation was 27 per cent. above Mr. Griffith's valuation, what difference was there between the poor law valuation and the rent?—Without knowing precisely as to that townland, I think that in that district the poor law valuation was pretty nearly the rent; it might vary five or six per cent. above or below.

464. Sir *H. W. Barron.*] Did you find the poor law valuation in those counties you are acquainted with to be, generally speaking, a good valuation?—No, I should say, generally speaking, it has not given satisfaction. In some particular districts it was well done, and tolerably equable, but in the next district it was often extremely bad.

465. There was no uniform principle acted on?—Certainly not any uniform principle, comparing one union with another.

466. And the greatest irregularity in the manner of valuing the lands?—There was great inequality in the manner of valuing the lands; in fact the price was one for which a good valuation could scarcely be obtained. A man might have local knowledge, and might get assistance from landlords, which might enable him to make a good local valuation; but the sum paid was too small to remunerate any person for going to the requisite trouble or expense in valuing.

467. In some districts has it come to your knowledge that the persons appointed were incompetent to form a permanent and good valuation?—In one or two instances they were, but in general they were more of the class of local valuers and farmers, with a good general knowledge of the value of land.

468. Mr. *Shaw.*] Who appointed them?—The Board of Guardians.

469. Sir *H. W. Barron.*] Are you aware that in some districts in Ireland those valuers valued the land considerably under the letting value?—I am sure of it from the general returns that I have read, laid before the House of Commons; but there is but one district in my neighbourhood where they have gone anything considerably under the value, and that is a very unequal and bad valuation, in the union of Strabane; on my own property there I had taken about 40 acres or 50 acres to plant, of the worst and most rocky ground, and they have put it at a higher acreable value than the best land on my property.

470. Generally speaking, the valuers were farmers?—Generally speaking, they were the better description of farmers, and persons with a certain degree of knowledge also as land-surveyors, who had been employed in valuing in the country, either upon tithe valuations, or something of that kind. In the case I speak of, I rather think he was a regular valuator; but there was some quarrel between him and the Board of Guardians; he did not get on fast enough, and I believe they were obliged to take any valuation they could get.

471. Are you aware that in some instances those valuers had a direct interest in valuing the land very low?—There was nothing of that kind, I apprehend, in our district.

472. *Chairman.*] On the whole, were the poor law valuations above or below the usual rents which could be fairly paid by tenants?—On the whole, I should say they were about the usual rents; in some cases they were above, and in some below; but in my neighbourhood they are about the usual rents.

473. You are speaking of the county of Donegal?—A great deal of Donegal is not yet valued. I should say the county of Londonderry, and that part of Donegal and Tyrone within 20 miles of Derry.

474. Mr. *Shaw.*] You said that the poor law guardians, at the time you speak of, had the appointment of the valuers?—Yes.

475. Has the law been altered?—The law has since that been altered, by giving the appointment to the Poor Law Commissioners; but it is very evident from their Report, that they know so little about the matter, that I think every

Board

Board of Guardians will be willing to go on with the valuation they have, sooner than be put to an enormous expense in altering it, particularly in those districts in which they feel and know that Mr. Griffith's valuation, by which it is intended to test it, is a very unequal one.

476. What was the expense in the unions you speak of on the poor law valuations?—I think they varied from about 150*l.* to 250*l.* in general; it was something about 200*l.* I think. The general price I think was about 2*l.* 1,000 acres; I am merely answering from memory.

477. Sir *D. Norreys.*] In those districts where you say the poor law valuation is about equal to the rents received, does not the tenant-right exist?—Yes, the tenant-right exists generally in the north.

478. And on an average how much an acre should you consider the tenant-right to amount to?—The tenant-right is a thing that varies so very considerably, that it is very difficult to classify it by the acre; most of the landlords in my immediate neighbourhood are now making the attempt to reduce it to something in reason, say about three years' rent, and giving an allowance besides, if the houses are in particularly good order, or the farm has been improved, or under particular circumstances; but instead of classifying it by the acre, it is more by the rent.

479. Mr. *Shaw.*] You mean a practice called tenant-right, not an actual right?—I mean the practice called tenant-right; with us it is now so established that I consider it will be almost impossible for any landlord to break it through without giving rise to very great difficulties and disturbances in the country.

480. *Chairman.*] Could a tenant sell land for which he has no lease?—The sale is almost always of land without a lease. I consider that the character of the landlords has more to do with the price of it, than has the question of lease or no lease; of course a lease at a low rent would sell for more, but a lease on one estate will not sell for more than land without a lease upon another.

481. Would you say that the custom may, to a certain extent, have originated in any improvements on the farm having been made by the tenant rather than the landlord?—The custom, some people affirm, originated in the original settlement of the North of Ireland, when the parties who came over at the settling of that country were feudal dependents upon the person called the Undertaker. There is an attempt made to trace the tenant-right, as it is called, to something of that kind: it has been continued, because it was thought equitable, where the tenant did all the enclosures, where he did the building of the houses, the repairs of the houses, and everything of that kind, that he was fairly entitled to something or other if he left the farm for any reason whatever; but as at present with us, it is a payment made for the possession of the ground, whether the man has improved the houses or not, whether the land is improved or not.

482. Mr. *Shaw.*] Arising out of the great demand for land?—Yes.

483. *Chairman.*] Under those old tenures, in the first instance, was it not necessary for the tenant to be a Protestant?—In a great number of instances it was necessary for him to be a Protestant; but in the early settlement of Londonderry, which was, I presume, intended to be as Protestant as any other settlement of the kind, there were grants made to persons denominated Innocent Papists, and arrangements of that kind, which showed that it was not intended exclusively for Protestants; and I believe that some of the districts of the North of Ireland were settled by Roman-catholics from Scotland.

484. Sir *D. Norreys.*] Still that, which you refer to as being equivalent to the poor law, must be taken to be a rent connected with a fine, which the tenant may be presumed to have paid in respect of that tenant-right?—I do not think it fairly can, for it is the possession of the land that sells; in districts of the country you will find that tenant-right running up to 8*l.*, 10*l.*, or 15*l.* an acre, where the landlord cannot raise his rent 1*s.*

485. Mr. *Shaw.*] Where land is set at the full value?—Yes.

486. Sir *D. Norreys.*] Is not the power which the man has to obtain 10*l.* an acre as his tenant-right in going out, equivalent to having paid 10*l.* an acre on going into his farm, or in getting possession?—It may be considered equivalent in arguing the question; but it does not, as a matter of fact, affect the valuation, if the rent cannot be raised.

487. *Chairman.*] In those districts in which the custom of tenant-right exists,

Sir
R. A. Ferguson,
Bart. M. P.

7 June 1844.

Sir
R. A. Ferguson,
Bart. M. P.

7 June 1844.

exists, would any landlord who looks to his own permanent interests attempt to set the land higher than it usually is set to those tenants?—Looking to his own permanent interests, I do not think he ought to set it higher than can be fairly paid.

488. Is it not the fact that those tenants pay as much as a solvent tenant can be reasonably expected to pay for his land?—Generally speaking, they do.

489. Sir *D. Norreys*.] Would not a man pay a higher rent for land which he could come into possession of without the fine or payment of the tenant-right, than if he were obliged to pay the tenant-right, taking land of equal quality?—I know that an attempt has been made in some cases, where the tenant was not able to pay the tenant-right, for the landlord to put on an additional percentage or interest, till he did pay; but those cases are very few, and I do not know what success has yet followed the attempt.

490. Suppose a man to be willing to take a farm of 20 acres, and that he had a selection of two farms of equal quality, one where the tenant-right did exist, and the other where it did not exist, and that the circumstances of the two farms were equal; would not he give a higher rent for the farm which he obtained without the payment of tenant-right, than for the farm for which he was obliged to pay the tenant-right of from 5*l.* to 10*l.* or 15*l.* an acre?—He certainly ought to do so; but there are so few instances with us, I should almost say not any, of a tenant being able to get possession of land, or a landlord either, without paying the tenant-right for it, that the case is a case that has seldom or never occurred.

491. Lord *Eliot*.] Do you think that the payment tends to injure the incoming tenant, by depriving him of the means which he would otherwise possess of stocking the farm and carrying it on?—I do not think it does, in all cases, for this reason, that you get, in all probability, an industrious tenant, and a man who has saved money, in place of a man who has not been so good a tenant; but in too many cases a small tenant will give all his means.

492. Mr. *Vesey*.] Is the tenant-right equal in all properties the same?—No, it is not; it depends a good deal upon the character of the individual proprietors.

493. Is the sum paid for tenant-right the same on a property that is high let as on a property that is low let?—To answer that question is very difficult; because you are confounding what is paid for what is called the tenant-right with possession, and what is paid for land at a low rate. If the land is let at a low rate, of course it sells higher than land let at a high rate; but still, from the character of the individual landlord, even though a particular farm may be high let, that farm may bring a larger sum than a proportionate farm upon a neighbouring estate.

494. Sir *D. Norreys*.] In the report of the Commissioners in valuing the Union of Lurgan, the Commissioner reports that the valuator took as his test for estimating the value of the land the rent which a solvent tenant would agree to pay; suppose he had to give 10*l.* an English acre for the purchase of the goodwill, that will be 16*l.* or 16*l.* 5*s.* an Irish acre; do you conceive that that is the mode in which the valuers, generally, have proceeded to value the districts to which you have referred, taking as the standard of their value the rent which a solvent tenant would afford to give for the land, paying such a sum for the goodwill as is the custom of the district to which you have referred?—I really do not think, generally speaking, that they do take the price paid for the tenant-right into consideration in making their valuation.

495. *Chairman*.] Do you think that, generally speaking, the valuers, in making their valuation for the purposes of the poor law, have kept in view the directions of the Act, which were to value the land at the rent which could be reasonably paid by a solvent tenant?—I think in most cases they did, where it came under my own particular knowledge; but I have already stated that the remuneration was extremely small for the work to be done, and therefore it was not so well done as perhaps it otherwise would have been.

496. The basis upon which Mr. Griffith's valuation proceeded was a certain scale of prices laid down in the Act; do you consider those prices a fair average of the last few years or not?—I scarcely have examined the prices so as to be competent to answer that; within the last few years there have been such variations, more particularly as to the price of cattle and pork, that

I could

I could not give an answer; the prices, for instance, of wheat and of oats and of barley, are from one-fourth to a third over this time last year. The Committee are probably aware, that in commencing the valuation, Mr. Griffith valued the land according to the prices of the neighbouring markets, and then from the total of each townland deducted one-eighth, to bring it to the prices of the Act.

Sir
R. A. Ferguson,
Bart. M.P.

7 June 1844.

497. Is it your opinion that Mr. Griffith's valuation would form a fair basis for a valuation for general purposes in Ireland?—The valuation in my immediate neighbourhood, I have already explained to the Committee, I consider to be a very irregular one; from comparing, however, that portion of it with which I have any acquaintance in the county of Donegal, I am aware that it was extremely improved, and as regards the general average value of the same description of land, very much improved; and although I think there is a mistake, as comparing one description of land with another, yet I can believe that Mr. Griffith's valuation, particularly now that it is likely to become a tenement valuation, might be made of very great use for general purposes in Ireland.

498. As his valuation is sometimes 12 and sometimes 27 per cent. below the poor law valuations, which you say approximate to the rents, would it not be necessary to re-adjust his valuations, for the purposes of the poor law, where the tax is to be apportioned between different parties?—I confess, looking at his valuation altogether, I scarcely see any advantage to be derived from carrying it on as a valuation according to a certain set of prices. It appears by his description of it, that instead of the valuers proceeding to value those lands according to a certain scale of prices, they are, in effect, valuing them according to a certain other scale of prices, a difference of one-eighth. If this becomes a tenement valuation, it is well worth the consideration of the Committee whether it shall not be a valuation at the fair letting price, which would become a much more useful valuation for all those purposes in Ireland. It appears to me, as well as I can understand the directions with respect to valuation, that the valuers are obliged to go back to the county of Londonderry, to their former valuation, to see whether the scale is according to the scale they started with, or whether they are getting into the fair setting price of the county; that appears to me the state in which the valuation is now; I do not see any advantage to be gained from carrying on the principle of uniformity. The Committee in 1824 put it very strongly forward in their Report; but at the end of that resolution they express an anxiety for a further consideration of it. At the time that they contemplated that, they could not have supposed that the valuation would have been 18 years going on; besides, by the Act of last session, borough towns have been taken out of it altogether, and their county rates are to be laid on by the poor-rate valuations, and not any valuation under this Act to extend to it. In the Act of 1826, and the following Acts, it was distinctly enacted, that all local taxation of every kind would be regulated according to those Acts; and in the Act of 1826, there was a clause authorizing all the tithe of uncompounded parishes to be laid on according to the valuation by that Act, which shows that they intended to go far beyond the parish and townland rates; and I think it would be a great object if that could now be carried out. I think it can only be carried out by making the valuation a fair valuation of tenements between landlord and tenant.

499. Would you recommend such an alteration of the directions given to the valuers as to carry that into effect?—I think it would be very desirable as regards those parts of Ireland which are still to be valued; and, with respect to the lands already valued, the alteration could be made on the revision of the valuation.

500. What are the advantages you contemplate from such a step?—I contemplate in the first place, that it might at once be used for the valuation in reference to poor-rates. At present the law is, that the landlord shall pay half rate for every pound of rent he receives from the tenant; as long as the poor-law valuations may be made very high or very low, they may in particular unions press very hardly or very lightly upon landlords, and I think there would be great advantage in that being settled by some competent authority, so that there would be a fairer division made, and that those who set higher should pay a larger proportion.

Sir
R. A. Ferguson,
 Barr. M. P.

7 June 1844.

501. Would there not be a great advantage in having one authentic valuation for Ireland, that all rates could be raised by it?—There is no doubt there would be a great advantage in having one authentic valuation.

502. Do you think any advantage in point of economy, or saving of trouble and vexation, might be obtained by raising all the rates together?—There is no doubt that a great advantage might be obtained in that way from raising all the rates together, but you must make considerable change in your mode of administration of the different rates. The poor-law rate, for example, is raised upon estimate, and the county-rate is raised upon the actual amount of charge, and it comes to a matter requiring a great deal of consideration before you attempt to raise the two rates under the same system, whether you shall place both upon the estimate or upon the actual charge. Then, the times for raising the county-rate are complained about; the levy of a rate in the middle of summer, when the people have almost nothing, is very much called out against, and very little of the money paid into the hands of the treasurer is called for at that season; but that would introduce the question of remuneration of the treasurer, part of which depends upon the interest of the money, so that it is a large question.

503. Sir *D. Norreys.*] If a certain sum is to be raised from the occupier, what is the difference you refer to, that a portion may be for an estimate and another portion for an actual charge?—When the portion is raised by an estimate, it can be raised or ought to be raised at the most convenient season of the year for paying it, and laid by, prepared for meeting the charges; but when the thing is raised to meet a particular payment, that must be ready at the time the payment is to be made; therefore it would be very difficult in my opinion to combine the two together.

504. Is not the poor-rate generally struck when a union is without funds, and requires those funds to be raised?—In most of the northern unions with which I am concerned, we strike our poor-rate in general at a particular season of the year. It is understood that the estimate of the sum required, and the statement of the amount to the credit of the electoral divisions, are made about the 1st of August; we then see what we require to carry us on till that time next year, and we make the rate so that it shall be in collection before the 1st of November, that the tenantry may deduct it from the rents then due; that is the system we are getting into in the north-west of Ireland, and I believe it is the system generally to make the poor-rate upon an estimate between the 1st of August and the 1st of December, so as to have it in collection immediately after.

505. That allows a certain number of months during which the rate is to be collected; but in the case of county-rates is not the rate virtually struck at one assizes, and in the course of collection by the next, which gives nearly the same period?—It is in the course of collection with us for the month or six weeks before the assizes.

506. The rate is struck at one assizes, and within such time as the treasurer can make out his warrant it ought to be in process of collection from one assizes up to the next assizes?—We do not consider that it ought to be in the course of collection; there is considerable delay in applotting. We consider that it ought not to be in the course of collection till such a time as with proper industry will enable the collector to pay it in at the assizes; in fact, with us the rate is so heavy now, that a large portion is collected after the assizes, particularly in the summer; the collector is obliged, for his own fees, to pay it in, but a large portion is collected by him afterwards.

507. In a valuation such as you have calculated upon, which should be sufficient for all the purposes both of the poor-rate and the county-rates, a large quantity of property would be included which would not be subject to county-rates; how would you manage with respect to property of this kind, inasmuch as the county valuation would appear for one purpose to be greatly larger than it would really be for the other?—I should make all property liable to the taxes.

508. *Chairman.*] Would you apply that recommendation to tithes?—I do not see why the deductions to be made from tithes should differ from the deduction from rent.

509. Sir *D. Norreys.*] Are you aware that in England tithes are subject to county-

county-rates?—I believe they are, because they collect for the poor-rate, and the county-rate is paid out of it.

510. You would recommend that the same exemption should exist in respect of property?—I think it better that the exemptions should be the same for all.

511. Would an alteration of the law be required to complete a valuation such as you have suggested?—Certainly, an alteration of the law would be requisite, by omitting the scale of prices.

512. And requiring, as the basis of the valuation, that the letting value should be adopted?—Or some such valuation as is suggested in the Poor Law Act.

513. The basis of the valuation for the poor law is, "The rent at which, one year with another, the hereditaments might in their actual state be reasonably expected to be let from year to year, the probable annual average cost of the repairs, insurance, and other expenses, if any, necessary to maintain the hereditaments in their actual state, and all rates, taxes, and public charges, if any, except tithes, being paid by the tenant;" do you conceive that the value of a property let from year to year would be different from the value of a property let for a term of years, say for 21 years, or whatever was the usual term of letting in the district?—I do not think that the letting value of land from year to year would be different from the letting value of land for 21 years; with the great variations in the prices in the markets, the people do not seem to me to be particularly anxious to get leases at the present time; but at any rate, having been until lately accustomed to lettings for lives or for long terms, they do not consider a lease for 21 years as much more desirable than an agreement from year to year.

514. Does not that assume that there is a customary confidence on the part of the tenant, of the landlord leaving him in possession of his farm?—Certainly; either leaving him in possession of his farm, or in case of his quitting it, his being entitled to some payment.

515. Virtually, the year by year letting is a presumption of a long tenure?—A presumption, certainly, of a continuing tenancy.

516. Have you any suggestions to offer as to any amendment of the law relating to valuation in Ireland?—I would suggest that a difficulty has arisen, on the construction of the word, "sub-denomination," in the Valuation Act; the intention of the Act evidently was, that the treasurer should applot the sums of money on each townland according to the list as printed by the direction of the grand jury; however, from using the word sub-denomination, the Judges at the assizes in the county of Antrim held that the treasurer was not obliged to applot it on the townlands, but that he might issue the warrant to the collector applotting it only on the parish. It appears to me that it would be very desirable that the treasurers should be obliged to applot on the townland, and that some public notification of the amount of money laid on each townland should be given by order of the county authorities. There is also a good deal of complaint made in reference to the amount laid on the towns. The Committee are aware that the land was to be valued according to a certain scale of prices; that the houses were to be valued, and one-third deducted from those prices. The value of the houses has been reduced most extremely since the commencement of that valuation; and there is another thing which presses very heavily upon towns, and that is the number of vacant houses, for which there is no relief in reference to the county cess, though there is a relief in reference to the poor-rate. In the returns which were printed from the population abstracts, it appears that in the year 1841, at the time the abstract was taken, one-sixth of the houses in the town of Belfast were vacant; the consequence of which would be, of course, to raise the county cess one-fifth upon the other houses, inasmuch as the amount to be received from the town must remain in the same proportion; I mention Belfast as one of the most flourishing towns of Ireland.

517. You mean that vacant houses are exempted from taxation, but that the amount that ought to be raised upon their value is added to what the rest have to pay?—There is nothing to be had, and of course you cannot get the taxes; but the amount to be levied on the townland is fixed by the valuation, and therefore must be paid.

518. Sir D. Norreys.] Do you know of cases where landlords have tried to use Mr. Griffith's value, as a test of value in letting their land?—I have myself

Sir
R. A. Ferguson,
Bart. M. P.

7 June 1844.

Sir
R. A. Ferguson,
Bart. M. P.

7 June 1844.

tried the valuation upon property in Tyrone, and upon property in the county of Donegal, which nearly met upon the top of a hill, and were in opposite vallies; I have mentioned to the Committee that the property in Donegal is placed by Mr. Griffith's valuation at the full letting value, at least as high as I can let it; whereas in the property in the county of Tyrone, I find it varies from 30 per cent. under my letting value in the good land, to being above it where it gets to the mountain; and I believe that would be found to be the case generally over those two districts.

519. Do you know of cases of other landlords who have had the same result in trying to use his valuation?—I have heard of the same result as taking place between the two counties. When you talk generally of other landlords, there seems all through that county a great discrepancy in reference to the rents and Mr. Griffith's valuation.

520. Do you mean by discrepancy, that the variation between the letting rent and Mr. Griffith's valuation, is found to differ in averages, or that in particular localities the variance is greater than in the adjoining locality?—There seems to me a great difference in particular districts and particular properties.

521. Mr. Vesey.] Is there, any difference in the general system of agriculture in the counties of Tyrone and Donegal?—There is not sufficient in those districts to account for any such difference in the valuation.

522. Sir D. Norreys.] Can you produce to the Committee a map of any portion of your property, as it has been completed by Mr. Griffith, to show how far it is possible to use that valuation as a test of value?—I will endeavour to procure one.

Lunæ, 10^o die Junii, 1844.

MEMBERS PRESENT.

Sir H. W. Barron.
Lord Courtenay.
Lord Eliot.
Mr. French.

Sir Denham Norreys.
Mr. M. J. O'Connell.
Mr. Vesey.

LORD COURTENAY, IN THE CHAIR.

Sir Richard Keane, Bart., called in; and Examined.

Sir R. Keane, Bart.

10 June 1844.

523. Sir D. Norreys.] HAVE you turned your attention to the subject of valuation?—Yes.

524. Will you state what opportunities you have had of considering the subject practically?—In the early part of 1826 I was resident in France, in the department of Sarthe, where I had opportunities of seeing the practical working of the French Cadastre; that is, the public registry of the quantity, quality, and value of lands. Great facility was given to me by the Préfet of the department, having recourse to all the books and archives belonging to the bureau.

525. Have you made yourself acquainted with the mode of carrying on valuations in any other country?—I also made myself acquainted with it in Bavaria, but not so practically as in France; I had not so much opportunity of working in the bureaux there as I had in France.

526. You are also acquainted with the subject in reference to Ireland?—I am.

527. Has the county of Waterford been valued, and what part did you take in the management of the valuation?—The county of Waterford has been valued for the county assessment, under an Act of Parliament, which passed in the year 1837. I acted in the capacity of chairman of the commission under that Act.

528. Was

528. Was that valuation considered as a field or tenement valuation, or a townland valuation?—It is a townland valuation, with reference to farms and tenements.

Sir R. Keane, Bart.
10 June 1844.

529. Mr. M. J. O'Connell.] Is it a valuation of the townland, in the first instance, and subdivided according to the tenements?—It is rather a parish valuation, composed of those townlands as an aggregate; but the occupancy is valued to each individual, whether they be lands, or whether they be houses.

530. Sir D. Norreys.] Will you describe the process by which the valuation is arrived at?—The instructions were to direct the valuers to go upon the lands, ascertain the name of the occupant, view the quantities and qualities of land in his possession, and then arrange them under different heads of classification, amounting to six in number; making those several values applicable to a tariff previously fixed upon as types by the several valuers.

531. Will you state what the types of those classes are?—The first class is 40s. an acre; the second class, 30s.; the third class, 20s.; the fourth class, 15s.; the fifth class, 10s.; and the sixth class, 5s. Then the heath land, or common mountain, is from 1d. to 2s. 6d. an acre; the turbaries from 5s. to 40s. an acre; the woodland, by quality of soil only, without reference to the timber; and the buildings, with their respective deductions, at their locative value.

532. What are the deductions you refer to?—By locative value I mean, what it is worth to the tenant; what a tenant would pay for the hire of the house; and then from that there is a deduction of one-third. That is taken from a table of instructions I drew up.

533. Sir H. W. Barron.] That is only relative value?—Yes, which is all we are empowered to take by the Act.

534. In point of fact, the land might be worth 5l. an acre, which you set down at 40s. only?—Yes; we could not go higher than 40s.

535. Sir D. Norreys.] By what process did you arrive at what you call the type of land: were certain lands selected by the Commissioners, which were put down, suppose, at the highest value, 40s., and all other lands compared with them?—The instructions went to say this, that a certain acre of land, which was looked upon as the best within the valuator's jurisdiction, should be taken at the agricultural annual rent usually yielded for a certain number of years, we will say for 15 years, in which land undergoes all its mutations, throwing out from those 15 years the two best and the two worst, and taking the arithmetical mean of the remaining 11 years. First of all, it was proposed that the geometrical mean should be taken; but that would have made a difference of a shilling or two an acre; the arithmetical mean being one half the sum of the extremes, the geometrical mean being the square of the product of the extremes.

536. And was it by this process that you arrived at 40s. as the first class of lands?—Upon trying the calculation, the best land was worth a great deal more than that; but there was an understanding, on the part of the Commission, that the best land in the county should only be valued at 40s.

537. Then what bearing has the calculation of the mean upon the classes or types you have adopted?—It was only to enable them to take the rents; they had a cardinal point to start from.

538. Mr. French.] Was the value of the sixth class (5s. an acre) as much below the real value of the sixth class as 40s. was below the value of the first class?—Yes, as nearly as could possibly be; it was done with that view; but that it was absolutely so, I cannot take upon myself to say, because I did not go over the whole of the ground myself.

539. That was the principle?—Yes; that you got an equitable adjustment over the whole.

540. So that it did not matter whether the first class was put at 5l. or 40s., as it was a relative and not a positive value?

541. Sir D. Norreys.] Having then adopted 40s. as your standard for the first class, all other lands were valued in comparison with that with reference to their probable productiveness?—With reference to their absolute rent value, according to the practice of the husbandry made use of in the country.

542. By those terms do you mean the rent which might reasonably be expected for the use of those lands from a solvent tenant holding from year to year?—Yes, I do.

Sir R. Keane, Bart.

10 June 1844.

543. Mr. *French*.] Tested by the sums that were actually paid?—Yes, as nearly as could be ascertained.

544. You found out the rent by inquiry?—Yes, from the different agents.

545. *Chairman*.] Did you take into consideration the question of the comparative improbability of different classes of land?—No; because then you would make the good farmer pay for the bad.

546. Sir *D. Norreys*.] Are your county-rates levied by a poundage on the amount at which each individual holder of land in the county stands rated in your books?—Yes.

547. Sir *H. W. Barron*.] Could you levy a rate under the Poor Law Act according to that valuation?—There are many things included in the poor law valuation which are not included in this; there are tolls, mines, and different other things; but you may on this structure, with these instructions, adding those things which are added by the poor law, frame a code of instructions applicable to both systems of taxation, making those additions which are contemplated under the poor law.

548. So that one valuation might be made applicable to both purposes?—Undoubtedly.

549. As the valuation is now made you could not apply it to the poor law rating?—No, certainly not.

550. Mr. *French*.] Why not?—Because it is too low in the first place; the poor law contemplates the positive value; this is only the relative value.

551. Could not you, by adding a certain per centage, make it the actual value?—I hold in my hand at this moment the valuation of two unions, as valued for the poor law and valued for the county, and they differ very little in proportion. In the Dungarvon Union the amount of county valuation, under the Act of 1837, is 97,771*l.*; the poor law valuation is 107,612*l.*, which is a difference of about 12 per cent. The valuation of the Lismore Union, under the Act of 1837, is 62,774*l.*, and the valuation under the poor law is 65,472*l.*, making a difference of only 2,698*l.*

552. Mr. *M. J. O'Connell*.] You consider the poor law valuations of those unions are very much under the letting value of the land?—I should say in the union in which my estate is, and which I am acquainted with particularly, land is very fairly valued.

553. Do you mean fairly as to the relative proportions of each tenement one to the other, or fairly in proportion to a comparison of valuation and to the rent at which it might be reasonably expected to be let?—I consider it is quite high enough for taxation; I do not think it comes up to the positive value.

554. How far does it fall short, not of the extreme rack rent or the rents exacted by middlemen in some parts of the country, but of the rent at which a proprietor like yourself would let your lands at?—About 25 per cent.

555. Mr. *French*.] The rent a proprietor like yourself would let the land at would be 25 per cent. higher?—I think so; I think it is valued low for a poor law valuation.

556. You confine your answer entirely to your own district?—Yes; I should say for that district the poor law valuation is low.

557. Sir *H. W. Barron*.] It is below the real value?—Yes; it is below the positive value of the land, that is, below what the landlord receives for the land. The principle of all valuations for taxation is, that it should be lower than the positive value; that is the principle of all the countries of Europe, I believe.

558. Sir *D. Norreys*.] What reason have you to suppose that it was a fair valuation?—My reason for saying so was this: when the valuation was first made for county purposes, there was a great outcry against it, on the ground that it was too high as compared with the other baronial valuations of the county; when the Commissioners were appointed they looked into the valuations, and found that it was higher than it ought to be in comparison with the other baronies of the county; and they agreed to take off 25 per cent., so as to make it upon a level with the other baronies in the county of Waterford. I hold in my hand the valuation of the several baronies, which shows exactly what they have been valued at. The general average of the county is 11*s.* 11½*d.* per acre; nearly agreeing with the tables attributed to Mr. M'Culloch, which estimate the value at 12*s.* per acre.

559. Mr.

559. Mr. *French*.] It was necessary the relative value of that barony as to the other baronies should be strictly adhered to, on account of the assessment for the purposes of the county at large?—Yes, to make it equitable.

Sir R. Keane, Bart.

10 June 1844.

560. Sir D. *Norreys*.] Has the valuation which is called the Townland Valuation of Ireland extended to the county of Waterford as yet?—I heard the other day that the valuers were in the barony of Gaultier.

561. Have you had any opportunity of examining the results of Mr. Griffith's valuations?—So far as reading over his instructions to the valuers; I have looked over them very attentively, and they appear to me to be more provisional than definitive.

562. What meaning do you attach to the term "provisionary"?—It throws the land into masses of quality, without reference either to occupancy or to the boundary of farms, or to the land in the possession of those several occupants; therefore it is a primary process, which must be followed up by other processes, to enable you to value or to collect. It is merely comparing the geological structure of the land with a view to ascertain its texture. I do not see that it goes further than that.

563. Do you consider that it would be desirable in Ireland if there should be but one valuation for all purposes of taxation?—I certainly do think it would be a very salutary measure.

564. You are aware that the basis upon which the townland valuation is conducted differs from that which was established for poor law purposes?—I am perfectly aware of that.

565. Which basis would you prefer for a valuation according to which the general taxation of the country should be levied?—Were I to make choice, I should say the poor law valuation, according to the instructions of the Commissioners, is the better one of the two, and more applicable to Ireland.

566. Mr. *French*.] Have you had any opportunities of testing the accuracy of Mr. Griffith's valuation?—I cannot say I have, further than his instructions to the valuers go; as to the details, I consider them only provisional.

567. But you have had no opportunity of testing them?—No, certainly not, from seeing the practical working of them in any county. I have heard from different quarters where it has been acted upon, that the land-owners complain that they are perfectly ignorant of the thing until they are called upon for the assessment. They have no opportunity of appealing. I understand the grand jurors are obliged to appoint provisional committees, and those committees, of course, follow in Mr. Griffith's wake; it is they who do the work so as to render it practicable for county purposes.

568. *Chairman*.] Of the poor law valuation you have actual experience?—Yes.

569. But of Mr. Griffith's valuation you only speak from his instructions to the valuers?—Precisely so.

570. Mr. *French*.] From your observation of the poor law valuation, do you believe it to be an accurate valuation?—If the instructions were carried out, I think they are very well adapted to a valuation in Ireland; but it is a science that is in its infancy in Ireland—a science that is not known.

571. And has not the poor law valuation, generally speaking, been effected by persons totally incapable of valuing?—Not in my county; it was valued by the same valuers who valued for the county; in some instances, all those that could be made available were selected; in other instances, they were agents.

572. And did the same valuers value every one in the county of Waterford?—No, not the same valuers that valued for the county; in some instances they did.

573. Sir D. *Norreys*.] You have stated the poor law valuation of the Lismore Union amounts to 65,472*l.*; what proportion should you conceive that bears to the actual letting value of the tenement's value?—I should conceive it was full 15 per cent. under the positive value; inasmuch as the county valuation at 62,774*l.* is 25 per cent. under, I should say the poor law valuation for that barony is 15 per cent. under the positive value.

574. In your opinion, the same district being valued at 62,774*l.* for county purposes, that is 25 per cent. under the fair value?—Under the positive value.

575. Do you mean by that, that the property valued at 62,774*l.* is actually valued at 25 per cent. under the value, or that if that district were valued for poor law purposes, other property being included which is not valued for county purposes,

Sir R. Keane, Bart. purposes, that would bring it up to 25*l.* per cent. over the amount at which it now stands?—I am not prepared to say that would bring it up to 25 per cent. more.
10 June 1844. it might bring it up to 15 per cent. more.

576. Did you not say that you considered the county valuation at 62,774*l.* was 25 per cent. under the value of that district?—Yes.

577. Do you mean that the property which is valued for county purposes at 62,774*l.*, if valued at its full letting value, would amount to 25*l.* per cent. more than the 62,774*l.*?—I should say so.

578. Then, in addition to the property so valued, which would amount to 62,774*l.*, plus 25 per cent., there would be the value of all houses under the annual value; there would be one-third of the value of all houses; and there would be tithes, fisheries, minerals, coals, and every other subject which is not included in the poor law valuation?—Yes; the value would be 62,774*l.*, plus 25 per cent. and plus the value of those other things.

579. Then will you be kind enough to state generally what the value of the property so valued would be, adding 25 per cent. to the county valuation of 62,774*l.*?—£78,467.

580. Supposing the addition of 25 per cent. to the county valuation would bring it up to the fair letting value, what addition do you conceive ought to be made for houses under the value of 5*l.*?—I cannot exactly speak to the number of houses, except inasmuch as for poor law purposes the valuation is 65*l.* per acre.

581. *Chairman.*] What addition would necessarily be made to the valuation supposing it to be for poor law purposes?—A considerable addition I should say; no doubt of it, if you come to the positive value.

582. *Mr. French.*] How do you arrive at what you term the fair letting value of the land?—What it really yields to the proprietor from year to year.

583. What proportion of the produce do you allot to the proprietor for his labour?—I do not think I have ever estimated it in that way. The rent of land is not the actual profit to the proprietor, because you must allow some profit to the tenant for his skill and capital, except that in Ireland a man goes upon the land without capital—he has nothing but his skill—but you will allow him a profit upon that; but the aggregate value of the land, I should say, is the landlord's profit, and the tenant's profit, deducting the expenses of cultivation, tithes, keeping up the land, manure, and so on, and preparing and carrying the produce to market; you must make those deductions, and then the profit remains to the landlord and the tenant is the rent of the land.

584. *Lord Eliot.*] Is there any material difference between the rents received by the large landed proprietors in your neighbourhood and the middlemen and small proprietors?—I should say there was.

585. When you speak of the letting value, do you refer to the rents received by the large landed proprietors?—I am speaking of the rents paid to the landed proprietors in the county of Waterford.

586. *Mr. French.*] Which is less than the rent paid to small proprietors?—Yes; and I believe it is the same through the whole of Ireland.

587. *Sir D. Norreys.*] Do you consider that the poor law valuation of the Dungarvon Union is a fair valuation?—So far as I know; I understand it to be low also.

588. You consider that is low?—I conceive it is moderate; I conceive it is not under the positive value.

589. Do you conceive it to have been made according to the directions of the Poor Law Act, viz. taking the rent which might reasonably be expected for the tenements let under certain conditions?—I should say not. I may mention an instance where a man I know pays 32*l.* a year rent and he is only valued at 13*l.* a year.

590. Do you think that either in the Lismore Union or the Dungarvon Union such cases are frequent?—I should say the cases are not frequent where the rents are so very low.

591. Have you property in the Lismore district or the Dungarvon district?—In both.

592. Have you property which you have let recently or within some few years?—Yes, I have property which I have let within five years.

593. Have you compared the amount for which you have let that property with the poor law valuation?

with the rates at which the tenements have been valued under the poor law?—*Sir R. Keane, Bart.*
I do not think any of them have been valued up to the absolute rent.

597. Have you compared the valuations of your own tenantry?—Yes.

10 June 1844.

598. Do you consider the tenements have not been valued up to what you consider the fair letting value?—Not up to the rent I receive for them.

599. Do you consider that to be a fair rent?—I consider it a fair rent as between landlord and tenant.

600. What should you consider to be the rate at which the poor law valuation is below the actual fair letting value in those cases which you are personally acquainted with?—I should say from 5 to 10 per cent.

601. If in those cases which you are acquainted with you would place the difference between the actual letting rent and the poor law rating at only from 5 to 10 per cent., how do you account for the extreme difference in the case you just now stated?—From the ignorance of the valuers. It is a science that in its infancy; it is a matter of opinion, merely arbitrary.

602. Was the case you referred to just now, where the comparison was as between 32*l.* and 13*l.*, a case of the valuation of land?—Of the valuation of land.

603. Is there any circumstance which would account for the fact that the valuers valuing land, in one case, should make so great a difference, and in the other cases to which you refer the difference should be so trifling?—I attribute it entirely to their ignorance; I do not think there was any wilful evasion of the law.

604. Do you consider it was by chance the valuers came so near to being correct in the cases you referred to as coming within your own cognizance?—Yes, I think so. In some instances they are correct, and in others they are far otherwise.

605. Do you think that if general taxation is to be based upon valuation, it would be safe in Ireland to leave the valuations in the hands of local Boards?—I think it might be effected by local Boards, because there is now a class of very intelligent men, surveyors, that may be had, who would act under the instructions of those local Boards, and I think adhere to them strictly, and carry out those instructions to a very salutary extent.

606. But if taxation were to be based upon any general union of large district, would it be safe to leave the valuations of those districts in the hands of Boards connected with certain parts?—I certainly think it would.

607. Would not the tendency of each portion of the district be to try to keep down the valuation of itself as low as it was possible to be?—That is the natural tendency of all men, I believe, when they know it is for fiscal purposes the valuation is made, they endeavour to keep it as low as they possibly can.

608. When you were establishing a valuation for the county of Waterford, you did not allow each barony to value for itself, but your valuation was for the whole district, comprising all the baronies?—The valuation was distributed amongst so many valuers for each barony; in some instances, there were four valuers in the barony; in others, there were only two.

609. But there was a check over those valuers, which brought the valuation of the several parts to one uniform standard?—There was the check of the commission and the secretary to the commission; everything was reported to that commission; and if there was any irregularity in the progress of the work, of course it was checked, and the valuers were then referred again to their instructions. If there was any deviation from the instructions they received on going out as valuers, it was immediately detected and corrected, so far as the Board were capable of doing so.

610. *Sir H. W. Barron.*] Was it not the Commissioners, and not any local Board connected with the baronies or local bodies, that appointed the valuers?—Yes.

611. Was that was a great check upon local influences?—Certainly; everything reported from the central Board. A Board of central agency is the most effective check you can have in the country, and let it be in constant operation; if you do it will be a constant check, and you will have everything done regularly.

612. *Sir D. Norreys.*] Virtually you did not leave the valuation to the several baronies?—No.

613. *Sir H. W. Barron.*] Is it in your recollection that considerable canvas-
o.3. H sing

Sir R. Keane, Bart. sing took place for the appointment of parties in the different localities as valuers?—Yes; but they all underwent a severe examination before the committee as to their capabilities, as far as they went, before they were appointed.

10 June 1844.

611. In like manner, are you not aware that very considerable canvassing, and what is called influence, is used in similar cases to appoint valuers to the different Boards of Guardians?—Yes, there is certainly great canvassing for all those situations.

612. Are you aware that in some instances men of inferior ability have, under these influences, been appointed?—I should say, from what has appeared in the valuations, that certainly men have been appointed who were incapable of valuing.

613. Are you aware that within the last three or four months the Board of Guardians at Waterford appointed a small landed proprietor of that district, who was never brought up as a surveyor, and was not at all a professional man, as a valuator, while there was a competitor, a man of the very highest professional eminence, who was rejected?—I am not aware of that circumstance.

614. Sir D. Norreys.] In reference to the Lismore Union, which is valued at 62,774*l.*, for the county, adding 25 per cent. to that, would bring the valuation up to 78,467*l.*; you therefore consider the real value of that property so valued for the county is about 78,467*l.*?—Yes.

615. By returns laid before The House this year, it appears that in this union there are 1,604 tenements, under the value of 5*l.*; those tenements are not included in your valuation for county purposes?—No; there is a clause in the Act which directs us to reject anything under 5*l.*

616. From what you know of the kind of tenements in this Lismore Union which would come under the denomination of houses under 5*l.* in value, what would you say would be their average value: are they houses of a very wretched description?—Small thatched houses. There are three towns in that district, and in the small streets of those towns those houses may cut a figure, but they are of very little value. I suppose, one house with another, they would not fetch more than 50*s.* a year.

617. For instance, in Cappoquin, there are 305 houses under the value of 5*l.*; what should you say was the average value of those houses?—I should say they generally pay a rent of from 2*l.* 10*s.* to 3*l.*; the towns cut a large figure in that district.

618. Supposing there are 604 houses under the value of 5*l.*, what should you say was the average value of those houses?—I should take them at 2*l.* a year, or thereabouts.

619. Then that would be an addition to the 78,467*l.* of how much?—£. 3,200.

620. In addition to those houses, you would have to add the value of the tithes of that union: can you state what they amount to?—No, I do not know the amount of the dean and chapter's tithes in Lismore; there are also five parishes in the union.

621. The value of the tithes of those five parishes would have to be added to the county valuation?—Yes, a per-centage upon the tithes.

622. In ascertaining the full value, the tithes would have to be added?—Yes.

623. Can you state how much the tithes of those five parishes amount to?—No, I have not got a return of them, and therefore I will not take upon myself to say what they are.

624. The fisheries in the district would also have to be added to the full value; what would the fisheries separately be valued at?—There is only one fishery on the Blackwater, which is rated at 700*l.* a year by the poor law valuers.

625. Can you form any probable guess of what the tolls of that district amount to?—If you say 100*l.* a year for the tolls of the union I think you will be safe.

626. Adding all these together, would it not appear that your poor law valuation is more below the actual letting rent than would appear by the first part of your evidence?—Yes, certainly; I set out with saying they were both moderate; I am of opinion the poor law valuation of Lismore is very far below its actual value.

627. Supposing there were one general valuation established in Ireland, which should be free from all local and individual influence, how often do you conceive it would be requisite to revise that valuation, having reference to the fact,

fact, that in every case in which a rate is struck for poor law purposes, the power of appealing against the rate on account of the valuation is an incident or follows?—I should say once in seven years would be quite sufficient.

Sir R. Keane, Bart.

10 June 1844.

628. But with reference to the names of the occupants, a more frequent revision or correction would be requisite?—The mutations which take place in property should be registered in each parish; as each occupier goes out and another comes in, he should be obliged by a strict regulation to give notice to the registry within that parish; that would always keep the thing correct. It stands so in France; it stands so in Germany. In Bavaria a man going out is obliged to give notice that he is going out, and the man coming in is obliged to give notice; and then the name is altered in the roll, and the collector goes to the new man and collects from him.

629. Except so far as changes of name, you would leave the valuation unchanged for a period of seven years?—Yes, the changes of proprietors would not alter the property; it is only the names of the parties you collect from that is material; that is the object I have in view.

630. Then you would leave the general valuation for seven years?—Yes.

631. Does that answer refer both to the collection of the county rates and the poor rates?—Certainly.

632. Are you able to state what the cost of your valuation has been in the county of Waterford?—The extent is 480,000 statute acres; the total valuation is 262,383 *l.* 14*s.* 10*d.*, and the cost of the valuation was 2,500 *l.*

633. How much is that per acre?—About 3 *d.* per acre, including all charges, secretary, stationery, and all the incidental expenses attending it.

634. Mr. French.] That is of the applotment solely?—This is the valuation upon which the applotment is made afterwards.

635. Does that 3 *d.* an acre include the applotment?—It only includes the valuation; the applotment is made afterwards, by the authority of the grand jury; the necessities of the county being described to them, they say it shall be so much in the pound.

636. Then the valuation without any applotment stands at 3 *d.* an acre?—Yes; if I may define the meaning of the term, I should say the applotment is dividing amongst the occupants the rate levied by the grand jury.

637. Sir D. Norreys.] If a valuation were made of all property according to the Poor Law Act, that valuation would include a large quantity of property which at present is not subject to county rates?—It would.

638. Would you consider it a hardship that all property liable to poor's rates should also be made liable to county rates?—Certainly not; I think it might be made available for county purposes.

639. The landlord, in respect of poor rates, bears a certain proportion of the amount which is paid by the occupier; do you conceive it would be advantageous in Ireland to apply the same principle to county rates?—I think there could possibly be no objection to the landlord paying one-half, as he is obliged to do, of the poor rate; it would be advisable, because it would be a means of creating a surveillance on the part of the landlords, who generally compose the grand juries of the county, to descry that no more money was levied than was absolutely necessary for the wants of the county.

640. If the landlord were liable to bear a portion of the county rate in proportion to the rent, would the fairest basis for the valuation be the full letting value of the land, or in other words, the rent which might reasonably be expected for the subject valued for any average of years?—To arrive really at what is, I think, intended by a valuation, that valuation should be made with all equitable considerations, and coming up as nearly to the fair value of the land as you possibly can ascertain; because for the valuation, it signifies nothing whether it be high or low, provided it be equitably valued between the proprietor and the land-holder; if it is high, they will require less money in the pound; if it is low, they will require more money in the pound. We have a great number of imperative presentments in counties, which we are obliged to levy. There are only the roads which are left now to the grand juries. We have an enormous taxation which is imperative upon us; at least half the taxation is imperative upon us now; we are obliged to levy the sums, whether we choose it or not.

641. Though relativeness in a valuation may be quite sufficient, where only the public and the occupier are concerned, yet is not something more required

Sir R. Keane, Bart.

10 June 1844.

when the occupier and the person to whom he pays rent are both to be taxed in proportion to their relative interest in the subject of value?—I should say the same equitable value should be carried out between the one as between the other.

642. In the first case, if the townland *A.* be valued at twice as much as the townland *B.*, if their relative values are such, it signifies not whether *A.* be valued at 100*l.* or 200*l.*, provided that *B.* is valued at double the amount; but where the amount of tax paid has to be divided between the landlord and the tenant, in proportion to their several interests in the land, would you not then require that the valuation should not only be relative, but positive?—Certainly.

643. Will you be kind enough to describe to the Committee the mode in which the French Cadastre is carried on, and what basis of calculation is adopted there?—I shall be able to do so more briefly and distinctly on a future day.

644. Is there any observation you would wish to make?—I will merely say this, that on looking at the townland valuation of Ireland in reference to the geology of the country, which it seems to be based upon, there are 18 counties in Ireland, and those in the interior, which are the richest counties, are upon one description of subjacent rock; that is the carboniferous group or mountain limestone, and the only difference in soil, in those 18 counties, arises merely from the depth over that. Sometimes you have freaks of nature; you find trap and quartz upon that rock; but it is all sedimentary soil, the whole of Ireland, with four exceptions, and that is the granite strata, the primary rock; therefore there can be no great secret in ascertaining and valuing the texture of soils in Ireland.

645. Sir *D. Norreys.*] Do you consider it desirable to continue the townland valuation now that a subsequent valuation for poor law purposes is requisite?—I do not see any benefit arising from it; it is loaded with formalities, which have retarded the progress of it; a valuation for all purposes for Ireland should be simultaneous, should be quickly done, and economically done; and there are no such difficulties in the way of valuing land in Ireland, and no such secrets attached to the value of land, that local Boards might not be sufficiently instructed, and might not obtain men of sufficient experience to effect one valuation for all purposes.

646. The object of the townland valuation is stated to have been to obtain an uniform valuation in Ireland, but 18 years will have elapsed from the commencement to the termination of that valuation; to what extent do you conceive that the result of such a valuation will be a uniform valuation of the country?—It is impossible that can be so.

647. It would show merely the comparative state of one part of the country with another, as they were at an interval of 18 years?—Yes.

648. *Chairman.*] Do you think it possible to make one good valuation for all purposes?—Certainly, quite possible, and very desirable.

649. Sir *D. Norreys.*] Would you place the control of such a valuation under some authority, independent of all local interests?—It is a difficult thing to say; I should like to place it under a responsible body; I mean responsible to Parliament, of course, because where they go to such an extent, if it were to be simultaneous, it would require to have a committee we will say of central agency in Dublin, with commissioners in the provinces.

650. That anticipates that the valuation of Ireland should go on simultaneously?—Certainly; otherwise it is of no value at all.

651. *Chairman.*] To what extent do you think it desirable that local agency or local interference should take place?—I think where it is a tax upon property, the representatives of property have a right to be consulted. I think it might with great confidence be given to local Boards in the counties, who would act gratuitously.

652. With reference to the appointment of officers acting under that commission, should that, in your judgment, rest with the local body or a paramount authority?—I should say it ought to rest with the Board of central agency; that there should be a certain school for it; that no man should come in who was not first of all tested, and that he not only gave proofs of his scientific capabilities, but that he also had experience.

653. Sir *D. Norreys.*] Then you would have a central controlling authority, and

and you would place the appointment of valuator or officers in that central body?—Certainly.

654. And thus you would disconnect the notion of valuator from any local prejudice or local interest?—Certainly; I would make them emanate from that body, because then they would go into the different districts with feelings irrespective of local influence.

655. Mr. M. J. O'Connell.] Have you considered how the power of appeal from any erroneous valuation might be exercised; have you carried your inquiries into the subject so far into detail as that?—I think there ought to be an appeal; in all cases where it comes to be connected with the occupancy, the occupier should have an opportunity of appealing; but I think that should be, as in all former instances, to the general sessions, before the assistant barristers, who are very competent judges of those points.

656. Chairman.] Then in what way would you contemplate having any representation on the part of those persons locally interested, except in the shape of an appeal; you would not give them any voice in the appointment of the valuator?—No, certainly not; the appointment of valuator should emanate from one responsible public Board, consisting of one, two, or three, as might be thought best; men of known experience, and known scientific knowledge on those points, because there are a great number of questions arising out of all these things. They ought to be men of knowledge and experience.

657. Have you any other general suggestions to offer upon the subject?—I do not know that I have.

Sir R. Keane, Bart.

10 June 1844.

Jovis, 13^o die Junii, 1844.

MEMBERS PRESENT.

Sir H. W. Barron.
Mr. Colquhoun.
Lord Courtenay.
Lord Eliot.

Sir Denham Norreys.
Mr. Shaw.
Mr. Vesey.

SIR DENHAM NORREYS, IN THE CHAIR.

Sir Richard Keane, Bart. called in; and further Examined.

658. Chairman. ARE you prepared now to state the mode in which the French Cadastre has been carried on, and the basis of the calculation which has been adopted there?—I hold in my hand the Ordonnance du Roi and the Réglements of the Cadastre. I took extracts from those Réglements, and as chairman of the Commission, applied them to the instructions to the valuator of the county of Waterford. All those things I thought applicable to the relation subsisting between landlord and tenant in Ireland. I extracted from those Réglements, and embodied them in that shape, with the tables annexed. (*The Witness handed in the Papers above referred to.*)

Sir R. Keane, Bart.

13 June 1844.

659. The date of this ordinance appears to be 1821; can you state whether any alteration has taken place in the mode of carrying on the Cadastre?—Yes, there have been some variations, but not, I believe, of any considerable consequence, so far as I have been informed, from that period. I left France in 1831 or 1832; and since that I have had no opportunity of having any practical information upon the subject; before that I was acquainted with it for some years.

660. What is the usual extent of each separate valuation in the French system?—They value by communes, taking the best acre in that commune; endeavouring to find out the first quality of the land by a type, in the same way as I described in the county of Waterford: it is the same in all countries.

661. What corresponding division of land would you place in this country as equivalent to a commune?—A parish.

o.63.

H 3

662. How

Sir R. Keane, Bart.

13 June 1844.

662. How are the valuations of the different communes made to correspond with each other?—They generally compare, in the office of the préfet, the valuation of one commune with that of another, and see whether they are consistent with the instructions given to the valuers going upon the land.

663. Then is the object to get the departmental valuation as nearly correct as possible?—Certainly, for this reason, that it is done with a political view, as well as every other. There are generally, we will say, in each department 300 of the highest rate-payers who form an electoral college, which has the election of three or four members who are sent to the Chamber of Deputies, according to the population.

664. Then in France the franchise is to a certain degree connected with the valuation that is made?—It is based upon the valuation.

665. Sir H. W. Barron.] In France is the land let at its full letting value?—The land is let, generally speaking, in this way—a man going upon the land asks what the tenant could honestly give for that land, or what the landlord could honestly let it for.

666. Then it is valued at its full value?—It is let at the market value of the day.

667. Mr. Colquhoun.] And who are the valuers?—They are the best surveyors they can get, mixed with the most intelligent farmers in the different communes; but the farmers who are selected for one part of the commune are put to value their neighbours' land, and they are alternately shifted from one part of the commune to another.

668. And who appoints the valuers?—The préfet of the department, aided by the municipal council.

669. Sir H. W. Barron.] In the valuation of the county of Waterford, which you spoke of the last day, the land is not valued at its full letting value?—No, it is only a relative value.

670. Then it differs materially from the French system?—It differs in that respect; each occupant is supposed to pay a fair proportion.

671. And it is solely with a view to the county cess?—It is solely with a view to the county assessment, without any other consideration. At that time the poor law was not in existence, or talked of in Ireland.

672. Chairman.] Can you state whether the valuation you have been describing in France gave satisfaction at that time?—I should think so; I never heard to the contrary.

673. What mode of appeal is given to those who are dissatisfied?—To the court of the préfet, or sous-préfet. In the first place, the appeal is made to the sous-préfet, and if the sous-préfet is not capable of deciding upon it, the appeal goes to the préfet, and he is assisted by the municipal council and a professional man, a member of the French bar.

674. Are all the departmental taxes levied according to that valuation?—I should say the whole taxes of the country are levied in that way for the army, the navy, and everything else; according to that valuation they pay the whole taxes of the country.

675. Is there any attempt to keep the valuation of one department upon a level with another?—I have not sufficient information on the subject to give a positive answer to that. Of course, the southern departments are more valuable than the northern ones, because they have a climate there which will make a difference in the productiveness; and I should suppose the southern departments of France are higher valued: the lands are of a better quality than in the north, generally speaking. But with respect to the geological structure, I am not prepared to speak to the different textures of the soil.

676. In what way is the comparison made of the valuation of one commune with another?—A monthly return is made by the préfet of the departmental taxes collected at the octrois, and from the several communes, but with respect to the comparison I cannot speak.

677. Mr. Colquhoun.] But in this departmental valuation, or rather this communal valuation, reference is had by the valuator, not to the geological qualities of the soil, but to the letting value as ascertained by the testimony of parties?—The instructions go to that; as to what the land is worth to the landlord, and what it is worth to the tenant.

678. But forming their judgment from the evidence of parties in the district, and from their own knowledge of the district, and not forming their judgment from

from the appearances or the qualities of the soil?—I should think the question of productiveness arises, and it is from the productiveness of the soil the value is ascertained in the first instance.

679. How is the productiveness ascertained; is it by the amount of rent paid?—Yes; I should think it is from the agricultural rent value of the land.

680. *Chairman.*] Do you mean rent actually paid, or what would be a fair rent for the use of the ground?—I should say they first of all endeavour to ascertain what rent is paid for the ground, and if they cannot obtain it in that way, of course they must have recourse to the general mode of valuing.

681. Are rents paid in France in a similar way as they are paid in this country?—They sometimes pay in kind, sometimes half money and half produce; there are different modes of letting land; because in some parts of France I know the landlord is obliged to find beasts for the land, he is obliged to find seed, and he is obliged to find agricultural implements for the land; in those cases there is an agreement between him and the tenant.

682. In your previous evidence you described what you called “the type of land;” you were asked, “Were certain lands selected by the Commissioners, which were put down, suppose, at the highest value, 40 s., and all other lands compared with them?” and your answer was, “The instructions went to say this, that a certain acre of land which was looked upon as the best within the valuator’s jurisdiction, should be taken at the agricultural annual rent usually yielded for a certain number of years, we will say for 15 years, in which land undergoes all its mutations, throwing out from those 15 years the two best and the two worst, and taking the arithmetical mean of the remaining 11 years. First of all it was proposed that the geometrical mean should be taken, but that would have made a difference of a shilling or two an acre; the arithmetical mean being one-half the sum of the extremes, the geometrical mean being the square of the product of the extremes:” did you mean by that answer that each valuator was to take a certain acre of land as a type for his district, or that there was one type which all the valutors of the entire country were to take?—Any land over 40 shillings’ value, in each valuator’s jurisdiction, is put down as the first class, let it be what it will, whether it was 3 l. or 5 l. an acre, if it was over 40 s. it was placed as No. 1 class.

683. But all classes were referred to some type as a mode of comparison; was there a type in each district of valuation, or was there one type for the entire country?—There was one type for each class of land for the entire county.

684. Then each valuator within his district was obliged to have reference to the common type of the county?—Certainly; there was only one of each class that was taken for the entire country; and if I might be allowed to enlarge upon the question the Chairman has put to me, I would say this, the second quality was brought down to 30s., and any land between 30s. and 40s. was placed at 30s.; any land under 30s., and between that and 20s., was brought down to 20s. It is a relative valuation. Of course that will show that it was very far from a positive one. You may take it very nearly as a third under the positive value.

685. What appeal was given in the county of Waterford to persons who felt themselves aggrieved by the valuation?—Upon the valuation being made, and returned to the Commission, each occupant was advertised, by notice, of the value affixed to his occupancy of either land or tenement, and he was, in 14 days from receiving the notice, required to appear before commissioners who sat to hear his appeal; and if he was justified in showing it was too high it was rectified: of course there was no complaint of its being too low. Then in case of his getting no redress from the Commission, an appeal lay to the quarter sessions.

686. Then in the case of the county of Waterford each occupier had a separate power of appeal?—Yes.

687. Is there any other observation you wish to make?—I am not aware of any.

Mr. Robert Purdon, called in; and Examined.

688. *Chairman.*] YOU are connected with the Townland Valuation of Ireland?—I am; I am at present engaged upon it.

689. How long have you been engaged upon that valuation?—Upwards of 9 years, nearly 10.

o.63.

H 4

690. What

Sir R. Keane, Bart.

13 June 1844.

Mr. R. Purdon.

Mr. R. Purdon.

13 June 1844.

690. What was your occupation previous to your being connected with the survey?—Mostly agricultural.

691. Had you any knowledge of surveying?—I had.

692. When first you commenced valuing for the townland valuation, how were you instructed in the mode of carrying it on?—I was first sent to a party of valuers that Mr. Griffith had employed, and perambulated the fields with them; and subsequently on one or two occasions with Mr. Griffith himself.

693. Then the object was to instruct you in the scale of valuation according to which the valuation was then in progress of being made?—That was the object of Mr. Griffith, to make me acquainted with that scale.

694. You continue to value according to that knowledge of land which you so acquired?—Yes; I endeavour to continue on the same scale that I was then put on.

695. Then, in point of fact, the lands which you are engaged at present in valuing, are valued not in reference to any particular prices of agricultural produce, but in reference to the value which you, under the valuers previously employed, put upon the lands upon which you commenced?—The first process which the valuers go through is to class the various qualities of soil according to Mr. Griffith's scale already formed; and I continue to do that in the same manner that I did in the first commencement of the valuation; but that is only a part of the process of valuation.

696. Having ascertained the land to be of a particular quality, what is your next operation?—There are a great many circumstances affecting the value of land; its quality, as I have stated, is one of the most important; then the next consideration probably is one of climate; the next, we will say, is situation as regards markets and manure; and one of the most important is the state of culture: all those points are considered subsequent to the first and chief one of classing the land according to the natural quality of the soil. They are for the most part done by Mr. Griffith, with the aid and assistance of his several valuers; chiefly his check-valuers.

697. You are a check-valuator?—I am.

698. How long have you acted as a check-valuator?—About six or seven years; from about two years after I had joined.

699. But the first operation is performed by the common valuers, ascertaining the quality of the soil?—Yes, it is.

700. What additional information does he give besides the classification of the soils of the district?—He is instructed by Mr. Griffith to write in his field-book, as it is called, notes of the prices of commodities the produce of land in the district; also any particular circumstances affecting land within that district, both as regards climate and markets, roads and manure.

701. When the first valuer has sent up that information to the office in Dublin, what is the next process?—The next process is to select from the townlands within each barony a certain number, and to send a list of them to the check-valuator, who then revalues those townlands.

702. Ordinarily, what proportion of the barony should you say was revalued by the check-valuator?—It varies from a third to a fifth, or perhaps I should be more correct if I said sometimes not more than one-sixth. It will depend very much upon Mr. Griffith's impressions of the accuracy of the work.

703. The selection of what portion of the barony should be revalued is made by Mr. Griffith, as circumstances lead him to that selection?—He generally follows the dates of the valuer's work, and he is further guided by such knowledge as he possesses of the different qualities of soil within the district. He also wishes to have a certain amount of work done, where possible, in each parish; but the object of the check being to ascertain the accuracy of the first valuer's work, the question of date is important, lest there may have been any change made in the scale of the first valuer; lest he might have varied as he proceeded, so that if there were three or four townlands checked, first done the week the valuer commenced the barony, there would be then three or four townlands that were done a month afterwards, and three or four more that were done two or three months afterwards, so as to follow out his work in that manner.

704. How many valuers have valued in the county of Wicklow, for instance?—At the present moment there is no valuer in that county, I believe, but myself. Generally in each county there are three or four; or five or six valuers in a large county.

705. Then

705. Then have they different districts assigned to each?—Latterly, Mr. Griffith's system has been to assign a barony to each valuator, and, when that was finished, if the adjoining barony was to be done, he has told him to go on with it, so that it frequently happens that one valuator will value two or three or four baronies adjoining each other.

706. What means are taken to ascertain that those valutors are carrying on the valuation fairly relatively to each other?—Mr. Griffith's chief dependence is upon his check-valuators; he has had opportunity of testing their valuations in many ways, and for considerable lengths of time; and he has found that they are persons who keep pretty steadily upon the scale of value. It is by means of their valuation that he chiefly can check any variation of scale in the first valutors; but he likewise takes other means to ascertain it; by collecting a great deal of local information, and submitting the valuation to the view of intelligent persons, and ascertaining the letting value of land in the district; he endeavours to collect all the information he can in that way bearing upon the point.

707. Does the valuator, in the first instance, collect all that information?—Not all; much is obtained afterwards; the valuator, as I have already stated, is desired to note down as much information in that way as he can obtain.

708. The valuator then simply classifies the land; does he put a price upon it?—The classification is expressed by the price.

709. Who ascertains what variation should be made for local circumstances?—That is chiefly done in Mr. Griffith's office.

710. Is that ascertained from the data that the valuator has supplied?—Very much; but also Mr. Griffith rests considerably upon his own very extensive knowledge of the country, aided by suggestions which are constantly and frequently being made by his check-valuators.

711. In what form is an opportunity given to the check-valuator to correct the previous valuation; is an abstract of certain portions of the original valuation sent to him, or is the entire valuation sent to him, with directions to re-survey certain portions?—The process he follows is, when he gets the field-maps that the first valuator had, and has the lots of land there marked upon those maps, is to value those lots irrespective of any knowledge or acquaintance whatever with the previous valuation; so that his valuation is quite an independent valuation from the other in the first instance; the two valuations are then compared; and where any material difference exists between them, he is called upon to explain the cause and give reasons why he did so and so, or why he made such and such suggestions, or what amendments he recommends to Mr. Griffith to have done. All that is done by means of correspondence with Mr. Griffith's office.

712. The original valuation would be checked by reference to the value of other lands of which the prices had been previously agreed upon?—Mr. Griffith's object being to carry out an uniform scale of valuation, he is anxious to have all his valuations made in the first instance upon that one scale, to correct the deviations of the valuations: to steadily uphold that scale is one of his chief difficulties in the matter.

713. You carry on your valuation totally irrespective of rents, or the value of the tenant's interest, or what interest he ought to have, but simply with reference to the price of certain lands, with which you originally commenced?—Probably it would be more correct, instead of the term "value," to say "quality of the soil," because that is but one ingredient in the valuation; I have already stated, I think there are several matters for consideration before you can come at the final value.

714. But still, all those subsequent considerations are also tested by reference to similar circumstances affecting the value of the lands where you first commenced your valuation?—There is in every branch of the valuation a constant reference to what has been previously done, for it is an uniform valuation that the Act of Parliament requires.

715. Sir *W. H. Barron*.] You said your process was first to value the land as to the soil, and then you talked of the climate and markets, and you said the most important point then remained, the culture. Now I want to ask you, how you bring what you call the culture of the soil into consideration; what is your view of it?—The lands are first priced as if they were in an ordinary situation, what Mr. Griffith terms an ordinary situation, neither the best nor the worst situation,

Mr. R. Purdon.

13 June 1844.

situation, and he also supposes the ordinary state of culture for the kingdom ; but different localities have different modes of culture, and Mr. Griffith's system is, where the culture is good in any particular locality, to add a per-centage to the ordinary price ; where the culture is very bad, to deduct a per-centage from the original value, and it is done in that manner in Mr. Griffith's office, full attention being given to the suggestions of the different valuator, the state of culture of the country being before him.

716. Then I am to understand from that explanation that two farms adjoining one to the other, and precisely of the same quality of soil, the one exceedingly ill cultivated, and the other very well cultivated, would the one be valued much higher than the other according to that process?—Not by any means ; it is the state of culture in the district, not of each particular farm, which is kept in view.

717. Then is not the fact that which I have stated?—No ; I may be permitted to remark, that it is an exceedingly difficult thing for a valuator to divest himself of the impressions which either very good or very bad culture will create in him, and to a small extent I feel confident that it influences in almost every case ; but I do not think it influences beyond a small extent.

718. Then the good or the bad cultivation does not affect your valuation in such small instances as I have just now been alluding to, such as the care of two farms?—No, certainly not.

719. Then where does that commence, or where does it end ; does it extend to a whole barony, or merely to a parish, or how do you bring the process in your own mind into operation?—Generally we report upon each parish, I think ; but however, there are many cases where parishes are so extensive that it might be necessary to make two, or perhaps more divisions of it, in speaking of the culture of that parish.

720. Did it never occur to you, through your experience in these matters, that the culture in reality is nothing whatever to say to the value of the soil?—Many soils would be of very little value without culture.

721. Does the mere manner in which a man cultivates his farm, or in which one parish is cultivated, alter in the least the real value of the soil?—It does not alter the natural quality of the soil materially ; but the value of the soil depends very much upon the amount of produce you can extract from it.

722. But a man who cultivates badly, it is well known, will not extract one-half what a man who cultivates well, will extract from soil?—He will not.

723. Then you cannot say it alters the value of the soil *bonâ fide*?—No, it does not alter the quality of the soil *bonâ fide*, but it is not the individual intelligence of each party that guides Mr. Griffith, but the average state of the culture of the district ; neither the very best nor the very worst cultivated farms, but what may be taken as the average culture of the district.

724. Lord *Eliot*.] A valuation so made, then, ought to be of a permanent character?—In any country where the process of culture is undergoing alterations, and becoming better every day, of course the value of the land is undergoing alterations.

725. A valuation founded upon the permanent productive power of the soil would be permanent ; but not so where, as an element in the valuation, the state of culture is taken into account?—The natural quality of the soil is the most important consideration in determining the value of land ; but it is only one item in the calculation ; the state of culture is very important, perhaps the next in importance.

726. Then it would be necessary, would it not, to provide for a periodical revision of the valuation, based upon those principles?—Certainly, I should consider the value put upon land now, may be very different from the true value, we will say 20 or 30 years hence.

727. Is there any provision made in the existing Act for a revision of Mr. Griffith's valuation?—I believe none whatever.

728. Sir *H. W. Barron*.] Then according to your view of the value of the soil, a parish which is badly cultivated would be valued lower than a parish which is well cultivated ; for instance, in parts of Donegal, if I am not misinformed, the cultivation is very bad?—It is very bad.

729. And in parts of Meath and Kildare it is very fair?—Average, I should say.

730. Now, then, we will take a parish in Kildare, where the cultivation is tolerably good, and it is supposed to be the same soil as a parish in Donegal where

where the cultivation is very bad; according to your system the parish in Donegal would be valued considerably lower than the parish in Kildare?—The state of culture being worse, of course it would be valued lower; it would be finally made out lower.

731. But still the parish in Donegal might, in its original state, have quite as good a soil, as good markets, and as good climate as the one in Kildare?—It might.

732. *Chairman.*] In the case put would the valuation of these two parishes be the same by the valuator before the alterations were made in the office?—If the valuator is steady in carrying out Mr. Griffith's system, his field prices would be the same in all cases.

733. By his prices you mean value?—I mean his field prices, not the final value; that is a different question: the field value supposes the ordinary culture of the country.

734. Supposing that a parish were of the extent of 10,000 acres, and that in one part of the parish the cultivation is much better than in the other parts, do you think it necessary to divide that parish into two portions in your report?—Where the system of culture would vary so much as to create a material difference, I would, in that case, draw Mr. Griffith's attention particularly to it.

735. *Sir H. W. Barron.*] You have made use of the word "prices" very often; I want to know how you apply it?—It is a question not easy to make understood at once; when we meet with a certain quality of land, we will say worth 20s. an acre according to Mr. Griffith's scale, we put down a price, say 20s. upon it; we go on a little further upon the same townland, and we meet another quality of land worth 5s. an acre less, and we put it down at 15s., another quality at 10s., another at 5s. Those figures I call the prices.

736. Has that any reference to the letting prices of the district?—No, not at that time, any reference whatever.

737. Then are you limited by Mr. Griffith in the number of prices, we will call it, that you value the land at?—No, the land valuator is left a full discretion as to his field prices.

738. What is your lowest?—In answering that I would divide land into two classes; in arable land we have rarely any below 5s., and very rarely any higher than 30s. an English acre. There is every intermediate price.

739. And in towns?—That is an after consideration; I was speaking of the value of our field districts; in mountain districts we have land as low as a farthing an acre.

740. And after putting all considerations together, it runs up how high?—In the neighbourhood of Belfast, there was land valued as high as 4*l.* or 5*l.* an acre; but such are extreme cases, only in the neighbourhood of very large towns.

741. *Chairman.*] Suppose in a district of the same value originally, and that the nature of the culture upon one portion of it improves, say that one half is under good cultivation, the other half under bad cultivation, what different percentage to the one is to be added on account of the state of cultivation of the district?—In the county Wicklow, where I am at present employed, I have known, for good culture alone, I may say 25 per cent. to be added; but in stating that I state an extreme case.

742. On first-class land it is more?—On all the lands in that district in which the culture is supposed to be good.

743. Then in that portion of this district, where you report that the cultivation is inferior, a farm well cultivated would be placed at the inferior value of the cultivation around it, and in the district where you reported good cultivation, and 25 per cent. was added on account of that good cultivation, a farm ill-cultivated would be put at the high value imposed upon the grounds around it?—Such cases do occur, but I would rather speak of them as exceptions to the general rule.

744. But by the rule you have laid down for your conduct such would be the case, supposing the case to occur?—Certainly.

745. *Mr. Vesey.*] Did I understand you to say that the field prices laid down by the first valuator supposed the land in the ordinary state of culture?—Yes.

746. Then do the field prices bear the same relative proportion in all parts of Ireland?—That is Mr. Griffith's system.

747. Does Mr. Griffith retain in his office a table of all those field prices?—Yes; all the documents are sent to his office.

Mr. R. Purdon.

13 June 1844.

Mr. R. Purdon.

13 June 1844.

748. Can Mr. Griffith, at any subsequent period, make those field prices applicable for any purpose that may be required?—He can.

749. Of what size are the districts, generally, from whence the average state of cultivation is taken?—They are chiefly baronies, I think; but I would say also, that in forming an opinion as to the average culture of the county, Mr. Griffith takes in a more extended view of that county than merely confining himself to a barony.

750. Lord *Courtenay*.] Is a barony the smallest division you take into account in considering the state of culture in any district?—I should say it is generally a barony from which the impressions are formed, unless there is something manifestly to the contrary.

751. *Chairman*.] Your first report therefore would be that each barony is in a certain state of cultivation?—Yes, in ordinary cases.

752. What extent of district would lead you to make a report as to the better or worse cultivation of the district?—I should not like to limit myself as to any extent; but in my own experience I think it rarely comes within anything under a parish, unless there were something very peculiar indeed, which but rarely occurs.

753. Lord *Courtenay*.] If a farm is better drained than a neighbouring farm, or the fences are in better order, are those matters taken into account or not, in ascertaining the value?—Those which are permanent improvements are taken into calculation upon the spot, and before what I have called “the price” is put down; that is, whether I shall price a division of land at 18s. or 20s. may depend very much upon the state of fencing and the drainage of the lot. That I take into consideration in the pricing; it is a particular local circumstance affecting only the lot of land then under consideration.

754. That fencing being perhaps the work of the tenant?—It might be so.

755. *Chairman*.] Supposing that you put down the average cultivation of a barony by any mode by which you express the ordinary mode of cultivation, and that you find a particular farm drained and well cultivated to an extent beyond all the district around it, how would that affect the prices which you would put down for that farm, supposing the farm to be of 100 acres?—The field price includes the value of the drainage. A piece of land, the drainage of which was permanent, might be priced at 15s. an acre, whereas the same land, if it were not drained, might not be priced at more than 5s., or perhaps not so much; and therefore every variety of price between those two will arise. The price depends very much upon the nature and quality of the soil. It is the cultivation of the district, and not the farm, which is considered afterwards.

756. The ordinary valuator in the first instance strikes out the quantities which constitute each lot, and the value, and marks them upon the field map?—He does.

757. Is the map so marked by him sent down to you?—It is.

758. Have you frequently to make corrections as to his quantities and value?—Very rarely; some cases have occurred, but I would say rarely, where I thought it necessary to divide the lot; instead of leaving it in one lot, to make it two, where they were of different qualities of soil; but I would say such cases very seldom occur.

759. By the new arrangement, Mr. Griffith now requires that the lots of valuation shall, as far as possible, coincide with the boundaries of farms?—Such are his instructions to his valutors.

760. In practice, where farms are small, suppose about six acres, do you value lots of qualities together, irrespective of the boundaries of such small farms?—Where farms are so very small as five or six acres, the valutors generally include three, or perhaps four of them.

761. To what extent of farms would you consider yourself at liberty to include several farms in one lot?—Mr. Griffith’s instructions to his valutors are not to put above 30 or 40 acres in a lot; rarely to exceed that; and if they carry out those instructions, they cannot include more than four or five farms in a lot.

762. Then two farms, of 15 or 20 acres, adjoining, that were of the same quality of land, would be valued together, irrespective of the boundaries of those farms?—I should think not, latterly especially; if two farms, of 10 acres each were very distinctly marked from each other by fences, shown upon the Ordnance Survey, probably in that case the valutors would make them separate, even where the soil was of the same quality.

763. Suppose

763. Suppose that a similar lot of value very distinct from an adjoining lot of value, were to run through two or three or more farms, would that lot be valued separately, without reference to the other land that was in those farms?—In small farms, where two or three of them should go together, there the object of the valuator alone would be to separate the different qualities of soil.

764. What mode do you take to ascertain what the letting value of ground is in the district which you are valuing?—Chiefly by inquiring of the persons resident in the district as to the prices for produce they can get within that district, and also what is the common letting rent at which lands are let in the neighbourhood.

765. Then you have reference not only to the prices of the neighbouring markets, but also to the actual letting value of land, as affected by the demand for land in that district?—Yes, in order to ascertain what is the letting value of land in that district.

766. Supposing that land, by your ordinary scale, were valued by you at, say, 20 s. an acre, what difference have you known in the character in which that land has been regarded on account of the alteration made in reference to the letting value of that, taking an average case?—In the north of Ireland Mr. Griffith's valuation of land is probably from 30 to 40 per cent. under the letting value; when I speak of the north, I would rather confine my observations to the counties of Down, Antrim, Armagh, and part of Tyrone; 30 or 40 per cent. below what I should call the full value of the land.

767. By the word "full" do you mean the value at which an ordinary landlord residing in the country, and in the rank of a gentleman, would be expected to let the land at?—There is very great variety with regard to the letting of land; I would rather be inclined to say what is called the full letting value is that which is very common upon estates of moderate size.

768. By full letting value do you mean the ultimate value that might be obtained by dividing the land, and letting small portions to cotters?—The rent that is common in such cases; it is very difficult to give an answer to the question, which applies generally, because it varies materially in different places.

769. The question has reference to your own answer as to what is the full letting value; do you mean by that the ultimate price which would be got by parcelling out the land to cotter tenants, and obtaining the greatest price which could be obtained for the use of the land?—I should not like to go so far as to say it is the greatest price that could be obtained, but I should think it to be the highest price that farmers would be likely to continue to pay.

770. Lord *Courtenay*.] Are you speaking of letting by valuation or by tender?—Upon small estates it is not very common to let by valuation; but I should say, as far as my own observation goes, where it is let by valuation, the rent is more moderate than where it is let by tender.

771. Then, when when you speak of the full rent, do you speak of such a rent as would be obtained upon letting by tender, or such a rent as would be obtained upon letting by valuation?—I should say the rent obtained upon letting by tender would be more likely to be a full rent.

772. *Chairman*.] When the valuation has been checked by you, what is the next operation that takes place in the office?—Lists of all the townlands and of the value put upon them are made out; the different per-centages to be allowed, either in addition or reduction, as the case may be, are then applied by Mr. Griffith and the persons engaged by him in the office.

773. So soon as that is done, how is the public interested in the result, made aware of it?—The public are not made aware of it until the lists of the entire barony are printed and published, according to the provisions of the Act of Parliament.

774. In what form is the public made aware of the result?—There are printed lists of the townlands, and the value put upon each townland, posted throughout the barony.

775. Then is the valuation of each townland printed as one quantity, or are the portions of which the townland is composed also given?—They are printed as one quantity; the only distinction made is in the different kinds of property, house property and land property.

776. You give the extent of the townlands in acres, their total value, and the value of the houses in the townland?—The value of the houses, as required to be published by the Act of Parliament.

Mr. R. Purdon.

13 June 1844.

777. What means have the public of ascertaining the correctness of the details from which the total valuation of the townland has been made up?—They have no means whatever of ascertaining it until the committee of appeal meets, when Mr. Griffith furnishes the books in which the details of each townland are given.

778. How long is that after the valuation takes place?—That depends upon what time Mr. Griffith publishes the list; there is a certain time allowed by law, I think it is six weeks from the time of the publication, but I am not exactly sure; a reference to the Act of Parliament will explain.

779. Does Mr. Griffith himself, or one of his officers, attend the committee?—He attends the committee himself; he must be chairman of that committee, according to the Act of Parliament.

780. What statement as to the relative value of the different tenements contained within the townland does he afford to the committee?—In cases of appeal, where it is necessary to refer to the townland, I have frequently observed Mr. Griffith make out from his books the value of farms for the purpose of satisfying the minds of the appellants as to the value which was put upon different farms forming a portion of the townland; it is a matter of applotment, which can be done by persons acquainted with Mr. Griffith's system of valuing, and in the habit of observing these books and reading them, and aware of how it is done.

781. All that each occupier can ascertain is the relative value of his lot as compared with his neighbour's?—That may be ascertained from Mr. Griffith's books in a great number of instances. As I think I have already stated, where the farms are very small, two or three are comprised in one lot, it is then a matter which cannot be done without going to the land to subdivide those lots again.

782. In the case of lands adjoining towns, where local demand affects their value, what is the greatest difference you have found between the valuation you have placed upon such land, with all the additions your rules prescribe, and the actual letting value?—I cannot call to my recollection at this moment what is the greatest difference; but I have observed a very considerable difference indeed. Perhaps I am not far from correct when I say I have observed a difference so great as 70 per cent. between the highest letting value and Mr. Griffith's value.

783. You are speaking of 70 per cent. difference between your valuation and rents which are actually and *bonâ fide* paid for the occupation of those lands?—I am.

784. To what distance around towns do you find that this large increased value extends?—It depends altogether upon the extent of the town and the nature of its population.

785. Take Dundalk, for instance; did you value lands about Dundalk?—I valued some lands in the neighbourhood of the town of Dundalk.

786. Did so great a difference between the valuation and the letting value occur there?—I am not prepared to say it occurred in that particular place; the general impression I have is, that in some of the towns in the north of Ireland there were considerable rents given for town parks.

787. And to what distance does that extend from the town?—It very rarely extends to two miles; I should say about a mile would be the outside to which the influence of a moderate sized town increases the value of land; but, however, I am not fully prepared to give an answer upon that point without further consideration.

788. Where you found so great a difference as 70 per cent. between your valuation and the letting value, what report would you make to Mr. Griffith upon that, and what would be the final result upon the valuation as returned to the county?—I would report, that lands in the neighbourhood of that town let exceedingly high, for what we term accommodation rent; and that his system of valuing lands around towns would not at all come up to those rents. When Mr. Griffith came to compare his valuation with the rents which he would ascertain were given around that town, he would be able to account for the difference by means of my report; that it was for accommodation, and not for agricultural value those rents were given.

789. Then in what proportion would Mr. Griffith raise the ultimate value of the land as published, on account of that difference of value?—Mr. Griffith has

general

general rules, which he has laid down in his instructions, by which he applies certain additions to land in the neighbourhood of towns. In ordinary cases he would be guided by those rules, where there is a special report, either by adding considerably, or by deducting considerably from the ordinary value; he would probably be guided by such report.

790. He would sometimes vary from his own rule?—Yes; it is impossible to lay down a rule that would be applicable to every case.

791. Lord *Courtenay*.] That high value depends in a great degree upon the population of the towns, the state of the roads, and so on?—Yes; the facility of getting manure out of the town frequently affects the value of the land.

792. There are certain tables put into the hands of the valuator?—Yes, for the purpose of classifying the extent of population and other circumstances, inasmuch as the same population in one town may cause the land to be of more value for agricultural purposes than an equally numerous population in another town.

793. *Chairman*.] Have you had any opportunity of ascertaining the correctness of the valuations made for poor law purposes?—To a very limited extent only.

794. Have you had an opportunity of comparing the valuation of the district for poor law purposes with the valuation which has been conducted under your supervision for county purposes?—I have in one or two instances.

795. Which were they?—In the Mullingar Union I have had an opportunity, and in the Drogheda I also had an opportunity.

796. To what extent did the poor law valuations in these unions differ from the townland valuations?—As well as my recollection serves me, I think in the Mullingar Union Mr. Griffith's valuation is not so much as 20 per cent. under the poor law valuation: I think in the Drogheda Union it is.

797. Lord *Courtenay*.] How do you compare the two valuations, townland by townland, or one valuation with the whole of the other?—Townland by townland is the mode I speak of.

798. In these two cases?—Yes; Mr. Griffith's valuation being supposed to be so much under the value, I was anxious to compare it with the poor law valuation.

799. When you say Mr. Griffith's valuation was 20 per cent. under the poor law valuation, do you speak of that as being the case in every townland?—I mentioned 20 per cent., as my general and first impression, as the difference between the two valuations; but, however, there might be cases where it was more.

800. And in some it might be less?—Yes.

801. In your judgment what would be the average difference?—I should not like to speak positively, as it is some time since I made the comparison.

802. *Chairman*.] Did the valuator for the poor law in these two unions make use of Mr. Griffith's valuation to guide them?—I am rather inclined to think not, because, if my memory serves me, there were some portions of the union valued before Mr. Griffith's valuation was published, so that they could not have made use of it; but I cannot speak with certainty about it; it is so long ago, I cannot recollect the dates correctly.

803. Have you had an opportunity of ascertaining the mode in which the poor law valuator has conducted their operations in the district where you yourself have been valuing?—I have had the same opportunity that is open to every member of the public; nothing more than that, by looking at the books and comparing them with Mr. Griffith's valuations, or any other valuations which I might test them by.

804. Is it your impression that the poor law valuations have been generally conducted well or otherwise?—I am inclined to think that the poor law valuation has been in a great many cases done, I should say, tolerably well; there are other cases where it certainly did not afford satisfaction to many of the occupants in the country, and a few of those have come under my observation.

805. Were the class of persons who were employed as valutors a class of persons likely to form a good and right valuation of lands in the district?—So far as I have had opportunities of observing them, I think they possessed the capabilities.

806. Were they farmers?—In a good many instances they were agriculturists, belonging to the class of farmers,

807. Is it your impression that the poor law valuation is much below what
0.63. 14 you

Mr. R. Purdon.

13 June 1844.

Mr. R. Purdon.

13 June 1844.

you call the letting value of the land?—I am inclined to think it is below the letting value, but not very much.

808. When Mr. Griffith has completed his valuation of a townland, supposing the individual occupiers not to have attended the committee of revision, what opportunity have the occupiers of the townland subsequently of ascertaining the relative value at which their lands have been valued?—The individual occupiers have no opportunity of ascertaining that until Mr. Griffith, according to the instructions given by the Act of Parliament, lodges the books with the county treasurer, who is then to furnish a copy of the books to the high constable of each barony, and when in his hands each occupier has a right to see them, and then can ascertain what value is put upon that portion of the townland which he occupies.

809. How can the occupier ascertain the portion of value which is placed upon his own individual tenement, inasmuch as the name of the occupant is not given or required to be given by the Act of Parliament?—By a reference to the map he can ascertain what value is put upon his farm, or upon that portion of the townland upon which his farm is situate; the boundary lines of the lots are given upon the map, and each occupier then can find out his own portion.

810. Each occupier must find out his own portion by reference to the map?—By reference to Mr. Griffith's books and map.

811. He must find out his own portion by the book, inasmuch as the names are not given in the map?—He finds out his own portion upon the map, and the map refers him by a number to the book.

812. Practically, can a farmer ascertain the value of his land without reference to some other competent person?—No, I should rather say not, for farmers are not much acquainted with maps, and are not ready in referring to them and ascertaining the situation of their own farms.

813. Should it be determined to make Mr. Griffith's valuation a tenement valuation, that is to say, that every house within the district, and every separate farm should be separately valued, do you conceive that would add much to the trouble and expense of the valuation?—It certainly would add to it, but I consider it would not be a very great additional expense.

814. Are you obliged to value every tenement, though from its lowness of value you afterwards exclude it?—Every tenement is not valued; for instance, a great number of houses; all houses under 5 *l.* are not valued.

815. Must there not have been a valuation to a certain extent to ascertain the fact of their being under 5 *l.* in value?—Yes; but it is not a very difficult matter to ascertain, on the first view of the house, whether it would be worth 5 *l.* Mr. Griffith's instructions to the valuers is to value every house which comes up to 4 *l.*, which are subsequently rejected by him and not included in the return; but lest any house should be omitted he has given those instructions to his valuers.

816. Then, virtually, you value all houses down to 4 *l.*?—Such are Mr. Griffith's instructions, and I have every reason to believe they are carried out.

817. As a check-valuator for the district, if referred to you, would you not look to the valuation to ascertain whether all houses which you conceive to be of the value of 4 *l.* were included?—Certainly.

818. Lord *Courtenay*.] You speak positively to that fact as regards your own observation and experience?—Yes, certainly; Mr. Griffith takes particular pains upon the point, for he gets two valuers to value all the houses in each district.

819. *Chairman*.] Would you then select those which you thought were of a value between 4 *l.* and 5 *l.*, for the purpose of excluding them?—They are struck out in Mr. Griffith's office.

820. They are valued at 4 *l.*, and he strikes them out?—Yes; there is no house included in the return, which does not amount to 5 *l.* Of course there is a considerable number of houses included by the valuers which are under 5 *l.*, and down as far as 4 *l.*; but when it is ascertained they will not come up to 4 *l.* value, they are struck out; they are not included in the return.

821. Suppose a house, which you have put down at the value of 4 *l.*, what rule have you followed to ascertain that value?—Mr. Griffith has furnished us with tables which facilitate us very much in determining the value of a house by measurement.

822. In respect of the 4 *l.* houses, which are not to be included in the valuation

valuation of the district, is the same mode of ascertaining the value, viz. measurement, applied?—It is.

823. And how do you determine that the house is not of the value of 4 *l.*?—Those tables are formed for showing the value of the house as if in an ordinary situation, and it will bring out the same result, whether the house is situate in the immediate neighbourhood of Dublin, or whether it is situate in the most remote part of the kingdom, it will bring out the same result according to those tables. There is an after-consideration of what should be added to those tables in favourable situations, or what should be deducted in bad situations; that is, the business that is carried on in Mr. Griffith's office, chiefly where he, from his knowledge of the country, is pretty well aware of what is the value of houses, I am now speaking of country houses alone.

824. But by what process do you ascertain, according to Mr. Griffith's rules, that a house is not of the value of 4 *l.*?—It is liable, of course, to all the variety of opinion which the value of almost any article is liable to; for one man may say a house is worth 3 *l.* 15 *s.*, or 3 *l.* 19 *s.*, and another man may say it is worth 4 *l.*; so that it requires an exercise of judgment and opinion upon the matter. With regard to Mr. Griffith's valuation, it must ever be kept in mind that it is the relative or comparative value.

825. But is not the value of a house ascertained by measurement and other considerations?—It is; but that is always supposing the house to be in an ordinary situation.

826. I want to know how far down in the scale of value you apply those general rules and considerations which Mr. Griffith has given?—By Mr. Griffith's instructions, the value of all houses, of whatever value, is ascertained in the same way.

827. So that the rules are equally applied to a house of the value of 5 *s.* a year as to a house of 50 *l.* a year?—If the rules were applied to it.

828. Then, under such circumstances, would there be any great increase of difficulty or expense in making Mr. Griffith's valuation a tenement valuation, inasmuch as in respect of houses, you are obliged, at present, to apply the rules of valuation to every description of house?—It would very much depend upon how far you would go; if you go down to the cabin, which would not be worth 10 *s.* a year, that would include a great number of houses, and of course a great deal of additional labour.

829. Have you not stated, that however low down the value of a house might be, still you applied these general rules in ascertaining its value?—I think I have already stated that Mr. Griffith does not value any lower than 4 *l.*

830. Practically, how would you ascertain the fact of whether a house were of the value of 4 *l.* or not?—By inspection.

831. By the appearance of the house, you would judge whether it was a house to which Mr. Griffith's rules for valuation ought to be applied or not?—Certainly you could decide in that way.

832. Then every house must still be inspected and valued in your own mind?—Every house; the valuator is bound to look at every house upon the townland.

833. And upon every house you place a separate value?—Those houses we observe by inspection will not approach to 4 *l.* in value we pass by; we put a slight mark upon it.

834. Lord Courtenay.] You do not value those houses separately?—No.

835. All you do is to decide they are not worth 4 *l.*?—Yes, and pass them by.

836. Chairman.] Would not houses such as you have described be easily valued, as there are certain conventional values in each district placed on houses of a certain class, so that it would really not be requisite to apply those strict rules of measurement to houses under the value of 5 *l.*?—I think it probably might; but for purposes of relative valuation it is necessary to go into very considerable accuracy and minuteness, otherwise it would not be a satisfactory valuation; for if one man should find his house valued at 5 *s.* a year higher than another, although it was a better house, he would be dissatisfied. That cannot be done without a close inspection and examination.

837. Should the valuation be required to be made upon the basis of the letting value or the rent which might be expected from a solvent tenant for the house

Mr. R. Pardon.

13 June 1844.

Mr. R. Purdon.
13 June 1844.

and the land; how would you be able to ascertain that without deviating from your present mode of valuing?—The difference between Mr. Griffith's valuation and the letting value of land would be ascertained by finding out the rents and collecting the opinions of intelligent persons in the district.

838. Should it be required to make a valuation which should include every separate tenement within the district, and to take as the basis of the valuation the letting value of the land in that district, and not the uniform scale to which you have been accustomed, do you conceive that it would still be requisite for you to have the ground valued according to your present system, or could you ascertain the letting value without the necessity of continuing the valuation to which you have been accustomed for townland purposes?—I think, for the purposes of a correct valuation, it would be better to follow out and complete the system which Mr. Griffith is now working and has carried out to a certain extent.

839. That is for the purpose of completing the work which has been commenced?—I think it would be better to do it.

840. But supposing the question to refer to those counties in which Mr. Griffith's valuation has not yet been commenced, would it not be possible to obtain a good valuation based upon the actual letting value of the land or tenements, without reference to that continuous valuation which has been carried down to the north of Ireland?—I have no reason to suppose it might not be done; but when I stated I thought it would be better to complete the general valuation, I said that with reference to the expense which would be incurred by any other system, as well as with reference to what I should consider the most accurate valuation.

Veneris, 14^o die Junii, 1844.

MEMBERS PRESENT.

Mr. Colquhoun.
Lord Courtenay.
Lord Eliot.
Mr. F. French.
Sir Edmund Hayes.

Lord Jocelyn.
Sir Denham Norreys.
Mr. Shaw.
Mr. Vesey.

SIR DENHAM NORREYS, IN THE CHAIR.

Mr. Robert Purdon, called in; and further Examined.

Mr. R. Purdon.
14 June 1844.

841. *Chairman.*] WILL you refer to No. 25 of Mr. Griffith's instructions to valuers, in which he directs that "in fixing the value upon the land the valuator is to act as if he were employed by a liberal landlord to value land for letting to respectable tenants at the then average price for agricultural produce." Is that the mode in which the valuers would still proceed in commencing the valuation?—In the practical carrying on of the business it is not constantly referred to; but it was upon that principle that Mr. Griffith's scale was originally framed.

842. But that is not the practical rule that is now acted upon in carrying on the valuation?—No; it being a comparative valuation, it is the comparison with other lands that is chiefly attended to.

843. And you have no reference now to the value of land, as let by a liberal landlord to a respectable tenant?—No further than as it may test what we are at present doing by what was formerly done.

844. In ascertaining the value, you would be guided by a comparison with other lands, and by no consideration of the question of how much a liberal landlord, letting to a respectable tenant, would require for the use of that land?—If we found that our calculation came to about the same as the landlord let it at, we should probably then test it by something similar which we had met with formerly.

845. In ascertaining the value of the land, which you would return to Mr. Griffith in the first instance as the value of the land, you would be solely guided by reference to other lands which you had valued, and not by the consideration

sideration of what a landlord would expect for the use of the land?—Solely, in the first instance.

Mr. R. Purdon.

14 June 1844.

846. Then this rule, No. 25, has ceased to be applicable after the first standard was established?—It is not in common use; it has ceased to be in use practically by the valuers. Mr. Griffith, before he finally publishes his list, tests it by a comparison with other lands; he tests it by that as well as by various other means, to try whether there are any inaccuracies.

847. But that has nothing to do with the duty of the valuers?—Nothing.

848. If you were required to commence a valuation of property in Ireland, upon which all taxation should rest, and which should include all tenements, of whatever value, and you should be required to take as the basis of your valuation the actual value of the lands tested by the rent which a landlord might reasonably expect to receive for an average number of years from a solvent tenant, how would you proceed?—To ascertain the letting value of land in each locality would probably be my first process; and having ascertained that, I should test it by a comparison with lands of similar quality in other districts.

849. Lord *Eliot*.] Other districts similarly circumstanced as to markets, and so on?—Yes; when I found districts similarly circumstanced I would have them put down at the same value.

850. Would such a valuation be framed upon the basis of what you had found had been actually paid upon an average number of years for the use of ground of similar quality in the district?—I am at present rather inclined to think it would be somewhat under the amount actually paid upon modern lettings.

851. Sir *E. Hayes*.] How would you ascertain the letting value?—By inquiry from the owners of the property and the occupiers.

852. *Chairman*.] Would you assume certain lands that were found let to industrious tenants, who appeared to be in what you considered a comfortable state, as a standard of what the value of similarly circumstanced lands ought to be?—If I considered that the system of culture carried on by such a tenant was the ordinary culture of the country, I would.

853. For instance, if you found that a tenant living in what you considered a respectable station had actually paid for the use of certain lands a certain amount, you would conceive that other persons might be able to pay for similar lands at least an equal amount?—I should not like to adopt a culture which might be followed by one or two individuals solely as the standard culture of the district.

854. Mr. *Colquhoun*.] But what would you take as the standard of the district; would you take the worst quality of culture in that district, or would you take something which you conceived, from your knowledge of farming, to be good culture?—What from my knowledge I conceived to be the average culture of each locality.

855. But might you not find in some localities very inexpert and rude farming prevailing?—You would in particular cases, no doubt.

856. And would you in those cases take as your standard the highest quality of that rude farming?—No, I would endeavour to embrace the whole of the farming in the district within my view, and take the average of that as the standard of culture.

857. Supposing that over the whole of the district very inexpert and rude farming prevailed, which I take to be the case in some parts of Ireland, how would you deal with such a case?—I should take the standard of culture as low in that district.

858. *Chairman*.] You would take the average state of the science of cultivation as your standard?—It is a most important ingredient in any calculation connected with the value of land.

859. Mr. *Colquhoun*.] Then in the case I put you would not look to the condition of the tenant, as the condition of the tenant would naturally be rude and uncomfortable if the culture was rude?—It generally follows.

860. Then when you speak of a solvent tenant living in comfortable circumstances, you would expect in many parts of Ireland the tenants would be impoverished, and living in very uncomfortable circumstances?—Certainly; you must take the district as you find it.

861. So that you cannot take the tenants living in easy circumstances as

Mr. R. Purdon.
14 June 1844.

a standard of value in many districts in Ireland?—In forming a standard I should be disposed to make the tenant's portion of the produce rather greater than I am satisfied is common in valuations made by the tenants themselves.

862. What would you consider a fair proportion for the tenant?—That depends altogether upon the state of culture.

863. Lord *Eliot*.] Do you, in calculating the amount of rent, begin by calculating the amount of produce?—Certainly.

864. Then what proportion of the produce would you consider as constituting the rent?—It would vary according to the state of culture and the quality of the land.

865. Can you state any average, under ordinary circumstances; what proportion of the produce you consider to constitute the rent?—I could not at once state what might be considered an average applicable to the whole kingdom, for it varies much.

866. Sir *E. Hayes*.] You stated you would endeavour to ascertain the letting value by inquiry, and you also stated you thought the letting value was, generally speaking, under what was ordinary in modern lettings; I want to know upon what grounds you form that opinion?—From a very extended observation of the condition of persons living by farming.

867. *Chairman*.] From what you have stated, am I to understand that you would estimate what you would consider the rent which could be paid by a farmer, to enable him to live in easy circumstances, by the state of things in each district, and would not attempt to take one standard as the standard of what easy circumstances might be for the entire of Ireland?—I consider there should be a separate calculation for each district.

868. Do you consider as the value of land that which would be paid for the use of it, taking an average number of years sufficiently large to include any probable variations of prices and fluctuations of crops, allowing the tenants or occupier to live in what you would consider easy circumstances, as connected with the general station of farmers in the district?—I am inclined to think that the amount which might be offered, and even paid for it, in Ireland, is rather above the true value of the land.

869. In going to ascertain what the true value of the land was, should you consider that you ought to take the probable value of the produce of the land for a certain number of years, and to charge against that all taxes or charges, or expenses, which should be payable by the occupier, the profit of the capital he has engaged, the maintenance of his stock and fixed capital, and a certain amount as remuneration to himself for superintendence, which may be considered in the light of wages for stewardship, and that the balance of the gross produce which would remain after the deduction of all these charges would constitute rent, or the fair value which the tenant would be willing to assume for the use of the ground?—It is by such calculation, or one somewhat similar to it, that I would arrive at it.

870. Mr. *French*.] You say you consider the rent paid for land in Ireland is generally high?—I speak so of modern lettings.

871. Do you allude to the value of the land, or the state of the tillage?—Chiefly with reference to the state of culture.

872. What do you consider the average of the modern lettings to be?—That is a question which I am not immediately prepared to answer, as applicable to the whole country.

873. You can state what the average rental of Ireland is?—I should say, in the midland parts, I think the average is 25 s. an Irish acre. It varies according to the quality of the land; sometimes it is as low as 10 s., sometimes as high as 40 s. for an Irish acre.

874. What does 40 s. an Irish acre amount to for an English acre?—About 25 s.

875. Mr. *Vesey*.] Do you get as much as 40 s. an acre for arable land, or is it only upon grazing farms?—I think for good arable land they do; but the question I understood was as to the average, and I confined my answer to the midland counties.

876. Lord *Eliot*.] Does your observation enable you to say whether there is any difference in the rents paid to the large landed proprietors and the smaller proprietors and middlemen?—I have reason to believe that on the estates of the larger proprietors rent is more moderate.

877. You

877. You are not able to say what proportion the one bears to the other?— I am not immediately prepared to state what is the exact proportion.

Mr. R. Purdon.

878. In reference to your previous answer, as to what should constitute rent, or the value you would place upon a farm, would it be requisite to make such calculations for every farm, or would not the making of such calculations occasionally suffice for the district, and the valuation of the rest of the district would be a matter of comparison with the lands in respect of which the calculation may have been made?—In a valuation for general purposes that would probably be the best mode of carrying it out.

14 June 1844.

879. Mr. Colquhoun.] You would take as the basis of your calculation in estimating the value of land the amount of produce which could be drawn in the then state of the culture of the district from that land?—It would be by such a calculation I should arrive at it.

880. You would readily admit that if the culture is improved the amount of produce will be greater; but taking the culture of any district, you would estimate what would be the probable amount of produce from the land in the then state of culture?—I would.

881. Do you find great varieties in Ireland as to the amount of produce which is reserved for the payment of rent?—Very great.

882. Will you state to the Committee what are the different amounts of produce which have struck you as being retained for rent?—It varies very considerably; upon good land, land of the best quality, the landlord's portion would probably be one-fourth; upon lands of an inferior quality it might be only one-fifth; and upon poor lands probably not more than one-sixth of the produce; and that is solely with reference to what I may call tillage farms. Upon grazing lands the landlord's portion of the produce is much greater: it amounts upon good land probably to two-thirds of the produce, and even more on good grazing land; upon inferior land it would amount, may be, to one-half.

883. Chairman.] When you state the landlord's portion as one-third, or one-fourth, or one-sixth, is it not still a question of the difference between the gross value of the produce of the soil and the amount of outgoings to which the tenant would be liable in managing it?—It is.

884. Sir E. Hayes.] Have any lands at very low rents, under old leases, come under your observation?—They have.

885. Do you think the tenantry, under those circumstances, are very much better in their circumstances than others?—Where the tenant is industrious, I find it to be generally so.

886. That is, where the culture is improved?—Yes.

887. Mr. Vesey.] What grounds have you for saying the landlord receives two-thirds of the produce upon grazing farms?—By a calculation, I can show that is about the landlord's portion.

888. As to grazing farms, do you take into your calculation upon the debtor side the gross produce?—The gross produce.

889. Upon the creditor side, do you take into consideration the interest of capital upon the purchase of stock?—That would be an item of calculation.

890. Also the taxes to which that farm is liable?—The county cess.

891. Do you take into calculation all taxes?—Yes; such taxes as the county cess were considered by me previous to the imposition of the poor-rate; I did not take that into consideration.

892. The general taxes?—Yes.

893. Did you also take into consideration the profit upon capital which a tenant ought reasonably to expect to derive?—In such calculation I would allow an interest upon the money embarked.

894. Besides that interest, you do not take any profit upon capital for the maintenance of the tenant and his family?—The profits come from the speculation.

895. Then, in fact, the only items you put to the credit of the tenant upon that farm are taxes, and the interest upon the outlay of capital?—Labour and superintendence also.

896. You take the superintendence also into calculation?—Yes, I do.

897. Then are there not the same number of items to be placed to the credit of a grazing farm that there are to the credit of a tillage farm?—Yes, but they are of a smaller amount; there may be the same number of items, but they

Mr. R. Pardon.

14 June 1844.

would be of much smaller amount ; for instance, labour upon a tillage farm is a very large item.

898. But the interest upon capital upon a tillage farm is not so large as the interest upon capital upon a grazing farm ?—Generally speaking, it is not in that country.

899. Then does not the difference between the interest upon capital upon a tillage farm and the interest upon capital upon a grazing farm go to balance the difference between the labour upon the one and the other ?—I presume it would not exactly do it, but to a certain extent it might.

900. But is there such a difference between the two as to warrant you in saying the landlord would derive so much greater a portion of rent from a grazing farm than he would from a tillage farm ?—Probably not, when viewed in that way ; but practically you will find that the landlord upon a very good grazing farm, such as I speak of, gets in the shape of rent two-thirds of the produce.

901. Does your opinion result more from practical inquiry than from any calculation you have made ?—I have made calculations bearing upon that very point, and it runs pretty closely to what I observe to be the practice ; I am, of course, speaking now of the value of good grazing land.

902. *Chairman.*] Practically, you find in this grazing land which you spoke of, the amount of expense, whatever head it may be cast under, either as profit of capital, or as labour, or anything else, is so small in proportion to the value of the gross produce, that it leaves a larger balance payable to the landlord in rent :—It does. To put it in a shorter way, it would be this : if the tenant can produce three guineas from each acre of land, he will have two guineas rent to pay.

903. *Mr. Vesey.*] You say you place the profit of capital as the maintenance of the tenant ?—No, I would not put it as maintenance.

904. Would not you put as one of the items to his credit the sum which may be laid aside for the maintenance of his farm and his family ?—In such calculation as we are now referring to the farmer must provide for his maintenance by a certain per-centage upon the capital embarked, as also by the portion of the labour which he himself performs.

905. *Chairman.*] He charges that as labour and remuneration for his stewardship ?—Yes.

906. Which is altogether independent of the profit of capital ?—Yes.

907. *Mr. Vesey.*] Have you known many instances of a salesmaster in Liverpool laying out capital in the purchase of stock in Ireland ?—I am aware of that having been done.

908. Where that is done, the farmer has to pay the interest of the capital of the salesmaster in Liverpool ?—So I should presume.

909. Do you know it of your own knowledge ?—I cannot speak to what may be the private arrangements between parties.

910. Can you infer it from the general course of business ?—I should infer that the salesmaster would receive a benefit. I have heard it stated that his profits in the first instance are small, but the cattle being sent to Liverpool and sold by him, he has a broker's profit upon the sale.

911. So that in that case you would not put to the credit of the tenant the maintenance of himself and family separate from the profit upon the capital invested ?—The maintenance of the tenant will depend upon what the profit upon the whole transaction together will be.

912. Then the maintenance of the tenant you always place as one of the items in a tillage farm ?—The maintenance of the tenant must be composed of his profit from the transaction, and also the labour he is able to perform himself.

913. Is it not the case in many tillage farms in Ireland that there is no outlay of capital on the part of the tenant ?—It is frequently very small ; but I should think in every instance there must be some. I do not see how a farm can be cultivated without some outlay of capital.

914. Then do you not separate the maintenance of the tenant from the general expenses of that farm in the letting of a farm ?—In many parts of the country it is very difficult to do so, for the person who farms the land is the actual labourer himself.

915. *Mr. Colquhoun.*] You have stated that a variety often occurs in rent,
from

Mr. R. Purdon.

14 June 1844.

from one-fifth to one-fourth of the produce, arising from the different qualities of the soil. Now, is there not a variation in rent arising from an entirely different cause; from the intensity of competition?—Competition certainly has the effect of forcing up the amount of rent.

916. And is it not the case, that in parts of Ireland, upon large estates for example, rents are charged at a proportion considerably lower than upon smaller and more subdivided estates, where the rents upon the same qualities of soil are much higher?—I have observed such to be the case in many instances.

917. Then in such cases how would you proceed in your valuation: you would not consider the quality of the soil sufficient to guide you, nor would you consider the amount of rent sufficient to guide you?—I should not wish to say; I would confine my observation to what was done upon any particular estate or property; it is what is the state of the soil and the state of the culture of the district that would guide me in fixing what I would consider to be the standard for that district.

918. Then supposing you found in the same district two farms equal in quality and equal in culture, on one of which a rent of one-fifth of the produce was exacted, and upon the other the higher rent of one-fourth of the produce was exacted, how would you in such a case proceed with your valuation?—If they were equal in quality, and similarly circumstanced, I would value them both alike.

919. Lord *Eliot*.] Has not competition a greater effect upon the rent promised than upon the rent paid; is it possible for a man to pay more than a certain portion of the produce of the soil?—The effect is to diminish his own portion.

920. He may reduce that to the minimum, but still below a certain point no competition can affect rents?—It must immediately correct itself if it does.

921. Mr. *Colquhoun*.] The fact is, I presume from your own observation of Ireland, that competition does in many instances grind a man down to a very bare amount of sustenance, and much below what an English or a Scotch farmer would live upon?—There is no doubt whatever that it does in some instances. I have seen the occupier of a farm of very considerable size, and his mode of living was very little better than that of the labourers.

922. Lord *Eliot*.] And in that case do you apprehend an improved system of culture would not have enabled him to pay the rent he had agreed to pay?—There is no doubt an improved culture would give a larger amount of produce.

923. Do you know any case in Ireland where the rents are so high that an improved system of culture would not enable the tenant to pay the rent?—I have observed such cases, but I should say they are not very common.

924. Mr. *Colquhoun*.] You would agree with the opinion which has been expressed to the Committee, that much larger rents would be exacted in England and Scotland upon lands of the same qualities as those lands in Ireland, and that higher rents could be paid?—Yes, I believe so.

925. Sir *E. Hayes*.] Generally speaking, do you consider that the landlords let their lands to the highest bidder?—There does not appear to be any one rule followed out.

926. Generally speaking, do you consider that the head landlords let their lands to the highest bidder?—No, I think not; generally speaking, the head landlords let their lands at a reasonable and fair rent.

927. By valuation?—When let by valuation I think the rents are more moderate than when let by tender.

928. They must let either by tender or by valuation; what I want to know is, whether, generally speaking, you find the chief landlords let their lands to the best bidder?—I think there are a great many extensive landlords who do not; that they generally get a valuation of the land.

929. Lord *Eliot*.] Have you had much experience in the valuation of lands in England or Scotland?—I have not.

930. Then you are not prepared to say whether a larger portion of the produce of the soil is paid in Ireland, generally, than in England or Scotland?—I am not prepared to state from my own individual observation.

931. Mr. *Colquhoun*.] But if you heard the rent in Scotland was, on good land, one-third of the produce, and on inferior land one-fourth; and you stated

Mr. R. Purdon.

14 June 1844.

that in Ireland it was one-fourth and one-fifth; you would at once infer that rent in Scotland was higher than in Ireland?—It would, of course, follow from those facts.

932. *Chairman.*] Would not that follow, necessarily, from your previous statement, that the expenses being reduced and the profits being greater, the balance payable as rent to the landlord would be larger?—It would. It must be kept in mind that with good culture, such as is to be met with in England and Scotland, the produce is greater.

933. With improved culture, the produce will be greater and the expense less?—Yes.

934. And the balance remaining to the landlord will be greater?—Yes, it will.

935. You would generally consider land as let fairly, at a rent which the farmer, upon an average of years, at the price which he was likely to receive during those years, and subject to the average fluctuations in the amount of produce which he was likely to be subjected to, would be able generally to pay for that land?—That is, generally speaking, the test of a fair letting.

936. Have you been present at many meetings of occupiers who have been assembled to consider Mr. Griffith's townland valuation?—I have not been present at the meetings where appeals were lodged, but I have been present at a great many meetings of committees of appeal, and there heard the nature of the objections made by parties.

937. What is the class of persons who usually object to the townland valuation; is it the landlords or the occupiers of the district?—I think, chiefly the occupiers.

938. Where there are several occupiers in a townland, and no individual interested in the result, is not the amount which each will have to pay so small, whether the valuation be a little higher or a little lower, that no one individual has an adequate motive for disputing the amount of the valuation?—I have no reason to suppose otherwise.

939. Would not Mr. Griffith's valuation have been more attentively scrutinized by the occupiers if each occupier were separately valued and separately named, and were able to compare the valuation of his own land with that of his neighbour?—I have no doubt it would.

940. Are you prepared to state to the Committee in what proportion the valuation framed for poor law purposes, which was based upon the letting value, and which included all tenements, would be more expensive than the townland valuation as at present conducted?—I am not prepared to state precisely how much more expensive it would be, or in what proportion.

941. Can you give the Committee any information generally as to the expense of carrying on valuations?—It very much depends upon what it is necessary to value, the nature of the property to be valued, and its subdivision.

942. *Lord Eliot.*] Are you able to inform the Committee what would be the probable expense of converting the existing townland valuation into a tenement valuation?—I think it might in large districts be covered by an expenditure of about three farthings an acre.

943. And supposing the townland for the future to be carried on as a tenement valuation, what will be the additional expense?—It would be something less, for there is some portion of the inquiry which might be made by the valuers in the first instance.

944. *Mr. Vesey.*] Do you include in that additional three farthings an acre the valuation of all those properties which have not been valued by Mr. Griffith?—No; I do not include any property but that which is at present in the townland valuation, land and houses of a certain value.

945. Are you aware that property is rateable under the Poor Law Act which is not liable to the county cess?—I have a general impression that there is; that there are various other properties besides lands and houses, such as canal property, and mining property.

946. Can you state generally what additional sum it would cost to value those properties?—I am not prepared to state with reference to those.

947. *Chairman.*] The valuation of large masses of property, such as canals, mines, and so on, could be carried on without any great additional expense?—I have reason to think it could.

948. You stated, in your previous examination, that in respect to houses under

under 5 *l.* value, which are omitted in the townland valuation, but which would be subjected to valuation under the poor law, even at present you are obliged to make a sort of rough valuation of them in order to ascertain the fact whether they be or be not of the value of 4 *l.* or 5 *l.*?—At present the valuers are obliged to value all houses they may consider, from inspection, to be worth 4 *l.*; all of an inferior value are merely looked at, and passed by; examined just to see that they do not belong to the 4 *l.* house class.

949. So that the additional houses which would have to be valued would be only those below 4 *l.* instead of those under 5 *l.*?—Exactly so.

950. Sir *E. Hayes.*] In the three farthings an acre do you include the alteration of your present valuation to a letting valuation, or merely the extension of that valuation to a tenement valuation?—The extension of it to a tenement valuation merely; the alteration to a letting valuation would be but a very moderate expense.

951. It is not included in these three farthings?—No; but from the information already obtained, and lying in the office, I think it would be very moderate.

952. Have you any idea what additional expense that would involve?—I am not prepared to state what it would be, further than that I think it would be moderate.

953. Mr. *Vesey.*] If you were to be employed by a Board of Guardians to value a union, what would you charge per 100 acres for valuing such a union?—It would vary in different counties, for example, the cost in the county Meath would be less than in several northern counties; it would depend altogether upon the subdivision of property in the district.

954. Taking two districts in the county of Down and the county of Meath, can you state what you would charge for valuing a union in each of those districts?—I shall be able to furnish the Committee with that.

Edward Senior, Esq. called in; and Examined.

955. Lord *Courtenay.*] ARE you an Assistant Poor Law Commissioner?—I am.

956. Employed at present in Ireland?—Yes; after having been employed for four years in England and Wales.

957. How long have you been so employed?—I have been employed in Ireland two years; during the last 18 months in Ulster.

958. In what district were you particularly?—In all the unions situate in the counties of Derry, Antrim, Tyrone, part of Donegal, and parts of Armagh and Down.

959. You have also been in the south?—I was for six months there, upon first going to Ireland, in the province of Munster.

960. In what part of Munster?—In the counties of Limerick, Clare, the North Riding of Tipperary, and in part of Kerry.

961. Were you, in either or both of those portions of Ireland, cognizant of the statements by Boards of Guardians on the subject of valuation?—I think I was, to a considerable extent; but the original contracts for the valuation had, in every instance, been taken previous to my appointment, and I had therefore more experience in the examination of that valuation, when made, and in taking the necessary steps to complete it as far as possible.

962. How far were you cognizant of the appointments of valuers?—Not in a single instance.

963. Then are you able to tell the Committee, from your own knowledge or other information, what was the course taken by the Boards of Guardians as to the valuation?—I think I can.

964. Will you be kind enough to lay that before the Committee?—A committee was always appointed, *pro forma*, to consider whether a new valuation of the union was necessary, and in every instance the committee reported that it was. They then advertised for tenders by competent persons to make such valuation, and a person was elected; of course, some examination was made of his competency and his previous habits. In every instance that I am aware of, a professional person was employed as a valuator of land, and received a certain remuneration, and was limited to a period of time for the completion of such valuation.

o.63.

L

965. Did

Mr. R. Purdon.

14 June 1844.

E. Senior, Esq.

E Senior, Esq.

14 June 1844.

965. Did not the committee draw up certain instructions as to the principles upon which the examination was to be conducted?—I think not usually, as very detailed instructions had been given by the Poor Law Commissioners.

966. Those instructions were referred by the committee to the valuers?—Yes.

967. From your observations of the persons so appointed, are you of opinion that the majority were competent persons or not?—I think they were generally competent persons; some valuations have, however, been considered much better executed than others.

968. Were they generally persons connected with the district by any local circumstances?—I think not; I believe the appointments were very honestly made in the north, where I had the fullest experience; I never remember any local or party feeling having actuated the guardians in the election of a valuator.

969. Are you aware of what was the case in the south?—My knowledge of the south is by no means so accurate as my knowledge of the north, but I should hardly be disposed to make so favourable a statement of the state of things in the south.

970. It was usual, I believe, to define the period within which the valuation was to be completed?—It was.

971. Was that period, in your opinion, sufficient?—I think it was not sufficient. The Poor Law Commissioners were exceedingly anxious that the poor law should be brought into operation at as early a period as possible, and therefore, both in the erection of workhouses and the valuation, things were hurried forward.

972. Supposing the valuator to be elected and to have commenced his work, what would have been the next step taken by the Board of Guardians?—I think the Board of Guardians usually were practically but little cognizant with the nature of the valuation until the valuator returned it as complete; he was then bound by the Act to exhibit it to all the parties who had cause of complaint against it for 14 days; it was then usual for the Board of Guardians to be present, and take an active part with reference to those complaints, and they had a fair opportunity of judging whether or not the valuation was correct, both as regards actual and relative value.

973. Which class of complaints, from your observation, were most common; those as to actual or as to relative value?—I think those as to relative value.

974. And what was the result of the decision of the Board of Guardians in the cases which occurred within your observation?—I think they endeavoured to correct them; but I do not think that in one instance in ten a person who found out a mistake took the trouble of coming forward until he was actually called upon to pay the rate. Small rate-payers are exceedingly dilatory in coming eight or nine miles; they will take no pains until they are called upon to pay the rate, then if they find that they have to pay a larger rate than their neighbours they will come forward.

975. In general did the matter of the complaint turn out to be well-founded? I think there were a great many mistakes; a valuation consisting of 20,000 or 30,000 names, of which in some instances one-half or three-fourths are under 5*l.* in value, there would be an extreme difficulty in making perfectly correct; I trust, however, that by constant revision of the valuation, in process of time it will be tolerably correct.

976. Can you tell the Committee, shortly, what were the general principles which were developed in the instructions given by the Commissioners to the valuers?—I think the explaining the test provided by the Act; the value which a tenant might probably, or as the Act terms it “reasonably,” which I think is to be interpreted “probably,” be expected to pay from year to year.

977. Lord *Jocelyn*.] Do you think that instruction has been attended to?—In the north I think the poor law valuation somewhat below that test; it is fully up to the rent of the larger proprietors, but I think below the rent of the smaller proprietors. I tested it especially with reference to the valuation for the larger companies; in the county of Derry I found it fully as high, if not exceeding, the actual rent.

978. Are not those properties known to be let much below their value?—Throughout the province of Ulster it is usual to let land by valuation, and not by competition. I have no doubt that all the land in that province is let con-

siderably

siderably below the competition value, dependent upon a variety of customs, which it is exceedingly difficult to explain.

979. Lord *Courtenay*.] What has been the result of your experience, so far as you have been able to obtain any, upon that point; the relation of the poor law valuation to the letting value of the land in the south of Ireland?—I suspect that the poor law valuation is considerably below the letting value in the south.

980. Do you apply that to the estates of smaller proprietors as well as the larger proprietors?—Yes. I recollect a very gross instance, which, I think, has been brought before Parliament, with reference to the Scariff Union; it occurred previous to my removal from the south of Ireland: I distinctly remember that certain parties lowered the valuation by a resolution of the Board. In fact, guardians in the south of Ireland had a direct interest in lowering the valuation, and occasionally acted upon that direct interest. I believe that certain leading guardians obliged the valuator to alter his valuation after he had given it in; they obliged him to strike one-sixth off that valuation.

981. Lord *Jocelyn*.] In reference to those properties, you say properties in the north of Ireland are let much lower than properties in other parts of Ireland; I want to know whether you mean at the same time to say that that property is let below its actual value in the north of Ireland?—I believe that in the north of Ireland the climate and the soil are far inferior to the south; on the other hand, I believe the cultivation of the north of Ireland to be much better than the cultivation of the south. I believe the rents in the north of Ireland, in one sense, may be said to be much larger than the rents in the west and south; in another sense, as compared with the competition value, I consider them low. I consider them, in that sense only, low.

982. Compared with English and Scotch land of the same value, are the rents low?—To answer that question you must come to a definition of what rent is. I take it a much smaller portion of the produce remains with the tenant in Ireland than in Scotland and England.

983. Mr. *Shaw*.] Is the same produce, do you think, generally raised upon the same quality of land?—I think decidedly not.

984. Lord *Jocelyn*.] Then you mean in comparison?—Yes.

985. Lord *Courtenay*.] You stated the difference in the relation to each other of the poor law valuation and the rent paid in the north and south of Ireland; in one case you said it was low, and in the other usually as high as the rents paid to the larger landlords; to what cause do you attribute that difference?—The constitution of the Boards of Guardians in the north and south of Ireland is extremely different. In the north of Ireland there is, I believe I may say, no political feeling on poor law questions: gentlemen and magistrates attend usually, and pay much attention to them; both *ex officio* and elected guardians work well together. I know of no landlord interest as distinguished from tenants' interest in any Board of Guardians I am acquainted with in the north.

986. *Chairman*.] And the contrary you take to be the case in the south?—I should not like to make any general statement on that subject.

987. Lord *Courtenay*.] You have stated generally the object of the instructions was to put more clearly before the Board of Guardians the intention and purposes of the Act; did those instructions contain any statement as to how allowances or additions should be made, or any circumstance beyond the proportion in stating what was to be taken into account in fixing the value?—I think the instructions went through each subject which was determined by the Act to be rateable, and stated how that was to be regarded with reference to water-power, machinery, turbaries, and other things.

988. Then are you prepared to state in what respect the instructions directing the valuation differed from the principles upon which the townland valuation of Mr. Griffith is carried on?—In the first place, the test of value is totally different; in the one it is to be the net value at which land will let to a solvent tenant from year to year, and in the other it is a scale of prices. The one is a tenement valuation, the other a townland valuation. In the poor law valuation the party rated has a right of appeal, which he has not in the townland valuation.

E. Senior, Esq.

14 June 1844.

989. The one is liable to constant revision, the other is not?—Certainly.

990. How frequent is the revision?—The poor law revision takes place every year.

991. Do you consider that an advantage?—I do certainly; I find from land falling out of lease, and alterations in boundaries, &c., that sometimes the changes are so considerable as to require very extensive revision.

992. Then you consider that the opportunity of frequent revision is a point of superiority in the one valuation over another, the object of which is an ideal standard?—I do; I may state I attribute to the fact of this revision that we have no appeals under the poor laws; when I state no appeals, I mean scarcely any.

993. What appeal does the Act of Parliament provide?—Before the assistant barrister.

994. You speak of there being very few appeals; can you tell us what proportion?—I think there were but three or four in the whole of my district last year.

995. And your district included Boards of Guardians in those five counties?—Yes, very nearly the whole of Ulster.

996. Can you tell us what would be the result of those appeals?—Some were successful, and some unsuccessful.

997. Mr. Shaw.] Are the tenements in the part of the country to which you have alluded very small generally?—The holdings are very small; much smaller than in the south, especially where the linen manufacture prevails.

998. Lord Courtenay.] The Committee understand that under the poor law valuation the tenant has a right of appeal upon both grounds, both in respect of its being positively, and also in respect of its being relatively improperly rated?—Yes; it rather depends upon the construction put upon the English Act of Parliament, and the decisions upon it.

999. Then is that appeal direct to the assistant barrister?—Direct to the assistant barrister.

1000. You spoke of the valuers being appointed as consequent upon the receipt of tenders; at what rate are the remunerations ordinarily carried out?—About 200*l*.

1001. Not so much per acre?—Yes, so much per acre, usually amounting to about 200*l*. That is for the whole union.

1002. Can you tell us, with respect to every union with which you are acquainted, how much an acre that would be?—I entirely forget; it would depend upon whether the land was arable, and whether the population was dense or thinly scattered. In some unions it consists of mountain; and in some, where the linen manufacture prevails, there is a very dense population.

1003. Chairman.] Do you mean the revision costs 200*l*., or the original valuation?—The original valuation.

1004. Lord Courtenay.] Are you able to state the average cost of a new valuation of a poor law union per acre?—I think I before stated that it very much depends upon the nature of the land; I should put it I think at about a halfpenny, taking an average union, with an ordinary quantity of mountain and arable land.

1005. Mr. Colquhoun.] You stated 'he test of value in the poor law valuation is the rate at which land will let from year to year to a solvent tenant; how is that ascertained?—I think I used the words, "the rate which might probably be expected."

1006. How is that ascertained?—I think you must take it by the usual custom of the country.

1007. Then in those parts of the country where competition forces up the rents, the value of land is proportionately enhanced?—It is.

1008. Then, in consequence of that, the valuation of land, which may be in reality less valuable in the south, may be higher than the valuation upon lands in the north of Ireland, where the land may be more valuable?—Yes. I do not see how you could do otherwise than ascertain the rent which is actually obtained. A valuator would not calculate the utmost rack-rent, but the rent which was actually paid.

Mercurii, 19^o die Junii, 1844.

MEMBERS PRESENT.

Sir H. W. Barron.
Mr. Colquhoun.
Lord Courtenay.
Lord Eliot.
Mr. F. French.

Lord Jocelyn.
Sir Denham Norreys.
Mr. Parker.
Mr. Vesey.

SIR DENHAM NORREYS, IN THE CHAIR.

Edward Senior, Esq., called in; and further Examined.

1009. *Chairman.*] WHEN you were in Ireland, did you apply your attention to the levying and applotment of county rates in that country?—I paid some attention to the principles, but not to the details.

E. Senior, Esq.

19 June 1844.

1010. Are you aware that there is a large class of property subject to poor rates which is not subject to county rates, and do you consider it desirable that all real property should be equally subjected to taxation for local purposes?—I think so, decidedly.

1011. The tax for the maintenance of the poor falls partly on the landlord and partly on the occupier; the tax for making and maintaining roads and county establishments falls entirely on the occupier; have you had any opportunity of forming an opinion as to the expediency of continuing such a distribution of the burdens which are borne by the land?—I think that is rather a question for the Legislature than for a subordinate public officer; but I would say, I see objections to the principle of interfering with existing arrangements between landlord and tenant.

1012. *Mr. French.*] Is it not the case that, as to the poor law, eventually the entire amount of taxation is defrayed by the landlord?—As a question of political economy, it will appear that all taxation is a reduction of rent; but, in point of practice, the case is very different.

1013. *Chairman.*] In your intercourse with people in Ireland did you hear any strong opinion expressed in favour of a new distribution of county rates, so that a portion should be borne by the landlord as well as by the occupier?—I think there is a very strong growing feeling, which is constantly expressed by Boards of Guardians; they compared one system of local taxation, in which one half is borne by the tenant, with the other, in which the tenant has to bear the whole; and they complain, possibly with greater reason, inasmuch as the one species of taxation they check and control, and over the other, of which they have to pay the whole, they have no check or control.

1014. *Mr. French.*] Which is the one over which they have no check or control?—The county cess.

1015. Have they not, by means of the cess-payers, associated with the magistrates at the special sessions, a check over the sums levied, with the exception of the compulsory assessments?—The larger cess-payers certainly have; but they are not elected by the occupiers.

1016. *Sir H. W. Barron.*] Are you not aware that the cess-payers are composed very often of the large proprietors and members of the grand jury themselves, who levy the tax?—Sometimes they are, and sometimes they are not.

1017. *Chairman.*] Could any distribution of the burden of county rates equitably between landlord and occupier take place, unless a fair valuation of land and tenements were made upon the basis of their letting value?—I think it could not take place without a fresh and uniform valuation.

1018. You are aware that the townland valuation at present in progress for county purposes is arranged according to a general scale of prices, fixed

E. Senior, Esq.

19 June 1844.

according to Act of Parliament, and that the poor law valuation depends, as a basis, upon the actual letting value of the land; would you prefer, in the establishment of one valuation, to extend Mr. Griffith's valuation to all tenements, or to take the poor law basis of valuation as the principle upon which you would found the new valuation?—I consider the poor law valuation a far sounder principle, inasmuch as it affords a self-acting test, which the other does not. The key of the poor law valuation can never be lost.

1019. *Sir H. W. Barron.*] That test being the rent?—The rent which a solvent tenant will be expected to pay from year to year.

1020. *Chairman.*] In the townland valuation, it being carried on by one set of valuers, whose test of value is the comparison of one set of lands with others of recognised value, according to his scale, how could such a valuation be revised when once completed, supposing the original valuers were not at hand to be employed?—It would be extremely difficult to do so; you would probably have to re-value extensive districts, comparing them by some certain test, such as the rent, and endeavour to estimate that scale as well as you could.

1021. Do you not thereby introduce a new element in introducing the rent, and destroy the uniformity of valuation which was intended to be effected?—Admitting that evil, that seems to me to be the only course by which you could ascertain it at all.

1022. The object of Mr. Griffith's valuation appears to have been to have a uniform valuation of Ireland upon one scale; must not the effect of every partial revision of such a valuation, such as you have described, be practically to destroy the valuation as a national and perfect work?—I believe that the principle which Mr. Griffith lays down is, the natural fertility of the soil and the average culture of the district, as governed by a scale of prices. If a new town springs up in any particular district, or any mountain land is changed from being mountain land or pasture to being arable, I can still conceive the original valuation might be altered without destroying it as an uniform work.

1023. Have you not presumed that, in case of the revision of that valuation, it would be requisite to introduce the new ingredient of the actual value or rent into any valuation; would not that be the introduction of an ingredient which has not been made use of by Mr. Griffith to the full extent to which you propose to make use of it in the valuation?—I concur with that criticism on my answer; but though Mr. Griffith does not appear to avow the element of rent, I believe he is in fact really guided by it.

1024. Is not Mr. Griffith's reference to rent merely in this respect—not a question of plus or minus as tested by rent; not a question of a positive addition to his original valuation, but of the addition of a certain per centage, which has reference to other per centages, which has been added in previous districts?—Mr. Griffith, in his instructions to valuers, directs them to add a given per centage if the place is near a town, and to take off so much if it is very distant from its market; and from all his instructions to valuers, the Committee will see it is, in fact, a question of rent.

1025. Would not the question of rent, as used by Mr. Griffith, still be merely a relative one in this way, that if the average value of land be 10*s.* per acre at five miles' distance from a town, and that similar land would be valued at 15*s.* an acre immediately close to a town, 50 per cent., or 5*s.* per acre, would be added to that close to the town by Mr. Griffith, with reference to the increased rent which would be obtained from it, but it does not follow from thence that 1*l.* per acre might not be the actual letting value of the land five miles distant, and 30*s.* the actual value of the land near the town?—Still, in that mode of putting the question, you assume rent to be the test of relative value.

1026. *Mr. Colquhoun.*] Would not there be one large class of cases in which Mr. Griffith would altogether disregard rent as a test of value: take, for example, the case of a district in Derry, where the landlord lets his lands, not upon tender, but upon valuation, and lets them at a moderate rent; and take the case of a district in Kerry, in which the landlord lets his lands according to the competition price, and therefore lets them at a very high rent: assuming the quality to be the same, and the culture in these cases to be the same, would not

not, in the one case, Mr. Griffith place a valuation upon the district in Derry nearly approaching to the actual rent to the landlord; and in the case in Kerry would not his valuation be greatly below the actual rent?—I apprehend in all that class of instances he would not be guided by the question of rent.

E. Senior, Esq.

19 June 1844.

1027. And therefore, when you refer to lands near a town, or near a good market, would not, in that case, Mr. Griffith say that he estimated the land more highly, not on account of the rent charged, but on account of the superior convenience of the situation?—Convenience, as affecting value.

1028. In fact, in those cases in Ireland in which rent is not proportioned to the value, but is much beyond the existing value, owing to competition, Mr. Griffith's valuation in that case would have this advantage, that he would not be misled by an exorbitant rent?—It would appear to have that advantage.

1029. On the other hand, Mr. Griffith's valuation is subject, I presume you would say, to this great disadvantage, that its uniformity depends entirely upon the judgment of the valuator, formed upon the quality of the soil and the quality of the culture, and is therefore likely to vary with the different opinions formed by the valuers?—It has that objection, among others.

1030. *Mr. French.*] But is it not checked after the valuers by persons of experience?—I am myself not sufficiently acquainted with all the details of the Government valuation, as they have not come much under my own notice.

1031. *Lord Jocelyn.*] I understand Mr. Griffith's valuation has nothing to do with the actual rent which is received by the landlord, but it is that which ought to be the rent drawn from the land according to its value?—I am not aware that Mr. Griffith admits that as his principle.

1032. *Chairman.*] The last question which has been put to you assumes that lands are let so far beyond their value that in many parts of Ireland the occupier is in the worst possible social position, and that the land is badly tilled; may not this, to a certain extent, have arisen from there being no fair standard of valuation, by which the landlord, who desired not to overlet his lands, could be guided; and would not a valuation of lands, made by impartial persons upon the basis of the full and fair letting value, be of much more importance to the landlord and occupier than a relative valuation, however well effected, inasmuch as the landlords would be more likely to be guided by the one in their lettings than by a mere relative valuation, like the townland valuation?—Assuming that the position of the lowest class of tenants, in certain parts of Ireland, is correctly described in the preceding question, I fear that I cannot hope that, with the existing competition for lands on the part of the tenants, any fresh valuation would give extensive benefit, but that some benefit would result from it, and no evil, I am quite prepared to expect.

1033. You have recommended, in a previous answer, that there should be one valuation for all purposes of local taxation: how would you recommend that such a valuation should be conducted; by local Boards, by county Boards, by the Poor Law Commissioners, or by a separate and independent office?—I should prefer the latter mode.

1034. Would you recommend that that office should be permanent, and should be responsible for keeping up the valuation to its fair standard?—I should do so.

1035. How often do you think a valuation once made should be revised; at stated intervals of three, five, or seven years, or yearly, as at present, under the poor law, omitting from your consideration any mere clerical alteration of the names of occupants, which could be done from time to time as occasion required?—A septennial revision would, I think, be sufficient, except for such changes as from time to time occur from large estates going out of lease. Some separate provision, probably, would be required to meet that class of cases.

1036. *Mr. Colquhoun.*] When you speak of a permanent and independent office, do you mean such an office as that of which Mr. Griffith is now the head, an office appointed by Government, and under the charge of the Government?—I do; whether that should consist of one officer solely, or be differently composed, is, I must again repeat, a question for the Legislature, which I do not feel myself competent to go into.

1037. *Chairman.*] Do you consider the question of the number of officers
0.63. L 4 who

E. Senior, Esq.

19 June 1844.

who collect the different items of county and local charge, and the periods of collection, of any importance?—I consider them to be of great importance.

1038. Will you state your reasons?—I think all local taxation in Ireland should be collected by the same officer, and at a certain period of the year, inasmuch as it is almost impossible to collect money in Ireland during the summer. Under the instructions of the Poor Law Commissioners, the different Boards of Guardians were ordered and directed to make two rates annually; this I have found it necessary to depart from, and to recommend Boards of Guardians to make one rate annually, commencing the collection about the month of November; and I find, under this system, the money is far better collected; and that the rate-payers also prefer it.

1039. *Mr. French.*] Have you ever known any difficulty in the collection of the county cess previous to the summer assizes?—Great difficulty.

1040. Will you state any cases in which the difficulty has occurred in which the collectors have declared the cess not collected previous to the assizes?—I have known, I may say, constant cases of difficulty, especially in the mountain districts; there, I have been informed by collectors who are solvent and respectable persons, that they had to advance large sums, and in fact, to defer the collection until the following season.

1041. The change which you made from the summer collection to November was more satisfactory to the people, simply because at that time their corn was ready for sale?—Simply; at one time they can pay and at the other they cannot.

1042. So that the difficulty is confined to the very poorest classes?—From the small size of the holdings, the people without money in the summer form the larger number of rate-payers. A very large proportion, indeed, of rate-payers in the northern unions are valued under 5*l.* in value. In the Lurgan Union three-fourths are valued under 5*l.* in value.

1043. *Mr. Colquhoun.*] Though perhaps you may not be cognizant of the fact, you would infer that in that respect there is no great difference between the holdings in the south and in the north?—I am of opinion that the holdings in the south are very much larger than in the north, especially in the grazing districts. The linen trade either does or has prevailed over almost every part of the north, and has much reduced the size of the holdings.

1044. *Chairman.*] In recommending one valuation by one set of officers, you anticipate that it would be requisite to alter the present system of taxation for county purposes where presentments are made twice in the year, that is, at each assizes?—I do.

1045. Has your recommendation of having only one set of officers, any reference to the difference of price which has been paid for the collection of the poor or county rates, or the mode of collecting these several rates?—I consider the facility of collection by far the more important point, both as regards the rate-payer and collector.

1046. *Mr. French.*] Might you not throw a difficulty in the way of collecting one rate which is not objectionable to the people, by joining it to a rate which they consider objectionable?—That question assumes that the collection of the poor-rate is at present considered objectionable, and in that part of Ireland with which I am best acquainted we have not met with any objection.

1046*. That is the north?—Yes.

1047. *Chairman.*] Do you consider the existing poor law valuations as a fair criterion of the relative value of tenements in the same union?—I believe it to be generally fair, but by no means free from mistakes.

1048. But as comparing one union with another, they are not by any means to be taken as a criterion, there being no common base for valuation?—They differ considerably, as might be expected in valuations executed by independent officers, having no common authority to look to.

1049. In laying down a basis for a general valuation of all the property, for the levy of local taxation, would you assume that the amount which may be expected to be received for the use of the property valued for a series of years, is the actual value of the property?—It is a test of the actual value.

1050. Should not such a calculation of average receipts be computed on an average of prices, such as was likely to include ordinary variations of price, and also

E. Senior, Esq.

19 June 1844.

also on an average of crops such as should include the ordinary variations of crops, one year with another?—I think you would only embarrass the valuation by such considerations.

1051. But how could you ascertain the actual or gross letting value of land without taking into consideration the average amount which would be obtained for its produce during a series of years, inasmuch as a valuation which might suit a high range of prices might be too large for the prices of a year or two prior or subsequent?—I would meet that objection by taking the average range for a considerable period of years.

1052. Does not that average range include all those variations?—It follows all those variations.

1053. Does not the rent correspond with those variations?—The rent corresponds with the scale of prices of the produce of the soil; rent I think is a safer test than any scale of prices.

1054. *Mr. Colquhoun.*] In fact, in the ordinary state of things, the farmer, in paying his rent, calculates the average prices then received, and takes his experience of the years which have passed, before he makes his offer, and agrees to pay his rent?—Yes: and, in fact, we find that a prudent man, in purchasing an estate, looks at the rent-roll for a considerable period of years; and upon that he calculates its value, not upon any scale of prices, or any laborious geological inquiry.

1055. *Mr. Vesey.*] In that last answer, with regard to not taking into consideration the geological structure, do you mean to say you would not examine the nature of the soil, and its consequent capabilities of improvement, as well as the rent-roll?—He would do so. He would probably also look to the agriculture of the district, the amount of capital expended upon it, and a variety of circumstances; but still I am of opinion the rent-roll would form his chief guide.

1056. *Chairman.*] It has been stated that there is much difficulty in Ireland in ascertaining what is the fair letting value of land; would you consider that to calculate the average value of the crops which could be produced for any given number of years, according to the ordinary skill of the district, and to deduct from the value of the gross produce the probable cost of all taxes payable by the occupiers; the cost of labour, seed, manure, sending to market, repairs, interest on capital, maintenance of stock, or fixed capital, and the maintenance of the farmer, calculated upon the principle of a steward's salary; that, after deducting the probable value of all these items, the balance would be the fair letting value of the land?—Yes; or, in other words, rent may be defined as the surplus remaining with the tenant, his own labour, interest upon his capital, and all the taxation the tenant may be subject to, being deducted.

1057. *Mr. Colquhoun.*] But you would prefer taking as your guide the actual rent, in preference to making an elaborate calculation, involving the items specified in the question?—Certainly; and in fact no landlord practically goes over any such calculation in estimating the rent which his tenant ought to pay him.

1058. *Chairman.*] Does not that arise from the facility which men acquire from every-day experience in obtaining a rough approximation to the fact, which you would otherwise obtain by calculation?—Yes; but which is found practically sufficient for all the purposes of life.

1059. When you hear it said that the amount which a tenant ought to pay for land ought to be one-third or one-fourth, or any other proportion, of the gross produce, do you understand it to mean that, upon the average, a calculation such as that stated above, will give a sort of rough approximation to a relative proportion of the gross produce, say one-third or one-fourth?—In point of fact, I attribute very little importance to all those calculations; it is quite clear that when the land is extremely fertile, a large portion of the produce goes to the landlord, which is called rent; and where the land is very inferior, a very small portion goes to the landlord as rent.

1060. *Mr. Colquhoun.*] And the proportion which goes to the landlord depends upon another element, viz., the scale of comfort in which the farmer chooses to live, according to which, he deducts a larger or smaller amount for his maintenance?—That is a very important consideration, which should not be overlooked, as well as the amount of capital which he invests in the soil.

1061. *Chairman.*] So that in competition for land, if the necessary taxes and

E. Senior, Esq.

19 June 1844.

outgoings for labour could be ascertained, which must necessarily be incurred, the farmer would have to put against them his own maintenance if he gave beyond the fair letting value for the land?—Yes, and in fact he does so every day.

1062. Could not a valuation, founded on the fair letting value, be carried into operation, without having reference to calculations such as I have been referring to; for instance, by taking a district, ascertaining the value of a portion of it, checking the value by the actual payments by such farmers whose social position was such as, considering the habits of the people, would be considered the most comfortable, their payments could, in most instances, be taken as standards of the actual fair letting value of the land?—An intelligent practical surveyor, by going over a few of the large estates, and examining the rent-rolls, would have no difficulty in forming such a valuation.

1063. *Mr. Colquhoun.*] And by that means he would be able to check the amount of rent extended by competition?—He would be able to do so.

1064. *Mr. Vesey.*] Supposing proprietors were not willing to show their rent-rolls to the valuers, in what way would he proceed then?—He would have no difficulty in ascertaining it from the tenant, so far as my experience leads me to infer: in fact I have myself examined the rent-rolls of most of the large proprietors in the districts in which I act.

1065. *Mr. Colquhoun.*] The rent-roll even would not be a sufficient test, inasmuch as lands might have been taken on lease at periods which would afford no criterion of the present value?—I assume the valuers only look at lands held by tenants at will.

1066. Or lands held by tenants under recent leases?—Yes.

1067. *Chairman.*] When you speak of the poor law valuation in the north of Ireland corresponding with the rent, do you assume that the tenant-right co-exists with those rents?—The tenant-right does exist in every part of Ulster, but it varies in every county, and in different parts of the same county.

1068. Do you consider the tenant-right in the nature of a fine paid by the occupier for the use of the land?—I do not consider it entirely of that nature, though it bears some relation to it.

1069. Are not rents lower in proportion to the amount of tenant-right which exists in any particular district?—I am not prepared to admit that to its full extent.

1070. Supposing two farms of equal value to be let, would not a larger rent be assumed for that where there was no tenant-right to purchase out, the difference being a sum equivalent to the average amount of tenant right which prevails in the district?—I think not.

1071. *Mr. Colquhoun.*] Perhaps you will state what your view of tenant-right is?—My view of tenant-right is, that it is the difference between the rent actually charged by the landlord according to the custom of the country, and the utmost competition value; therefore if the rent in a large estate is low, and confidence in the landlord is great, the amount of tenant-right per acre will be very large; for instance, tenant-right in some of the better managed estates of the London Companies in the county of Derry is worth from 15*l.* to 20*l.* per acre.

1072. Is that uniformly the case; are there not many cases in which a high tenant-right is paid, though the land is let at its full value?—Not according to my previous definition of it.

1073. But according to the facts as they have come under your observation?—I think it is impossible to be so.

1074. Such a circumstance could only arise from intensity of competition; but have you not heard of cases in which the fact is so, the competition being intense?—I think not.

1075. *Chairman.*] In the case of two farms of equal value, one situate in a district, the custom of which was that the tenant-right amounted to 15*l.* or 20*l.* an acre, as you have stated, and the other in a district where there was no tenant-right; would not a person, wishing to take one of these farms, assume a higher rent payable to the landlord, where he had that 15*l.* or 20*l.* an acre to pay, than where he had not that 15*l.* or 20*l.* an acre to pay?—I think that question would imply, firstly, that the tenant-right is of recent origin; secondly, that it is independent of the feeling of the majority of the tenantry, neither of which is the case.

1076. The question is one of fact; whether a person desirous to take a farm would not assume a higher rent, where he had not at once to pay 20*l.* an acre for the possession of the land, than where he had?—He would not pay a higher rent, inasmuch as the strong feeling of the neighbouring tenantry would be against him.

1077. Virtually, would not the rent be the same; that he would pay a high rent in the one case to the landlord without paying tenant-right; in the other case, that he would pay a diminished rent to the landlord, but he would pay the difference between the high rent in the one case, and the smaller rent in the other, to the tenant?—As a question of arithmetic, decidedly so; but there are other questions besides those of arithmetic involved in the matter.

1078. Lord *Eliot*.] Would he not pay a higher rent for land in the parts of Ireland in which the tenant-right does not exist than in those parts in which it does exist?—Undoubtedly he would. Tenant-right is a very old custom; it can only exist where lands are comparatively let low; but I do not think it is the cause of their being let low, but the result.

1079. Mr. *Colquhoun*.] Are there any parts of the north of Ireland where land is let so much below its real value as to justify the tenant in giving 15*l.* or 20*l.* an acre for the tenant-right?—There are. I may mention, as instances that have come within my own knowledge, the estate of the Drapers' Company in the county of Derry, and Lord Charlemont's estate in the county of Armagh.

1080. Upon those estates, what would the fee-simple of the land sell for per acre?—I cannot say; I have had no experience in buying or selling estates.

1081. Do you apprehend that land upon those estates would sell for more than 40*l.* or 50*l.* an acre?—It would sell, I should think, for about 25 years' purchase.

1082. The ordinary rent in such cases would be how much?—The ordinary rent, I take it, would be about 1*l.* an acre.

1083. Therefore, the incoming tenant is, in fact, paying to the outgoing tenant a price only one-fifth less than the selling value of the soil?—Such is the fact; but these are selected instances, where the tenant-right practice or custom happens to be the strongest, not average cases.

1084. *Chairman*.] In such cases, would you take the rent payable to the landlord as an equivalent for the fair letting value?—I should, according to the terms of the Irish Relief Act. I think a person who purchased an estate, intending to do away with the tenant-right and to let the land at a competition value, would find out that he had made a mistake.

1085. Is not the letting value, as defined by the Poor Law Act, the rent which would be payable to the landlord, and the sum or the equivalent to be deducted which would be paid for the tenant-right?—It is the sum which may be reasonably expected from year to year from a solvent tenant; and a landlord would find it difficult, if not impossible, to get more.

1086. But do not those words assume that it is the sum which may reasonably be expected from a solvent tenant who has only certain taxes to pay, but not from one who has also to pay a sum, as you say, of from 15*l.* to 20*l.* an acre for the use of that land?—I think it would be distinctly illegal to rate the tenant for a rent which he has not to pay, and can never be expected to pay.

1087. Mr. *Colquhoun*.] Is it found, in fact, that as the rent rises the tenant-right falls in amount?—It does, unquestionably.

1088. And does the amount of tenant-right bear any proportion to the fixed capital invested upon the farm, in buildings or in drainage?—It varies with the rent, it varies with the state of cultivation of the farm as compared with the rent, and with the amount expended upon the land, including all improvements upon it.

1089. Has it in any degree, as far as you are aware, allusion to the tenant having been left by the landlord to make permanent improvements, such as those upon buildings, and the drainage and fencing of the farm?—I think it but fair that where everything which is done by the landlord in England, is done by the tenant in Ireland, the out-going tenant should receive the value of the capital which he has laid out; and I attribute almost entirely to the custom of tenant-right, both the absence of agrarian outrage in the north, as well as a much higher cultivation in that part of the country.

1090. Then if a tenant in the north of Ireland has taken a farm upon which

E. Senior, Esq.

19 June 1844.

the buildings are indifferent and the drainage bad, and he leaves that farm with good drainage and good buildings, will he obtain a larger tenant-right upon his outgoing than he paid upon his entrance?—Rents remaining the same, he will.

1091. And the amount of surplus which he receives will be pretty nearly proportioned to the superior state of accommodation, and of buildings and of drainage, in which he leaves the farm?—Yes; but the Committee should not understand that the tenant-right depends entirely upon an outlay made by an improving tenant, inasmuch as an outgoing tenant in a mountain district would receive tenant-right, who had not expended anything upon the land.

1092. But in the cases supposed will there not be a significant difference between the amount of the tenant-right? In a mountain farm will not the outgoing tenant receive a small sum, say 2*l.* or 3*l.* an acre, and in a farm in which the buildings are improved and the drainage good, will he not receive a higher tenant-right, such as you have stated, of from 15*l.* to 20*l.* an acre?—If the mountain pasture were let extremely low, and the lowland arable land were let extremely high, he may possibly receive as much in the former case as in the latter.

1093. But rents being moderate in both cases, and the only difference being in the capital invested in the buildings and in the drainage, will he not in the latter case receive a larger proportion of tenant-right?—He will, rents being the same.

1094. *Chairman.*] Then may not the tenant-right be taken to be an indication of the difference between the rent paid to the landlord, and the letting value of the land?—That is exactly the definition I have before given of the custom.

1095. Then, if so, according to your own definition, the rent actually payable cannot be the actual letting value?—Not the competition value; it is the difference between the two. If by the words “letting value,” I am to understand competition value, that is exactly my previous definition of the custom.

1096. Supposing the custom of the country were, to let by valuation, and not by competition, would not the amount of tenant-right be still an indication of the difference between the rent payable to the landlord and the actual value, as ascertained by valuation?—The land is at present let by valuation, and not by competition.

1097. But no rise of rent takes place where tenant-right is paid for the occupation of the land?—It does indeed: the real difficulty in the custom of tenant-right, I would state, is to explain why the landlord does not increase his rent.

1098. Is not the tenant-right money paid upon the presumption that the landlord will not increase his rent?—It is upon the expectation, not upon the certainty; and therefore it depends upon the character of the landlord as well as upon other causes.

1099. Then may not the tenant-right be taken to be equivalent to the possession of a lease, at some amount of rent which is below the rent which would be payable upon a valuation?—I should not be disposed to adopt that as its definition; the mere circumstance of a considerable fall in prices a year and a half ago, by diminishing the competition value of land, materially affected the price of tenant-right.

1100. In such a case as you have mentioned, where the custom of the district is, that from 15*l.* to 20*l.* an acre shall be payable for tenant-right, would not the tenant, if he chose, instead of selling the ground, be able to let that ground at a rent somewhat larger than the rent he paid, and actually obtain a profit-rent equivalent to the tenant-right which he would have obtained if he had sold?—The landlord would not allow him to do so.

1101. But if the tenant had a right to sub-let, could he not sub-let at a profit-rent equivalent in amount to the value of the money he would have had to receive in the shape of tenant-right, in the case of a sale?—I would say, as a mere question of money, it is precisely the same to the incoming tenant whether he pays a larger rent to the proprietor, or whether he pays a given sum to the outgoing tenant, and a small rent; but it must be remembered this is a matter of custom, and the one would be exceedingly opposed to the feelings and interests of the whole class of tenantry; and therefore the landlord could not at once say, “I will raise my rents and destroy tenant-right.”

1102. *Mr. Vesey.*] Supposing in any given district tenant-right did not exist,

19 June 1844.

exist, would not the same landlords in that district get a higher rent than they now receive, the tenant-right existing?—A larger portion of the produce of the soil belongs to the landlord where tenant-right does not exist; but, on the other hand, the whole produce of the soil is increased, from the certainty which the tenant has that he will receive the value of all the outlay of his capital.

1103. *Chairman.*] But supposing that the landlord were to purchase the tenant-right over the district from his own tenants, and that he were to let those farms anew, would he not get a higher rent for the use of those farms than was previously paid for them?—As a question of political economy, I before stated that it is precisely the same to the incoming tenant whether he pays a small rent, and a large fine as tenant-right, or a larger rent to the proprietor, but the one plan is according to the custom of the country and the other is not; and a person who paid a larger rent under the circumstances would be accused of taking a step opposed to the interests of the neighbouring tenantry.

1104. That would depend simply upon a question of feeling amongst the tenantry; but if a landlord chose to make that purchase, and if a tenant chose to run counter to that feeling, he would pay a larger rent for the ground, having no fine to pay upon entering into possession of it?—Yes; but we must remember it is a question of feeling from beginning to end, which prevents the landlord asking a higher rent.

1105. *Mr. Colquhoun.*] Is it so much a question of feeling as a question of the outlay of capital? Is it not that in past times, in place of the landlord laying out his capital upon the land in buildings and permanent improvements, he has allowed the tenant to do so, and consequently one tenant pays the other for capital, which in England is laid out by the landlord, and which in that part of Ireland has been laid out by the tenant?—Yes; but I am aware of certain estates where the tenant-right is absolutely the highest, and where the improvements have been very small.

1106. *Mr. Vesey.*] Do you not conceive that the actual fact of the tenant having to pay a large tenant-right upon coming into a farm, is very often the means of preventing that beneficial outlay upon the farm which he would be able to make if that tenant-right did not exist?—In some instances, by draining the incoming tenant's funds, it may prevent his being able to effect improvements; on the other hand, it tends to effect improvements where the tenant has capital, and is certain that he will get its value upon quitting the property.

1107. Is it not generally the case in Ireland that the tenants have not very large capital?—They have not large capital as compared with English tenants, but I know extensive estates in many counties of the north where the farm buildings are substantially built and slated, belonging to tenants at will, and those buildings would not have been erected if the tenant was not quite certain he would get the value upon quitting the property.

1108. Can you state from your own knowledge whether those buildings have been made solely by the tenant, without any assistance from the landlords?—I can quote instances on both sides; in some instances it has been done entirely by the tenant; in others a proportion has been advanced by the landlord and a proportion added to the rent; but viewing as a whole, the farm buildings are far better in the north than in the south, small as the holdings are.

1109. Then do you say in the north of Ireland generally, tenants have a sufficient capital to pay a large tenant-right amounting to from 15*l.* to 20*l.* an acre, and also to make a large outlay of capital on their farm buildings and other improvements, without any assistance from the landlord?—I do not admit 15*l.* or 20*l.* an acre to be the average rate of tenant-right, it being the highest rate of tenant-right, but co-existent with the practice of tenant-right and its being increasing rather than diminishing; the outlay made in permanent improvements in Ireland, principally in drainage, during the last 12 months, has been enormous, and entirely by the tenants.

1110. In the north of Ireland?—Yes.

1111. *Mr. Colquhoun.*] And do you apprehend that in such cases the tenant-right will rise upon the outgoing of those tenants who have made these great improvements?—I have no doubt it will.

1112. *Lord Jocelyn.*] Are you not aware it is the general custom in the north of Ireland, upon the properties of large landlords, to give their tenants

F. Senior, Esq.

19 June 1844.

the slating and timber for their houses?—I should say that occasionally that is the case; I should say it is the exception, and not the rule.

1113. Of what parts of the north of Ireland are you speaking?—I refer principally to the counties of Armagh, Derry, Down, and the south of Tyrone, not to Donegal or the north of Tyrone; the south of Tyrone is a more improved country.

1114. Have you been over many of the large properties in the county of Down?—I do not know the large properties in the county of Down so well as I know the large properties in the other counties I have mentioned, but still I have considerable acquaintance with them.

1115. *Chairman.*] Do you consider the amount which is paid for tenant-right is increasing in the north of Ireland?—I think it is, but it fell during the late agricultural distress.

1116. Is not that precisely equivalent to the operation which is taking place in the south in the increase of rent which is offered for land through competition?—It is so.

1117. Then, does that show that the rent payable under the tenant-right is not the fair letting value of the ground, but only an ingredient of the fair letting value of the ground, the full letting value being composed of the rent payable to the landlord and the tenant-right?—I before defined tenant-right to be the difference between the fair letting value and the competition value.

1118. The words of the Act, upon which the poor law valuation is based, are, "The rent at which, one year with another, the same might, in their actual state, be reasonably expected to let at from year to year, the probable annual cost of repairs, insurance, and other expenses, if necessary to maintain the hereditaments in their actual state, and all rates, taxes, and public charges, if any, except tithes, being paid by the tenant." What right would you have, in estimating the fair letting value in the north of Ireland, to deduct from their fair letting value the amount which may have been paid either as a fine or premium for the possession of those lands?—As a question of law, I apprehend the valuator must consider solely the letting value which may be expected to be paid by a solvent tenant from year to year.

1119. Which value would be calculated without reference to the rent actually paid by the tenant, but solely with reference to what might be paid by a fair tenant, who had nothing to pay for the possession of the ground?—I cannot agree to that.

1120. Ought not such value to be calculated according to the strict words of the Act of Parliament upon which the valuation is based, without reference to local custom, and without reference to any sum which may have been paid by the person who entered into the occupation of the land for the use of the land?—Decidedly so.

1121. Then, whether the use of the land had been purchased at 1*l.* or 100*l.*, its actual letting value to the tenant, without reference to the fine, should be the criterion of value?—The criterion of the Act is the rent which may reasonably or probably be expected from a solvent tenant.

1122. No allowance being made for the payment of the fine?—No allowance being made for the payment of the fine.

1123. Then do you still adhere to the opinion, that in ascertaining the fair letting value of land in Ireland, ascertained according to the strict meaning of the Act of Parliament, the rent actually paid by the tenant should be taken as the criterion of the value of those lands, or that the value should be ascertained without reference to local customs connected with the tenant-right?—I apprehend it must depend upon the letting value according to the custom of the country; and if a person was valued upon the net value of land at a higher rent than was the custom of the country, he would have a good right of appeal.

1124. *Mr. Vesey.*] In a district where tenant-right does not exist, is not the rent higher than in a district where it does exist, upon lands of equal value?—Undoubtedly so.

1125. Then in a district where tenant-right does not exist, will not the valuation for the poor law be higher than in the district where it does exist?—I think so.

1126. Then do you not conceive that according to that the poor law valuation will not be uniform in all the districts of Ireland?—I am quite prepared to admit

admit that, but in valuing land for taxation you must construe the Act of Parliament rigidly; and there is no section in the Act which appears to me to contemplate the existence of tenant-right.

E. Senior, Esq.

19 June 1844.

1127. Then under this Act of Parliament do you conceive it will be impossible to have a uniform poor law valuation throughout all parts of Ireland?—So far as tenant-right affects the letting value, to that extent it would disturb the valuation.

1128. Then as tenant-right does affect the letting value, is it not the case that the poor law valuation, under the existing Act, cannot be uniform?—Just as in one part of Ireland the utmost possible competition raises the rent from year to year unreasonably high, so in another part of Ireland, where rents are low, the valuation must follow the custom of the country; in other words, it must correspond with the letting value.

1129. But is it not the case that in districts of Ireland, quite irrespective of competition value, the rents will be higher where tenant-right does not exist than where it does exist?—I should say, under the previous definitions I have given of rent, viz., the proportion of the produce of the soil paid to the landlord, the portion of the landlord is less in the north than in the south.

1130. Suppose a landlord had a property in the south, where tenant-right does not exist, the same landlord having property in the north, where tenant-right does exist, and that his lands upon both properties are let upon the same principle; would not the poor law valuation, according to your former answer, be higher upon the property in the south than it would upon that in the north?—Yes, the poor law valuation depends upon the rent which may probably be expected from a solvent tenant from year to year; and as such rent is lower in the north than in the south, undoubtedly it would be so.

1131. Therefore the poor law valuation will be higher in the south than it will be in the north, upon the same quality of land?—Of course it will.

1132. And therefore under this Act of Parliament the poor law valuation cannot be uniform throughout all parts of Ireland?—It will be uniform to the extent to which rents are uniform, neither more nor less.

1133. And as rents are not uniform, it cannot be uniform?—It cannot be uniform; and it is not, that I am aware of, at all desirable that it should be so in that sense.

1134. *Mr. Colquhoun.*] Do the Committee rightly apprehend your views of tenant-right to be these, that in some cases where competition is intense in the north of Ireland, tenant-right is paid, even though no permanent improvements have been made in the farm; but that the majority of cases being those in which permanent improvements have been made by the tenant, tenant-right may be taken to indicate the repayment of the capital of the outgoing tenant, which has been laid out by him, that sum being repaid by the incoming tenant, and the rent being in such cases lower than those in England, where the rent represents not only the letting value of the soil, but the profit to the landlord of the capital he has laid out in buildings and permanent improvements?—Tenant-right will result from either of two causes; first, low rents with reference to value; second, extensive improvements. If land worth 2*l.* an acre is let for 1*l.* an acre, the difference between the two will be given by the incoming tenant, whether that has been from the original state of the soil, or whether that difference of 1*l.* an acre has been produced by drainage or other agricultural improvements.

1135. In the one of these cases tenant-right is perfectly intelligible; one can understand why, if the value of the soil has been raised from 1*l.* to 2*l.* an acre, by the permanent improvements of the tenant, the tenant should receive, in the shape of tenant-right, the repayment of the capital which he has so invested in the soil; but if he has made no such improvements, why should the landlord in the commencement of the custom of the country, which custom I presume must have had some basis, why should the landlord not ask for his soil, worth 2*l.* an acre, the actual value of 2*l.*?—I am endeavouring to explain to the Committee the custom of tenant-right as I find it; but I can at the same time understand that a certain interest in the soil may have belonged to the tenant at the period of the first colonization under James I.

1136. *Chairman.*] Is it not clear from what you have stated that a certain amount of the value of the land, whether receivable by the landlord or by

E. Senior, Esq.

19 June 1844.

the tenant, will not be subjected to local taxation in the north of Ireland?—Clearly so.

1137. That that portion of the value of the soil which is received by the landlord in the form of increased rent in the south of Ireland will be taxed, while that portion of the value of the soil which exists in the shape of tenant-right in the north will escape taxation?—Certainly, and does escape taxation.

1138. *Mr. Colquhoun.*] But do you know as a matter of fact whether the permanent improvements in the north of Ireland have been made in general by the tenants or by the landlords?—I should say that agricultural improvements have been made almost exclusively by the tenants. There are of course exceptions to that rule. I would mention Sir Robert Ferguson, who has drained very extensively, as an exception.

1139. My question refers rather to past times than to the present; to those times, namely, in which the custom of tenant-right may be supposed to have taken its rise?—I should say universally by the tenants.

1140. May we not infer that whereas in England and Scotland the landlord has generally invested a certain amount of capital in permanent improvements upon his land, and in letting that land receives in the shape of rent that value which is strictly termed rent, as well as the interest for that invested capital, in the north of Ireland, on the other hand, the tenant having advanced the capital, expects and receives his repayment through the medium of what custom terms tenant-right?—That is the theoretical view of the question, but in point of fact there are further exceptions.

1141. That is to say, the custom of the country, being established, subjects to its influence a great number of those cases which ought to be exceptions from such a theory, but which, in fact, fall under the usage of the country?—I do not myself feel at all sure that tenant-right may not have existed previous to almost any improvements beyond the mere mud dwelling of the occupier.

1142. And in such a case, would you not infer that tenant-right, or a payment for the possession of the land, must have sprung from the intense competition for land, leaving parties to pay to the outgoing tenant a sum which should induce him to leave the land in his possession?—I think I can offer a more probable view of the question: the early settlers were stationed in a hostile country, and could only tempt their retainers to come over or to remain by granting permanent advantages in return for the protection they afforded the first chief occupiers. It may, in fact, have been a species of feudal tenure.

1143. But under such a theory, would not the tenant-right be a payment either by the landlord to the tenant, or by the tenant to the landlord, not by one tenant to the other?—It became the custom of the country to exact a very low rent; subsequent competition for land increased the value of that rent, but the landlord did not feel it advisable, or possibly even safe, to increase that rent. We must remember, in considering the question of tenant-right, that the north of Ireland has not been, during all periods, a country in which it would have been safe for a landed proprietor to break through existing customs.

1144. *Chairman.*] If you found in the south of Ireland that in a large district leases had been given a century and half ago to all the tenantry upon the estate, from precisely the same causes which you have stated in respect of the north, the inducement of the settlement of respectable yeomanry upon the estate, would you value such lands at the rents which were payable to the landlord, although those rents would be much below the actual letting value of the land?—I should go, as I before stated, as a mere question of law, simply by the words of the Act of Parliament, viz., the rent which might reasonably have been expected from a solvent tenant from year to year.

1145. *Mr. Vesey.*] Quite irrespective of the present value of the land?—No, on the contrary, I mean closely following the letting value of the land. I mean in the case of a district in which there are old leases, let us assume at 10s. an acre, I should disregard those leases.

1146. *Chairman.*]

1146. *Chairman.*] You would disregard those leases, and value the ground according to the letting value?—Yes.

E. Senior, Esq.

19 June 1844.

1147. Then in the north of Ireland, where the tenant-right may be taken to be equivalent to the possession of a certain interest in the land by the tenant, equivalent to his having a lease, why should you not proceed upon the same basis of valuation, and value the lands there at the actual letting value, as they would let had the tenant no lease or no right of sale?—I am quite prepared to express my opinion that a tenant would have a right of appeal from a valuation constructed upon such a principle, as being contrary to the terms of the Act; the rent only being the test, not a varying custom.

1148. But in the case of the south the rent would be much below the letting value of the ground, and therefore you would neglect the rent?—In the one case it is a payment from year to year, in the other for a term of years.

1149. Still, in the case of the north the payment from year to year is considered by the person who purchases the property as equivalent to a term, or he would not lay out his money?—I have before observed that all purchases of land in the north are regulated upon the principle adopted by the Act of Parliament, and that the purchaser of an estate in the north knows he cannot and dare not raise the rent of his estate to the utmost competition value.

1150. Supposing that a landlord in the north of Ireland is obliged to evict his tenant by a process of law, and that the tenant does not sell his tenant-right or cannot sell his tenant-right, would not the landlord be considered fully at liberty to let his land at a higher rent than the former tenant had paid for it?—He would not; he would allow the outgoing tenant the full value of his tenant-right, deducting the arrears due to him as landlord, and would then relet the land on the same terms as before.

1151. *Lord Courtenay.*] It would not in any case be added to the rent?—It would not.

1152. *Mr. Vesey.*] Would he receive from the incoming tenant the tenant-right he deducted the arrears from?—Yes; in other words, if the tenant had to receive for 10 acres of land 50 *l.* as tenant-right, and he owed to his landlord 30 *l.*, he would be allowed to receive 20 *l.* as the difference due to him.

1153. Then what would be the course the landlord would take with regard to the incoming tenant to whom he would fresh let the land?—He would charge him precisely the same rent as the outgoing tenant paid.

1154. Then would he ask from the incoming tenant the same he had received from the man he had ejected?—He would allow the outgoing tenant to make his own bargain with the incoming tenant, and he would not interpose further than by exercising a veto, if he had any personal objection to the incoming tenant.

1155. Do I understand from you that the landlord does not actually choose the incoming tenant, but it is a bargain between the man who is ejected and the man who is coming in?—Entirely so; the usual form which appears is an advertisement, headed "Farm for Sale," issued by the outgoing tenant who is in want of a purchaser. Under this system, therefore, there are almost no arrears of rent.

1156. *Lord Courtenay.*] That is called "Farm for Sale"?—Yes.

1157-8. Even though the tenant has no lease?—Yes.

Lunæ, 24° die Junii, 1844.

MEMBERS PRESENT.

Viscount Courtenay.
Lord Eliot.
Sir Denham Norreys.

Mr. Shaw.
Mr. Vesey.

VISCOUNT COURTENAY, IN THE CHAIR.

Richard M. Muggeridge, Esq. called in; and Examined.

*R. M. Muggeridge,
Esq.*

24 June 1844.

1159. *Chairman.*] YOU are an Assistant Poor Law Commissioner?—I was till the latter end of last March, but I then resigned to conduct a commission in England, to inquire into the condition of certain classes of the manufacturing population in the midland counties, where I am at present employed.

1160. In what districts were you principally employed, when acting as Assistant Poor Law Commissioner?—At first, I had the counties of Wicklow, part of Dublin, Wexford, Kildare, and Carlow. As the number of Assistant Commissioners was reduced from time to time, I had an addition made to my district, and latterly it included also the counties of Waterford, Kilkenny, Queen's County, part of King's County, and part of the county of Tipperary.

1161. Were you charged with the office of introducing the poor law into that district?—In the first part of the district which I have named, I was.

1162. In the exercise of that office you were of course charged with the arrangements with reference to the valuations?—I was.

1163. Will you state to the Committee what course was adopted by you, and by the Boards of Guardians under your authority, in reference to that subject?—The first point I endeavoured to ascertain in each case was, whether any existing surveys or valuations were in force which could be made available for poor law purposes, but I found none that we could use. There was a local valuation in Kingstown, in one of my unions, which had been made for the commissioners of the harbour there, but it was not thought sufficiently accurate for our purposes to render it worth our while to avail ourselves of it, and in all instances we had new valuations made. I got resolutions from the Board of Guardians in each case, that in their judgment no existing survey or valuation was in force adequate to the purpose.

1164. Will you describe, *seriatim*, the steps which you took?—Those resolutions were usually followed by an order from the Poor Law Commissioners to appoint competent valuers, and the Boards of Guardians in my district uniformly advertised for tenders by a given day, generally three weeks or a month after.

1165. Did the advertisement specify the rate per acre?—It specified that they were to state the rate per 1,000 acres at which they would conduct the valuation, including all rateable hereditaments thereon; there were then usually many tenders, varying from 12 to 20, and in some instances a few more or less. They were sometimes from professional men, and sometimes from farmers and men who had not been professionally employed, but who were generally acquainted with the value of land. I thought such persons hardly came up to the letter, and certainly not up to the spirit of the Act of Parliament, in my own mind; and I tried, as far as possible, only to have really professional persons.

1166. Were you able, in the great majority of cases in your district, to secure the services of such persons?—In every case; they were all professional valuers.

1167. You said, that among the answers which were returned there was a considerable number from persons who were not professional persons; did any case occur in which no answer came from a professional person?—Not in my district; I had always one or more professional persons apply.

1168. Where

1168. Where unprofessional men sent in the lowest tender, how did you manage?—I did not invariably recommend the guardians to take the lowest tender. R. M. Muggeridge,
Esq.

1169. In point of fact, in every case a professional person was employed?—In every case. I should state why I gave the advice not to take the lowest tender. It was because the highest, in my judgment, was always inadequate, and did not give a fair remuneration for properly valuing the unions. The price ranged generally from 20s. the thousand acres, with all the properties on them, up to 50s., neither of which I think an adequate remuneration. 24 June 1844.

1170. Are you aware what is the expense of the townland valuation per acre?—I am not.

1171. Will you proceed to state to the Committee, those persons having been so appointed, what steps were next taken?—The next step was for the valuers usually to appoint persons under them as assistants.

1172. Selected by themselves?—Selected by themselves. In many instances those persons were recommended, and in fact I believe they were usually recommended by the Boards of Guardians as persons possessing local knowledge, and persons in whom they had confidence. I am afraid that instances did occur in which the election of the professional valuator, the head valuator, was in some degree contingent upon his promise to employ A, or B, or C as assistant. I do not consider that the employment of a local assistant is dangerous in principle: it is extremely likely, if he is an honest and an intelligent man, that his local knowledge may be of great use to the valuator. In all cases he was subservient to him.

1173. You apply that observation to those cases in which reason existed for supposing that the election of the head valuator was made contingent upon his subsequent selection of particular assistants?—I have reason to think that that existed in some cases. Again, in the same county I endeavoured, as far as possible, to secure a uniformity of valuation, by recommending strongly that the same professional man should be appointed. In the county of Wexford I succeeded so far as to get the county divided into four unions, and the Boards of three of them to appoint the same person; that was the firm of Neville & Sons in Dublin, formerly the valuers of the Corporation of Dublin, and one of the oldest established firms in Dublin.

1174. Was the whole county of Wexford valued by this firm?—The three unions were, and they have subsequently been appointed revising valuers to the fourth, on my recommendation, so that I hope that that county at least will have a uniformity of valuation.

1175. Have you found in the three unions of Wexford a greater uniformity in their relation to the fair letting value of the country, than would have been the case had different persons been employed?—I think so; and I think that nowhere have I had less complaint than from that county.

1176. Subsequently to the selection of those local assistants, were any fresh instructions issued by the Poor Law Commissioners upon which you were to act?—There was a code, or book of instructions, issued upon valuation and rating, which bears date the 25th March 1840, which was very early in the commencement of our proceedings there. It took a considerable time to form the country into unions, as in my district I made a point of seeing every gentleman of property throughout the county, and learning fully their views. I also ascertained thereby the distribution of property, and got maps of the estates sent me, so that it enabled me to avoid cutting up a gentleman's property in any way. I got it all, unless at a great distance, in the same union, which is always an object with proprietors, and it worked the law better.

1177. Mr. Shaw.] And of course it is much more gratifying to the proprietor of the estate?—Yes; and it gave him more directly the fair influence of property, than if he had a part of his estate in two or three unions.

1178. Chairman.] Within the districts with which you have had experience, have you had reason to suspect the operation of any peculiar influence on the minds of the persons employed, of a nature to affect the general accuracy of the work?—I think the Act itself, to a certain extent, produced that influence.

1179. Influence in what direction do you allude to?—I think the Act of Parliament making the payment of the rate a poundage rate, contingent upon the amount of the value, and then the subsequent proportionate division of that being contingent upon the rental, every tenant felt or thought that he had an interest in getting the holding valued at as low a rate as he could, in order that a greater

R. M. Muggeridge,
Esq.

24 June 1844.

portion of the rate, upon the division of it, might fall upon his landlord. That was brought to bear as far as possible upon the persons engaged in valuing the unions.

1180. *Mr. Shaw.*] You mean to have it low; relatively to the rent?—Below the rent as far as possible. The majority of guardians are of course of the tenant class, the ex-officio guardians forming, as they do, but one-fourth of the Board.

1181. *Chairman.*] Is it your opinion that the natural tendency in the minds of Board of Guardians, of which you now speak, in point of fact did affect the general accuracy of the valuation?—I think so; and I think it would have done so to a much more unfair extent, but for the constant efforts of the Commissioners and the Assistant Commissioners to counteract that influence, by pointing out the strict letter of the law.

1182. What is your opinion as to the general accuracy of the poor law valuation?—I think upon the whole it may be considered better as a valuation than we could have expected, under all the circumstances. In the first place, the valuers were almost in every instance greatly pressed for time; the time allowed to perform the work being inadequate to its efficient and satisfactory performance. We were so placed that we had no funds for any purpose till the rate was made; at that time we had not the Act which subsequently authorized the Boards of Guardians to borrow 200*l.*; we had no funds, and of course there was every reason existing why we should get the valuation made as early as possible, as that was the first step to bring the law into operation. I think another great obstacle to their accuracy was, that in some cases too many of the unions were undertaken by the same person; I know of one instance in which a valuator in Dublin was valuing either nine or eleven unions (I cannot recollect which at this moment) at the same time, and they were in all parts of Ireland, one of the largest of which, in the west of Ireland, was about 400,000 acres; he was engaged in valuing all those unions simultaneously; he must necessarily therefore leave a great deal to others, and the supervision which was exercised in my district could not have been exercised by him in other unions, from his having so many to attend to at the same time.

1183. What relation does the valuation in your district stand in, do you think, to the actual letting value of the properties within that district?—In my district I think it would be, taking the whole, probably from 5 to 15 per cent. below the actual letting value. I think there are some unions that are extremely near the letting value, and I think I might go so far as to say that one or two exceed the rental; one especially, which is the Shillelagh Union, four-fifths of which is the property of one nobleman; he lets his land extremely low, and I know that on his estate the valuation exceeds the rental in many cases.

1184. When you speak of the actual letting value, do you mean the return which would arise from the property if let by tender, or in such a way as to let it up to the highest point?—I speak of the fair letting value of the district; I think there is hardly any price which might not be got for land in Ireland if let to the highest bidder.

1185. *Mr. Shaw.*] When you estimate the valuation at from 5 to 15 per cent. under the fair letting value, do you mean that uniformly, or upon the average?—I mean taking it on the average.

1186. Are there any great inequalities?—I think there are.

1187. Will you point those out to the Committee?—In one union, the Baltin-glass Union, I considered the valuation to be 20 per cent. below the letting value.

1188. Was that general throughout the union, or upon an average taken of the whole?—Upon an average of the whole.

1189. Did it approximate to a fair application to the entire union?—I think it did in that case. In the Carlow Union, which was a very important union, the amount was from 5*s.* to 8*s.* an Irish acre lower than the actual rent.

1190. Was that pretty uniformly the case throughout the union?—Yes, pretty uniformly throughout the union. In the Celbridge Union I find it was equal to the letting value as nearly as could be throughout. In the Enniscorthy Union I considered it to be 10 per cent. below the letting value on the whole, if I except a very large property in the union, held by the trustees of the Earl of Portsmouth, and which I think is so let that the valuation of it was quite equal to the rate at which the property is let.

1191. As to the other parts of the union, you would say that pretty uniformly they were valued at 10 per cent. below the fair letting value?—Yes. The Gorey Union was considered about one-eighth below the ordinary letting value of the land, and the houses in rather a lower proportion. I found that in what are technically called the old takes, the valuation was higher, but that it was lower on the recent ones.

R. M. Muggeridge,
Esq.

24 June 1844.

1192. Did the old takes constitute any large proportion of the union?—Not a very large proportion.

1193. On the whole, in that union you consider the valuation to be about one-eighth under the fair letting value?—Yes, not more than that.

1194. Is there any other union which you can mention?—The Rathdown is considered nearly equal to the rents throughout, except houses let for the season.

1195. And you consider in that case the rents to be about the fair letting value of the land?—I do.

1196. *Chairman.*] Have you spoken of all the unions within your own experience?—The Rathdrum is 10 to 15 per cent. under the letting value. The Wexford I think not quite so much, but still below, about six per cent. I think.

1197. You have spoken of the unions within your own actual observation; are you able to lay before the Committee any information bearing upon this point in reference to other unions?—Some time ago Government applied to the Commissioners for a return of the different classes of occupiers, in reference to the question of the franchise. They also, in their communication to the Commissioners, requested to know the views entertained, how far the valuations came up to the usual letting value of the lands, and that communication, of course in the ordinary way, was referred to the Assistant Commissioners in charge of the different districts to make their report upon that point, and they appended, usually very briefly, what they considered to be the difference; and thinking it was a matter that would be interesting to the Committee, I this morning looked carefully through the report, and made an analysis of the answers throughout the whole of Ireland. I need not say that it was very hastily prepared, having but a very short time in which to do it, and therefore the information is not so full as I could wish, and perhaps is only valuable as showing the views entertained by the party whose name is subscribed to it. It shows considerable difference in the rates, and a great want of uniformity. (*The Witness delivered in the same.*) *Vide Appendix.*

1198. *Sir D. Norreys.*] Can you state how far the opinions conveyed by the Assistant Commissioners, in the statement which you have given in, correspond with the opinions on the valuations which the Boards of Guardians themselves have printed?—No, I cannot.

1199. In the cases which you have referred to of unions under your charge, have any of the Boards of Guardians given opinions unfavourable to the valuations and contrary to your opinions on the subject?—I only recollect a single instance. Before I expressed any opinion myself, I conferred generally with the valuers, and often with the chairman and some of the practical guardians on the Board, some of the farmers and large proprietors. I do not say but that there would be individual opinions which might be contrary.

1200. *Chairman.*] In reference to the paper which you have handed in, shall you be able so to alter the mode in which it is now drawn up as to place the information which it gives before the Committee in a tabular form?—I could do so in a day or two.

1201. *Sir D. Norreys.*] When you state, that in certain unions the valuations have been from 10 to 15 per cent. below what you call the fair letting value, do you wish the Committee to understand that that is the general average of the valuation of the entire union, or that the valuations have been so well made that every portion of the entire valuation would be an average of from 10 to 15 per cent.?—I am quite sure it is not so; because, as more than one assistant was constantly employed in a union, it would often happen that the care and attention, as well as the skill, of one would be a little greater, probably, than that of others, and though the general rate was kept up, there would be, I am sure, something to disturb the uniformity of there being an unvarying deduction of 10 or 15 per cent.

1202. So that although the average valuation might be from 10 to 15 per cent., parts of that average might vary from 15 to 30 per cent.?—I think hardly so
0.63. much

R. M. Muggeridge, Esq. much as that; for that would be so glaring a discrepancy, that it would have attracted the attention and the correction of the valuator himself, the professional person employed.

24 June 1844.

1203. *Mr. Shaw.*] Have you, in your former answer, specified the cases which you think would be the principal variations?—I have.

1204. *Chairman.*] You have spoken of the fair letting value of the county; will you state in what mode you ascertained that?—What I consider the fair letting value is the value that property generally brings from a solvent respectable tenant, allowing him a fair remuneration for his capital employed, enabling him to live out of the holding, and remunerating him also for the cost of the labour bestowed.

1205. Taking into account anything for superintendence and management?—Yes; I take all those elements into account; and where no complaints are made, and where it is known generally (and it is pretty well understood in Ireland,) that the landlord is letting his lands fairly. I have not taken extreme cases at all.

1206. *Mr. Shaw.*] You consider that, without any reference to the extreme anxiety to obtain land in Ireland?—I do; a great part of my district was differently circumstanced to other parts; the competition is not allowed to be brought into the market. Though the competition exists it is utterly disregarded by a great mass of the landlords. The cases where that is allowed to operate most, are where the landlords have not the direct power.

1207. In coming to your conclusion upon what was the fair letting value, how far did you take into account the rent actually paid in that or the neighbouring district?—I found out what was the sum which good and respectable tenants were paying with satisfaction to good, and fair, and respectable landlords, and when I found that both parties were satisfied, I thought that that was a proper basis to build a fair letting value upon.

1208. Have you any further observations to make upon the way in which the valuations were affected by that provision in the Poor Law Act which divided the burthen of the rate between the landlord and the tenant?—No.

1209. Did it operate to any great extent in the unions that you were conversant with?—Not to a very great extent.

1210. *Chairman.*] What is your view upon the general operation of that provision; has it been beneficial?—I think upon the whole that it is beneficial, but I think it acts unfairly in one respect, with regard to the advance; the full rate is to be paid, and it has now all to be paid by the occupier. There has been no particular season of the year, though we are trying to get Boards of Guardians into one general period, for making the rates; but heretofore we have not been sufficiently advanced to be able to command that, and the consequence has been in some instances, that the rates have been made shortly after the gale day, and there has been a long time that the tenant has had to wait before he could put in his rate receipt as rent. They complain very much of that, and it is considered unfair that they should advance for the landlords; they think that the rich should advance for the poor, and not the poor for the rich; that if any advance is to be made at all, the landlord should advance for the tenant, and not the tenant for the landlord.

1211. Is it within your knowledge that there are cases in which the landlord voluntarily advances for the tenant?—There are; and there are cases in which some have taken the advantage of that portion of the Act which enables them to compound with the Board of Guardians.

1212. That is voluntary on the part of the landlord?—Yes.

1213. *Lord Eliot.*] Do you think that a provision to that effect would be practicable?—I think so, as it is now made so in the case of holdings under 4 *l*.

1214. As far as you have known, has the alteration made by the Legislature been beneficial?—I think extremely so.

1215. *Sir D. Norreys.*] At what time did that Act come into operation?—In August 1843.

1216. At what period did you cease to be connected with the Poor Law Commission?—The 1st of April last.

1217. What opportunity had you, between August 1843 and the 1st of April last, of ascertaining the operation of that Act in any of your unions?—I had not much personal opportunity of course; but I have had a good deal of correspondence on the subject, fully warranting me to make that answer.

1218. Can

1218. Can you refer to any unions in which collections have been completed since that Act came into operation?—No, I cannot, as fully completed. R. M. Muggeridge,
Esq.

1219. *Chairman.*] Suppose the valuations completed, what course has been subsequently taken to amend or revise them?—When the valuations were completed, the Boards of Guardians generally appointed committees for the purpose of revising the valuations by electoral divisions. The valuation itself was, under the law of that day, exposed to public inspection for 21 days; my Boards, and I suppose others also, invited all objections against the valuations, and all errors to be stated in a printed form, and left in the room where the valuation was exposed, and intimated that they would be considered in due course, of which public notice would be given. A great many objections were in many cases sent in, in some more, and in some less, but there were not a great many substantiated. The subject was not considered quite so seriously as it should have been; many sent in objections, only that they might try to get something off if they could, but it was not considered in many cases that there was any very valid ground for the objection. These objections were considered by the committees, with the concurrence of the valuator and his assistants, and in some cases parties were brought forward to show that they had not the quantity of land which they were charged with, or that some other person held part of the land, and then the corrections were made, but they were always made by the valuator, not by the guardians, though of course they recommended and assisted him in making them. When they were made and completed, as far as they could be, a resolution was passed that the Board received and adopted the valuation, as revised and corrected, as that upon which to found the assessment.

24 June 1844.

1220. *Mr. Vesey.*] Have Boards of Guardians in your district generally appointed the original valuator to make those corrections?—Not in all cases.

1221. Can you state any instances in which they have changed them?—In most instances I think they have been changed.

1222. On what grounds have they changed them?—The Poor Law Commissioners are appointing the revisors now; they have taken the power into their own hands.

1223. Before the Poor Law Commissioners had that power, which was granted to them under the Act of last Session, have you known the revising valuator changed?—I have.

1224. On what grounds has it been in those cases which you have known?—I can hardly answer for the grounds on which the Boards have acted.

1225. Have there been any public complaints and dissatisfaction expressed with the mode in which the first valutors had made their valuations?—No doubt there have been in some cases.

1226. Have you known any cases in which the valuator has been changed on those grounds?—I think there are many instances, in which no very loud or general complaint was made, that the feeling of the country was more in favour of a local man; and it was thought that though such a person was not competent to undertake the first valuation, and go through the great labour and business that was required to perfect the valuation of an entire union in a given period, still that the valuation being once made, a local man, practically acquainted with the value of property in the neighbourhood, would do the revision better than a stranger, and that he could be got at less expense. If the original valuator was to be brought from Dublin or from a distance, they feared that they would be liable in some shape or other to pay the expenses; and that was one of the grounds, I think, on which the guardians have chosen local men as valutors.

1227. *Chairman.*] Within your experience were many objections made by the rate-payers or by Boards of Guardians, in relation to the valuation of the property of others as well as of their own?—There were a considerable number; but the principal objections that were made were with reference to their own properties, considering themselves as overvalued; and where the ground upon which the objection was a comparison of the value put upon others, it was oftentimes found that the persons with whom the comparison was made were also complainants, and I think that complaints were often made without any very serious consideration, or any valid ground for making them. A great number of them were disposed of by the Boards of Guardians without any alteration, and in a great many cases the parties did not attend or take any steps to support their objections.

1228. There lies an appeal from the decision of the Board of Guardians upon such a ground?—Yes.

R. M. Muggeridge,
Esq.

24 June 1844.

1229. Have many appeals against the rate been carried into court in your district?—But few.

1230. What was the result of the appeal in the majority of cases, as far as you have followed them?—The result was in all cases I believe to confirm the rate; but in some two or three cases amendments were made in the rate-books, but the rate itself was in no instance quashed.

1231. Mr. *Vesey*.] Did you experience any serious obstacle in the collection of the poor-rate, arising out of the mode of valuation?—The only source of opposition I found in my district at all was in the county of Waterford, in the barony of Gaultier, and there very great complaints were made, not only against the valuation, but against the working of the law, and the law itself.

1232. What complaints were made in respect of the valuation?—As often being unfairly valued, one man in comparison with another.

1233. Were those cases inquired into?—They were.

1234. Were the complaints found to be well-grounded cases of complaint, or not?—In many cases the valuation has been altered subsequently.

1235. Is the existence of those cases attributable to incompetent persons having been employed, or to the adoption of incorrect principles of valuation?—I think to the adoption of incorrect principles, to a great degree.

1236. As to what point?—I was not in charge of the union at the time the valuation was made.

1237. Lord *Eliot*.] Has the dissatisfaction which you have adverted to been removed by the subsequent correction of the inaccuracies of which you have spoken?—The dissatisfaction has been, I hope and believe, in a great degree removed, if not wholly so. My reasons for arriving at that conclusion are, that the Union of Waterford is now quite out of its difficulties. When I first had the charge of it it was in debt to the treasurer upwards of 4,000*l.*, and owing enormous sums to the contractors, and with large arrears of rate uncollected, but subsequently the treasurer and all the contractors have been paid off, with, I believe, a very trifling exception, and a rate adequate to the purposes of the union has been made, and is in the course of collection; and I know considerable pains have been taken to correct the valuation, but whether fully adequate or not I can hardly say.

1238. Sir *D. Norreys*.] Suppose an individual feels himself aggrieved with the amount at which he has been valued, what course is he obliged to adopt to have the grievance remedied?—I would say that he would have no remedy but by appeal against the rate.

1239. Must not that appeal take place after the rate has been struck?—Yes.

1240. Supposing that he be successful in proving his case, that the valuation has been an incorrect one, what course is adopted by the assistant barrister or by the Commissioners?—The assistant barrister would alter the rate-book so far as his holdin gis concerned.]

1241. Does not that alteration take place at a time when it is impossible for any other individual to complain against the amended valuation of the property of the individual who has originally appealed?—It does so.

1242. Suppose it possible that an individual could appeal for some very large portion of a union, and that the result of his appeal would be to reduce the valuation, say 50 per cent., would not that have the effect of disarranging the rate which had been struck?—It would, of course.

1243. Would it not appear to you to be the simpler plan, that there should be an existing valuation which should be made perfect, and should have undergone all the requisite appeal previous to striking the rate, rather than that the appeal should take place after the rate had been struck?—I think it would be an improvement, decidedly.

1244. *Chairman*.] How often are collections made for the poor-rates at present?—There is no fixed time at present; they have been made from time to time as the Boards of Guardians, some from necessity, and some from convenience, have chosen to make them.

1245. Under the instructions of the Poor Law Commissioners, collections should be made twice in the year?—They should be made twice in the year, but that has been found in practice not to be a satisfactory arrangement, and most of the Boards of Guardians are endeavouring to make one rate do for the year; well-regulated Boards of Guardians make that collectable at the period of the year at which the people can best afford to pay it, which is the autumn.

1246. Mr.

1246. Mr. *Vesey*.] Would it be desirable that the period should be fixed by the local Boards, or that the Commissioners should appoint a stated time?—I think it would be much better to appoint a stated time; that the requirements of the union should be ascertained at a particular period, and then the necessary steps taken for making a rate and collecting it after. R. M. Muggeridge,
Esq.
24 June 1844.

1247. Would not you leave with the local Boards the power of altering the time of collecting the rate, and adapting it to the local circumstances of the country?—I should be afraid to leave any discretion in the matter with the Boards of Guardians. I think it would be better that there should be a fixed period within a limited time, say two or three months, and that if necessary a supplemental rate might, under particular circumstances, be allowed to be made.

1248. Do you fix upon the autumn as the time, as being after the harvest?—Yes; I speak of the districts with which I am more immediately connected. I know there, it would be found of great advantage; in fact practically they are obliged to leave the collection till then, though the rate may have been made in February or March.

1249. Would it be practicable in large unions to have the collection only once a year?—It would be difficult in large cities like Dublin or Cork, but hardly so in the rural districts; nor do I see any difficulty even in cities which might not be got over.

1250. The observations which you have made as to the collection for the poor-rates would apply to all collections which are to come from the tenant for whatever purposes they might be made; for instance, collections for the county cess?—I think it would be better that there should be one uniform collection in the year.

1251. Made at one time?—Yes.

1252. Have you turned your thoughts to the question, whether that should be collected by one class of officers?—I think it would be better that it should be collected by one class of officers, as far as practicable. In my own district I have had the collections usually made by the collectors of the county cess, and I found it work better than any other system; but there are sometimes objections entertained to it on the ground that the collector of the county cess being forced to collect his cess by a certain day, he will leave the collection of the poor-rate, for which he is not pressed in the same manner. I know that those collectors are frequently obliged to make considerable advances, owing to there being a fixed period, namely, the assizes, by which they must have completed their collections.

1253. Are there any unions in your district where the poor-rate collectors are not the collectors of the county cess?—Yes, there are some.

1254. Have you found, in those unions, that there is much difficulty in the collection of the rate?—I think I have found about the same as in others.

1255. Have you found that, in the unions where the poor-rate collectors are not the collectors of the county cess, there have been complaints by the rate-payers of the mode of collection?—I have not heard many complaints of the mode of collection, very few in my district.

1256. Were there any unions added to your district previous to your leaving Ireland?—Yes, from time to time, as the number of Assistant Commissioners was reduced. In my district, when I first went to Ireland, I had but 10, but when I left I had 21.

1257. You have stated, that in those unions which you yourself formed the collectors of the county cess were chiefly appointed collectors of the poor-rate?—Yes.

1258. Therefore it is only in those unions which have lately been added to the district that the collectors of the poor-rates are not collectors of the county cess?—Generally so; but in many of those cases even, it was because the collectors of the county cess had given it up. Not considering the remuneration sufficient, they had resigned, and then we were obliged to appoint others; but I never would sanction the appointment of another till the collection had been offered to and refused by the collector of the county cess.

1259. Have you had much opportunity of judging, from your present knowledge, of the effect of becoming acquainted with any dissatisfaction which might have arisen among the rate-payers in those unions where the collectors of the poor-rates are not the collectors of the county cess?—No, I have not.

1260. *Chairman*.] Should you see any difficulties in the way of requiring that the collection of the county cess should be made by the same officer as was employed in collecting the poor-rate?—Not if made at one time.

R. M. Muggerridge,
Esq.

24 June 1844.

1261. Lord *Eliot*.] Would there not be this difficulty, that the collection for the poor-rate is made on an estimate of that which may be required, whereas the county cess is collected for expenses already incurred, and must be collected twice in the year?—I do not think it must be necessarily twice in the year; it must, according to the practice of grand juries in Ireland at present; but I know, or at least have heard, that with many grand juries the greater portion of the presentments are made at one assize, for the sake of their coming due at the time when the people can best pay them; there are many which are, however, now imperative.

1262. Mr. *Vesey*.] You allude to heavy discretionary presentments?—Yes, I allude to heavy discretionary presentments.

1263. *Chairman*.] Have you ever turned your attention to the subject of an uniform valuation, for the purposes of all public assessments?—I consider that it would be very desirable. I do not think the existing valuations, either for the Poor Law or the county cess, are as satisfactory as they might be made, and they are certainly based upon many varied principles in different parts of the country.

1264. Is it your opinion that neither the present townland valuation nor the poor law valuation, as it stands, would in itself form a sufficient basis for such an uniform valuation?—I think they would not; I think the poor law valuation, as such, as existing at present, with the power of correction which the Commissioners have, might be safely left in their hands, but I think if other purposes are to be met, such as the political or municipal franchise, or other expenses are to be paid out of the collection, that it would not be desirable to leave it as it now stands.

1265. Beyond that, will you state anything which occurs to you as a reason why neither of those valuations would form a sufficient basis?—At present, with regard to the county cess particularly, it is so very unequal in its operation.

1266. Mr. *Vesey*.] Has Mr. Griffith's valuation been perfected in any of the counties comprised in your district?—It had not when I left, but in one; they have now commenced in the county of Wicklow; they have paid their first assessments under it in part of that county.

1267. *Chairman*.] You have stated that, in your opinion, it would be practically desirable to have a uniform valuation for all public assessments?—Yes.

1268. As far as you are acquainted with Mr. Griffith's valuation, and with the knowledge you have of the poor law valuation, which, if either, would you take as the basis for such an uniform valuation?—I should not like to say that I gave an unqualified preference to either; I think that both would be very useful as the basis of a general valuation. Mr. Griffith's valuation, if I understand it correctly, is wholly a townland valuation, the total value being governed, in a great degree, by the character of the soil and subsoil, and the situation with reference to markets, and certain fixed prices of produce which are specified in the Act. In the poor law valuation we have an applotment of the whole value among the several occupants; whereas Mr. Griffith has no applotment to make upon the occupiers upon the townland, he only determines the value of the townland itself.

1269. Sir *D. Norreys*.] The question referred to the principle of the two valuations; to which would you give the preference, to a valuation that had relation to certain prices, or to the valuation adopted under the Poor Law Act, of the value suggested by the fair letting value of the district?—I think one would in a certain degree govern the other; I think the fair letting value, as it is called, would be governed by the value shown by Mr. Griffith's mode of valuation. There are many other circumstances which would affect it; but if I were called upon to choose between one and the other I would choose the principle of the poor law valuation, founded on the fair letting value of the property.

1270. If you were to select a basis for a valuation on which taxation should rest, which should you consider the fairest basis for such taxation; the actual letting value of the ground, or what was actually on an average of years paid for the use of it; or its positive value as ascertained solely by the quality of the soil, irrespective of its market value?—I would choose the actual value, on an average of years.

1271. *Chairman*.] Would you admit into such valuation the question of the improbability of the soil, or its capacity supposing it to be so improved?—I would, as an element of value.

24 June 1844.

1272. Do you think it would be practicable to let in the question of the improbability of the soil, not with reference to the present payment, with which of course it would have nothing to do, but payments to be fixed upon future revisions?—I consider that a person determining the value of property must determine how far it is capable of improvement; that is one of the elements which constitutes its value.

1273. Mr. *Vesey*.] In that answer you comprise the capabilities of the soil?—Yes, to that extent.

1274. Do you conceive that the purchaser of a property would merely look to the rent-roll to ascertain the value of that property, or would he look also to the capabilities of the soil?—I think that he would look at the capabilities of the soil, though he would certainly be guided in a great degree by the rent-roll.

1275. Not solely by that?—No, not solely, I should think.

1276. Would he not look at the capabilities of the soil, to see how far improvements might hereafter make the property more valuable?—I think probably so.

1277. Would he in consequence give a higher or a less price, according to the greater or less capabilities of the soil?—I do not know that he would necessarily be called upon to give a higher price for it; that would be departing from its present actual value as far as determinable by the rent-roll.

1278. Do not you think if property was put up for sale, and it was stated that there were great capabilities of the soil in that property, that it would fetch a higher price in the market than if merely the rent-roll was exhibited?—That is a matter of opinion.

1279. Sir *D. Norreys*.] If you were establishing a valuation for local taxation of every kind, whether for county purposes, or poor law purposes, or purposes under the 9th Geo. 4, the improvement of towns, would you leave such a valuation to be made by a local Board, or would you have it made by some independent Board?—I think that it would be essential that it should be made by an independent Board.

1280. Would you recommend that a valuation of this kind should be connected in any way with the poor law system?—I would not.

1281. You would recommend that it should be an independent responsible Board for valuation generally?—I would.

1282. Suppose that a valuation were once established, and that it were satisfactory, how frequently do you conceive that, for poor law purposes, it would be requisite to revise such a valuation, taking for granted that the mere alteration of the names of the occupants could be done by the union authorities?—I think that once in five years would be adequate.

1283. So that all rates struck during those five years should be a poundage on the original valuation?—I think it might be so, if you gave the Board of Guardians, or some poor law authority, the power to make the necessary changes of occupants, and so on, that may have taken place in the time.

1284. Is not your view this, that if a farm of 1,000 acres were valued in the first valuation, and that it was subsequently let to 10 proprietors, each of whom would have 100 acres, still the valuation of 1,000 acres should continue as one valuation till the next revision?—I think it should as regards value.

1285. Mr. *Vesey*.] You are understood to state, that the poor law valuation ought to be according to the fair letting value of the district?—Yes.

1286. In very old leases does the farmer, or the middleman, pay to the head landlord a rent equal to the value of the ground?—No; in many instances nothing like it.

1287. Does the occupier of the ground pay to that middleman more than the value of the ground?—I think he does, in many cases.

1288. Is not the ground generally let on a competition value to the occupier under the middleman?—Yes.

1289. Suppose the land in the whole of the district were held by middlemen of that class where they paid to the head landlord less than the value of the ground, and the occupier paid more than the value of the ground; how would you ascertain in that case the fair letting value?—That I should ascertain by what was the market value of the neighbourhood.

1290. Would the qualities of the soil be taken into account?—In that case I think necessarily so.

1291. Would those qualities be made the chief groundwork of the valuation?—I think they would in so extreme a case.

R. M. Muggeridge,
Esq.

24 June 1844.

1292. Do you think that in the poor law valuation the consideration of the qualities of the soil ought to be thrown overboard entirely?—According to the law at present, we are bound to make the valuation according to what the tenant may be reasonably expected to pay from year to year; the valuers make local inquiries generally, and ascertain what they do pay, and what they might reasonably be expected to pay; but they attach very often different meanings to the word “reasonably” in different parts of the country.

1293. If there was a revision of the law, would you consider it advisable to make any alteration in that respect, with regard to the principle of valuation?—I have not heard the principle of the poor law valuation much complained of, and do not think that it is necessary to make any amendment in it.

1294. *Chairman.*] You have stated that it would be desirable, in case of such an uniform valuation as the latter questions which have been put to you have contemplated, that it should be placed under separate authority; to what extent would you consider local administration desirable?—I should rather guard against local assistance in the matter, if possible. I think that a valuation should be independent of local influences.

1295. Should you consider it necessary, for the sake of procuring information, to employ persons connected with the township?—Any Valuation Board, I consider, would avail itself of local information to some extent, but it would be better to keep it entirely distinct from local influence, much in the manner the present townland valuation is.

1296. *Chairman.*] You have gathered from your examination to-day the principal points to which the attention of the Committee is directed; do any suggestions occur to you upon the general subject?—Not at present.

Jovis, 27^o die Junii, 1844.

MEMBERS PRESENT.

Sir H. W. Barron.
Lord Courtenay.
Lord Eliot.
Mr. F. French.

Lord Jocelyn.
Sir Denham Norreys.
Mr. Shaw.
Mr. Vesey.

SIR DENHAM NORREYS, IN THE CHAIR.

George Coode, Esq. Assistant Secretary to the Poor Law Commissioners, called in; and Examined.

George Coode, Esq.

27 June 1844.

1297. *Chairman.*] WHAT is your profession?—I am a barrister.

1298. Is the legal business of the office generally referred to you as assistant secretary?—Very largely.

1299. Were you at all engaged in drawing up the Act of the 1 & 2 Vict. c. 56, for the relief of the poor in Ireland?—I was engaged on it throughout, having drawn the Bill and settled all the amendments introduced into it during its progress through Parliament.

1300. Have you any recollection of what took place on the subject of the valuation clauses, whether at that time it was considered how far Mr. Griffith's townland valuation could be made applicable to the purposes of the poor law?—Many Irish members were very anxious that Mr. Griffith's valuation, so far at all events as it had been proceeded with in Ireland, should be adopted; many desired that it should be carried into effect throughout Ireland, and used for the purposes of the poor law; others proposed that it should stop where it was, and be used for that portion of Ireland in which it was completed, and that some plan, such as was proposed in the first draft of the Bill, should be adopted for the rest of the country. There were many representations made to the Government by Irish members in favour of using Mr. Griffith's valuation, as far as it had been completed. These proposals were considered very carefully by members of the Government; I recollect the present Lord Monteagle and Lord Morpeth gave a careful

a careful attention to that recommendation, and papers were written upon the subject, and considerable details gone into by those who had charge of the Poor Law Bill; these papers were distributed amongst those who took an interest in the matter, and the final conclusion was, that the principle of the valuation, such as we find it in the Act, should be adopted, and a separate valuation made for the purpose of the rate for the relief of the poor.

George Coode, Esq.

27 June 1844.

1301. How far had the desire to make the principle of the valuation the same in Ireland and in England to do with that determination?—Not at all, at least so far as I can judge. I have heard it occasionally observed, that it is desirable that the law should be the same in both countries; persons agreed very generally that if the circumstances of the two countries were such as to allow of it, the valuations should be as far as possible the same; but I do not think that this consideration operated as a motive at all with the Government; I think they and other members of both Houses of Parliament were decided by a consideration of the comparative advantages of the respective modes of valuation.

1302. By a positive preference?—Yes.

1303. You have had occasion to compare the bases upon which English valuations and Irish valuations for poor law purposes are conducted; do they differ in any respect?—They differ verbally and materially in one respect, namely, that there appears in the definition of the net annual value upon which the rate is to be made in England, to be no authority for making a deduction for landlord's taxes; whereas in Ireland, the foundation of the valuation for the rate is the pure net rent, in which allowance is made for the taxes which are borne by the landlord. There are very few landlord's taxes in Ireland, but a poor-rate was imposed directly upon landlords by an Act of last session, so far as relates to property in the country of less value than 4*l.* a year, and in certain boroughs of less value than 8*l.* a year.

1304. In the general principles upon which the valuation of property should be conducted, do you consider them the same?—I think the intention was that they should be the same, but that there is an unintentional difference caused by the omission in the English definition of some words which should have included landlord's as well as tenant's taxes.

1305. *Mr. Shaw.*] Were those words supplied in the Irish Act; and, if so, will you point out the section?—The words of the 64th section of the Irish Poor Relief Act are sufficient to authorize the deduction of the landlord's taxes; the words are these: "That every rate shall be made upon an estimate of the net annual value of the hereditaments rated; that is to say, of the rent at which, one year with another, the hereditaments might in their actual state be reasonably expected to let from year to year, the probable annual average cost of the repairs, insurance, and other expenses, if any, necessary to maintain the same in their actual state, and all rates, taxes, and public charges, if any, except tithes, being paid by the tenant."

1306. *Chairman.*] Will you read the words of the English Act?—The corresponding words of the English Act (the 6 & 7 Will. 4, c. 96, s. 1) are, "That no rate for the relief of the poor shall be of any force which shall not be made upon an estimate of the net annual value of the several hereditaments rated thereunto, that is to say, of the rent at which the same might reasonably be expected to let from year to year, free from all usual tenant's rates and taxes, and tithe commutation rent-charge, if any, and deducting therefrom the probable average annual cost of repairs; insurance, and other expenses, if any, necessary to maintain them in a state to command such rent."

1307. By that the words, "free from all usual tenant's rates and taxes, and tithe commutation rent-charge, if any," would indicate a different basis of valuation in England and Ireland, inasmuch as in Ireland the value is to be put, placing the usual tenant's rates and taxes upon the tenant; whereas the valuation in England, from those words, would appear to place the tenant's rates and taxes upon the landlord?—There is considerable difficulty experienced in construing the words of the English definition. The words in their strict grammatical connexion import that the hereditament is to be assumed to be let free of the usual tenants rates and taxes, and that the rent obtained under such a letting is to be taken as the net annual value. Now it is clear that the rent which a tenant would pay for a tenement in which he was free from rates and taxes, would be a larger rent than the net rent; and therefore the words of the definition are in direct opposition to the usual sense of the term "net annual value." Acting under the

George Coode, Esq.

27 June 1844.

advice of the law officers of the Crown, the Poor Law Commissioners have adopted a construction more consistent with the obvious sense of the term net annual value and with the apparent purpose of the Act. This construction assumes that the words, "free from all usual tenant's rates and taxes," refer to the rent. It is admitted that this is not the strict grammatical construction, but it is adopted as the only construction by which we can get at what was the apparent intention of the framers of the Act, in attempting to define the words "net annual value." I use the word "apparent," inasmuch as from other parts of the same clause, and other clauses of the Act, it is the only consistent construction which can be put upon the Act; and also the only construction consistent with what I should consider the policy of the Act.

1308. Mr. *Shaw*.] Do any other words in the Act occur to you which favour that interpretation?—The words, "free from all usual tenant's rates and taxes, and tithe commutation charge, if any," evidently include in the same construction the taxes and the tithe rent-charge. Now there is an unquestionable rule of taxation, that no property is to be rated twice over in the same rate. Tithe is by law separately rateable, in the hands of the tithe-owner or lessee. It cannot without express authority be assumed to be the intention of the Act to make the tithe rent-charge rateable also in the value of the land. But unless the value of the tithe rent-charge is deducted from the gross rent of the land, the rate would include the value of the tithe once in the value of the land, and the tithe would be a second time rated separately in the hands of the tithe-owner or lessee.

1309. You are therefore of opinion that any other interpretation of the words than that which you have put upon them would be inconsistent with a sound construction of the Act of Parliament?—Any other construction would introduce a new rule of rating, and a great injustice, by laying the rate upon persons who derive no benefit from the property; for the persons interested in the land would, by adopting the grammatical construction, be taxed in respect of the value of the tithe, which they do not enjoy.

1310. Then, upon the whole, considering those words as well as other portions of the Act, and its general policy, you think the interpretation you have put upon those words is the correct one?—I feel no doubt of it.

1311. *Chairman*.] Have the superior courts pronounced any opinion upon the subject?—Of course they have had questions of rating constantly before them; but they have had no case which would raise this question. In all the cases which have been before the courts in which this matter has been involved, it always appears to have been assumed that the net annual value is the value of the land, with deductions made for the tenant's taxes and for the tithe commutation rent-charge.

1312. Lord *Eliot*.] Is it not reasonable to presume that if any doubt had existed upon the point, the question would have been raised?—I cannot deny that there has been a good deal of doubt as to the effect of that definition; but the subject has not been made as yet a subject of question in the courts of law: and if the doubt was one which could have been maintained with much prospect of success, it is almost certain that some one would have tried it.

1313. *Chairman*.] Then taking that as the practical construction which is put upon this Act, you would say the English and Irish Acts correspond in the principle of valuation they assume?—Yes; and in the details also, with certain exceptions of particular kinds of property in the Irish Poor Relief Act, and with the exception also of the matter I adverted to before, the difficulty as to the deduction of the landlord's taxes.

1314. Is there any description of property which is liable to the poor rates in Ireland which is free from such liability in England, or *vice versa*?—The chief differences are that all timber is liable to the rate in Ireland, and is exempt in England. All mines that have been opened seven years are liable in Ireland, whereas only coal mines are liable in England; also some easements, rights of way and tolls, liable in Ireland, are held by the construction of the courts not to be liable in England. There is nothing liable in England that is not liable in Ireland.

1315. Timber, coal mines, tolls, and turf, I think you say are the subjects of difference?—Turf would be rateable in England; turf is exempted under some circumstances in Ireland, and would be included in the rate in England.

1316. Mr. *Vesey*.] When you state that timber is rateable in Ireland, do you consider that the valuator, in valuing woods, is bound to take into his account the actual

actual value of the timber, or merely to value the ground upon which that timber grows?—He is bound to value the hereditament; that is to say, the land at its present rate of production; what the land would let for to be cultivated as it is cultivated. He has nothing to do with the timber which is upon the land, which is the accumulated property of the landlord, or of the tenant, where the tenant takes the timber: he has nothing to do with the timber as it stands; but only with the productive value of the land at the moment when he makes the valuation.

George Coode, Esq.

27 June 1844.

1317. In England are wood-lands generally exempt from all rates?—All those growths of wood which do not come within the description of “saleable under-wood,” are exempt in England: the statute of Elizabeth included in the description of property made liable to the poor’s rate the words “saleable under-woods,” and it was held the use of the words “saleable underwoods” operated to exempt all kinds of timber and of other woods.

1318. Mr. *Shaw*.] In Ireland if they proposed to value an acre of ground, suppose an acre so covered with timber as to be unprofitable for any other purpose, what value would they put?—The valuator would have to consider what was the accruing value upon that land from year to year. The timber would be improving at a rate which a valuator, who knew his business, would be able to estimate. He would have nothing to do with the timber which had already grown; he would have to consider what would be the growth at the end of the year, and what the tenant would give to have the privilege of taking that growth.

1319. Mr. *French*.] Generally speaking, land under timber in England is much more valuable than land under timber in Ireland?—I do not know.

1320. *Chairman*.] Under the view you have just stated, the timber, supposing the ground planted was worth 10s. an acre at the present time, and the probability was that in 30 years there would be a greater gross amount of value upon that ground, would that be valued without reference to its future value, when the timber became fit for cutting, or would it be valued according to its original value, without reference to the timber?—I think the proper mode of valuing it, under the provisions of the statute, would be to regard only the annual increment of value, and to estimate the value as if the profit could be taken annually, which by properly distributing your cuttings, could easily be done. Then it would be easy to ascertain what a tenant would give as an annual rent for the land. If the cuttings take place at intervals longer than a year, the value of the cuttings must be spread over those intervals, and the division of the value of the cuttings by the number of the years included in the interval, with due allowance for the interest of money foregone in the interval, would give you all the yearly increments of value which form the basis of the valuer’s estimate of the net annual value.

1321. Then the valuer would take into consideration, simply, the value of the timber cut upon the ground, and not the original value of the ground itself?—He would take into consideration the profit that would be derived year by year from that ground, and he would have nothing to do with the original value of the ground, nor the prospective value of the ground. His task would simply be to ascertain what, year by year, is the value of the produce, and what annual rent a tenant would give for the land, without reference to what had been the original state of the land, or to what might at any remote time be the prospective state of the land.

1322. Simply the value of the cuttings of the timber?—Yes, supposing that is the sole produce of the soil.

1323. Mr. *Vesey*.] In order to ascertain the value of the timber, and otherwise what the tenant would give from year to year, would it not be necessary for the valuator to estimate the value of the timber upon that ground?—If you mean by the value of the timber all the timber grown in a succession of years, and at the time of the valuation, with the accumulated property standing upon the ground, I should say not; he has nothing to do with that any more than of any other tenant. He has merely to consider the value of that timber accruing within the year, but not the values which have accrued in a number of previous years. He has only to do with the increase of the year, which a man treating the timber as he might do, cutting, year by year, at proper intervals, such portions as would leave the total value of the property no less than it had usually been; he is to take the accruing value which a tenant might thus derive from the land year by year, and not the accumulated value. The basis of his estimate would, in short, be what a tenant taking the land from year to year would pay for it, and not what a purchaser taking the produce as it stands would give for it.

George Coode, Esq.

27 June 1844.

1324. Mr. Shaw.] I understand, you are supposing the land to be valued in the best possible manner for producing profit, at the same time bearing in mind that it is always to be kept in its original condition in point of value?—Yes; it is always assumed that the tenement is to remain at the end of the year, or the end of the period for which the rate is made, in the condition in which it was found when the rate was made; in other words, the valuator is to assume that the property will continue in the same state in which he finds it when he values it.

1325. The two conditions then would be, that the permanent property could not deteriorate in value, and that the best annual profit could be made from the land?—Yes; assuming that the land is neither to be deteriorated nor improved.

1326. *Chairman.*] Take the case of an osier yard, which must be cut every two years; suppose the valuation made the year after the cutting had taken place, and that the next cutting would not take place until two years afterwards; how, under the terms of the Act, could such an osier yard be rated; having reference to the value at the next rate, or having reference to the value at a future period not within the year?—The words under which the valuer has to act require him to make “an estimate of the net annual value of the several hereditaments rated; that is to say, of the rent at which the same might reasonably be expected to let from year to year.” He has to consider what these tenements would let for, one year with another; therefore he has, as the first part of his task, to average the value of the produce of the land. He would in the case supposed divide the profits coming in once in every two years, and spread that profit over each of those two years, and then say, “what will this land let for from year to year?” The actual state of this osier bed, if let, would be such as to give the whole profits of the crop in two years; and this being ascertained, the valuer has the conditions of his problem before him, from which he can at once estimate what would be the rent which, one year with another, the property might be reasonably expected to let for. It would come very nearly, but not quite, to a division of the value of the crop by two.

1327. How would that definition of the mode in which the valuator is to proceed correspond with the words, that the property is to be valued as in its actual state, at the rent at which it might be reasonably expected to let from year to year?—I see a little difficulty if you suppose the tenant is to be turned out at the end of the year. If it is to be let from year to year, and the tenancy is to expire at the end of the year, of course that osier yard would let for nothing; and on this supposition the valuer or maker of the rate, would have to pass over to the next year, when he would find the year in which the crop would be taken; and then by the supposition he would have to charge the whole of the value of the crop in that particular year. Of course it would come in a series of years to exactly the same thing; for if you construe the words of the Act as requiring it to be assumed that the tenancy will expire at the end of the year, that it is not to be a tenancy from year to year, the tenant holding on until he gets the benefit of the crop, then undoubtedly it would come to this in the case supposed, that the osier bed, producing nothing but osiers, the year it was not cut would let for nothing, and the year it was cut, would let for a rent calculated upon the value of the crop of two years' growth.

1328. In the first part of the answer you have given you anticipate that the valuator is to be allowed to presume a term of years to exist equivalent to the time at which some future profit is to be made?—I cannot say what doctrine the courts would hold upon the subject, but I think they would consider the proper meaning of those words of the Act which refer to the average “rent, one year with another,” to be, not that the tenancy should expire necessarily at the end of the year, but that there should be such a cycle of years supposed as would allow the tenant the benefit of the rotation of crops or the benefit of all the crops which would interlace the one with the other, so that the whole course of cultivation should be gone through according to the usual system of husbandry practised in the place.

1329. Take the case of a crop of liquorice, which may be presumed to be five years in coming to perfection, upon what principle would the valuator be justified in valuing the ground for the first four years of the growth of that crop, under the terms that it is to be valued at the rent at which it might reasonably be expected to let from year to year?—He is bound to look at the whole of that definition, which includes these words: “the rent at which, one year with another, the hereditaments might be expected to let;” and he is to have regard therefore to the fact that

that the rent is one which is to be obtained one year with another, as well as to the fact that it is to be let to a tenant from year to year. Both assumptions must be combined in making his estimate. Then it appears to me to be easy to make a calculation in the case assumed. The rent which would be procured one year with another must be understood, and I think may be reasonably understood, to be the rent which would be got in that mode of cultivation which would allow the tenant to take the entire benefit of that cultivation, he being supposed to reap his crop as well as to plant it and manure it and bring it to perfection; unless all this is assumed he cannot be supposed to be the tenant at all; for, on the assumption that he is not to have the benefit of the cultivation, no man would pay any rent, or become a tenant. Therefore where a crop does not come to perfection within the year, the valuer must suppose that the land will be enjoyed by the tenant, so as to allow him not only to plant or sow and manure, but also to reap. This seems to be the natural time for a valuer to assume as the period over which he is to spread his calculation, so as to get the rent which would be obtained one year with another: he is not entitled to look much more forward than that, but he cannot reasonably look less far forward than that.

George Coode, Esq.

27 June 1844.

1330. Then in making this valuation of a tenement in its actual state, from the rent at which it may be expected to let from year to year, the valuator has not only to consider its value from year to year but has also to presume the certainty of a tenure for, in the case supposed, five years?—He is to assume in that case, as in all others, that the tenant is to take the profits of his cultivation, and out of those profits to pay the rent. If the crop is such as to require the tenant to have it for five years, then it would be necessary, in order to realize the first words of the definition, for us to consider the tenant to be in possession for five years and to take the profits of his crop.

1331. Then you must in that case construe the terms “from year to year” as meaning a tenure for at least five years?—Yes.

1332. Lord *Eliot*.] Or that an allowance would be made to him by the in-coming tenant?—Yes; you cannot assume a tenant will go in for the purpose of bearing all the burthens of the cultivation, and not to take the profits; and you cannot suppose a man will pay a rent out of the tenement but for the benefit he derives from the tenement.

1333. *Chairman*.] Then the value of that ground would depend upon the assumption that the tenant had a certain term?—I do not see any objection to admitting that that would be so.

1334. Lord *Eliot*.] Or a certain interest which he would derive from the supposed advantages which would be made over by him to any in-coming tenant in the event of his ceasing to be the occupier?—Yes; my impression is that we must consider the tenant as having an interest in all that value which accrues to the land during his year of occupation, and that he is somehow or other to be compensated for that. It appears to me, the best term to be used is, that the tenant is to have a right to the whole of the value which has accrued from year to year.

1335. Mr. *Shaw*.] You assume that the land or tenement, whatever it may be, is to be let in the manner best calculated to produce annual profit?—In the manner which will allow the tenant to take the full profit from the land as it is cultivated; the land remaining in the condition in which it is found at the time of the valuation.

1336. And that land, or manufactories, or any other tenements shall be assumed to be let in the manner most calculated to produce annual profit upon a fair letting of the premises?—I should say, in the manner to allow the tenant to take the whole profits accruing during the time of his tenancy. When I say the profit accruing during the time of his tenancy, I do not mean the profit reaped during the time of his tenancy, but strictly the profit accruing; the expansion of the seed in the ground, the addition of the manure, the development of the uses of that manure upon the crop; all those are accruing profits, although the profits are not reaped during that time, and are values which might be purchased from the tenant at any time during the year. I take the words “accruing profits” in the sense of the value acquired in the progress of the time, whether it be a longer or a shorter time, which would be purchaseable; and that the tenant is to have the full benefit of that value. Whether the crop in the interval assumed, has arrived at maturity, and may be reaped, is an indifferent matter; if he find the corn standing, and he would reap it at the expiration of that year’s tenancy, the valuer would be able to estimate the value which had accrued at that time. This would evidently come to

George Coode, Esq.

27 June 1844.

the same thing as considering the tenant entitled to reap the crops. In the latter case, he would continue longer in his tenancy, he would be employing more labour upon it for a longer time, he would be paying rent for a longer time, but he would be entitled to reap his crop at the time when it was mature. It is evidently the same thing, whether we consider him entitled to the value then realized in his crops standing, as at any intermediate time during his tenancy, his tenancy expiring at this moment, or whether we carry the calculation further, and assume his tenancy to expire when his crop is ripened, and when he is to take the value.

1337. *Chairman.*] The questions which have been put to you with reference to whether the value of land let from year to year is the same as the landlord would require by giving a certain term for the use of the land; do you conceive that the valuator in valuing ground, under the terms of the Act, is bound to look to anything more than what the tenant might make by the year, the land being in his actual occupation, and that the valuator has no right to look to what might be made of it if the tenant thought it worth his while to expend money upon the ground in improvements?—I think the valuer has no right at all to consider what might be the rent produced, or the profit obtained by improvements; he has nothing to do with prospective advantages beyond those which appear to result from the present condition of the land.

1338. May not the present value of the land be in some degree affected by the question of the time for which a tenant would have a right to the occupation of that land?—You can affect the present rent by giving the tenant a term, no doubt; but this is not done by affecting the present value of the land, but the greater present rent is obtained because you give the tenant an opportunity of making investments of labour and capital, which shall accumulate, and become more profitable to him than the land would be without that opportunity. Where land is let with such objects and prospects, the landlord receives a greater rent than the present value of the land, because of this prospective advantage to his tenant, and because the rent, as usually arranged, is made an equal rent from year to year. In such a case, in the earlier part of the tenancy, the landlord would be taking a rent somewhat greater than the actual value of the land; but when the tenant had made his investment of capital and labour, and brought the land into a higher productive state, then the landlord would be receiving a rent somewhat less than the net value of the land. But the higher rent in the first year would not be the result of the fact that the value of the land in the first year of the tenancy was increased; but the tenant would be giving to the landlord a higher rent, because of the prospective advantages which he would expect to reap at a future time of his tenancy; and he would be giving, when the land was of less value, a higher rent than it was strictly worth.

1339. So that practically you conceive, under the terms of the Act of Parliament, the valuator is bound not to value the prospective advantages which might be made by the tenant improving the ground, but simply from the land in its present actual state?—Yes; he is only to regard the land in its present actual state. When the land is so improved by the tenant as has been assumed, then the land will become rateable on a higher net annual value. While it continues improving the land will constantly come into the rate to a greater and greater amount; but the valuator will follow the improvements of the land as those improvements are realised, and is not entitled to anticipate those improvements by making his estimate upon the basis of the rent agreed to at the beginning of the term.

1340. The requirements of the Act being that the value of the subject shall be an estimate of the rent which, one year with another, might be expected, which rent should be taken; the rent which a tenant would assume who had no reference to future improvements, but simply to the positive value of the land, or the rent which a tenant would assume who was certain of a term, whatever that might be, and who would upon such a certainty undertake the improvement of the land?—I think it would be the former rent which the valuator should proceed upon, namely, the rent which might be obtained from a tenant who took the land in the condition in which it was, with no expectation of making improvements, but merely enjoying it during his time in the condition in which it was at the commencement of the tenancy, and leaving it in that condition.

1341. *Mr. Shaw.*] You consider no deduction is to be made, from an apprehension on the part of the tenant, arising from the expression "from year to year," that he may be turned out at the end of the year?—No; the assumption is, that

that he is to have the full benefit of his tenure during the year, taking all the profits accruing during that year; and that his tenement is to be taken, maintained, and left in the condition in which it was at the beginning of that year.

George Coode, Esq.

27 June 1844.

1342. *Chairman.*] He is only to have reference to the profits of the ground in its actual position during that year?—The profits derivable during the year from the ground in the actual condition in which he finds it at the time of the valuation.

1343. *Mr. Shaw.*] But must you not assume that he will have a sufficient tenure to realize the full annual profit of the land?—Yes. It is perhaps desirable that I should explain, what may appear inconsistent in the answers I have given to the questions put to me. I have answered those questions with reference to two somewhat different hypotheses, though the result of both appears to me to be the same. The first hypothesis, which I conceive to be the more practical one, was that the valuer, in estimating “the rent at which one year with another the hereditaments might reasonably be expected to let,” should take into his consideration the mode of occupation and cultivation, and if the usual average profits of such occupation and cultivation could not be realised within one year, that he should take into his calculation the whole series of years necessary to enable a tenant to take the benefit of the actual mode of cultivation, and then to divide the whole benefits by the number of the years in that series, by which he would arrive at an average year’s gross value. The second hypothesis was suggested by the questions of the Committee, in which it was assumed that the words of the definition “the rent at which the hereditaments might be reasonably expected to let from year to year,” implied that the tenant was actually to quit his land at the end of the year. Adopting this hypothesis, I then endeavoured to explain how the calculation of the valuer must be made. In doing this, I contend that he must not suppose the tenant to go out at the end of the year, yet going out with the full benefit of his profits accrued up to the time of his going out. This assumption is inconsistent with the legal quality of a tenancy for a year; for in the case of a yearly tenancy, which is by the agreement to expire at the end of the year, the tenant who puts seed into the ground does it at his own peril. Therefore the answer I have been giving in reference to the terms “year by year,” has assumed a state of things inconsistent with a yearly hiring, inasmuch as it assumes that the tenant is to have the full benefit of all the increase of value in the land, by reason of his sowing, planting, and manuring the land during that year. But if you suppose the tenant to have the benefit, whether in the shape of a payment from the in-coming tenant, or in any other way, of the whole profits of his cultivation and improvement of the land during the time of his tenancy, it appears to me to come to precisely the same thing as if you assume he is to hold the land until his crops can be reaped. I have attempted to show the two results would be identical.

1344. *Chairman.*] Does not that answer assume the tenant will have a vested right in the improvements he has made?—A vested right in the profits which have accrued during his tenancy.

1345. *Lord Eliot.*] Would not the valuator be bound to consider the course of husbandry practised; for instance, in many parts of the country a wheat crop can only be produced once in seven years; if the valuator were valuing that land, would it not be his duty to value it as producing a wheat crop every year?—I think he would be bound to have regard to the whole rotation; fallow, unproductive during the year, would be adding a value which would be taken in the wheat crop; in the same manner that green crops would be adding a value to the land which I have assumed should be recognized as the value which a tenant is entitled to make who undertakes to make the outlay, or to forego the profits involved in leaving the land in fallow, or in taking a less profitable crop.

1346. Does then this follow, that in your opinion that farm is not valued as if it were let to a tenant merely from year to year?—Yes; that is what I find inconsistent in using the words “from year to year.”

1347. *Mr. Shaw.*] In practice is there such a thing to be found as a strict yearly tenancy?—I know nothing of the kind as a practice in England; I cannot answer as to the Irish practice.

1348. *Mr. Vesey.*] Is it likely a tenant would take ground and make any improvements upon that ground if he considered that at the end of the year he was likely to lose the ground?—It seems to me universally inconsistent with the objects with which any tenant takes and manures the land.

George Coode, Esq.

27 June 1844.

1349. Mr. Shaw.] Is not the law the same in England as in Ireland, that unless there be a positive agreement that the tenant shall go out at the end of one year, "a tenancy from year to year," means a continuing tenancy, unless there be six months' notice to quit at the same period of the year at which the tenancy began?—Undoubtedly that is the understanding.

1350. The practice generally is, where there is a tenancy from year to year, in that sense, that it continues a long time; quite sufficient to bring out the full value of the ground on a community of years:—A tenancy from year to year in England is so adjusted that the tenant shall not be surprised into a loss of his manure, or labour, or seed, or anything which is in the nature of outlay upon the land.

1351. And that must be assumed in construing the Act of Parliament?—Yes. The other construction assumes a forfeiture by the tenant; that the tenant should forfeit his labour or his expenditure.

1352. Chairman.] Then in point of fact your understanding of the words, "the rent at which the same may reasonably be expected to let from year to year," does not mean the rent which may be reasonably expected from year to year, but for a certain term of years, which shall be consistent with the average rotation of the crops which may be expected to be put into the ground?—I do not think that the valuator is to assume that the tenant is to be surprised at the end of the year into a forfeiture of his labour or capital by the tenancy being put an end to before he can take his crops; but I think that the valuator may assume a yearly tenancy as qualified in my preceding answer, viz. a tenancy which would allow the tenant to take away, or to receive from the in-coming tenant, the whole of the values which have accrued during his tenancy. This appears to me to be the same thing as to say that the valuator is to assume that the tenement is to be let for a term that will allow the tenant to take the full benefit of the mode of cultivation or occupation of the land.

1353. Would not that meaning of the law, supposing that to be the correct one, be more clearly expressed by stating that the valuator was to estimate the subject valued by the rent at which, one year with another, the same might in their actual state be reasonably expected to be let for, if let for some certain term of years sufficient to cover the expenses which under an ordinary average state of cultivation he might probably have to incur?—I think if the definition were modified as suggested, the simple object of the valuator would be somewhat confused by an estimate of all the advantages that are derivable from a farm, besides those of simply taking the crops of the land as the land is found. All those advantages which are of a certain pecuniary value would then come into calculation, and the valuation would involve an estimate of prospective advantages as well as of what may be said to be the mere annual advantages.

1354. But all your previous answers anticipate prospective advantages?—Only such prospective advantages as seem to be the immediate result of the occupation of the land as found in its present state, in its present mode of cultivation. The value would, I contend, have nothing to do with those more remote prospective results involved in the consideration of the uses the tenant would make of the land if he held it for a term of years, with the opportunity to invest more permanently his capital and labour in it, and derive greater profits than are apparently derivable from the land in the state in which it is seen at the moment of the valuation.

1355. But if it were determined to establish a new basis of valuation in Ireland, upon which all taxation should rest, and that the landlord were to bear a certain proportion of the tax in proportion to his interest, should you not consider that the sum which would reasonably be expected to be received by the landlord upon an average of years, should be the amount upon which the taxation should fall?—Yes, if by "an average of years" is meant an average of years during which the occupation and mode of cultivation are to preserve their present character; but not if the term "for an average of years" involves any expectation that the land during that average of years would be improved.

1356. Would not the fair basis be the value which a landlord might reasonably expect to receive from the land, if let in the manner which would be most conducive to his own interest?—I think that would be, first of all, an impossible plan of valuation; it would assume a knowledge, on the part of the valuer, not of the productive power or value of the land as he saw it, but a knowledge of what might be done by a course of improvement, of what was the utmost possible rent of the

best

best possible course of improvement; it would require him to estimate values which are not in existence. George Coode, Esq.

1357. Taking the valuation of the Union of Longford, the valuator states that he generally founded his estimate upon an assumption that the tenant was to have a 21 years' or a 31 years' lease, or for his life; that person presumed that he was valuing according to the terms of the Act of Parliament; in your view of those terms do you think he was justified under that assumption?—I do not.

27 June 1844.

1358. Going to the Bandon Union, the valuator states that the land was to be valued according to what it would let at to a solvent tenant from year to year; and he had thought it ought to be valued lower than if the Act had directed the valuation upon the assumption that the land was to be let upon lease; for a prudent solvent tenant ought not to take land from year to year at all, unless he got a strong inducement at a very low rent, which would make a difference in the valuation of 10 per cent. at least?—There he assumes a liability to loss to the tenant who takes the land year by year, and who may be turned out leaving his crops and other values upon the ground.

1359. Is he correct in his view of the law?—No, I think not; I think he assumed a disadvantage to the tenant in the case of a yearly tenancy, which is not contemplated in the definition of the net annual value.

1360. Mr. Shaw.] And which does not generally arise in practice?—No.

1361. Chairman.] In Clonmel, the valuator says, "the majority of the farms in that county are of between 10 and 50 acres," and in considering the value he considers the tenant as getting a lease, but not for any particular time; do you consider that he followed the terms of the Act of Parliament?—I should consider he proceeded upon the principle I adverted to in my first answers, viz., that he considered the tenant as having it long enough to enjoy all the advantages of cultivating the land in its actual state.

1362. Do you think he was justified in that?—Supposing that he acted upon that principle I think he was justified, for it comes to the same thing as if he had valued it as let from year to year, with a right to the tenant to take all the produce growing, and all the value conferred on the land by his labour and expenditure in the meantime.

1363. Lord Jocelyn.] Do you think he has valued upon the same principle?—I understand him to mean, that he supposed the tenant would have it a sufficient time to take the benefit of all his crops. Assuming this to be his meaning, I think he did right, for what he thus supposed comes to exactly the same thing as a tenancy for one year, with a right at the end of the year to take all the profits which have accrued to the tenant.

1364. Chairman.] In the case of Belfast, the valuator states he adopted as his principle what he considered the fair rent between landlord and tenant, whether from year to year or by lease; would there not be a considerable difference between the two values?—Supposing that he assumes that a tenancy from year to year allows the tenant to take all his profits, then again it comes to the same thing, whether it is supposed that the land is let for a term which allows the tenant to take the profits, or from year to year, with liberty to take the profits.

1365. Lord Jocelyn.] In those cases in which you find the valuation has not been taken upon the right principle, do you think by the Act which was passed last year the Commissioners would be justified in ordering a new valuation?—Certainly, it would be their duty to do so. It would be necessary to show to the Commissioners that that plan of valuation produced a result different from that which they would consider to be a proper valuation. There must be a practical inaccuracy shown in all cases; the mere theoretical irregularity would not justify the Commissioners in causing the expense of a new valuation to be incurred.

1366. But if a practical evil were shown, they would order a new valuation?—If a practical evil were shown they would order a new valuation. If the result were different from what they would expect on a proper valuation. If the result were the same or nearly so, they would not be justified in incurring the expense.

1367. Chairman.] Considering the different views which have been taken by different individuals of the meaning of these terms, if it were considered desirable to establish one general valuation in Ireland, and adopt as the general principle the actual letting value of the land as you have defined it, would you think it safe to leave these terms, as they at present appear in the Poor Law Act, without explanation, or any other term explanatory of that?—I have endeavoured in my

George Coode, Esq.

27 June 1844.

answers to express what was my view of the strict and proper interpretation of those terms. If the result is one which is approved of, then the terms which you find in the Act are by the supposition sufficient to produce that result. On the other hand, if some other result is required, those terms, by the same supposition, are not the terms to be used. I would not undertake to say better terms might not have been found; but it appears to me those terms do justify the construction I have put upon them; justify the making of the estimate in such a way as I have described to be the duty of the valuator.

1368. Lord *Jocelyn*.] You think that is the proper construction?—I think that is the construction the courts would be found to put upon them.

1369. *Chairman*.] Then if the courts would be found to put that construction upon them, how is it the Commissioners would allow a valuation to be conducted as in the Bandon case, where the valuator allows that he has adopted a principle of valuation which reduces the value 10 per cent.?—I am not sure that the valuator acted wrongly in making that valuation as he describes; for it appears to me to be very true that the grant of a lease to a tenant might procure a rent of 10 per cent. more than could be got from a tenant who occupied only from year to year, with a full right to the produce, as I have before described. A lease might enable him not only to keep the land in its present condition, and to derive such profits as are now derived from it, but actually to make improvements, the opportunity to do which might be worth 10 per cent. more. If such were the valuator's view of the advantages of a lease, he was bound to exclude these advantages, and 10 per cent. may on this view have been a proper proportion for the consequent reduction.

1370. Mr. *Shaw*.] Then in the case put you assume a lease would give the power of making improvements, but if the lease only gave the tenant the benefit in length of time of holding, the land remaining at the same value, it would make no difference?—It would make no difference except, indeed, the tenant considered the permanency as a settlement for himself and children.

1371. But if it merely secured him in the possession of the land, the land itself continuing of the same value, then it ought not to alter the value?—It ought not.

1372. *Chairman*.] You assumed in the last answer there are two values of the land, the one the rent from year to year, the other the rent which may be 10 per cent. higher if a lease is given; at which rent do you intend the valutors should value the land for the Poor Law valuation?—I did not admit there were two values of the land; but I have explained that a tenant averaging the values of the land for the entire of any term, would in the beginning give a higher rent than the then present value of the land, in consideration of the advantages a lease afforded him; that the rent then would be at all times during his tenancy a different thing from the value of the land; at the beginning of the tenancy more than the value, and when the investments which he would make in improvements were effected, less than the value. Therefore that there is not at any one moment two different values of the land, but there may be at all times, during the currency of the term, a difference between the actual rent of the land and the actual value of the land.

1373. Is machinery liable to be valued in England?—Fixed machinery is liable to be valued, and gearing and moveable machinery before the alteration in the law which exempts stock in trade was liable also to be valued.

1374. It is not now?—No.

1375. Do you consider, under the present state of the law in England and Ireland, that machinery, the wheels and gearing of a mill, for example, are liable to be rated?—I think only such as would be considered parts of the freehold. The rate being fixed upon the hereditament, all that is not part of the hereditament would be exempt from the tax.

1376. Supposing a valuation should be established in Ireland for all local taxation, would you recommend that such a valuation should be carried on in connexion with the Poor Law Commission, or with the county officials, or that it should be independent of all local influences?—I see no reason for connecting it with the Poor Law Commission, nor with the persons having the expenditure of any particular rate. The value of the property is a thing which would best be ascertained by functionaries who had no other administrative duties whatever to perform.

1377. You would recommend a separate Board for valuation simply?—It seems to me a separate Board for valuation would effect the purpose better, and with less inconvenience

inconvenience perhaps than any other ; but that is a practical question, on which I do not wish to offer an opinion. I see no reason why it should be connected with the Poor Law more than the county cess, or any other tax which is now or may be levied in Ireland.

George Coode, Esq.

27 June 1844.

1378. Supposing that such a valuation were established for all purposes, would you prefer the adoption of Mr. Griffith's townland valuation, or the basis of the Poor Law valuation, of the actual letting value?—Unquestionably such a valuation as forms part of the Poor Law valuation. The townland valuation appears to me to be one which is, in fact, impracticable ; one which is incapable of that easy correction which is necessary to secure the just imposition of a tax ; perfectly unintelligible in the mode of its imposition to all rate-payers, or persons who may be aggrieved by it, as well as false in its theory of obtaining the estimate of the value of the fund which is intended to be the subject of taxation.

Mercurii, 3^o die Julii, 1844.

MEMBERS PRESENT.

Sir W. H. Barron.
Mr. Colquhoun.
Viscount Courtenay.
Lord Eliot.
Sir Edmund Hayes.

Viscount Jocelyn.
Sir Denham Norreys.
Mr. Shaw.
Mr. Vesey.
Mr. Young.

SIR DENHAM NORREYS, IN THE CHAIR.

Edward Gulson, Esq. called in ; and Examined.

1379. *Chairman.*] YOU have been employed under the Poor Law Commission?—I am the senior Assistant Commissioner under the Poor Law Commission. I have been an Assistant Commissioner ever since its first constitution. I was employed in various districts in England, and went over to Ireland with Mr. Nicholls.

E. Gulson, Esq.

3 July 1844.

1380. When you commenced your operations in Ireland, what steps did you take to procure the necessary valuation of the unions?—When we first commenced proceedings, Mr. Nicholls, the Poor Law Commissioner, expressed an anxious desire that the expense should be as small as possible, and consequently that if possible the existing valuations should be made available for the purposes of the Poor Law. Mr. Griffith's valuation was more perfect, or at any rate had been longer in operation in the north of Ireland than elsewhere, and it was to the north that my attention was first directed. We therefore got Mr. Griffith's valuation, and endeavoured to make it available for Poor Law purposes ; but when we came practically to work it out, we found it impossible.

1381. Will you state the nature of the difficulties which you had to encounter in making that valuation available?—In the first place, as I conceive, his valuation is based upon a vicious principle, because he is obliged by his Act to take a certain list of prices of produce, which are annexed to his Act, and having ascertained the productive quality of the soil, these two form the basis or the principle of his valuation. Suppose, therefore, two farms adjoining each other, one in a very good condition, having been carefully attended to and its productive qualities brought out to the greatest advantage, and another farm, (the soil of which is precisely similar to the first named farm), which has been neglected and worn out, he would value them both alike, or nearly so, the productive quality of the soil of both being alike, but inasmuch as upon the Poor Law valuation depends a relative payment between the landlord and the tenant, and the rent of those farms would be exceedingly different, perhaps one double the other, it would be very unjust that the landlord of the one should pay as much as the landlord of the other to the poor rate.

1382. Is the opinion which you have now given formed merely on your own view of Mr. Griffith's instructions, or the Act of Parliament under which he acts,

E. Gulson, Esq.

3 July 1844.

or practically have the guardians who have attempted to use his valuation found the difficulty which you have now stated?—On going into the north, I found Mr. Griffith's valuation was so popular that the guardians generally expressed a great anxiety to avail themselves of it. Though in many instances I had myself become aware of its being impracticable to adopt that valuation, I found the feeling so strong in its favour as to induce me to allow Boards of Guardians (by allowing them, I mean, not putting any impediment in their way) to adopt their own course, being convinced that when they came practically to attempt to carry it out, they must feel its impracticability, and that it was better they should discover that for themselves than do it at my dictation; but in every instance in which Boards of Guardians have attempted to carry it out, they have failed, and have consented to adopt another course.

1383. Do you consider that the failure has arisen from the difficulty which there was of ascertaining the values of individual properties, or from any difference in the relative valuation of properties?—Decidedly; there is a difference in the relative valuation of townlands, as well as that there is no valuation of individual properties.

1384. Was it ascertained that cases such as you have referred to were frequent where lands which practically would be of a very different value as estimated by a Poor Law basis, were estimated at the same value according to Mr. Griffith's basis?—Frequently; then again, if land is used as town parks (and some properties are very valuable in that respect, I could instance property in Dundalk which is of great value from its immediate vicinity to so thriving a town as that), Mr. Griffith, though he values that land higher than other land, does not value it at anything like its real extent of value.

1385. Do you find that the division of the rate between landlord and tenant, in certain varying proportions, has been a source of much difficulty in arriving at satisfactory results as to valuation?—I think that almost all the difficulties which the Poor Law Commissioners have had to encounter as to valuation, may be traced to that source.

1386. What districts of Ireland have been peculiarly under your charge as Assistant Poor Law Commissioner?—The counties of Down, Antrim, Armagh, Monaghan, Louth, a portion of Meath, and more or less, such as taking a view of the general appearance for other Assistant Commissioners, over a considerable portion of the western part of Ireland.

1387. Have you not lately had to do the duties of the Chief Commissioner in Ireland?—I have, and I am still doing so with my colleague, Mr. Power.

1388. For what period?—For the last 15 months.

1389. This situation must have made you more or less acquainted with the valuations over the rest of Ireland?—Certainly.

1390. In so far as you have been able to judge, has this separation of interest between landlord and tenant been the source of the valuations not being entirely satisfactory over the parts of Ireland with which you are not so immediately connected?—Certainly, for this reason; we are pressed on two sides, one by the tenants to get the valuations as low as they possibly can, because the lower they are the less they eventually pay; and we are pressed on the other hand by the landlords, to take care that the valuations are not put down below a fair value in consequence of the pressure of the other parties.

1391. Can you state whether this feeling has had a greater practical result in the south than in the north?—Decidedly it has in the south and west, generally.

1392. To what do you attribute the difference?—To the greater attention paid to the working of the Poor Law by the gentry of the country in the north of Ireland.

1393. Mr. Shaw.] Would you attribute it to the rents in the north of Ireland being nearer the fair letting value of the land?—I am not sufficiently informed of the rents in the south and west of Ireland to be able to state that. I have an impression that such is the case; but it has not come under my own immediate knowledge.

1394. They are better calculated in respect of the fair letting value in the north than in the south and west?—Certainly; I have seldom in the north heard complaints made by tenants of being over rented by any considerable landlord, while in the south and west such complaints have been made to me.

1395. Mr. Vesey.] Have those complaints of being over rented had relation to the head landlord, or to the immediate landlord?—To the immediate landlord.

lord. I conceive that in the south and west lands are much more underlet than they are in the north; the lands are more held from the first landlord without being underlet to middlemen in the north than elsewhere.

1396. *Chairman.*] Practically you have given up all attempts in your valuations now, to use Mr. Griffith's valuation?—We have.

1397. So far as the south of Ireland has been under your observation, do you conceive that the poor law valuations can be taken as indications of the fair value of the tenements contained in the unions?—I think not, as the full fair value.

1398. Have complaints been made to you generally, that the valuations of tenements have been unequal as compared with each other, and not just as relates to the actual value?—Yes, certainly.

1399. Would you go so far as to say that complaints of this kind are general in respect of valuations in the south of Ireland?—No, I think I cannot go that length.

1400. Have you had occasion to act under an Act which passed during the last session, making the Poor Law Commissioners responsible for the valuations?—Yes.

1401. Have you appointed revisers under that Act?—We have.

1402. Have you found any difficulty in procuring persons to act as revisers?—Great difficulty in getting persons in whom we could place sufficient confidence.

1403. Did you desire to obtain the services of professional men?—Practical men more perhaps than professional men. Surveyors we find are not so much accustomed to value as some other men; they are more surveyors than valuers.

1404. *Sir W. H. Barron.*] An Irish surveyor does not occupy the same position as an English surveyor?—No.

1405. *Chairman.*] Have you not had occasion to send persons whose profession is to value land from Dublin?—We have.

1406. Has the result of their revisions been satisfactory?—I think scarcely any of them are finished; I can hardly tell one instance in which they have completed their revision; they are at work now. I can give the Committee a list of unions in which we have appointed the revisers.

1407. *Mr. Shaw.*] Have they made any report to you of the progress of their work?—Some of them have.

1408. *Lord Eliot.*] On whose representation have the revisions been ordered by you?—On the Boards of Guardians complaining that the valuations are unsatisfactory, and that they cannot make another rate upon them, we then appointed revisers.

1409. Have they been made with the general concurrence of the Boards, or of particular members only?—I think the general concurrence of the Board.

1410. *Mr. Colquhoun.*] Who are the practical men, or what class of men are you alluding to as employed generally in the valuation; are they farmers?—The men we have employed are those who have had most experience in valuations; for instance, a man of the name of Morris has been employed in valuing estates largely, and was practically employed in the poor law valuation in the first instance, and is now appointed by us because he did his work in the first instance more satisfactorily than many others.

1411. Had they been employed by parties wishing to purchase property, or landlords wishing to let land?—Yes.

1412. *Mr. Vesey.*] What description of persons have you generally found appointed by the Boards of Guardians as valuers?—In Belfast, they appointed men who have been employed by the Police Commissioners, and by several of the large land proprietors round Belfast to value property. In the next union, that of Lisburn, though anxious to make Mr. Griffith's valuation available if possible, and intending so to do in the first instance, they gave it up and appointed a land valuer of Lord O'Neil to value it. In Lurgan they appointed a man who gains his living by valuing property for landlords, for rental. In Banbridge Union they employed a man who had been employed largely in the tithe valuation; he also valued the Downpatrick Union, the Kilkeel Union, and the Newry Union. In the other unions in the province of Ulster, the valuations have been made by a class of persons similar to those I have mentioned, and the results likewise are very similar.

E. Gulson, Esq.

3 July 1844.

1413. Viscount *Jocelyn*.] Who valued the Dundalk Union?—A farmer of the name of M'Cann.

1414. Accustomed to value land?—I think not, nor did he do it satisfactorily.

1415. Will you state why you think it was not satisfactory in Dundalk?—I think the man was inclined to value property very low, lower than its actual value.

1416. Do you think that he acted from the direction of the Board of Guardians, or upon his own personal views?—I think he acted from his own personal belief and information very much, but at the same time under a considerable pressure, I think, from the Board.

1417. Can you state on the average what you suppose was the amount lower than the actual value at which they valued the union of Dundalk?—I think it varies very much indeed in different parts of the union. In the immediate neighbourhood of Dundalk, where the land as town parks is of as great value as in any part of Ireland in which I have been, I think he did not value it much more than half the actual letting value; while in Carlingford and the poorer portions of the union, I think he valued nearly up to the letting value.

1418. Mr. *Vesey*.] In the case of the Dundalk Union, do you consider that the majority of the guardians were influenced in the appointment of the valuator by the wish to have a rate far below the value of the property?—I think they were.

1419. And that they chose him rather than have such a description of men as you have mentioned as having been appointed in those unions in the North?—I think the man that was appointed was the best man that answered to the advertisement; we had a very bad choice.

1420. Viscount *Jocelyn*.] Were there any objections made against the valuation?—There were.

1421. What was done?—The valuator was directed by me to revise them all carefully, and he did so, and altered them in some instances, and in others he adhered to his original valuation.

1422. Has there been a reviser at Dundalk under the Act?—The same man has revised the union partially since. There has been no other revision.

1423. The Committee may understand that they were satisfied with the last revision?—I think so.

1424. Have you had many complaints similar to those which have been made in the Dundalk Union from the south of Ireland, since you have been in the head office in Dublin?—Yes, many.

1425. Can you state the grounds of those complaints?—No, I cannot; for I was not a party to the first valuations when they were made, and I am not sufficiently acquainted with them.

1426. Have there been in the south of Ireland great contests in the Board of Guardians as to the appointment of valuers?—Certainly.

1427. And have you heard complaints, that valuers in the south have been very often appointed for the purpose of making a partial valuation, instead of valuing according to the real letting value of the land?—Making low valuations.

1428. Have you in the south of Ireland been obliged to appoint revising valuers under the Act of last session?—We have appointed some revisers under that Act.

1429. Have you heard that they have given general satisfaction?—I am not aware of any reviser having been appointed in the south, under the Act of last session, except for a temporary purpose; and I have heard no complaint, as far as their proceedings have gone, for that temporary purpose. But I do not think that their valuations stand after that revision in such a manner as would be satisfactory for future purposes.

1430. Do you conceive that an alteration of the law, giving the appointment to the Commissioners, would give general satisfaction?—I think it would be satisfactory to the landlords, and less so to the tenants who wish to have the valuations low, for the sake of saving their own pockets.

1431. Do you not think that generally to the better class of farmers and people who are living under good landlords it would give more satisfaction?—To that class it would, certainly.

1432. Mr. *Shaw*.] It would lead to a truer valuation?—Yes.

1433. Mr. *Vesey*.] And thereby avoid litigation or appeal?—And avoid litigation and appeal.

1434. *Chairman*.] Are you aware of an Act which passed last session, which required

required the Poor Law Commissioners to have certain valuations, which are called supplemental valuations, made for the purposes of towns under the provisions of the 9th George the 4th?—I am.

E. Gulson, Esq.

3 July 1844.

1435. Can you recollect at what period you first became aware that such duty was required from you?—I have in my hand the proofs sent to the printer by us for the new forms, with the date at which they were returned by him, which is the 8th December 1843. Prior, therefore, to that time we were aware of the necessity for adopting the form to which the question refers.

1436. Have you received complaints from towns under the 9th George the 4th, that they are unable to raise rates for local purposes in consequence of the Poor Law Commissioners not having completed those supplemental valuations?—We have been asked and called upon by parties interested in towns to complete those valuations, to get them done for them, but I do not think that we have had complaints from them, except from the town of Mallow; we had a communication or two from the chairman of the town commissioners, stating that they wanted money and could not get that money till we furnished that supplemental valuation.

1437. Are you aware that in towns subject to that Act, the rates must be levied once in the year on an estimate made in the month of August?—I was aware that it was in some one particular month.

1438. The clause of the Act is as follows: "Be it further enacted, that so soon as conveniently may be after the first day of August in every year, the Commissioners for the time being for the execution of this Act in any city, town corporate, borough, market town, or other town, shall estimate the charges, cost, and expenses of carrying the purposes of the Act into effect during the ensuing year." By the Act of last session the Commissioners so situated are unable to levy a rate except where a supplemental valuation shall have been made by the Poor Law Commissioners in pursuance of the acquirements of the 6th and 7th Victoria, cap. 93; is not that the case?—Yes, it is.

1439. In that town you have referred to, have the Poor Law Commissioners at the present time completed the supplemental valuation?—No, it is not completed; it is promised us this week, but it was not completed when I came from Dublin.

1440. Consequently from August to the 3d of July the commissioners of that town have been prevented from raising funds for local purposes?—They have; I may state that it was not until the 13th of October 1843, that we were applied to by the chairman of the town commissioners of Mallow; this is the first letter we received from him, dated October the 13th.

1441. So that, in October, the necessity for your making the supplemental valuation was pressed upon you, and up to the present time it has not been completed?—It is not completed.

1442. Had not the necessity of a revision of the valuation of the union been previously pressed on your predecessor, Mr. Nicholls, and subsequently on yourself, as commissioner?—Yes, but the subject of the valuations being before Parliament at that time, and knowing that some provisions were contained in the Bill before Parliament relative to the valuations, the Commissioners thought it much best to do as little as possible till the Bill passed, that we might make the valuations in accordance with the new provision rather than with the old.

1443. Can you refer to the date of a letter addressed by you to the town commissioners of Mallow, in which you desire to know the purpose for which the supplemental valuation was required?—It is the 16th of December: "The Commissioners will be glad to be informed in what way the absence of a revision of the valuation affects the proceedings of the town and borough commissioners in reference to the making of a new rate."

1444. At the time you wrote that letter, could you have been aware of the provisions of the 93d chapter of the 6th & 7th Victoria?—We were; and I have in my hand the proofs of the form of the new rate, in which we provided for it, which were printed on the 8th of December, this letter being dated the 16th of December; therefore we were decidedly aware of it; for here are the printer's proofs of the form, providing what we considered to be necessary. We wanted to know whether the town commissioners could furnish any additional information upon the subject; we wanted to know whether their view of the matter coincided with ours; we were just at that time sending out these forms, and we wanted to see if they were perfect for all purposes for which they were required, and therefore we asked them that general question, for the sole purpose

E. Gulson, Esq.

3 July 1844.

of seeing whether we had provided for everything that was necessary. The Commissioners were not consulted in any way in regard to the provisions of that Act. The first that we knew of that provision was, I believe, rather accidental; either Mr. Power, my colleague in Dublin, or myself, saw the Act some time in the month of December, our attention never, up to that time, having been practically called to it; we then saw that the Poor Law Commissioners were required to do as pointed out by the Act, and we at once got out new forms applicable to the purpose. Mallow was the first official application we had on the subject, and before we sent out the forms, we wrote, as I said before, a letter, to ascertain whether their views coincided with ours, and whether we had provided everything which they considered necessary, instead of sending down the form in the first instance.

1445. It appears, then, that no notice was given to you that there was to be any connexion between the Poor Law Act and the Municipal Act?—None.

1446. Are the Committee to understand that the Commissioners in Ireland were not referred to as to the expediency of placing on them the duty of making a valuation which was not to be used for any purpose connected with the Poor Law?—We knew nothing of it whatever till some time after the Act passed in December or November.

1447. What has been the cause which has delayed the completion of that revision which you stated to have taken place?—The valuator or reviser appointed for the duty has, I think, been less energetic than he should have been; he has had other work in hand; and has shown a disposition to attend to that other work rather than to the Mallow valuation. I think that is one of the chief reasons; and we have expostulated with him strongly on the subject. He was absent from Mallow, attending on other business, for six weeks, without our knowledge, and it was only upon receiving a letter from Mallow, complaining of his delay, that we became aware that he was not going on with his work. Another cause of the delay was that we found it necessary to apply to the Solicitor-general for his opinion as to the course which should be adopted by the revisers, in regard to the separate valuations, what he deemed to be a separate valuation; whether a house should include a house and garden, or whether the house and garden should be valued separately. That occupied some time; I have his opinion here.

1448. By the Act of last session the Commissioners were required to draw out new forms of rates?—Yes.

1449. Have you a copy of the form which was drawn out in consequence of that requisition?—I have. (*The Witness produced the forms 1 V. and 2 V.*)

1450. Have you had great difficulties in respect of any other town in which the 9th of George the 4th is in operation?—No.

1451. How can you account for this, inasmuch as other towns must be similarly circumstanced with Mallow, as they must make their rates at the same periods, and could only make them on a valuation which had been revised since the passing of the Act of last session?—At Trim we were asked for a separate valuation, and it has been supplied by the revisers; but as far as my recollection will serve me, I doubt if we have been asked for it elsewhere, and from the circumstance of its being within my knowledge that the clerks of some of the unions have been asked for the valuations as they stand without any revision; I am inclined to think that in many instances they are still making rates upon the old valuation.

1452. Inasmuch as they can only legally strike a rate upon a valuation which has a separate valuation of houses, and inasmuch as that separate valuation of houses did not exist prior to the passing of the Act of last session, how can rates have been levied in those forms without a valuation made by the consent or under the superintendence of the Commissioners?—We do not know when the rates are required in those towns, or in what towns they are required, unless we are applied to for the separate valuation pointed out by that Act. Wherever we have been applied to for the purpose, we have taken the necessary measures for procuring a separate valuation; and where we have not been applied to we have done nothing.

1453. Do you not, under the 18th clause of the Act of the 6th and 7th Victoria, cap. 93, consider that the Commissioners are directed to cause such separate valuations to be made in every town, under the 9th of George the 4th, whether they have been applied to or not for the purpose?—We have no means of knowing whether

3 July 1844.

whether rates are wanted at all, except by application from the parties; we have no means of knowing what towns are under the 9th of George the 4th. We have no means of knowing where the Act is in operation and where it is not, or whether rates are wanted; we therefore have done nothing except in those places from which we have been applied to; we presume that inasmuch as no rates can be levied except where a separate valuation is made, no rate is wanted.

1454. Mr. Colquhoun.] Do the Committee rightly apprehend your meaning to be, that neither in the Act of the 9th of George 4th, nor the 6th & 7th of Victoria, is there a specification of the towns which are to be rated, and that consequently you must wait to ascertain what towns require a rate for any local purposes by the application from such towns to yourselves?—Precisely so, we have no other means of knowing it.

1455. *Chairman.*] In the forms that you have given in, there are columns for landlords' repairs and insurance; have those been inserted in consequence of the latter part of clause 10 of the 92d chapter of the Act of Victoria, that "in any town to which a charter of incorporation may under the Municipal Corporation Act be granted, the rate book shall, in addition to any other necessary particulars, contain an account of the estimated net annual value of such rateable hereditaments, and an estimate of the probable annual average cost of the landlord's repairs, and landlord's insurance?"—They have been inserted in consequence of that provision.

1456. Can you give in a list of the unions which have been required to make out their rates with those columns?—I can. (*The same was delivered in.*)

1457. Have you had an opportunity of knowing whether any difficulty has been encountered in ascertaining what is meant by the term "landlord's repairs" and "landlord's insurance"?—Decidedly so; great difficulty has been experienced.

1458. Has it been represented to you that it is not the custom in Ireland for landlords to insure, and that it very rarely happens that landlords undertake the repairs of premises?—Certainly it is not the custom; all my experience proves that it is not; it may be done in such a place as Dublin occasionally, but it is not the general practice.

1459. What was the reason of your inserting in the form V 2, a column for a charge which you admit not to exist?—By the 6th & 7th of Victoria, c. 92, sec. 10, the column is required for the boroughs named in the Municipal Act, and also the words of the Act are for "any other town in which a charter of incorporation may under the said Act be granted, the rate book shall in addition to all other necessary particulars, contain an account of the estimated net annual value of such rateable hereditaments, and an estimate of the probable annual average cost of the landlord's repairs and landlord's insurance."

1460. By reference to the Municipal Act, 3d & 4th Victoria, c. 108, it appears that you consider this column necessary in certain towns mentioned in the schedules to the Act annexed, and also to such towns as by the last census appear to contain a population exceeding the number of 3,000?—Yes.

1461. So that the necessity for those columns has been extended to all unions which contain a town which shall appear by the last census to contain a population over 3,000, whether a charter of incorporation shall have been applied for on account of those towns or otherwise?—Exactly so; we provided the form to them all, in case it should be wanted.

1462. Will you produce a list of those unions which you required to make their rates according to the form V 2, namely, to have the landlord's repair and insurance?—I will. (*The Witness produced the same.*)

1463. Taking any union in the list produced, when you have required them to fill up the landlord's repairs and insurance, to what extent do you require that those columns shall be filled up, to the whole union or to any particular division or district of it?—We have not required them to make it up over any particular extent, excepting where it has actually been wanted, for it would be difficult to define any boundary in which it might be required at a future period.

1464. Is a rate a legal rate unless it be filled up according to the orders of the Commissioners?—No.

1465. Have not the Commissioners issued orders in respect of every separate union?—They have.

1466. In these districts in which there is no corporation, but in which, having

E. Gulson, Esq.

3 July 1844.

a town of 3,000 inhabitants, they have considered it requisite to order that the rate columns shall be filled up according to form V 2, with landlord's repairs and insurance, and separate valuations, to what extent do you consider it imperative on the guardians to fill up those columns; whether on the entire union, or to any extent around the town which may have been the cause of the necessity of this column being inserted?—We have only required the guardians to make up that landlord's repairs and insurance column in the cases in which it is practically wanted, not where it may be wanted. Where the town has no charter of incorporation, though we have issued a form, so that it may be made use of in case of its being wanted at any future period, we have so framed our order as that if the rate is made without it, it will be legal, except in instances where the charter of incorporation exists.

1467. Take the case of the union of Mallow; have not you required that the landlord's and tenant's column shall be filled up there?—I have in my hand the order to the revising valuator, and this points out what his duty shall be, and it has the two forms in it. It contains this direction: "We hereby order and direct that the valuation of the hereditaments aforesaid shall be set forth, revised, and corrected as aforesaid, in the forms V 1 and V 2, to this order respectively annexed; and to this end, the said Edward Vaughan shall separately value all property in the said union liable to the payment of any rate or assessment under the provisions of the statute 9 Geo. 4, c. 82, and which is or shall be by law exempted from the rate, or not rateable to, or which shall not be included in the rate for the relief of the poor in the union; and in the case of dwelling houses valued together with other property, the said Edward Vaughan shall separately value all or any such property and dwelling houses." He is to use these forms, including that column for the landlord's repairs and insurance, just where it is practically required.

1468. Is the Committee to understand that the reviser has the discretion of defining to what district this landlord's and tenant's column shall refer?—The reviser and the Board of Guardians together, certainly.

1469. In the case under consideration there is no corporation?—No.

1470. The necessity for the landlord's and tenant's column has arisen from the fact of the town having 3,000 inhabitants, and therefore under the Municipal Act capable of requiring a charter of incorporation?—Yes, if it is done at all it has arisen from that; but we hold that it is not necessary to do it till that shall occur.

1471. Till the charter shall be granted?—No, I will not say till the charter shall be granted; it is impossible that at any fixed period you should say what town it might be necessary to apply this provision to.

1472. Perhaps you would desire to stop this branch of the examination till you have other documents before you?—If the Committee pleases.

1473. Can you state whether appeals against the rate have been very general?—Very few.

1474. No appeal can take place against the valuation simply; must it not be against the rate?—Yes.

1475. Do you not consider that it would be a more convenient course if the valuation were first rendered perfect by allowing all appeals which could be made against it to be made, and that the valuation should be put into perfect order before the rate was struck?—I think that might interpose so much delay as to cause the unions to get into debt while it was going on; we generally find the moment the valuation is made, the guardians want a rate upon it, while if you had to wait for that inspection, and the appeals upon it, the unions would be bankrupt in the meantime.

1476. Mr. *Vesey*.] How long would they have to wait previous to the appeal being made?—They might have to wait four months.

1477. Would much inconvenience arise during those four months?—Very much.

1478. When one rate was struck, why could they not make their new valuations immediately, so as to have it all prepared previous to the new rates?—Because changes of occupation are so constant in Ireland that the valuation, if made long before the time at which the rate was struck, would become in fact less perfect than it would be if the rate was made upon it immediately.

1479. At what time would you recommend the rate to be struck?—It should be struck twice a year; when I say that, I mean under the Commissioners' orders

3 July 1844.

as they stand; my experience leads me to think that it would be much better to have but one rate in the year.

1480. In case of there being only one rate in the year, do not you conceive if a valuation could be made so many months previous to the rate being struck, that the valuation appealed against might be made complete previous to the rate being struck?—I think it might be subject to change of occupation; there would be considerable change of occupation even during those four months.

1481. Has not the difficulty been diminished by the Act of last session, which provided for the rating of the immediate lessors of the property under 4 *l.* and 8 *l.* instead of the occupiers as before?—It has.

1482. At what period of the year would you recommend that to be struck?—I should recommend it to be struck so that it might be collected during the months of November, December, and January. In some unions under my charge I have advised the Boards of Guardians to try the experiment, and they have tried it with the greatest success.

1483. Suppose the valuation were a good and perfect one, would not the revision take a very short time in making?—If it was a good valuation previously to its revision, it would take but a short time.

1484. Where were one of the appeals tried?—At the quarter sessions, before the assistant barrister.

1485. Are you aware that they should be held in the month of October?—Yes.

1486. If a revision was ordered in the month of August, could not the appeals be tried against that revision in the ensuing session of October?—Yes, I think it might, if the revision had been completed by that time.

1487. And therefore could not those appeals be settled previous to the striking of the rate in the month of November, as you proposed?—Yes, they might; but at the same time, I do not see any great advantage in so doing, because if a man appeals against a rate, the quarter sessions has the power of altering and adjusting just the same as if he appealed against the valuation. If he has paid too much, the quarter sessions have the power of ordering it to be paid back again.

1488. *Chairman.*] In case of any alteration when the rate has been struck, do not you alter the relative amount of payment which each district has to make?—If the rate amounted to the precise sum required, that would be correct; but there is always a running account with the union.

1489. Is not the rate so much in the pound separately on each electoral district?—As nearly as it can be ascertained.

1490. So that in the case of a successful appeal of an electoral division, the result will be to alter the amount of rate which should be levied upon that electoral division?—I do not think the result in any appeal would alter the poundage rate upon the electoral division.

1491. Supposing a 500 *l.* rate were required from an electoral division which was valued at 10,000 *l.*, and that on appeal the valuation should be diminished one-tenth, the rate struck being a poundage on the valuation, the amount which could be levied from that valuation would be one-tenth less than the sum its expenses were calculated to amount to till the next rate?—Yes.

1492. Consequently the other electoral divisions would have to defray those expenses till the next rate to that extent?—That does not follow, unless the whole sum was certain to be wanted; 500 *l.* is but an estimate, it may be a little more or a little less.

1493. It is an actual estimate or a fair estimate of what the expenses will be?—As near as they can be ascertained. Suppose the rate to be a tenpenny rate for a year, you strike off a halfpenny in the pound, and you have ninepence halfpenny instead of tenpence in the pound, and this will be a close approximation to the estimate.

1494. Would not the simpler plan be to have the valuation made perfect before the rate was struck, and not to render the rate liable to be subsequently disturbed?—I do not think so. In forming any estimate of the expense of any electoral division, you do not, and cannot, come within so precise a limit as that an appeal should alter materially the proportion of the whole union expenses on balancing the half-year's accounts.

1495. *Mr. Vesey.*] Has not the present system of charging the whole on electoral divisions, instead of the union at large, made a great inequality and confusion in the rates?—Certainly an inequality.

E. Gulson, Esq.

3 July 1844.

1496. There being that present inequality in the rates, does not a greater inconvenience arise in the appeal against the rates instead of against the valuation?—I do not see any inconvenience arising from the inequality of the rate. I do not think more inconvenience arises in that respect, where rates are unequal, than where they are equal.

1497. Does it not lead one electoral division to appeal against the rate of another, where that would not be the case if the rates were more equal?—I think not. I have never seen an instance of that; the only appeals of which I am aware have arisen from causes which would have operated to create an appeal had the rate been general.

1498. *Chairman.*] Are there not causes of appeal against a rate connected with the valuation, which may be the cause of the rate itself being quashed?—Certainly an appeal may cause a rate to be quashed.

1499. May not an appeal take place against the valuation generally, as being unequal and unfair?—Certainly.

1500. Would it not be the more intelligible course to have the valuation made perfect before you struck your rate?—I do not think that follows.

1501. Is not your rate struck because you want money for the general purposes of the union?—Yes.

1502. Wanting that money, the sums placed on a valuation which is liable to be quashed on account of the fault of the valuation itself?—Yes, but we can go on collecting the rate whatever appeals are lodged against it, both from the parties appealing as well as from others, and they are just as much bound to pay as if they had not appealed.

1503. Would not such a course be likely to create great confusion in the union?—No.

1504. *Lord Eliot.*] If the appeal is successful, is an abatement made in the rate?—The same result ensues to the appellant whether he has paid the rate previously to the appeal or not, inasmuch as if he has paid too much, a remission is made of the overcharge.

1505. The knowledge that this would be the case, tends to reconcile the ratepayer in the interval to the demand for the payment of the sum assessed upon him?—Certainly, and the law in Ireland is precisely similar to the law in England in this respect.

1506. *Chairman.*] What advantage do you attribute to the connexion between the rate and the valuation, and why do you prefer that the rate should be struck upon the rate, which may turn out to be made upon an incorrect valuation, rather than that the valuation should first be made complete, and then the rate struck upon that?—By the Poor Law Relief Act as first passed, the valuations were laid open to inspection a certain period previous to the time at which a rate could be made upon them. That inspection gave rise to numerous objections against the valuation, and the rate was thereby so much impeded as to create the greatest inconvenience.

1507. *Mr. Vesey.*] Have you ever considered the question of having one general valuation for all purposes of local taxation throughout Ireland?—I have, very carefully.

1508. Will you state to the Committee in what mode you would have that valuation carried on?—I think it would be for the general interest that there should be one general valuation for all purposes of local taxation in Ireland; that such valuation should be based upon the same principle as that upon which the poor law valuation is based at present, the actual fair letting value; and I think that the valuation should be made by some independent authority, whereby uniformity would be much more certain than if made in any other way.

1509. Would you have that central Board quite independent of all local influence, whether of the Poor Law Guardians or the county authorities?—Most decidedly so.

1510. You consider that that would create greater uniformity of operation throughout Ireland?—Certainly; and create much more general satisfaction with regard to the valuation than in any other way: and inasmuch as such valuation would be applied to poor law purposes, to county purposes, and to political purposes, any independent authority I conceive must give more general satisfaction to all parties concerned, than if the valuation were entrusted to persons interested or biassed in either the one or the other of the matters to which the valuation was to be applied.

1511. You

1511. You stated that you would base that valuation upon the principle adopted in the Poor Law Act?—Yes.

1512. Will you not take into account any of the principles laid down by Mr. Griffith?—I would not.

1513. Will you state why?—I think the principle a vicious one; I think that the principle of a fixed list of prices of produce, together with the productive quality of the soil, never can be made applicable to a relative payment, like that of the poor rate, between landlord and tenant.

1514. Would there be as general an uniformity throughout the country by basing a valuation upon the principle laid down by the Poor Law, as on that laid down by Mr. Griffith?—I think there would if it were done by persons competent to the duty, and whose sole time and attention were occupied in it.

1515. Do you conceive such a principle of valuation would give more general satisfaction throughout the country, than the mode adopted under the late Poor Law Act, whereby each Board of Guardians had the power of adopting its own valuator?—Infinitely so; I think that any valuation made under the control or superintendence of the parties interested in that valuation must necessarily create dissatisfaction rather than satisfaction.

1516. In taking away the appointment of valuers from the Boards of Guardians, should you not remove a great source of dissension?—Decidedly, because the Boards of Guardians being composed of two classes, landlords and tenants, whose interests are opposed to each other as regards the valuation, dissension must necessarily ensue.

1517. Have you practically found that such dissension has ensued?—Certainly, in numberless instances.

1518. Do not you conceive that having removed that source of dissension, the Boards of Guardians are more likely to carry the object of the poor law into effect, by cordially drawing together, and giving due effect to the law, with regard to the relief of the poor?—I think nothing would tend so much to the cordial and the well working of the poor law, as taking the valuations out of the hands of the Boards of Guardians and the Poor Law Commissioners.

1519. Would you make that valuation simultaneously through the whole of Ireland, or would you only do so on requisition from various Boards of Guardians?—I would do it certainly not at once, but I would have it done as quickly as it could be done, beginning where the Boards of Guardians most wished it, and going on gradually till the whole was done. Suppose a Board of Guardians did not wish it at all, that would be no reason for its not being done. Of course the valuation should be made in all cases, and throughout Ireland.

1520. Would you have the expense of that revision laid upon the different unions?—Yes. I am led to believe by Mr. Griffith, in consultations I have had with him, that the expense would be very moderate.

1521. Why do you consider that it would be moderate?—Because Mr. Griffith tells me that in effecting his county valuation, he has collected such information and such materials (which he is now in possession of) as would enable him to apply the poor law principle of valuation at a very small expense, and therefore it would be moderate where the county valuation was effected.

1522. In cases where the townland valuation has not been completed, do you consider then that it would be more moderate?—Of course it would cost much more than where that is completed.

1523. Would it be more moderate than the valuation as carried on by valuers appointed by Boards of Guardians?—I think where the townland valuation is not completed, you might get a general valuation for all purposes at a less rate than you can get a valuation for county purposes, and a valuation for poor law purposes less than the combined expense of the two separate valuations.

1524. In those cases would you charge the expense of the valuation to the unions or to the counties?—I do not think it would make any difference which way it was done. I do not see where the difference would arise, as the same parties would pay in either case.

1525. Is the principle of a local payment or a general payment the better?—The more general the payment was made the better.

1526. *Chairman.*] You have recommended that there should be a Board of valuation, separate from the Poor Law Commissioners, and also from any local connexion?—Certainly.

E. Gulson, Esq.

3 July 1844.

E. Gulson, Esq.

3 July 1844.

1527. You would place in this Board the responsibility of keeping the valuation up to its proper state, as well as making it?—I would.

1528. It would be a Board constantly in operation?—Certainly.

1529. You have stated that you would revise the valuations once every three years?—I think so.

1530. You would place the revision in this Board?—Decidedly.

1531. Would there not be a certain intermediate revision of occupants required, and could that be left to Boards of Guardians?—I think, instead of permitting the Boards to have anything to do with it, the better way would be to recover the rate from whoever was upon the premises; you would thereby avoid allowing the Boards of Guardians to touch the valuations at all. I should prefer a provision enabling you to levy the rate, notwithstanding the change of occupation, from any person who occupied any portion of the property, and let him settle it with the others who might have an interest in part of the same property.

1532. In connexion with other measures founded upon the poor law valuation, such as the franchise, if you left the rate unchangeable for three years, would not the inconvenience follow that no person who came in at the commencement of a term could have his name entered in the rate-book so as to substantiate his claim to registration till the new revision had taken place?—That would be a very important reason for keeping it out of the hands of the Board of Guardians.

1533. With what view should the revision be confined for three years?—I should think that provision might be made in any Act of Parliament regulating the Parliamentary franchise, which would better provide for such a contingency than that of revising the valuation oftener than three years. Instead of an intermediate revision it would be better to have a provision that any man should be allowed to prove that he had been in occupation of any property upon the rate-book for any given time you please during the three years.

1534. *Mr. Vesey.*] How does the revision take place in England?—By the overseer of the parish in regard to the Parliamentary franchise.

1535. *Lord Eliot.*] In England occupiers have not the same interest in making the valuation low which they have in Ireland?—Decidedly not.

1536. So far as the rate-payers of a particular union are concerned, it is a matter of indifference whether the valuation be high or low?—So far as the particular rate-payers of any parish in England are concerned, for the general expenses of the union are regulated by a certain scale which the Commissioners lay down. They are regulated by a certain average of the three last years' expenditure, and so long as the valuation is a relative valuation between occupier and occupier in a parish, no injury is done. There is in fact no inducement; they have no interest in reducing the amount of the valuation.

1537. *Chairman.*] In the same way, suppose property should fall out of lease shortly after the general revision, and that from having one occupant it should become divided into ten, you would recommend that the rates which should be struck between the last valuation and the next valuation should still remain to be struck as for that one occupant, and levied as for that one occupant, however many may have had possession of it?—I would, as the least inconvenience of the two. I do not think it is a perfect way, but we cannot expect to arrive at perfection.

1538. You would propose that all county taxation, as well as poor law taxation, should be levied according to this valuation?—Certainly.

1539. Are you aware that there is much property subject to poor rate which is not subject to county cess?—Certainly.

1540. Have you heard complaints made in Ireland of this difference of liability of property?—I have heard dissatisfaction expressed.

1541. Is it your impression that it would give satisfaction in Ireland that all property should be made equally liable to the payment of all taxation?—I think so. I think it a great anomaly that it should be otherwise.

1542. With respect to that principle which was introduced into Ireland, by the poor law throwing a certain portion of the taxation upon the landlord and a certain portion on the occupier, according to their supposed respective interests in the land, have you had reason to suppose that the extension of that principle to county taxation would give satisfaction?—I think that to the majority it would give satisfaction. I think that those who would have to pay more than they

they have to pay at present would not be so well satisfied; but at the same time, I think it would be for the general interest that the same principle of payment should be applied to county cess as to poor rate. It has been pressed upon me to a great extent ever since I have been in Ireland, that the payment of county cess ought to be apportioned between landlord and tenant upon the same principle as the payment of the poor rate.

1543. Have you read so much of the last Report of the Poor Law Commissioners as relates to Ireland?—I was a party to its preparation.

1544. Will you refer to the recommendations which are made in the following paragraphs. “The course which we consider might be pursued for this purpose is the following: After the selection of a proper valuator of a union requiring revaluation, we would furnish him with the valuation of the several townlands in the union, as made by Mr. Griffith. He would then be required to survey the several townlands for the purpose of considering what addition, if any, it might be right to make to the total valuation of the property valued therein by Mr. Griffith, in order to bring that total to the net annual value under the Irish Poor Relief Act. To this ascertained amount he must add the value of the rateable property not included in Mr. Griffith’s valuation; and he must also add or deduct, as the case may be, what in his judgment is proper, in respect of every other consideration which may occur to him, and which might give just ground for a departure from the total value assigned to each townland by Mr. Griffith. At this stage of the proceedings the valuator employed would be required to report to us the total value he had assigned to each townland, and to account in his report for every departure from Mr. Griffith’s valuation; and before proceeding in the applotment of the townland valuation upon the several occupiers and lessors, he would await our final approval and confirmation of the total value assigned to each townland. This is the only course which appears to be available to us deriving advantage from the labours of Mr. Griffith, so as to introduce thereby a certain element of uniformity in the valuations of unions, and for keeping a control, through the agency of our Dublin office, over the operations of valutors employed in different parts of Ireland”?—We considered the course here recommended as the best which could be adopted in the existing state of the law.

1545. Is the Committee to understand that you recommend that Mr. Griffith’s valuation should be continued throughout the rest of Ireland where it has not been commenced, for the purpose of affording this test?—I would much rather, in making the remaining portion of Mr. Griffith’s valuation, that he did it in such a manner as to render it more applicable to poor law purposes than he is in the present state of the law able to do.

1546. The Committee is not to infer that it is your opinion that it is necessary that the present townland valuation of Ireland, as carried on on its present basis, should be carried on for the purpose of enabling you to effect that valuation which you have recommended?—Certainly not; on the contrary, I think there would be a loss of labour and of expenditure in so doing.

1547. Had it been decided that a general valuation of Ireland should take place, based upon the general principles of the Poor Law, that such valuation should be carried on by an independent Board, this recommendation of the adoption of Mr. Griffith’s valuation would not have been made by the Commissioners?—Certainly not; it is merely applicable to the present imperfect state of the law.

1548. The Committee are to understand that this recommendation was simply made in order to take what advantage you could of the existing valuation made independently of you?—Exactly so.

1549. Mr. *Vesey*.] If you were to adopt an uniform valuation for Ireland, as you recommend, by a central Board, would you take the basis as adopted by Mr. Griffith?—I have stated that I would not.

1550. Do you conceive that the basis which Mr. Griffith adopted was one applicable to the purposes for which his valuation was originally intended?—I consider that it was applicable in fact to the purposes for which it is intended; but it is totally inapplicable for general purposes. I think Mr. Griffith deserves great credit for the manner in which he has conducted his valuation for that purpose.

1551. Will you state why it is inapplicable for the purposes you propose, and applicable to the purposes for which Mr. Griffith was called upon to undertake

E. Gulson, Esq.

3 July 1844.

E. Gulson, Esq.

3 July 1844.

it?—For county cess purposes, so long as the valuation is relatively a fair valuation between townland and townland, it will operate justly and fairly, because the county cess is paid solely by the occupiers; but inasmuch as the payment of the poor rate is made both by the landlord and the tenant, by the tenant in proportion to the valuation, and by the landlord in proportion to the rent which he receives, the valuation made for county cess purposes is totally inapplicable to the poor rate payment.

1552. *Chairman.*] In point of fact Mr. Griffith's valuation may be a very perfect one so far as its original purposes were concerned, but is only made now insufficient from the introduction of the poor law, which makes each individual separately rated?—Precisely so.

Jovis, 4^o die Julii, 1844.

MEMBERS PRESENT.

Mr. Colquhoun.
Lord Courtenay.
Lord Eliot.

Sir Denham Norreys.
Mr. Shaw.
Mr. Vesey.

SIR DENHAM NORREYS, IN THE CHAIR.

Edward Gulson, Esq. called in; and further Examined.

E. Gulson, Esq.

4 July 1844.

1553. *Chairman.*] WOULD you suggest that the valuation which you proposed should be made the basis for all local taxation?—I certainly would so recommend.

1554. If all local taxes were to be levied according to that valuation, would there be any advantage in placing the collection in the hands of one individual, and in regulating the periods at which the collection should be made?—I think there would be great advantages: in the first place, I think that the collection might be much more economically made if collected at once, than if collected by various persons at different times. I also think that it would be much more satisfactory to the ratepayers to know the time at which they would be called upon to pay all their rates; they would then have an opportunity of being prepared for the payment, and I think it would be much more satisfactory to pay them to one man they are in the habit of paying, instead of being called upon by several, as they must be if each rate is collected separately.

1555. How often do you think that rate should be collected in the year?—Looking to my experience in Ireland, I am decidedly of opinion, that all rates which are collected from the occupier would be much more easily and satisfactorily collected during the winter than at any other time; that is, in the months of November, December, and January, when the little farmers have their crops to take to market.

1556. Would that render it requisite for the farmers to sell their crops earlier than the state of the markets would otherwise induce them to do?—I think not; my experience leads me to believe that the class of persons from whom the collection of rates is most difficult, always sell their produce by the end of January. They who can afford to keep their produce can pay the rate without taking their produce to market.

1557. Do you think that any difficulty would arise from the magnitude of the amount which would have to be collected at one period, if all local taxes were collected at one time?—No, I cannot say I think any difficulty would be experienced in that respect; in the country the only taxation I am aware of is the county-cess and the poor-rate.

1558. In towns there would be not only the poor-rate and the county cess, but there would be local rates for watching and cleansing?—Certainly.

1559. And again in certain districts in Ireland, for instance, near the Shannon, there would be rates for the improvement of the river?—Yes.

1560. Do you include all local taxes, of whatever kind, in the proposition you have made?—I do not think there would be any objection to collecting even all those

those taxes together; but my observations apply more particularly to the taxation which extends over Ireland generally, like the county-cess and the poor-rate.

1561. Would it not be requisite to alter the law in respect of county presentments to meet your view, so that all presentments should be made at one period of the year?—It would.

1562. Do you consider that the collector should be the poor-rate collector, or that there should be one collector, independent either of the county or the poor-rates, simply as a collector; or would you require that the poor-rate collector should be the collector of the county-cess, and that it should be paid out of the poor-rate?—I think it would be a very good plan to assimilate the practice in Ireland to the practice in England, in that respect, so far as paying the county-cess out of the poor-rate; but I do not think the Boards of Guardians should have the appointment of the collectors; I think the Legislature might perhaps fix upon some other authority which would be better than the Poor Law Commissioners or the Boards of Guardians.

1563. That it should be an independent duty to collect the poor-rates and every other rate?—Precisely so.

1564. Mr. Colquhoun.] Do you consider that one person should collect the poor-rate and the county-rate for the whole county?—Not for the whole county.

1565. For what district?—Say a barony, as at present.

1566. Wherein would the greater economy to which you have alluded in the collection of the two rates consist?—It would consist in the collector being occupied a much less time in making the collection, consequently in his being paid a much less sum for making the collection. In collecting a large sum, he could afford to collect it at a much less poundage than in collecting a small sum. If a man has 200 *l.* to collect from a given district, instead of 100 *l.*, he can collect that 200 *l.* with the same trouble that he could the 100 *l.*, and therefore if his per-centage in the one case was 5 per cent. he could afford to collect it for 2½ per cent. in the other.

1567. Is it not the fact at present, in some parts of Ireland, that the same person does collect both county and poor-rates?—It is.

1568. Then the difference would consist, not in the sum being larger, but in his being able to collect the two sums at one time, instead of a separate time for each?—Yes, in those cases in which the two rates are at present collected by one person.

1569. Chairman.] But your observations do not go to there being one individual to collect both rates, but to there being one rate for both purposes?—Precisely so. I think the most satisfactory course would be to pay the county-rate out of the poor-rate, and thereby assimilate the practice in Ireland to the practice in England; but even if there are two rates, and they are put into the hands of a man at the same time, he would be enabled in that way to collect both rates at the same time as economically as if they were in one book.

1570. If the two rates were kept independent, might there not be some clashing between the county authorities and the poor law authorities as to the selection of the individual who was to collect; whereas, if they were both consolidated into one rate, only one party would be responsible for the selection of the individual?—I have already stated I would have the appointment of the collector provided for by legislative enactment, by some one authority.

1571. Mr. Colquhoun.] You have not stated in whom you would prefer that authority to be vested, but you are clear it should be vested, whether it is for the collection of the county-rate or the poor-rate, in one and the same party?—Certainly.

1572. Chairman.] Do you produce now a copy of the General Order of the Poor Law Commissioners, issued in consequence of the Act of last Session, in relation to the form of the rate?—I do.

1573. This order contains the following words: "To the Guardians of the Poor of the several Unions named in the Schedule (B.) hereunto annexed," and so on; "We the said Poor Law Commissioners, acting in pursuance of the powers given to us by the said Acts, do hereby order, direct, and declare, that from and after the date of these presents, every rate to be made by the guardians, or other officers competent to the making of a rate in every union named in Schedule (B.) hereunto annexed, shall be made in one of the forms prescribed in the Schedule (A.) hereunto annexed, as the case may be;" does not that order require that the rates made in all the unions contained in the Schedule (B.) of this order, should be

E. Gulson, Esq.

4 July 1844.

E. Gulson, Esq.

4 July 1844.

made according to the form No. 2, which is called "The Borough Form"?—No; it directs that the rate shall be made in one of the forms prescribed in these schedules, either (A.) or (B.), as the case may be; "that is to say, in all unions or parts of unions not comprised within any of the boroughs named in Schedule (A.) or Schedule (B.), annexed to the before-recited Act for the regulation of municipal corporations in Ireland, or in any other town to which a charter of incorporation may, under the said Act, be granted, the rate shall be made in the form No. 1, hereto annexed; and in all unions or parts of unions comprised within any of such boroughs, the rate shall be made in the form No. 2, hereto annexed."

1574. The Schedule (B.) annexed to the order, appears to comprise a very large proportion of the unions in Ireland?—Yes.

1575. By the terms of that order, are the guardians not required to introduce the "landlord's repairs and insurance" column, so far as the case may require?—They are.

1576. What was the guide by which you formed this Schedule (B.)?—We took the whole of the unions in Ireland, and directed, that wherever the form No. 2 was required in those unions, it should be used; and that wherever it was not required, the form No. 1 should be used.

1577. Does not the schedule to the order indicate to the guardians where form No. 2 shall be used?—No, not the schedule. If you look to the previous words, you will see that it states that in any boroughs now existing, or to which charters of incorporation shall at any future time be granted under the Act of last session, the form No. 2 is to be used, so far as it is wanted, and in all unions or parts of unions not comprised within any of such boroughs the form No. 1 is to be used.

1578. But the schedule which is given with the order seems to indicate the unions where the two forms shall be used?—Yes; one or other must be used throughout.

1579. Are there not many of these unions contained in your Schedule (B.) where there are no municipalities?—There are.

1580. In districts which contain towns containing 3,000 inhabitants, to what portion of the union would this order, requiring them to insert the "landlord's repairs and insurances," extend?—The Act of Parliament does not prescribe the limits within which it is required, because the Act provides that charters of incorporation may be granted, under certain circumstances, by the Lord Lieutenant, and that the Lord Lieutenant shall prescribe those limits; consequently, until the limits are prescribed by the Lord Lieutenant, it is impossible to prescribe the limits within which that form, No. 2, is to be used. The Act of Parliament, therefore, is deficient in providing that the form No. 2 shall be used within certain limits, whilst in fact those limits are not defined. There is great difficulty, and we can only do the best under the circumstances that the case admits of.

1581. Then, practically, having an Act of Parliament to guide you, which you found deficient, what course would you adopt in respect of carrying out this order in that respect?—We thought it best to follow the exact words of the Act of Parliament in the order, and then leave it to the other parties who had to carry that Act of Parliament out, (it is not with us to carry it out,) to apply it as they best could.

1582. Are not the Commissioners responsible for making the rate?—They are.

1583. How is it, then, you say you leave to parties other than the Commissioners the duty of carrying out and making the rate?—As I said before, inasmuch as the Act of Parliament prescribes that the form shall be used, and the rate shall be made in a given form, within limits which are not yet defined, but which hereafter, upon the granting of a charter of incorporation, are to be defined by the Lord Lieutenant, it is impossible for us now to define the limits within which the Act will at some future time be applicable; we therefore have followed the words of the Act of Parliament, and said that it shall be used where necessary, according to the words.

1584. But inasmuch as you are responsible for making the rate collected according to the terms of the Act of Parliament, what course do you adopt as to the extent in which this "landlord's repairs and insurances" column is filled up in the districts which are contained in your Schedule (B.)?—We direct the clerk of the union, whose duty it is to make out the rate-book, to make it out in form No. 2, where a corporation exists, and where a corporation does not exist, in form No. 1.

1585. Mr.

E. Gulson, Esq.

4 July 1844.

1585. *Mr. Shaw.*] I suppose you comply with the Act of Parliament as nearly as you find it possible?—We do.

1586. *Chairman.*] The words of the Act require that you should put in the “landlord’s repairs and insurance” column in the rate of any town to which a charter of incorporation under the Municipal Act may be granted?—Yes.

1587. And by reference to the Municipal Act it appears that a charter of incorporation may be granted to any town containing above 3,000 inhabitants, by the last census?—Yes, provided a majority of qualified ratepayers apply to the Lord Lieutenant for a charter.

1588. Does it not also contain this provision: “And if the persons who shall have signed such petition (including a majority also of such of the inhabitants of such borough) would be qualified (as far as such qualification can be ascertained from the assessment of the poor-rate made under the Act for the more effectual relief of the Destitute Poor in Ireland) to have been enrolled upon the burgess-roll of such town, if the same had been named in the said Schedule (A.), and such burgess-roll had been made according to the provisions hereinafter contained”?—Yes; such is the provision of the Act of Parliament.

1589. The Act, in section 30, requires that “landlord’s repairs and insurances” shall be taken into consideration in the amount which shall constitute the value of the property?—Yes.

1590. You state that you have directed that the “landlord’s repairs and insurance” column shall be omitted in all places where a charter of incorporation has not been granted?—Yes; that the form without that column shall be used in all such cases.

1591. As the words of the Act require that that column shall be inserted wherever a charter of incorporation shall be granted, how are you justified in omitting that column?—The Act of Parliament is not complete upon the subject, inasmuch as it states that the form shall be used in those places in which corporations do exist, and in which they may exist; but, inasmuch as the limits are not defined of the places in which they may exist, until they do exist, we cannot prescribe the limits to which this form is applicable.

1592. *Mr. Shaw.*] I suppose in that case you construe the word “may” as “shall”?—Certainly.

1593. *Chairman.*] Is not the consequence of the course you pursue, that you virtually deprive certain towns, which now contain 3,000 inhabitants, of the power of obtaining charters of incorporation under the provisions of the Municipal Act, inasmuch as there would be no possibility of obtaining the consent of a majority of those who would have been burgesses, inasmuch as the “landlord’s repairs and insurance” column has been omitted from their valuations?—No such instance has occurred, though the Act of Parliament is incomplete in this respect.

1594. *Mr. Shaw.*] Suppose in such cases as you put, in case the town is incorporated afterwards, then you would adopt the Schedule (A.) to the Act of Parliament?—Certainly, or even prior to that, if an application were made for a charter, and the question arose whether it had been applied for by a sufficient number of qualified persons, we might at once adopt that column to ascertain that fact, even before the charter was granted; as I said before, the Act of Parliament is in itself obscure, and we are obliged to do the best we can under the circumstances.

1595. *Chairman.*] You do not consider you are able strictly to follow the enactments of the statute?—We cannot to a greater degree than we have done.

1596. *Mr. Shaw.*] Inasmuch as there is some obscurity in them?—Precisely; the provisions in the Act are obscure, and we are obliged to do the best we can under the circumstances.

1597. In construing the two Acts together, you find some obscurity in the provisions, and you are obliged to meet that as well as you are able, inasmuch as you do not clearly see your way to an exact compliance with the words of the statute?—Precisely so.

1598. *Chairman.*] Have not the Commissioners had much trouble imposed upon them in consequence of this connexion of the Municipal Act with the Poor Law?—They have.

1599. Has it not led, in many cases, to a derangement of the proper working of the poor law system in different localities?—It has in some localities.

1600. Attempts have been made by Boards of Guardians to convert the poor law into an engine for promoting their own political views?—In no instance in
0.63.] the

E. Gulson, Esq.

4 July 1844.

the district of which I have been in charge, has that been the case, but I have heard it has been the case in other districts.

1601. Your opinion, upon the whole, is, that there should be one valuation for all purposes, based upon the poor law principle?—Yes.

1602. And that all local taxation should be levied according to that?—Certainly.

1603. And also that such valuation should be conducted by a central Board, independent of the Poor Law Commissioners, and all local influence?—Yes.

1604. What mode of correction would you suggest for such a valuation?—I propose it should be revised every three years by the same authority that first made the valuation, and therefore by some permanent authority.

1605. Supposing that parties felt aggrieved by the determination of the central authority, what appeal would you allow them?—The same as that which now exists, an appeal to the quarter sessions, presided over by an assistant barrister.

1606. Would you allow an appeal to be made positive as against the valuation of a particular property, and also relative as to its being relatively too high or too low, as respects any other property valued?—I would.

1607. Do you think a power should be given to an electoral division to appeal against another?—Certainly.

1608. And that such appeal of course should be final?—Certainly.

1609. That the Commissioners should be bound by it?—Yes.

1610. Is there anything you wish to add upon the subject of valuation?—No, I am not aware there is anything else.

The Hon. *Charles S. Clements*, called in; and Examined.

Hon. C.S. Clements.

1611. *Mr. Vesey.*] YOU have been employed as an Assistant Commissioner in Ireland?—I have.

1612. At what period were you employed?—From the commencement of the operations under the Poor Law, in 1838, until the summer of 1842.

1613. Were you acting at the time the Poor Law was put into operation?—Yes.

1614. Did you turn your attention to the best mode of obtaining valuations under the Poor Relief Act?—I did considerably.

1615. In doing so, did you examine into the system which Mr. Griffith adopted in making his townland valuation?—My attention was called to Mr. Griffith's valuation almost immediately after commencing operations in the north of Ireland, where my district is situate.

1616. Did you do so for the purpose of seeing how far you could adapt it to the poor law valuation?—Mr. Griffith's valuation was completed in the counties of Londonderry and Tyrone, which were the first counties upon which I commenced, and great satisfaction was expressed by the public with respect to his valuation, and an apprehension was entertained lest the Poor Law Commissioners should insist upon a new valuation, the expense of which was much apprehended. I had occasion to attend at various public meetings, in order to explain the course which the Commissioners proposed to adopt in the formation of unions, and bringing the law into operation; and at all those meetings my attention was forcibly called to Mr. Griffith's valuation, and general satisfaction with it was expressed, with one exception, which related to the discrepancy in value between districts of acknowledged fertility in the county of Derry, and high lands of a very poor description. In every other part of the county satisfaction was expressed; accordingly I turned my attention and endeavoured to make arrangements by which it might be made available for the valuation required by the Poor Relief Act.

1617. And what was the result of that?—From inquiries I made, I was led to believe that Mr. Griffith's valuation was generally one-fourth below the letting value, and the persons who are most competent to form an opinion upon the subject, expressed themselves satisfied that, generally speaking, if a fourth was added to the value of the land, and it was what is called apportioned upon the different tenements, it would prove satisfactory and give the fair letting value; accordingly, in the first valuation which was undertaken in my district, which was the valuation of the Derry Union, the valuers were appointed with the view of carrying that arrangement out. They commenced operations by closely valuing seven different townlands, of different qualities of land; the thing was then gone more closely into, and it was found that Mr. Griffith's valuation differed materially from

from what was considered the fair letting value. It differed, as well as I can recollect, in the seven different townlands, from $7\frac{1}{2}$ per cent. to 26 per cent. These townlands were the property of different individuals, and some of them were let upon recent valuations by acknowledged competent persons; this destroyed very much the confidence of the public in the line proposed to be adopted; the valuation committee of guardians were called in to decide, and the result was that the plan of adopting one fixed scale, by which Mr. Griffith's valuation could be altered, was abandoned. That led me to make further and more close inquiry in other unions, the valuation of which was about to commence; and I found that a similar course, if adopted, would have to be abandoned there also, and accordingly the idea of adopting such a system was abandoned generally.

1618. Mr. Shaw.] The object in the case you put was, to fix the poor-law valuation at a fair letting value in all cases?—Of course that was the object to be attained.

1619. Mr. Vesey.] Did you find that one of the difficulties in adopting Mr. Griffith's valuation, arose with reference to the relative value placed by him upon good and bad land, as well as the allowance that was made for situation, and other local circumstances?—I attribute a good deal of the discrepancy between the letting value of different descriptions of land, to the principle upon which Mr. Griffith's valuation was undertaken. Mr. Griffith's valuation was undertaken at a time when the attention of people generally was not turned to it so much as it has been since; the object, as far as I understood it, was to obtain a uniform valuation for the whole of Ireland, and certainly the plan by which that was to be attained, was more comprehensive than any valuation that had hitherto been attempted in any part of the kingdom, and it is no doubt well calculated for the purposes for which it was proposed to serve; but when it came to be applied to the exact fair letting value of each particular tenement, it was found to fail.

1620. Mr. Shaw.] It regarded rather the capability of land than its existing letting value?—Yes, it regarded rather the capability than its present actual state, and it was from that circumstance that, I think, the discrepancies existed. Mr. Griffith, in his instructions, evidently considers the actual quality of the land more than its present actual state, more than its situation, more than its advantages from local circumstances, and more than the difference of value produced by its situation; for instance, such as the accommodation value, close to towns, and so forth; and I consider the discrepancies that have been found to exist in Mr. Griffith's valuation, since it has been examined into for the purpose of adapting it to poor law purposes, arise, not from the work having been badly done, but wholly from the principle upon which it is done. Land which has not been improved in any way, perhaps situated on a hill, may, in quality, be equal to land which is very much improved, but inasmuch as Mr. Griffith, in his valuation, takes comparatively little account of the state of cultivation, that land would, from its quality, be much higher in proportion to highly cultivated land; and hence, I consider, arises a great deal of the discrepancy.

1621. Mr. Vesey.] With regard to houses, how does he value them; does he value them separately or with the land?—He invariably values them separately from the land, and hence a great deal of the difficulty in respect of the land, and with respect to fixing the value according to each tenement. A tenement may be valuable or worthless, according as it is well housed or otherwise. If the houses and offices belonging to a farm are insufficient for the farm, it is comparatively worthless; if they are better than is required for the farm, they are, more or less, an incumbrance to the tenement. Then, I should say about houses, that he valued them very much according to admeasurement; and I do not think that any attempt was made to assimilate his valuation of houses to poor law purposes.

1622. You stated the attention of the public has been called lately to the inequality of value of Mr. Griffith's valuation more than it was at first; will you state your reason?—When Mr. Griffith's valuation first came out the public were very well satisfied to receive it as a great boon, in comparison with the sort of valuations they had to abide by previously, and it was under the letting value avowedly by one-fourth at the least. I think it will be found that all valuations for public purposes are, generally speaking, under the letting value, and as each man finds the particular land with which he is connected is under the rent which he pays, he is satisfied with it comparatively; it is very difficult for him to ascertain by comparison whether it is an equable valuation as regards other places;

Ion. C. S. Clements.

4 July 1844.

finding that the value is low as regards himself, he does not trouble his head further about it, and hence the general satisfaction expressed; but when it came to be inquired into and examined further, it was found that the poorer lands were, in point of fact, valued higher than the richer, and people found that those who were less able to pay had more to pay in proportion than those who were best able; and hence a great deal of the dissatisfaction which has since arisen.

1623. Then, upon the whole, do you think Mr. Griffith's valuation can be taken as the basis for the poor law valuation?—I think Mr. Griffith's valuation was of very great service in making the valuations under the poor law. Mr. Griffith's field-books describe minutely the different qualities of soil; the valuation also assisted in ascertaining the contents of each farm, and that was one thing which created a great deal of difficulty in the valuations, because, there being no field survey in any case, they have no means of ascertaining the contents, except where the landlord chooses to furnish the means, and in many cases the landlords have no correct survey or knowledge of the contents of their farms; therefore the field-books, denoting the different qualities of soil, were of very great assistance to the valuers, and enabled them, no doubt, to correct their valuations; it formed a guide, in point of fact, for them. I have no doubt, therefore, it was of great service; but I do not think that any general rule can be established by which Mr. Griffith's valuation can be adapted to the purposes required by the Poor Relief Act.

1624. Supposing that the valuations in the northern counties were superior to those in the south, do you consider that the taking Mr. Griffith's valuation, in a certain degree, as the basis upon which those valuations have been formed, has been a circumstance to call for satisfaction?—If the valuations in the north have given more satisfaction than they have in the south, I should think it very probable that the reason is, that in the north they have Mr. Griffith's valuation as a guide, and in the south they have it not; but I am not aware of the state of the valuations in the south; I only know of them from common report.

1625. What course, then, did you pursue with regard to recommending the valuations in unions generally under your care?—When I found that Mr. Griffith's valuation would not serve so completely as the basis of the poor law valuation, as I originally anticipated, further examination led me to feel that it would be of great service as a guide to valuers; in every case, therefore, they were furnished with a copy of his field-books, and with a map with lines denoting the quality of the soil; but they were directed to act entirely upon their own judgment, and use them as much or as little as they found advantageous; the valuations were required to be made wholly upon their own responsibility.

1626. Did the valuations conducted upon their own responsibility give general satisfaction in the unions in which they were adopted?—I think a new valuation, when it first comes out, has to undergo a great ordeal; the great mass of the public are anxious to have the valuation low; and if the valuation, therefore, is at all near the letting value, a cry against it is very apt to be created. Generally speaking, I should say, the valuations of the district which I had the charge of are good. There were some exceptions where they were not good; but I think, upon the whole, they may be considered to be good.

1627. Have you ever compared the valuations with the rentals in the different districts, as far as they could be ascertained?—I have never actually compared them; but in all unions I was in the habit of making very strict inquiries as to the scale upon which the valuers were proceeding. I was anxious that the valuation should be made, as near as possible, to what I considered a fair letting value, to what was the general letting value in the country; because I felt, that upon that depended very much the operation of the law as regarded the division of the rate between landlord and tenant, and I therefore kept very close watch upon the valuers, in their first outset, to see that they were valuing as the law required. I can recollect one instance, in which the valuation at first was very nearly equal to the rent, though lower than the rent generally paid; but upon a subsequent revision, the valuers gave way to the clamour of the people generally, and they reduced it considerably after I had thought that I had secured a fair valuation. It may have been corrected since for what I know.

1628. How far do you consider the valuation conducted under the Poor Law Act as satisfactory, as compared with other valuations?—I should say, taking it as a whole, as far as my experience goes, the valuations under the poor law are superior to other public valuations. They certainly are very superior to the tithe valuations;

valuations; the tithe valuations are very various as regards the general estimation formed of them; some of them are good, others are good for nothing; and as far as I have seen the valuations in England, I should not be inclined to think higher of them than of the valuations in Ireland.

Hon. C. S. Clements.

4 July 1844.

1629. You stated it was impossible to obtain a complete valuation at once; how would you eventually hope to obtain a complete valuation?—I think when a valuation is first made the valuator has so much to do, that he is liable to make very great mistakes, especially if he is a stranger to the locality. I think a man must be perfectly conversant with the locality to make a good and fair valuation; I think, therefore, the best way to secure a good valuation is to facilitate, as much as possible, the means of its revision. I should say that the valuation should be considered to be undergoing a constant revision; that the best means of giving general satisfaction as to valuations would be to make an arrangement for the valuation to be undergoing constant revision; alterations to be made according as circumstances would require. Periodical revisions, in my opinion, lead to attempts being made by various individuals to obtain alterations in their valuations, to which they are not entitled; and I am led to believe that they very often succeed by clamour in obtaining those alterations, where there are a number of people coming forward at the same time, and that they would not succeed if the whole valuation was not under consideration, and there was therefore a number of people calling out and complaining to the same extent as themselves.

1630. And for that purpose would you have valuers constantly employed?—I think it would be desirable.

1631. By whom would you have the valuers appointed?—I think that depends very much upon the use to which the valuation is to be turned.

1632. Have you found much discrepancy to exist in the scale of value between one poor law union and another?—I think discrepancies do exist, but not to any great extent, or not to an extent which might not be very easily remedied.

1633. How would you remedy them?—By appointing a valuator who would be responsible for the constant revision of the valuation, and by facilitating the mode of appeal. The valuation required by the poor law is peculiar, inasmuch as upon it depends the share of the rate which the landlord and tenant have mutually to bear. All other public valuations of which I have had any experience, are considerably under the letting value, and as long as they are equable, one tenement with another, the public generally are satisfied; but the valuation required by the poor law cannot satisfy the public generally, unless it is up to the fair letting value. There is no doubt, that in some unions the valuers had acted according to law more closely than they had in others, hence the discrepancies; but I think those discrepancies would be very soon remedied, if valuers were appointed, who were responsible not just for the time being, but constantly responsible for keeping the valuation according to law; and if the means of appeal were facilitated so as that either one party or the other might obtain redress without going to so much expense.

1634. In what way would you facilitate the means of appeal; what court would you have the appeal made to?—I would divide the means of appeal under two different branches: all legal questions bearing upon the liability to be rated, or questions referable to any informalities, or anything of that kind, I would refer to the existing court; that is, the assistant barrister's court at quarter sessions; but all questions of value I would leave to be determined in a much less expensive way, by umpirage. I think a Board might be established, with great advantage, similar to any Board of Umpirage which is ordered by the courts, where there would be two umpires and a referee; and the matter might be determined by actual inspection of the premises, which cannot be done by the court at present.

1635. Who would you propose to appoint that Board of Umpirage?—That would depend again upon the use to which the valuation is to be applied; that Board of Umpirage would be different, according to whether the valuation was made available for poor law purposes only, or for other purposes likewise.

1636. Supposing it is made available only for poor law purposes, who would you propose to appoint the Board of Umpirage?—I think the mere question of value might be determined with advantage by the valuator on the one side, and by any person named by the appellant, who might be a professional valuator, on the other; and that the referee might be the auditor of the union. The auditor would, in the first instance, perhaps, have very little experience in the matter, but he would soon acquire the experience which would be necessary to determine such questions.

on. C. S. Clements.

4 July 1844.

1637. Supposing there were a great number of appeals, do you think the auditor would have sufficient time to go through those cases?—I do not think the number of appeals would be very great, where the alterations were constantly going on; they would not be so great as if there was a periodical revision of the valuation. I do not think there would be such a number of appeals as would prevent him satisfactorily performing the duty.

1638. Have you ever considered whether it would be expedient to have one uniform valuation for both county and poor law purposes?—There is a good deal of property which is now rated to the relief of the poor, which is not rateable for county purposes, but I think it would be of great advantage if one valuation was made; I think it would create great satisfaction in the country. As far as I have seen of Mr. Griffith's valuation, the applotting of it upon the different occupiers in the townlands gives rise to a great deal of unpleasantness; and I think it would be a source of great satisfaction that every man should know exactly the valuation upon which he had to pay his rates; and that he should, if he considered himself wronged, be able to get redress from competent and acknowledged authority, instead of, as at present, having to go and fight it out, as best he can, at the meeting of the townland to applot.

1639. Then upon what basis would you place this valuation; would you place it upon the basis, as proposed, of the present poor law, or the basis of Mr. Griffith's valuation?—I would place it upon the basis of the present poor law.

1640. You stated that having only one valuation for county as well as poor law purposes would give general satisfaction to the country; will you state your reasons?—I think it would give satisfaction, because every person would find that they could obtain redress, in the event of their being dissatisfied with the valuation, more readily than they can at present. Mr. Griffith's valuation is now made upon the townland, and the allotment of the amount to be levied is left entirely to applotters appointed in a particular way. If any particular occupier of the townland is dissatisfied with that applotment, he has practically no redress; and there are many instances in which great dissatisfaction is felt with the applotment made; and for that reason I think a valuation arranged as I have described, by a permanent valuator, with facilities for redress by appeal, would be more acceptable to the people generally than the present arrangement.

1641. Lord *Courtenay*.] By whom are the applotments made at present?—The parishioners meet and elect two applotters.

1642. Are not the applotments, under the present law, sometimes made by ignorant, ill-qualified, or interested persons?—Yes.

1643. Mr. *Vesey*.] Would you have the payment of all the rates made at the same time?—I think that the winter is the most convenient time for the people to pay the rates in the agricultural parts of the country; in towns, perhaps, it would be more convenient to pay at two different periods of the year, but that could be very easily arranged if one rate was made for the year. I believe, generally speaking, in the north of Ireland, one rate only, so far as poor-rates are concerned, is made in the year.

1644. Do you think there would be any difficulty in collecting both rates at the same period, in consequence of the different mode of making the poor-rate, and the rate for the county-cess?—I think if they were to be collected together, they ought to be brought into one rate; they might be kept separate in the book, but I think the rate ought to be made for the two purposes simultaneously.

1645. For that purpose would it be requisite to make some alteration in the mode of rating by the grand jury presentments?—It would certainly be necessary to make some alteration; for instance, the grand jury presentments are at present made upon the actual payments required, but practically, I consider it is almost an estimate, because the amount of cess to be levied is determined at one assizes, and has to be levied previous to the ensuing assizes; and it is made in point of fact upon the contracts entered into with different persons for the repair of roads and so forth; and if those contracts are not executed, if the county surveyor does not certify that they are, the money is not paid, but is re-presented, so that practically it is an estimate.

1646. Would you have the presentments made twice in the year, as they are at present?—That is a question which would require a good deal of consideration. I think if it was thought advisable to bring the county-cess and poor-rate under one collection, and the making of those rates under one department, although the rate might be made once a year, it might be collected in two different instalments, or three or four different instalments, as might be found most convenient.

1647. Would

1647. Would there be greater economy and increased facility in the collection if all the rates were to be paid at one time?—I think there would be greater economy, and much greater facility in the collection, if the making of the rate and the collection of the rate was brought into one department. As I said before, the question of paying the whole at one time, is one which would require a great deal of consideration as regards the county-cess; as regards the poor-rate, I am satisfied it is more convenient to pay it once a year than twice, except in towns.

Hon. C. S. Clements.

4 July 1844.

1648. When you talk of bringing the making the rate and also the collection of the rate into one department, what do you propose that department to be?—My experience in the whole machinery of making rates and collecting them, points out the advantages of having officers responsible for the making of the rate and for the collection of it, irrespective of the persons who require the money. I have constantly seen in Ireland a pressure upon the persons who had to make a rate. When they are to give directions for its being prepared at a certain poundage, and levied, they are inclined to take advantage of any little circumstance to postpone the unpleasant act of actually making the rate. The result is, that payments fall into arrear. My attention, therefore, has been forcibly called to the advantages of having one body responsible for the preparation of the rate in time, when the money is required; that is what I mean by making a rate. The question put to me has reference to the county-cess and poor-rates being levied upon one valuation. I think the officer intrusted with the act of preparing the rate and making the rate should be independent, as it were, of the Board of Guardians on the one hand, and of the grand jury on the other; that he should be responsible for the preparation of the rate, and that it should be prepared by him upon a requisition for a certain amount to be levied, by the body who have authority by law to require it from him. In England the overseers have the duty of preparing the rate and of levying it. The Board of Guardians call for a certain sum; the magistrates in quarter sessions call for another sum; the overseers are responsible for having the rate ready to meet those calls, and if they do not pay the money by a certain day, they are rendered liable to have their own private property distrained upon.

1649. Lord Courtenay.] I understand from this answer, your view is that the direction of the valuation and the preparing and making the rate would be more desirably withdrawn from the Poor Law Commissioners and Boards of Guardians and placed in a separate authority?—I am supposing the valuation to be made available for the two rates; it will then be desirable, of course, to insure that everything should be uniform. The Legislature never would consent to the county-cess being levied with the poor-rate unless there was some security that all preparation should be made for levying that money, and that the whole county would not be thrown into confusion for want of the money at the appointed time; and the only way I can see that security would be given, is the appointment of officers who would be responsible. We will suppose the grand jury made a requisition for a supply, and the Board of Guardians were not to make a requisition at all; that man would be equally responsible for preparing the rate required by the grand jury, which would be collected, whether he made the other rate or not.

1650. Chairman.] You would not only have these valuations made by an independent body, but have the collectors independent either of the Board of Guardians or the county?—Certainly, if the two rates are to be levied off the same valuation. I have seen great advantage in Ireland from the appointment of a collector over a district larger than he can actually collect from himself, a respectable man, a man of business-like habits, a man of intelligence, and a man of a certain amount of property, who can give security for the actual payment of the rate made by a certain day. I think that great facility is given in the collection of the rates where such security is given. I have seen a good deal of difficulty in collecting rates in England as well as in Ireland, and I am convinced that the people pay more readily when they feel the collectors will be at the loss, as compared with what they would do when they know that only the public will be at the loss.

1651. Mr. Vesey.] After the rate is struck, if there should be any change in the property, what method would you take to rectify it; would you collect from the person who is in the actual occupation of the property when the collection is made, or would you divide it between the present occupier and the person who had previously left the property?—I think it would be very desirable that means

Hon. C. S. Clements. should be taken to enable the collector or the rating officer to applot a share of the rate upon the incoming occupier; for instance, supposing a tenement had been vacant, and that he came in at a certain period, or at any period after the rate was made, I think it is desirable some power should be given to enable the same officer to limit his charge to the proportion to which he would have to pay for the time he had occupied the tenement.

1652. How would you ascertain the time each person had occupied the tenement?—By inquiry of the collector.

1653. *Chairman.*] Is it your suggestion that the county and other rates should be collected by the poor-rate collector, and collected as the poor-rates, and paid out of the amount collected by some one independent party, who should be neither a poor-rate collector nor a county-cess collector simply?—I think that if it was determined to have both county-cess and poor-rates collected by one officer, and that both rates were to be made upon one valuation, it will be desirable that the officer connected with the arrangement should be responsible to some party irrespective of the two for which he would have to act, in order to preserve his doing his duty to both the parties properly.

1654. So that there might be a valuator independent of local influence, and also a collector equally independent of local influence?—Precisely.

1655. If it were determined to establish one valuation upon which all taxation should fall, and to assume that the letting value should be the basis of that valuation, could the present poor law valuation be taken as a fair indication of the actual letting value of the tenement which would be liable to taxation?—I think the poor law valuations are, generally speaking, under the letting value, but I think they might very easily be raised to the letting value if the means of appeal were facilitated; at present it is necessary to bring appeals into the courts of law, which is expensive, and the uncertainties attending all legal proceedings render people unwilling to incur the risk.

1655.* Are the Committee to understand that you simply consider the present poor law valuations have given great facilities for full valuations, and not that they themselves can be taken as the basis of any valuation for general purposes?—I should say the present poor law valuations are sound and good, taking them as a whole, as far as my experience goes, and that they are as good, generally speaking, as can be expected from totally new valuations.

1656. Mr. Vesey.] Your experience has been chiefly in the north of Ireland?—As regards Irish poor law valuations wholly in the north of Ireland.

1657. Have you heard that the poor law valuations in the north of Ireland have generally been superior to those in the south?—I think I have heard greater complaints in common rumour as regards the valuations in the south than in the north, but I should say common rumour is not always to be relied upon, with respect to valuations especially; I have often found a great outcry made with respect to valuations, which upon examination have been found not to warrant it.

1658. Mr. Griffith's townland valuation has been very little carried into effect in the south of Ireland as yet?—I believe so.

1659. I think you stated that you, to a certain degree, took Mr. Griffith's valuation as the guide for your valutors in the north?—Where I found it could not be taken absolutely as the basis upon which to form the valuation for poor law purposes, it was given to the valutors to assist them in forming their judgment, as they had to go over a very large tract of country, with a good deal of which they could not have been familiar, and Mr. Griffith's valuation detailed the qualities of the soil, and, as far as I could ascertain, faithfully. The only discrepancies in Mr. Griffith's valuation arose entirely from the circumstances I have mentioned, that is, laying greater stress upon the actual quality of the land, without reference to its present actual state, than anything else, but I think what was done, was correctly done, and efficiently done, according to the principles he laid down.

1660. Then do you not consider that the valuator getting the assistance of Mr. Griffith's valuation, has caused in those unions where they have adopted it, to a certain degree, a greater uniformity of valuation with reference to the different unions?—I think it most probable.

1661. And therefore in those parts of Ireland where Mr. Griffith's valuation has not been completed, and where the valutors have not been able in any way to take it as their guide, that uniformity in the different unions cannot exist?—That I can easily understand.

1662. Lord

1662. Lord *Courtenay*.] You do not mean, I apprehend, that the inference to be drawn from what you have now stated is, that in order to preserve it, it would be absolutely necessary to employ Mr. Griffith's valuation as the basis?—By no means; I only mean to state that in the north they had more materials which they could use than they apparently had in the south. Hon. C. S. Clements.
4 July 1844.

1663. *Chairman*.] Have you any observations which you yourself wish to make upon the subject of valuation?—I am not aware of any.

George Coode, Esq. called in; and further Examined.

1664. *Chairman*.] YOU have been present at the examination of Mr. Gulson? —I have. *George Coode, Esq.*

1665. Have you had occasion to examine the Acts to which his examination referred; the Municipal Corporation Act and the Poor Law Amendment Act?—Until yesterday I never made any comparison of the terms of the sections which I heard Mr. Gulson examined upon; I allude especially to that which enables Her Majesty to create municipal corporations in certain places having a population of above 3,000, under certain conditions. I have now made a comparison of the passages in the two Acts, and my impression is, that the construction of the Act does not involve all the difficulties which have been supposed in the course of Mr. Gulson's examination. It appears to me that the 10th section of the 6 & 7 Vict. c. 92, which requires that "in the boroughs named in the Schedule to the Act for the regulation of Municipal Corporations, or in any other town to which a charter of incorporation may, under the said Act, be granted, the rate-book shall contain an estimate of the probable annual average cost of landlords' repairs and landlords' insurances," does not involve the necessity of filling up those columns in places in which a charter of incorporation has not, in fact, been granted at the time of the rate being made. It seems to me that the effect of that provision is that those columns shall be only filled up in places which are, at the time of making the rate, actually incorporated.

1666. But may not charters of incorporation under the said Act be granted to other places?—Charters of incorporation may, by possibility, be granted to any places coming within the definition of the Act for the regulation of Municipal Corporations. But it appears to me, if the intention had been that this column should be filled up in all places in which there is a bare possibility merely of a charter of incorporation being granted, then the definition of the places in which the rate-book is to be filled up in this manner would have been different from what it is; that it would have run, "in all the boroughs named in the Schedules (A.) and (B.) &c. and in any other town having a population of 3,000," and so on, following the words of the Municipal Corporation Act.

1667. And is not this consideration involved in the term "any other town to which a charter of incorporation may be granted," inasmuch as the Municipal Corporation Act gives a power of claiming a charter of incorporation to any town which does contain a certain population?—I think that is not the correct reading. No town having merely a population of 3,000 is in fact in the situation of a town to which a charter of incorporation is to be granted; it requires other conditions to be previously complied with; an application by the inhabitants, and other matters, to be performed before the Queen would be in a condition to grant a charter of incorporation. Therefore such places as were referred to in Mr. Gulson's examination, places merely supposed to have a population of 3,000, are not places to which a charter of incorporation *may be granted*, except in a sense in which the word "may" is never used in an Act of Parliament, viz. as expressing a contingency, or bare possibility. These are not places, until an application has been made to the Queen, to which a charter of incorporation "may be granted." I understand the words of the 6 & 7 Vict. c. 92, "any town to which a charter of incorporation may, under the said Act, be granted," as signifying a place to which, at any time after the passing of that Act, and after the performance of all the necessary preliminary conditions, a charter of incorporation has at the time of making the rate, in fact, been granted.

1668. You consider it is a legitimate reading of the Act of Parliament, to read the clause as if it had been "any other town to which a charter of incorporation under the said Act may have been granted," instead of "may be granted"? —I think it is a legitimate reading of the Act of Parliament to consider it as expressing, in words of the present tense, whatever is to be found at any time

George Coode, Esq.

4 July 1844.

to be existing while that Act of Parliament is in force; and that it is a legitimate construction of the Act to understand it to speak thus: "That in any other town in which, at the time of the making of the rate, a charter of incorporation has been granted."

1669. Were you drawing an Act to consolidate all these Acts, would the terms which are at present used in the 6 & 7 Vict. c. 92, be the words which you would think would the most clearly give that interpretation which you have put upon them?—Certainly not; now that my attention has been called to the several clauses of the two Acts, I should consider it necessary to interpolate other words, to show the meaning more plainly than the words of the 6 & 7 Vict. c. 92, appear to do.

1670. I think, in your previous evidence, you stated what you considered would be a fair basis of valuation, did you not?—I would say, I am decidedly of opinion that the net annual value or net rental of the property in respect of which the tax is to be imposed, is the proper basis of valuation, in all cases where the tax is applicable to purposes similar to those of the poor-rates and the county-cess.

1671. Have you read a Bill, which has been introduced during the present Session, intituled, "A Bill to amend the laws relating to the assessing, levying, and collecting the county-rates," in which this basis of valuation is proposed, that the valuations of parishes for county-rates shall be based upon "the gross annual rack-rent value of the messuages, lands, tenements, and hereditaments rateable therein to the relief of the poor; such gross annual rack-rent value being taken to mean the rent, by the year, at which the said messuages, lands, tenements, hereditaments, and rateable property are or could be respectively let at rack-rent, without any deduction for taxes, repairs, insurance, or other charges;" is there any precedent, in valuations in England, for a definition of value such as this?—I know of no precedent. I believe it is contrary to all precedent to assess the tax upon the gross rack-rent of property.

1672. What objections suggest themselves to your mind with respect to such a basis of valuation?—The first objection is the gross injustice of such a principle of taxation, which would cause a rate to be imposed upon property producing a small revenue to its possessor, equal to what would be imposed upon a property producing a much greater revenue to the possessor. Thus, for instance, two properties, both let at 100*l.* a year, the one pasture land, liable to no outgoings for repairs, insurance, or the like, and free from tithe, would be rated at no greater sum than a property of a very perishable description, exposed from the mode of its occupation to great danger and to great charges, which would be let at the same gross rent of 100*l.* a year, and might probably produce to its possessor not above half the net revenue of the pasture land. This course is the more objectionable in the case of the county-rate, because between parish and parish the charges of the nature of rates and tithe rent charge vary greatly; and when the county-rate is imposed as it is upon a multitude of parishes, without deduction for these charges, the inequality between parish and parish would be greatly exaggerated by throwing the rate upon the gross rental. So far as repairs, insurance, and that class of outgoings are concerned, the tax would be laid upon what really constitutes the inability, not the ability of the person who is to be taxed; and so far as the outgoings consist of taxes and other public charges, the plan proposed would amount to the imposition of a tax upon a tax.

1673. Have you remarked the terms, "are or could be respectively let at rack-rent;" and would the introduction of the terms, "are or could be," into any basis of valuation, obviate the difficulty which has been suggested in respect of the tenure of ground, inasmuch as the "are" would refer to all actual cases of letting at their full fair value, and "could be" would assume the premises were let for such a term as it would be desirable for a landlord to let them on?—I think it undesirable that the terms "are" and "could be" should both be used. All that is desirable is, that words conveying a meaning similar to that conveyed by "could be" should be used; but the introduction of the word "are" puts two alternatives before the valuator, and he will find a difficulty, wherever the property is really let, in disregarding the rent which is in fact obtained, and which may be very far from what would be the fair estimable rent. This alternative will be embarrassing to the valuer, and give him no facility; inasmuch as if he can resort under the words "could be" to the consideration of what would be the reasonable letting value, then he would be entitled to throw aside the consideration of the effect involved in the use of the word "are."

1674. Does

1674. Does it strike you the words "could be let," used without "are," would be more comprehensive for the purpose, than the use of the words "at which they might in their actual state be reasonably expected to let for"?—I think what is intended to be denoted by the words "could be" is rather the reasonable expectation than anything else. But there is a difficulty in the use of the words "could be," which appears to me to involve a consideration which ought not to be entertained, viz. the consideration whether by possibility some tenant might not be found who would take the property even upon terms more than ordinarily disadvantageous. It might be quite possible to get a rent which it might not be reasonable to expect.

George Coode, Esq.

4 July 1844.

1675. In the Report of the Poor Law Commissioners on Local Taxation, there is this passage in relation to the basis of valuation which has been established by the English Act: "Giving to the equivocal terms of this Act the construction most consistent with the practice and doctrine established at the time of its passing, it very nearly prescribes the theoretical net rent as the standard of rateable value. The defects, however, of this definition of "net rent" are very considerable; the most substantial objection is, that the rent is required to be that 'at which the hereditaments might reasonably be expected to let for from year to year.' Where properties require for the development of their full productive value any considerable investment by the occupier, a letting from year to year only, would procure a rent very much below their actual value." You have stated that the English and the Irish basis of valuation are generally the same; does this difficulty with regard to the yearly value hold good as respects the Irish Act?—The English and the Irish Acts differ in this, that the Irish Act includes the words, "the rent at which, one year with another, the hereditaments might in their actual state be reasonably expected to let from year to year," and therefore introduces the consideration of what would be the letting value one year with another. These words are wanting in the English Act, and in that respect there is some ambiguity about the intention of the Act; and the difficulty adverted to in the Report on Local Taxation, in construing the Act, certainly exists, to a much greater extent than with regard to the Irish, if in the latter case it exists at all.

1676. Do you conceive that the introduction of the terms "one year with another," introduced into the Irish Act, has completely got rid of that difficulty; that the yearly value of the place is not equal to what might be obtained for the subject valued, if that term were given to it?—I do not think that has quite got rid of the difficulty; I think a difficulty might still be argued for very plausibly, but I do not think conclusively.

1677. In the County Rate Bill, to which reference has been made, there is a provision "that in every case where the houses and buildings within any parish or place shall, in the opinion of a certain committee, exceed in value one-tenth of the whole of the estates and rateable property within such parish or place, it shall be lawful for the said committee, in estimating the value of the estates and rateable property of such parish for the purposes of this Act, to make an allowance on account of such houses and buildings, of any sum not exceeding 30 per centum on the entire value of such estates and rateable property." Can you recollect any precedent for a clause similar to that in any English system of valuation?—I know of none.

1678. Do you see any ground for the introduction of such a clause into any system of valuation which might be introduced into Ireland?—I suppose the grounds which presented themselves to the framers of that Bill were these. Having laid their rates upon the basis of the gross rack-rent, they see, with regard to property of a perishable kind, requiring much reparation, that this would operate unjustly, and they therefore introduce a clause to diminish the injustice which otherwise must operate most severely, viz. in the case of houses. But the clause itself appears to me most inadequate to effectuate their purpose. It authorizes an arbitrary deduction of 30 per cent. upon the entire value of the whole of the estates and rateable property of any place which contains but one-tenth in value of houses and buildings. Now it is obvious, that while the place only contains one-tenth in value of houses and buildings, a deduction of 30 per cent. would be in fact a deduction of a greater amount than the full value of the whole of such houses and buildings; and where, as may be frequently the case, the whole of the estates in the parish consist of houses and buildings, there the allowance supposed to be made in the first case is still all that could be obtained. Thus the correction proposed

George Coode, Esq.

posed by this clause would operate unequally in every case in which the proportions of the houses and buildings to the other property of the place may differ.

4 July 1844.

1679. You would not recommend a clause of that kind in the valuation you have suggested?—Certainly not.

1680. You have recommended that there should be one valuation for the purpose of all local taxation in Ireland; have the Commissioners, in their Report upon local taxation in England, recommended a similar course for English taxation?—They have so, with the exception of some rates, which are laid for specific purposes, apparently affecting only specific kinds of property; such, for instance, as drainage rates, and various improvement rates affecting only particular kinds of property, in which case it would be obviously improper to bring in those other kinds of property which are supposed to be fairly liable to general taxation.

1681. In England, as well as in Ireland, you found some properties liable to particular taxes which others were not liable to?—Yes.

1682. Then you recommend in England that the same property should be made liable to the same taxes generally, so far as county-rates and poor-rates?—Yes.

1683. Then what recommendation should you make with respect to the collection of the rates levied according to such a valuation; would you recommend that each rate should be separately collected, or that they should be collected by one individual, and as one rate?—We have recommended that at the first stage one valuation should be made for all the rates; next, that all the rates on the same basis should be consolidated into one rate, to be made by the same authority and inserted in the same book; next, that the collection of the whole of the rate contained in that book should be effected at the same time by the same collectors.

1684. Who is the person who is to make this collection; is he an officer of the guardians?—In the local taxation report, it is assumed that the poor-rate being the largest rate, the rate best known, and that probably which is most correct, and upon the whole the most approved of, would be the better rate to form the basis of all the other rates; and it is in some measure assumed, that, if that were so, the persons who would be concerned in making the valuation, and making the rate, and in the collection of the rate, would be the same persons as perform those duties with regard to the poor's rates, not that this is recommended as essential. Speaking of the personal opinion of the Commissioners, I believe it was not their view that it was necessary at all that the valuation, the making of the rate, and the collection of the rate, should be vested in the persons who have to administer the relief to the poor.

1685. Then what is your opinion upon the suggestion which has been made by a previous witness, that the office of collector of taxation should be an independent office, totally unconnected either with the guardians, or with county rates, or with Commissioners under the Lighting and Cleansing Acts?—So that you secure the responsibility of the collector to some persons for the performance of his duties; it is immaterial, so that you secure that object in the most effective manner, who those persons may be. It appears to be no part of the business either of the administration of the affairs of the county, or the administration of the relief of the poor, to see to the collection of the rates; but it would be necessary, undoubtedly, that the collector should be subordinate to some authority, or made responsible, by security or otherwise, to some authority that would be interested in seeing to the due performance of his duty. Perhaps that would be better effected by making him give security, say to the justices of the county, with respect to the county-rates, and to the poor law guardians with regard to the poor law; and to all the persons, in fact, who might require rates to be collected, for the due performance of his duty.

1686. At present those who require a certain amount of county-rates to be collected, and those who require a certain amount of other rates to be collected, send a statement of the rate to the overseers of the parish?—That is the course in England with regard to the county-rate, and the borough-rate, and the borough watching-rate.

1687. The guardians of the unions, do they send to the same individual?—They do, to the same individual.

1688. Is the overseer independent of the guardians?—He is quite so, in making the rate, and in the collection of the rate.

1689. He merely then acts in his capacity as collector, and collects whatever the guardians send to him to collect, as well as whatever the county authorities, or the municipal authorities, send to him to collect?—Yes.

1690. Does he collect the whole of these rates by the name of poor-rate, or does he collect each poor-rate separately?—He makes a rate according to his anticipation of what will be required for all these purposes, under the denomination of a rate for the relief of the poor, and out of that he pays the county-rate, or the borough-rate, or the borough watching-rate, or the contributions to the guardians as the demands come in.

George Coode, Esq.

4 July 1844.

1691. Still the money is collected under the name of a poor-rate?—It is so; he does not distinguish the different demands in his rate-book.

1692. Mr. Vesey.] Does he make that rate himself?—The two overseers and two churchwardens for the most part make the rate, under authority given to them by the statute of Elizabeth, originally for the purpose of relieving the poor. Subsequently to that, by the 12 Geo. 2, the county-rate is directed to be paid by the overseers out of the rates raised by them for the relief of the poor. Again, the Municipal Corporation Act of the 6 & 7 Will. 4, directed that the borough-rate should be raised in the same way as the county-rate; in other words, should be paid by the overseers out of the rate raised for the relief of the poor. There are some minor differences, not perhaps worth the attention of the Committee, such as the practice in the north of England, where the county-rate is raised by constables, who have very little occasion to raise any other funds by that rate; they raise it under the denomination of constables' rate, and sometimes they call it a county-rate. There the overseers have nothing to do with county-rate. Eight counties in the north of England are excepted by the statute of the 12 Geo. 2 from the ordinary operation by which county-rates are raised in all the rest of the kingdom.

1693. I think you stated, the Board of Overseers, in striking the rate, took into account what probably would be required for poor law purposes and for county purposes?—Yes.

1694. In collecting that rate, do persons pay that rate upon any authority higher than the authority of the Board of Overseers?—None whatever; they see no authority whatever but that of the overseers, as overseers, collecting the poor-rate under the statute of Elizabeth.

1695. Chairman.] Supposing that your suggestion, that all property should be equally liable to all local taxation, and that there should still remain a difference of liability in different properties, how would you meet the difficulty which would be encountered by one individual collecting one rate from properties not liable to the entire of the rates which he has to collect?—It would be necessary that the form of the rate or the form of his collection book should show to him what was to be raised, in respect of each rate, off each property; and that in any case of property liable to one rate, and exempt from another, the column of the book appropriated to that rate, from which it is so exempted, should show that nothing is to be collected from that property in respect of that rate. This might be done in this form:—

No.	Name of Occupier.	Description of Property.	Net Annual Value.	County Cess, at 2s. in the Pound.	Poor's Rate, at 1s. in the Pound.	TOTAL RATES.
			£.	£. s. d.	£. s. d.	£. s. d.
1	J. S.	Land - -	10	1 - -	- 10 -	1 10 -
2	—	House -	4	exempt	- 4 -	- 4 -
3						

1696. Would not this involve a necessity for having a separate abstract of the general valuation for each purpose, inasmuch as the poundage for the poor-rate would not produce the same amount as the poundage for the county-rate where the property liable to valuation is not the same?—I think it would involve new modifications in the valuation, which, upon the supposition that it is to serve all purposes, should be so detailed as to show all the properties liable to all the rates, and all those parts of such properties as may be exempt from certain rates. For instance, if the distinction were to be continued of houses and lands which now

George Coode, Esq. prevails with regard to the county-cess, it would be necessary, however impolitic it might be to do so, to distinguish the land from the houses in that same valuation; the poor rate would apply to both the land and the house; the county-rate would apply to the land alone, if the house was under the estimated value of 5 *l*.

4 July 1844.

1697. By the 9 Geo. 4, c. 82, called "The Lighting and Cleansing Act," the rates are to be levied by a valuation of the general improved yearly value of all houses, offices, warehouses, cellars, vaults, gardens, yards, and tenements situate within such city or town, but the Commissioners can only be elected from persons who shall have occupied a house of the clear yearly value of 10 *l*. and upwards situate within such town: so that the consequence has been that the Poor Law Commissioners have been required, in such boroughs, by the 6 & 7 Vict. c. 93, to make what they call supplemental valuations; that is to say, valuations in which the value of the house appears without any connexion with gardens or out-offices; is there any precedent for such a separation of the valuation of the house from its appurtenances?—We do not know the principle in the English law; there is no precedent for such a process as dividing the house from the appurtenances which are usually in use together with the house; nor do we know of any such a law or practice in England as the division of the house from the land, when the house is occupied with the land for the purposes of cultivation.

1698. Or garden or out-office?—Where the garden or out-office is used together with the house, and is in one occupation with the house, they are valued together with it. The principle seems very objectionable, of separating properties which mutually add to or diminish the value of each other, and which therefore can only be fairly estimated in combination with each other.

1699. Then in the valuation which you have suggested, you would include as one tenement everything which was connected with the value of that tenement, as constituting part of the value of the tenement?—Everything which would operate to add to or diminish the value of any tenement should be included with it, where it is in the same occupation.

1700. Did you draw up the Appendices to the Report on Local Taxation, by the Poor Law Commissioners?—I did.

1701. Was the state of the English valuations, and the progress which has been made in carrying out the valuations for counties, brought repeatedly under your notice?—So far as the law and principle of making these valuations, it was brought under my notice; but so far as regards the actual progress made in the county valuations, it was not.

1702. Had you not to consider the different points of complaint made against the valuation; and so far the state of the valuation was brought under your notice?—Yes, very frequently; not only in the preparation of those Appendices, but in the course of my official business.

1703. In what state do you consider the valuations are in general in England, taking the County Rate Act as the test of the state they stand in?—In some few counties in England they have revalued the parishes under the 56 Geo. 3, by calling the overseers before justices of petty sessions, and occasionally examining them there upon oath; and now and then, but very rarely, by appointing a surveyor, at the expense of the county rate, to value parishes and townships. This has been done in very few counties, and the reports as to the effect differ very much. It is said that it has succeeded in Cumberland; but it is not reported by clerks of the peace, and other persons who have had occasion to report officially upon the subject, to have been generally successful where attempted. In other cases the valuations are formed in the most anomalous manner. The result of the valuation for the counties is stated at page 53 of the Report on Local Taxation, in these terms: "The county-rate is to be assessed upon parishes, rateably and equally, according to the full and fair annual value of the messuages, lands, tenements, and hereditaments liable, or which might be liable to be rated to the relief of the poor. We have described the way in which parishes have attempted to evade their fair share of contribution to the county and other aggregate rates, by undervaluing the whole of their respective properties according to some arbitrary proportion. In order to counteract this attempt, as well as to enable the justices to correct inequalities between parishes on appeal, the justices at quarter sessions are enabled, by the 55 Geo. 3, c. 51, to call for returns from high constables, petty constables, churchwardens, and overseers, and from assessors and collectors of public rates and taxes. The quarter sessions can then direct the justices within their respective divisions to receive these returns on oath, and to examine the persons making them

them upon oath, and to report proceedings to quarter sessions. In case of default in making the returns, the justices may employ persons specially, to ascertain the annual value of property in any parish. These powers have been frequently resorted to, but as far as we have learned with no great success, inasmuch as the annual officers, chiefly the overseers, whom the justices have to rely upon, are persons not only interested in maintaining the existing valuation of their parish, but are also generally incompetent to correct that valuation, a task which requires professional skill, and a freedom from personal interest. The result, practically, amounts to this, that where the justices have gone through the process pointed out by the 55 Geo. 3, c. 51, the total valuation of the county has indeed usually been much increased, and therefore some approximation has been made to a fairer valuation; but in no case that we have heard of, has the result been considered satisfactory by the justices themselves. In other cases the justices have made the attempt, but have found their powers insufficient to surmount the difficulties which they encountered, and have consequently abandoned the task before its completion. In a considerable number of counties no attempt of the kind has been made. There are, accordingly, still found a great variety in the practices by which the relative proportions of the parishes contributing to the county-rate are ascertained; many of the proportions being determined by scales or valuations which have been in use for periods much exceeding 100 years, during which great changes have occurred in different parts of the same county; and a vast extent of new property has been created in many such parts, liable to the tax by law, but which is often wholly disregarded in the actual assessment. In some counties, a valuation has been made in the manner just before described, at some period since the year 1815, under the powers of the 55 Geo. 3, c. 51. In some other counties, the contribution to the land-tax serves as the scale of the proportionate contribution. In these cases the proportion has been charged since the year 1792, notwithstanding the subsequent alterations in the value of property. In other counties, the valuation made in the years 1814-15 determines the scale of contribution. In other counties, some ancient scale, of which the origin is unknown to the respective clerks of the peace, determines the proportion. In other counties, the nominal valuation of the poor's rate, uncorrected by the application of the powers of 55 Geo. 3, c. 51, and made in some counties in, or very early after, the year 1739; and in other counties, at various periods between that date and the present time, serves as the basis of the contribution to the county-rate. All these various practices are alike complained of as unequal in the counties in which they are adopted." The note to the same passage shows in detail the various bases of valuation adopted in counties, and in use when the report was drawn up.

George Coode, Esq.

4 July 1844.

COUNTIES.	DATE OF VALUATION.	PRINCIPLE ON WHICH VALUATION IS REPORTED TO HAVE BEEN MADE.
Bedford - - - -	1739	No valuation made under the 55 Geo. 3, c. 51. The principle of the existing scale not known to the clerks of the peace, and cannot be ascertained by them.

Devon - - -	1816	Ditto - - - ditto.
Cumberland - - -	1810	Poor's-rates, and examination of overseers as to the actual value of properties rated.
Sussex, Eastern Divi- sion.	1831	Annual value of all property assessed to the poor's-rates or liable to be so.
Worcester - - -	1833	From returns of overseers, altered by magis- trates where insufficient.
York, West Riding -	1816	On the average of poor's-rates and property- tax returns, deducting one-fourth there- from.
Salop - - -	1740	Under the 12 Geo. 2, c. 29.

* Previous to the year 1816, the rates were not made upon any valuation of property, but were collected by the ancient mode of so much a trained soldier (each hundred being rated with a certain number), which served to show the proportions of the county-rate to be paid by each hundred.—(Appendix to Report of Select Committee of the House of Lords, 1834, p. 279).

1704. Do you consider the state of the law in England enables counties to have correct valuations for general purposes, inasmuch as the law seems rather to contemplate that a general valuation should emanate from the separate collections of portions, instead of the valuation being made for one general object?—The provision for the valuation of the county-rates involves in fact two systems. In the first case

case a parish is assessed by the county justices upon a certain value, in proportion to what it is to contribute to the county-rate; at the next stage the sum assessed upon the parish by the justices is distributed upon the rate-payers of the parish, upon the basis of the valuation upon which the rate is to be made by the overseer. The rate laid by the justices upon each parish bears the same proportion to the whole sum required from the county as the sum at which the justices have valued the parish bears to the aggregate sum at which they have valued the whole county. These valuations of the parish and county have been affected in the various ways described in the preceding passages of the Report on Local Taxation. They take no cognizance of the fact, that the overseers in collecting the poor-rate may proceed upon quite another valuation, formed upon quite another basis; and accordingly in many counties the demands of the justices at quarter sessions are made upon ancient assessments, wholly unconformable with the present aggregate value of the property in those parishes in which the rate may be levied, in fact, by the overseers in collecting their poor-rate upon a different valuation made under Mr. Poulet Scrope's Act, and which may represent the true net annual value of all the property in the parish.

George Coode, Esq.

4 July 1844.

1705. Then the Committee presume it is not the English system of valuation you recommend to be introduced into Ireland?—Most certainly not as regards the aggregate valuation of parishes to the county-rate.

1706. You have, in a previous part of your examination, stated that if a valuation for general purposes of taxation were to be established in Ireland, you would recommend the adoption of the basis of the Poor Relief Act, rather than the basis under which Mr. Griffith is conducting his townland valuations?—Certainly.

1707. Have you any additional observations to make upon that subject?—My observations would be not so much in addition as in confirmation and proof of the observations I made upon the valuation conducted by Mr. Griffith. So far as concerns Mr. Griffith's valuation, it is but just to say there is every appearance of its having been conducted with great skill and knowledge of the subject by Mr. Griffith, and as well perhaps as it was possible to be done under the principle of the Act of Parliament which he had to carry into effect. But the principle of that Act of Parliament seems, by Mr. Griffith's evidence before the Committee which sat upon County Cess, to have been found by his own experience to be quite incapable of being carried into practice. He has given instances in which, instead of conforming to the scale of prices laid down by the Act, he takes the ordinary prices of the district, or the local prices of the neighbourhood. In like manner he has corrected the results obtained in conformity with the Act, by a reference to what is practically found to be the letting value of the land, a test evidently intended to have been excluded from his consideration by the Act, inasmuch as the Act lays down for land a scale of prices for valuation, and for houses it expressly lays down the rents which are to be obtained. It therefore appears to result from Mr. Griffith's evidence, that he has found, in practice, the principle of valuation laid down for him by the Act to be incapable of being carried out, and he has been forced to resort to what appears to be a more reasonable principle of valuation, viz. a reference to the net rental of the land, which has served him for the ultimate test for his own valuation by which he has corrected the result he had obtained upon the principle of valuation suggested by the Act of Parliament. It would therefore appear, by this evidence, that Mr. Griffith was directed to act upon a false principle, which would not enable him to carry his valuation through, and was deprived of the opportunity of referring constantly to that principle which nevertheless he was occasionally compelled to refer to, and that his experience shows that the principle of the Act was incapable of application. Other defects of the county-cess valuation are, that it does not go sufficiently into detail to enable any tax to be levied upon the persons and properties that are, in the last resort, liable to the tax. It thereby deprives all persons of the opportunity of knowing the extent to which the law operates justly or unjustly upon them, and consequently of all means of applying for a remedy, if adequate provision were made for a remedy, by appeal. The result is, that great obscurity exists with regard to the relative extent to which individuals are made liable to the tax, and it appears most probable that great inequalities and great injustice do, in fact, result from this valuation; though, from the plan adopted of reducing the valuation in all cases so much below the real value ascertained by the rent paid, all persons are induced to be

George Coode, Esq.

4 July 1844.

satisfied, though they are quite in the dark as to the principle upon which their neighbours and fellow contributors are made liable to the tax,

1708. Have you ever considered how far it would be possible to revise Mr. Griffith's valuation, when once it shall have been completed, and the persons who have carried on some relative valuation of land by sight shall not be at hand to perfect the valuation?—It appears to me, that whenever it is necessary to revise the valuation, it would be perfectly impossible to use the valuation already effected as the groundwork; the standard of the valuation is not the net annual rental, which in all places is capable of ready estimate, but is a standard having relation all through Ireland to the value first mentioned in the county of Derry. Now it is obviously impossible that the relations of the value of land throughout Ireland can remain the same for any length of time; and it is therefore obvious, that if the relation of the value of land in Derry, to the value in other counties, was correctly ascertained in the first valuation, it would still be impossible, when any disturbance of the proportion took place, to re-adjust the valuation to any local change in value.

1709. Taking the basis of valuation to be the letting value, that is a subject of easy revision; your standard is always at hand?—It is always at hand; for one of the things is experience of the locality, and every person's experience is, in fact, supplying you always with the means of revising your estimate.

1710. What do you understand by the term, "fair letting value"?—I mean by "fair letting value," such a value as persons, before they contract with one another in the respective relations of landlord and proposed tenant would, under the ordinary circumstances of the locality, place upon the land, judging alone of value by the amount the landlord could get from other persons who would be likely to take it, to be occupied in the mode in which the tenant proposes to occupy it. I mean, such a rent as could be got by persons freely contracting with each other, and without regard to the personal power of the landlord over the tenant to wring a high rent from him.

1711. Lord *Courtenay*.] And with reference or not to the existing competition for land in that locality?—Undoubtedly with reference to the existing competition, operating upon the whole class of tenants, and persons desirous of becoming tenants of property in that district. In fact, I mean nothing but the general market value of the land to a tenant in the open market.

1712. *Chairman*.] Would not such a valuation upon such principles be likely to be of more use to the tenants in guarding them from their landlord, and from too high a rent being demanded of them, than any mere relative value?—I conceive it would be a great protection to tenants, to form a guide to them. I have heard of persons taking houses and other property as tenants, since the valuation has been made in England, who have gone to the valuers to inquire of them what had been the amount at which they had estimated the property, and that they had been guided by the answer as to the sum which they would offer to the landlord; in fact have offered less terms, and got the tenancy on lower terms than they would have done if they had not had the opportunity of going to the valuer. I have not however heard of any persons guiding themselves by the valuation actually made by the parishes, because, in England, the valuation is considered to be still much below the true letting value.

1713. If the valuation be conducted on a low scale, such as Mr. Griffith's valuation now, no one would appear to be inclined to refer to it, but if the valuation professed to be a valuation of the full fair letting value, such a valuation would appear to be a protection to the tenant, inasmuch as the landlord would require some strong grounds to justify him in deviating to any great extent from a valuation which is received as a full and fair valuation?—I think it is an obvious engine, a fair valuation of property, to check the claims of persons who attempt to get exorbitant rents for their property.

Lunæ, 8^e die Julii, 1844.

MEMBERS PRESENT.

Sir H. W. Barron.
Mr. Colquhoun.
Lord Courtenay.
Lord Eliot.
Sir E. Hayes.

Sir Denham Norreys.
Mr. Shaw.
Mr. Vesey.
Mr. Young.

LORD COURTENAY, IN THE CHAIR.

George Cornewall Lewis, Esq. called in ; and Examined.

1714. Sir *D. Norreys*.] HOW long have you been a Poor Law Commissioner ?
—I have been a Poor Law Commissioner since the beginning of the year 1839.

G. C. Lewis, Esq.

1715. Have you had an opportunity of considering the state of the valuations for poor law purposes in Ireland ?—The subject of poor law valuations in Ireland was much considered by the Commissioners last year, in reference to a Bill for the amendment of the Irish Poor Relief Act, which was passed during last Session. In consequence of the complaints that were made at that time of the inaccuracy of the valuations in Ireland, an additional power was taken to enable the Commissioners to appoint valuers for revising the existing valuations. The principal objection stated was, that the poor law valuations were unduly low ; that they were made so by the Boards of Guardians in which the interests of the tenants might preponderate, in order to give advantage to the tenants in the working of the deductions due from the landlords under the Act.

8 July 1844.

1716. Generally, have you reason to suppose that the poor law valuations, at present existing in Ireland, would form a fair basis for general taxation ?—In answer to that question, I would say, that I believe the poor law valuations in Ireland to have been made upon a fair and sound principle : one in accordance with the law of rating in England, and in accordance with those principles of valuation which appear to be recommended by experience ; but I am not prepared to say, that the poor law valuations in Ireland have been executed with the skill and the uniformity, which would render it safe to adopt them as the foundation of a general system of local taxation. I believe that the existing poor law valuations are in many cases deficient in uniformity ; even in the same union, different parts of the union have been valued upon different principles.

1717. In your 10th Report you have made observations in reference to the valuation which is in progress in Ireland, called the Townland Valuation of Ireland. Have you had an opportunity of reading the evidence which Mr. Gulson has given in reference to the observations in that Report ?—I have read Mr. Gulson's evidence in reference to the passage in our 10th Annual Report upon Irish Valuations (the answer to Question 1554, and the following answers), and I concur generally in the answers which he has given to the questions there referred to. I may take the opportunity of stating that the Commissioners were extremely desirous of adopting Mr. Griffith's valuation to the purposes of the Poor Law ; but they found upon examination that the principle upon which his valuation was constructed rendered it inapplicable to poor law purposes, without extensive alterations, and they applied to him for assistance in making those alterations ; they found, however, that the alterations were so extensive that it was impossible to devise any means of converting his valuation to poor law purposes systematically, and that it could only be done by taking the valuations of single unions, and attempting a modification of the valuation constructed under his superintendence, by the reviser of the valuation appointed by the Commissioners under the powers of the Act of last Session.

1718. Has the question of the consolidation of the several valuations for the general purposes of taxation been brought under your consideration ?—That is
o.63. U one

G. C. Lewis, Esq.

8 July 1844.

one of the subjects which has had much of the attention of the Commissioners; and it has struck us, as it must have struck every person who considered the subject, that there was a great waste of public money in the present system which is pursued in Ireland with respect to valuations for local taxation. There are at present, by law, two valuations in Ireland for the imposition of local rates; one for the county cess, and the other for the poor-rate, framed by independent authorities and upon discordant principles. It is now proposed to extend Mr. Griffith's valuation for the county cess to the whole of Ireland; and it is intended to apply it to two counties in which there already exists a valuation, which has been constructed under local Acts; so that there are two counties in which there will be one valuation for the grand-jury cess, made under a local Act, the valuation made under the Irish Poor Relief Act, and in a short time there will be a third valuation, framed by Mr. Griffith, under the powers contained in the general Valuation Act. It is manifest that this system leads to a great waste of public money; and that by multiplying the valuations, the inducement to perfect any one valuation is greatly weakened. If there were one valuation applicable to all local rates, the interest to obtain a perfect valuation would be at its maximum, whereas at present the interest is divided. For these reasons it has occurred to us, that it would be extremely desirable to consolidate the valuations for the county cess and for the poor-rate; but as the law now stands, that consolidation is impracticable; the valuations are constructed by different authorities, they are made upon different principles, and the rates founded upon those valuations are levied by different collectors.

1719. Are you aware that a large portion of the property which is rateable to the poor-rates in Ireland is exempted from the payment of the county cess?—I am aware that there is a difference with respect to the classes of property subject to the poor-rate and subject to county cess; the most important exemptions, as far as I am aware, are of tithes and machinery, which are not liable to the county cess, whereas they are liable to the poor-rate. If the two rates should be consolidated, it would be necessary to consider whether those exemptions should be preserved, or whether the classes of property which are now subject to poor-rates should be made subject to the county cess. It strikes me, upon the first view of the question, that there is no reason for exempting machinery from the county cess in Ireland. Generally, I would remark, that all exemptions of property from local taxes are an evil; the presumption is in favour of rating everything; every one must see there is great danger in exempting any class of persons from a common burthen to which property is subject; if there be any question as to the extension of any burthen, it gives an interest to the class exempted to recommend the increase of that burthen which they themselves are exempt from. Any one must see, for example, how very dangerous it would be to exempt any large class of persons in England from the operation of the poor-rates; such persons might gain to themselves great credit for humanity and regard for the interests of the poor, in recommending the increase of the poor-rate, which increased burthen would fall, not on themselves, but on others; they themselves would not share in the increase of the burthen which they would seek to impose upon the community; I therefore think that there are strong reasons upon general grounds why all descriptions of visible property should be liable to local taxes, and therefore I am not aware, unless some special reason should be given, why fixed machinery should not be rateable to the county cess in Ireland as it is in England. With regard to tithes, the question is different, for it is in Ireland a composition for tithes, and the composition has been fixed at a certain amount; the deductions have been determined by law; and I am not prepared to say that it would be desirable or just at the present time to impose upon tithe in Ireland any burthen which was not contemplated at the time of the passing of the Tithe Composition Acts in that country.

1720. Mr. Shaw.] You particularly allude to the Rent-charge Act?—Yes; to the Tithe Composition and Rent-charge Acts in Ireland; and therefore I am not prepared to say that it will be either just or desirable at present to impose that new burthen upon tithes in Ireland. The subject is not one upon which I can venture to express a confident opinion to the Committee; it is not one which I have considered in detail; but that is the opinion which I am led to form upon the best means of information upon the subject which I possess. I will only now remark, that the exemption of tithes, or of any other species of property, from
the

the county cess, would form no argument against the consolidation of the two rates, inasmuch as there would not be the smallest difficulty in forming a rate-book in such a manner as would enable the poor-rate and the county-rate to be levied simultaneously, although the classes of property upon which they would be imposed would not be precisely similar. I am unwilling to trouble the Committee with details upon the subject, but I should be prepared to suggest the form of a rate-book, which would exemplify the manner in which that exemption would be preserved.

1721. Can you state any particular reason to the Committee why you consider the tithe had been subject to the poor-rate?—I apprehend it was subjected to poor-rate in Ireland, upon the same principle upon which it is subject to poor-rate in England. I believe that the rating clauses of the Irish Poor Relief Act were framed upon the principle of the law of local rating in England, which has been now examined and scrutinised for a considerable number of years by courts of justice, and undergone the test of experience, and may be said, generally, as far as any financial arrangement can give satisfaction, to give satisfaction to the public.

1721*. But with reference to the particular object for which the rate is levied, viz. the relief of the poor and destitute, does it occur to you it is any principle connected with that which renders tithe both in England and Ireland subject to taxation with respect to poor-rates, when it is not generally subject to taxation?—The question, perhaps, refers to the original tripartite division of tithes, according to which one-third was supposed to be allotted to the poor. I apprehend, however, that was not the principle upon which tithes were introduced into the Act of Elizabeth. I rather think tithes were considered the subject of taxation, from their being a portion of the rent of land, and that the tithe-owner in England is regarded much in the same light as any other owner of real property.

1722. I think at the time of the passing of the Irish Poor Law Act there was a willingness expressed by the clergy to be taxed to the poor, and no objection was made on their part, or any of their friends?—I am not aware that any objection was made to the inclusion of tithes in Ireland within the obligation of poor-rate.

1723. Sir *D. Norreys*.] Tithe being now a charge upon land, why should it not be liable to any system of taxation which is supposed to render the land more valuable?—The question appears to me to include its own answer, viz. that it is a fixed charge upon land. In so far as tithe in Ireland is a fixed charge upon land, it appears to me that it would not be equitable to subject it now to any additional burthens for the purpose of the county cess; in so far, however, as it is susceptible of increase with the rent of land and the general prosperity of the country, there certainly would be a ground for subjecting it to charges for objects by which the general prosperity of the country is promoted, such, for example, as the construction of roads and bridges.

1724. Tolls, corporate and private, and ferries are liable to poor-rates, but not liable to county cess; is there any reason why they should be exempt?—I can see no reason why private tolls should be exempted from the county cess in Ireland; I am not prepared to say it is desirable that tolls, the property of any public body, should be rated.

1725. Mr. *Shaw*.] You are aware that other rent-charges are not generally subject to taxation, mortgages, jointures, or other fixed charges upon land?—I am speaking now of those classes of property which are subject to the poor-rate, and not subject to the county cess. I would not propose that any rent-charges, mortgages, or jointures, which are not subject to poor-rates, should be subject to county cess; I see no reason why incumbrances upon land should be rateable to any local rate.

1726. Sir *D. Norreys*.] Supposing that it were determined to have one general valuation, according to which all local taxation should be levied, which principle would you prefer to be adopted; that laid down in the Poor Law Act, or that adopted for the townland valuation?—I should decidedly prefer the principle laid down in the Poor Law Act, because that is, upon the whole, the most equitable, and has stood the test of the longest and the widest experience. I am unable to understand the advantages of adopting the principle which is laid down by the Valuation Act for the county-rate valuation of Ireland. As far as I understand that principle, it is, that the value of land is to be determined by its productiveness, ascertained according to a scale of certain prices prescribed by

G. C. Lewis, Esq.

8 July 1844.

the Valuation Act. I have great difficulty in conceiving how the productiveness of land can be taken as the test of its value, independent either of the annual rent or of the value of the fee-simple. The Committee will see to what absurd consequences the principle would lead, if applied upon a large scale. For example, land in the midst of a desert might be extremely productive, and nevertheless would be devoid of value. In a new colony, land might be extremely productive, and yet, from the absence of any demand, absolutely worthless. I can conceive no safe or intelligible guide for the valuation of land, except either the annual rent of the land or the value of the fee-simple; and it will be observed that in estimating the value of the fee-simple, it is common to take the rent as the standard, inasmuch as it is the usual mode of stating the value of the fee-simple to say it is worth so many years' purchase; that is to say, the fee-simple of the land is worth the annual rent multiplied by a certain figure. I therefore can only come to the conclusion, that the fairest and most practicable standard for the value of land is the rent, and that no other can be safely adopted in framing a general valuation, either for the purposes of local or other taxation.

1727. Mr. Shaw.] Does not that assume that land is reasonably well cultivated and managed?—It appears to me, whatever the cultivation may be, the same principle would apply, that you can only value land by estimating what its probable rent will be, according to the ordinary and average system of cultivation practised in the country.

1728. Do you not think, in valuing the fee-simple of land, its permanent capabilities should be in some degree taken into consideration as well as the present value?—No doubt that would be an element in the calculation; at the same time I believe that, practically, the valuer of land would look to the probable rent; and would multiply that probable rent by the number of years at which land was commonly sold in that part of the country.

1729. Do you think in that respect there would be no difference, as between England and Ireland?—I believe in England, for various reasons which it is now unnecessary to enter upon, the fee-simple of land would be a greater multiple of the annual rent than in Ireland.

1730. Do you not also think the annual rent would be a fairer test in England of the real value of land, from the higher state of cultivation and more improved agricultural habits of England, than in Ireland?—I have a difficulty in seeing any reason why it should be so; it appears to me there is no other standard which can be taken for the value of land than the rent.

1731. Does it not occur to you that in England, generally speaking, the land produces a fair rent, inasmuch as it is reasonably well cultivated; whereas in various parts of Ireland the knowledge of agriculture and the habits of the people are so much behind England in that respect, that the land does not bring in, in its present state, what it would be very capable of if reasonably cultivated?—The facts stated by the Committee show why land of the same quality would produce a smaller rent in Ireland than in England; but they do not appear to me to prove that the actual or probable rent is not as fair a test of the value of land in Ireland as in England.

1732. Now, supposing the land to be very ill cultivated in the hands of a tenant with no capital and very little skill, it would be impossible he could pay the real value of that land in rent?—I am unable to affix any distinct meaning to "the real value of the land" as distinguished from its practical value. By the value of land, by its real value, if it may be said, I understand the annual rent which that land is likely to fetch, if cultivated according to the average mode of cultivation in the country for the time being.

1733. And do you think in Ireland, generally speaking, or in a great many parts of Ireland, the land, as compared with England, is cultivated in that manner as to afford a fair test?—There is an average ordinary mode of cultivation in Ireland as there is in England; those two modes of cultivation differ; they differ in different parts of Ireland; the ordinary mode of cultivation in the north of Ireland is different from the ordinary mode of cultivation in the south; the ordinary mode of cultivation in Leinster is different from the ordinary mode of cultivation in Connaught, and the value would be ascertained by estimating the rent, according to those different modes of cultivation, for a certain number of years.

1734. Do you not think as the people's habits improve, and agricultural knowledge and skill improve, the tenant will be able to pay a higher rent, and be

be better off himself, than in many cases he can do now, he being in a very uncomfortable state?—Unquestionably; and that fact shows there is no such thing as the real value of land; and that the attempt which the Valuation Act appears to make to fix upon land a permanent value, independent of the changes of prices and means of cultivation, is a chimerical attempt; that no such value can be fixed; all you can do is to estimate the probable value of land at the time being, and to alter that value according to the improvement or other variations in the mode of cultivation, increase of capital, increase of skill, the amount of crime, the removal of restrictions upon foreign trade, the growth of large towns in the vicinity, and any other circumstances which may affect the value and profit of the land.

G. C. Lewis, Esq.

8 July 1844.

1735. *Chairman.*] And you would provide for changes, arising from such circumstances as those to which you refer, by a periodical revision?—I would unquestionably make such a provision; and I look upon it as an important defect in the existing Valuation Act, that it seems not to contemplate any revision, from time to time, of the valuation. As I understand that Act, the valuation, having once been made, is to remain in force for an indefinite time, and all county rates which may be imposed by the grand jury, after the passing of the Act, are to be imposed according to the valuation which is then in force, however old that valuation.

1736. *Sir D. Norreys.*] In using the term “rent,” which you recommend should be the basis of the valuation, do you mean the rent which is actually paid for ground, or the rent which you conceive an impartial person would consider as the sum which could reasonably be expected to be paid for the land?—What I understand is not the rent actually paid, but such rent as the land is reasonably worth; such rent as it would probably fetch if it was cultivated in the ordinary manner, with the average amount of skill and capital used in that part of the country.

1737. *Sir H. W. Barron.*] If I understand your ideas upon this subject, it is not in reality what would be made of the land under good management, which you fix as its value, but what, under indifferent or bad management in bad districts, the land would be likely to fetch?—That is my meaning: I do not take any ideal standard; I am not supposing a farmer from East Lothian, coming, with extraordinary skill and a large amount of capital, and settling in the middle of Connaught; I do not estimate the rent which such a person, with such knowledge and such capital, would be able to pay, but I would take an ordinary Connaught farmer, and I would value the land according to the rent which he would be likely to pay. I can conceive a time when Connaught may be as highly cultivated as the Lothians; if that time shall ever come, and nobody can say how near or how distant it may be, it is quite clear that all the existing valuations will require to be revised.

1738. It follows then, from your view of the case, that (we will say) an estate of 500 acres, well cultivated and well managed, with sufficient capital, would be valued by you yourself, if you were valuing that estate, at a much higher rate than a similarly circumstanced estate in every respect of 500 acres, which was ill-cultivated and badly managed by indifferent tenants?—Yes; if the cultivation of any estate was considerably above the average, and if that cultivation was likely to produce a higher rent for the future; the cultivation might be such as to make a permanent improvement in the capacity of the soil, and might be likely to increase the value of the land thereafter by better cultivation, and therefore might justify the valuator in saying, the probable rent thereafter for the land would be higher than upon the neighbouring properties. If, however, it did not justify any such inference, I would put upon that estate a lower value than the existing rent.

1739. *Mr. Shaw.*] But in the case supposed, the owner of the more improved property would be able to pay a higher rate than the owner of the neighbouring property?—No doubt he would, even though he was valued up to the actual amount of the rent.

1740. *Sir D. Norreys.*] Supposing a general valuation were made upon which all county rates should fall, how frequently do you consider it necessary that a revision should take place of such valuation?—It seems to me impossible to lay down any general rule with respect to the frequency of revision. I think there ought to be a machinery which would enable the valuation to be permanently revised. That is the case in England; the overseers in England have

G. C. Lewis, Esq.

8 July 1844.

the power to make a new valuation for every rate if they so think fit; such necessity, however, scarcely ever arises except in large towns. In large towns, where new houses are perpetually in course of building, and where changes of value are extensive and frequent, a new valuation to a certain extent is necessary every six months. In rural parishes, where population is stationary, and where changes in cultivation are not considerable, the revisions of valuation need not be frequent; but I consider it as a necessary part of every good system of constructing a valuation for local purposes, that there should be a permanent power of revision, and that that power should be applied wherever the changes in the value of property are frequent and considerable.

1741. Witnesses examined before this Committee have recommended rather that where the valuation is once completed it should remain unaltered for a certain period, in order to avoid the expenses attendant upon alterations in the valuation; do you see any objection, so far as poor law purposes are concerned, to the valuation remaining unaltered, say from three to five years, provided there be a power of altering the names of the occupants?—I see strong objections to fixing by law a limit of as much as three or five years for any valuation for local taxes. It appears to me in towns that such a law would work considerable injustice. I can, at present, see no reason why a valuation should not be altered for every successive rate. There may be possible reasons, the force of which I do not at present see, why it may be desirable that the valuation should not be altered more than once a year; but it appears to me that should be the extreme limit. I look upon it that valuations, in order to be accurate, should be subject to perpetual revision. I can conceive no valuation pretending to accuracy which is not liable to constant revision. Though you adopt the principle of a tenement valuation, if the valuator is to value the tenement, and not larger divisions, I look upon it that there should be, unquestionably, the power of re-considering the valuation of any one tenement in constant operation.

There is an important difference between the Irish Valuation Act and the English valuations, which the Committee ought not to overlook, which is, that according to the Irish Act, the commissioner of valuation values the townland; he fixes the sum at which all the property in the townland is to be valued. This document is transmitted to the townland; the inhabitants of the townland, in vestry, appoint some applotters; these applotters proceed to value each tenement, taking care only that the full value of all the tenements in the townland should coincide with the sum fixed by the commissioner of valuation. Now, it is manifest, upon comparing that process with the valuation in England, that in Ireland the document, which answers to the valuation in England, is not the valuation of the commissioner of valuation, but the valuation made by the applotters. All that the commissioner of valuation does, is to say that the total amount of the property of the townland is to be valued at so much; he does not attempt to determine the value of each separate tenement. Now in England, where the overseers make a valuation of the parish, or where a surveyor employed by the overseers makes a valuation of the parish, he does not value the total amount of the property of the parish, but he imposes a value upon each separate tenement; the consequence is, that when a person examines that valuation, he knows whether or no his property is fairly valued; but when a person looks at Mr. Griffith's valuation, it is impossible for him to say whether or no his property is fairly valued; all he knows is, that the total property in the townland is valued at so much; it is impossible for him to know what proportion of that valuation his individual property forms. It therefore seems to me, that the absence of appeals against Mr. Griffith's valuations, or the absence of objections to them, furnishes very slight evidence in favour of their accuracy, inasmuch as it is impossible for a party to judge what his probable share of the value will be, when the applotters have performed their task. Everybody must see the impossibility of forming such a judgment, when they come to consider what would be the effect of looking at the total value of the property in a parish in a large town. Suppose, for example, the person who occupies a house in any large town looks at Mr. Griffith's valuation of a parish in that town, what judgment can he form of the fairness of the valuation? It is manifestly impossible; he does not know, when the total value comes to be applotted upon all the houses in the parish, what his share will be. There is another consideration too, which is, that even if the total value imposed upon the townland is something above what it ought to

to be, each individual may think, when the valuation comes to be apportioned, that his share will be somewhat less than it ought to be; he may have a confidence, derived from reasons of his own, that the apportioners may not impose upon his tenement its full value, and therefore, although the valuation of the entire townland may be too high, he may think that when it has come to be apportioned, his tenement will be valued below the value; and therefore he may for that reason abstain from objecting or appealing.

1742. Supposing that the Committee were to recommend the adoption of one valuation for all purposes of taxation in Ireland, do you think that such valuation should be made independently of the poor law system, as well as of the grand jury or any other local authority?—It seems to me that if it were decided by Parliament that all the local rates of Ireland should be imposed upon the basis of one valuation, it is desirable that valuation should be constructed by an independent authority, similar to that which is constituted under the present Valuation Act; and that the county-rate and poor-rate should be levied in some manner which should be agreed upon in common, and that neither the Poor Law Commissioners nor the Poor Law guardians should have any control over the valuation upon which the two rates should be imposed.

1743. You propose that there should be an independent authority for the purpose of framing the valuation; do you also consider that that independent authority should continue for keeping the valuations up to their proper standard?—It appears to me there ought to be a separate and permanent authority for the construction and superintendence of the valuation for local taxes; but as I before stated, I think that valuation ought to descend to the separate tenements, and it ought not to rest contented with fixing a gross sum for the value of the property, either in a townland or any other district, inasmuch as I conceive there can be no practical redress against a valuation, unless the valuator fixes the value upon each separate tenement; unless the principal responsible authority fixes the value for each tenement, it is impossible for the occupier to judge whether or no the valuation is correctly made; and if he is unable to form that judgment, there is no effectual responsibility in the valuator.

1744. Supposing there were such a valuation completed, have you any observations to make as to the mode of collecting the rates, or the time at which rates should be collected?—If it were decided that the county cess and the poor-rate should be imposed upon the same valuation in Ireland, it would of course be necessary to decide as to the manner in which the entire rate should be collected; it might either be collected by officers appointed by the grand jury, or it might be collected by officers appointed by the Board of Guardians; it does not appear to me that it would be very important which that should be; the authority to appoint those officers is not a matter of great importance; I should be unwilling myself to express any opinion upon the subject. But what does appear to me to be important is, that there should be in Ireland as in England a single rate, comprehending both the county-rate and the poor-rate; that is to say, that the county-rate and the poor-rate should be collected by one set of officers; that those and all other local taxes should be collected simultaneously, and that the expense of a separate collection by independent officers should be avoided. It appears to me of subordinate importance whether those officers should be appointed by one local body or another: I assume, of course, the appointment would be vested in some local body. With regard to the time of collection, I am afraid no opinion I could express would be of any value to the Committee; I have not sufficient evidence as to the time of the year when it is most convenient to collect; of course I am aware that in Ireland there is a great difference as to the facility of collecting rates at different times of the year, and there are many reasons why the collections should be as infrequent as possible; perhaps means may be devised of making only one collection in a year, and at all events it is probable that two collections would be found sufficient: that appears, however, a matter of detail which would be properly left for future consideration.

1745. Have you any other observations you wish to make to the Committee with reference to the question of valuation?—I should desire to observe to the Committee, with regard to the purposes for which a valuation of this sort is constructed, that the immediate and direct purpose is to secure a fair standard for the imposition of local taxes. In order to secure a fair standard for the imposition of local taxes, it is necessary that the valuation should be constructed upon

G. C. Lewis, Esq.

8 July 1844.

G. C. Lewis, Esq.

8 July 1844.

a correct principle, by skilful persons, subject to efficient responsibility; and that the valuation should be liable to constant revision. An incidental and collateral purpose of such a valuation, but at the same time an important one, is to secure a standard by which municipal franchises, and perhaps Parliamentary franchises, may be regulated; but beyond those two purposes, viz. the direct purpose for which the valuation is constructed, the imposition of local taxes, and if necessary, of some general taxes, and the collateral object of securing a standard for certain franchises, beyond those purposes, I say, it does not appear to me that such a valuation should extend; and I should particularly object to any such valuation being constructed with a view to furnishing a scale of reference for the determination of rent, and for affording the means of arbitration between landlord and tenant. That question is one of great delicacy in all countries; it is a question of peculiar delicacy in Ireland; and it seems to me that any Government functionary constructing a valuation, who should attempt to influence the letting of land, and to furnish a standard of reference by which the free contracts for fixing rent should be in any manner regulated, would very far exceed his proper province and functions.

1746. Mr. Shaw.] Still I suppose you would wish the standard of value for the purposes of taxation to be the fair letting price?—I should wish that the valuation should follow the rent, and not that the rent should follow the valuation; I should wish that the valuator should be guided solely by an estimate of the probable reasonable rent of the land.

1747. The fair letting value?—That he should take into consideration the actual circumstances of the country; but it appears to me that no view of influencing the letting of land prospectively ought to enter into his calculation.

1748. Mr. Colquhoun.] But in those cases in which the rent, from any causes, exceeded the reasonable value of the land, you would leave a power to the valuator to correct that, in his opinion, excess of rent, by a calculation founded upon general circumstances?—No doubt it would be his duty to make a calculation according to the average circumstances of the country; but I should be sorry to find that any valuation framed by a public officer, should be framed with any view to influencing, though indirectly, the letting of land. If any person engaged in the letting of land were to choose voluntarily to adopt the value fixed by a public valuator, it would of course be competent for him to do so; but it seems to me it would be highly inexpedient for Government to use, even indirectly, its influence to control bargains which landlords and tenants may make in respect of land.

1749. But without assuming any wish that the Government valuation should control the rent, suppose he found in any cases, that from the average circumstances of the district, rent was forced up by extreme competition, how would you have the valuator deal with such cases?—It seems to me, that the existence of extreme competition is one of the circumstances which the valuator ought to take into account in estimating the rent of land. It may be a circumstance to lament that great competition exists, which induces persons to offer for land a price which they may be unable to afford, consistently with their skill or capital; at the same time, the existence of that competition is a fact which the valuator ought not to attempt to blind himself to; he is bound to recognise that fact, and to form his valuation accordingly. I object extremely to a valuator having any theories with regard to what the rent ought to be, or what the condition of the cultivating tenantry ought to be; he is a person who should be guided simply by facts, not having any speculations with regard to some possible and desirable condition of the people.

1750. So that, even in the case in which the rent to an ordinary observer is such as to leave a very inferior sustenance to the cultivator, you would have the valuator follow the rent which is got, instead of following his own opinion of what should be the condition of the tenant?—I would have him look to the ordinary average rent of the district, even if that ordinary average rent should be determined by active competition. The condition of the occupying tenantry may be extremely bad; there may be great suffering in consequence of the competition for land; but that is a fact which the valuator ought simply to lament, and not attempt to correct.

1751. Mr. Shaw.] But suppose the valuator finds in any one case ground greatly overlet, do you think he ought to value it at its actual rent instead of its fair letting value?—If it is overlet with reference to the ordinary letting value of the

the district, I should say then he ought to value it at less than the actual rent ; but if overlet means overlet according to some theoretical standard of value which he may fix in his own mind, with reference to the comfort of the tenant, and the sum which he thinks that tenant ought to pay, then, I should say, he ought not to value it at less than the actual rent.

G. C. Lewis, Esq.

8 July 1844.

1752. Mr. Colquhoun.] You would not leave him to compare that district with other districts in Ireland, or even with districts in England and Scotland?—Certainly not with remote districts in Ireland ; and I apprehend, if he were to compare any part of Ireland, where the rents are highest, with any part of England, and still more with any part of Scotland, he would fix a higher instead of a lower value. I believe the rent of land in Scotland, per acre, is much higher than it is in any part of Ireland, taking equal qualities of land.

1753. Mr. Shaw.] Supposing two contiguous farms, similarly circumstanced in all other respects, but one let at what might be considered above the fair letting value, and the other at or below the fair letting value, you do not mean to say the valuator in that case should be influenced by the amount of actual rent paid upon one of those farms?—My answer to that question must depend upon the meaning which is assigned to the words, “ fair letting value.” If “ fair letting value” means such a rent as would be given by an ordinary cultivator in that part of the country, then, I say, he ought to take the fair letting value ; if “ fair letting value” means the value which a person thinks a tenant ought to pay, not with reference to the existing circumstances and existing competition of the district, but with reference to the amount which a humane man might think the tenant ought to retain for his own comfort, then, I say, he ought not to do so. My objection to that mode of valuing is, that it involves a theory which cannot be brought to any practical test.

1754. You are aware very often a rent is undertaken to be, and which is not in fact, paid?—No doubt ; that is to say, it cannot be paid ; a person undertakes to pay more than he is able to pay.

1755. Mr. Colquhoun.] And another objection would be, that that mode would of course submit to the discretion of the valuator a number of questions which it is desirable to exclude from him?—Which it appears to me to be absolutely necessary to exclude, because I can conceive persons taking opposite views ; one person may say, “ Rents in Ireland are too high with reference to the comfort of the occupying tenantry, and therefore I will fix a lower value ;” another person may say, “ Rents in Ireland are too low, as compared with what they might be if the land were cultivated with skill and a larger amount of capital, and therefore I will fix a higher value.” The moment you depart from the actual circumstances of the country, it seems to me you have neither chart nor compass.

1756. Then, upon the whole, you think the rent is a fair indication of the actual circumstances and value of land in the district?—It seems to me to be the only fair indication, because it is the only indication the nature of the case admits of.

1757. Sir D. Norreys.] Supposing that such a valuation were made, would you recommend it to extend to every tenement, however small the value of it might be?—It appears to me such a valuation should be framed upon the same principle as the poor law valuation is now framed, viz. it should comprehend every tenement. If the valuation for the Poor Law is consolidated with the valuation for the county cess, the question immediately arises whether the county cess upon tenements of less value than 4*l.* should be paid by the landlord, in the same manner that the poor-rate upon tenements below 4*l.* is now paid by the landlord. If the valuations for the two rates are to be consolidated, it is impossible to overlook that question ; it is one which it is necessary to consider, and decide one way or the other. One of the great advantages of consolidating the valuations for the two rates is, that the same person should pay both rates at the same time. Now, if upon tenements below 4*l.* the owner is rated for the poor-rate, and the occupier is rated to the county-rate, it is quite clear that the two rates cannot be collected from the same person at the same time, and by the same collector ; it would be necessary to have distinct valuations and distinct rates ; and therefore the consolidation of the two rates appears to me to involve the principle that the owner is to pay the county-rate upon tenements below 4*l.* At present, according to the Valuation Act, the Lord Lieutenant has the power to direct that houses of a less value than 5*l.* shall be erased from the list ; and I believe that the practice is, that houses below that amount are not rated to the county

G. C. Lewis, Esq.
8 July 1844.

cess, and that houses of a higher amount are only rated at two-thirds of the value. It would be necessary that those two principles should be altogether altered, and that there should be a distinct understanding as to what should be done with tenements of less than the annual value of 4*l*.

1758. *Chairman.*] I understand you to address these observations to the Committee with the view of bringing before them points which, in case their recommendation should go to an uniform valuation, you would think material to be borne in mind?—My reason for mentioning that point to the Committee was, that I was asked questions with respect to the consolidation of the county cess and poor-rate; and if those two rates are to be imposed upon the same valuation, and collected by the same officer, it would be necessary that there should be some adjustment of the question of the rating of tenements below the value of 4*l*. The Committee are aware, that by the Act passed in the last Session of Parliament, the poor-rate upon all tenements of less annual value than 4*l*. in the country and 8*l*. in towns is imposed upon the owner and not upon the occupier. By the original Irish Relief Act all occupiers were rated, but it was found that great difficulty arose in collecting the poor-rate from occupiers of tenements of very small value; accordingly, in the last Session, Parliament made an alteration in the law, and since then the poor-rate has been collected directly from the owner of tenements of less annual value than 4*l*.: that change has hitherto worked very beneficially; it has considerably diminished the difficulty of collecting the poor-rates, and, as far as I know, it has met with general approbation. Now, the occupiers of tenements of less annual value than 4*l*., such tenements not being houses, are liable to the county cess according to the existing law; if the two rates are consolidated, therefore, there would be a discrepancy, as the poor-rate would be collectable from the owners of tenements below 4*l*., whereas the county cess would be collectable from the occupiers of tenements below 4*l*., provided those tenements were not houses. I merely mean to state that this question requires consideration.

1759. *Sir D. Norreys.*] The difficulty which you suggest, would be obviated by making all taxes payable by the same individual?—The discrepancy would obviously be removed by collecting both the county cess and the poor-rate from the same individual. The question which the Committee have to consider is, whether the poor-rate should be again imposed upon the occupier; in which case, the county-rate and the poor-rate would be collected from the same persons; or whether the county-rate should be imposed upon the owner. In either case, whichever plan is adopted, the same person would pay both rates.

George Coode, Esq. called in; and further Examined.

George Coode, Esq. 1760. *Sir D. Norreys.*] IN reference to your previous examination, as to the meaning of the terms of the basis of valuation, as established by the Irish Poor Law, have you considered any form of words which would avoid the difficulties which have been supposed to exist in the present definition of value?—I hold in my hand a form of words which appears to be calculated to exclude the supposed difficulty, perhaps the actual difficulty, involved in the use of the words “from year to year,” in the definition of the estimate of the net annual value. It appears to me, that some such form of words as this would perfectly answer the purpose; the definition of the estimate to be, “An estimate of the yearly rent which could reasonably be expected to be paid by a solvent tenant, keeping the tenement in its actual condition, and paying all rates, taxes, and public charges payable by law, either by the landlord or the tenant, in respect of such property, and having such a term certain as would enable him to take the utmost benefit of the occupation of the tenement in such its actual condition.”

1761. By the present definition of value, tithe is excluded from the taxes which it is supposed should be payable by the tenant, would your definition, which omits that exception, make any difference in the actual value of the property?—It would so; the definition I hand in to the Committee was framed with a view to ascertain the net annual value of the tenement which is immediately subject to the rate. It supposes, to take an instance, that the land is to be rated at its net annual value to the occupier or owner, or other person paying the rate upon the land, and that the tithe is also to be separately estimated, and the rate paid upon it as a separate transaction. If it were intended that the occupier or owner of the land should pay at once, as now under the Poor Relief

Act,

Act, the rate upon the tithe, then it would be necessary to interpolate in the definition which I have handed in some additional words; the definition then should run, "paying all rates, taxes, and public charges, except the tithe commutation rent-charge."

George Coode, Esq.

8 July 1844.

1762. And if those words be introduced into the definition, does it not involve this, that the valuation will not represent the net annual value of the property, inasmuch as it will represent the annual value only to this extent, that something has yet to be deducted?—It will not represent the net annual value of the land, but it will represent two net annual values, or nearly so; namely, the net annual value of the land, and the annual value of the tithe commutation rent-charge. It will represent the net annual value of the land, *plus* the gross tithe commutation rent-charge: and there is a good reason why the definition should not be framed upon that principle; because, although you can get at the net annual value of the land, the sum included by the definition in respect of the tithe rent-charge would be the total rent-charge to be paid, upon the hypothesis, by the tenant. But the proper rateable value of the tithe commutation rent-charge would be the sum actually received and retained by the owner of the rent-charge, not the sum paid by the tenant, inasmuch as the owner of the rent-charge will be liable to certain taxes in respect of that rent-charge, and he is entitled in fairness to have a deduction made for that.

1763. Mr. *Shaw*.] Are you aware that, in point of fact, those deductions are not now made from the rent-charge, but the tithe-owner has to pay the tax upon the whole gross value?—Certainly. I heard a full statement of that objection two Sessions ago. A clause was proposed to be adopted in a Bill then before Parliament to remove the objection which the tithe-owner entertained to being taxed for his gross income, without having the same allowance made to him which is made to all other persons under the Poor Relief Act for the public charges which fall upon them.

1764. Lord *Eliot*.] Is there any difference in the situation of the tithe-owner in England and the tithe-owner in Ireland in that respect?—Yes; there is this important difference, that in England the valuation takes place upon the same principle which is proposed in the definition I hand in. Each separate tenement is separately estimated; so that we estimate land in England at a value which supposes the tenant to pay the gross tithe commutation rent-charge, and thus we get at the net annual value of the land to the tenant or owner of the land. The valuation is made separately of the tithe to the tithe-owner himself, with proper deductions made to him as the owner of a separate rateable tenement; so that justice is effected to the tithe-owner in England by separating the two tenements, tithe and land, the proper deductions being made in each case; a result which seems to be almost impossible under a definition framed in the terms of the Irish Poor Relief Act.

1765. Mr. *Shaw*.] In England the tithe-owner pays his poor-rates separately?—Yes.

1766. Sir *D. Norreys*.] Is not the ability of the individual to bear taxation best ascertained by ascertaining the net annual value of the property, on account of which he is to be charged?—Conceiving the individual derives his revenue from the land or the tenement the subject of the rate, it seems to me to be obvious that there is in fact no other fund but the net annual value upon which you can lay the tax; his ability to bear taxation consists in that revenue which he derives from the land, after all the outgoings to which he is subject have been made.

1767. In valuing in England, in ascertaining what is the net annual value, you consider the tithe or tithe commutation as payable by the occupier?—We consider it as payable by the occupier; so that the amount of it is deducted from the gross value of the land.

1768. But tithe is not to be excluded from taxation, inasmuch as it is separately fixed subsequently?—Just so.

1769. Whereas by excluding tithe from the consideration of value, you ascertain the net annual rent, and subsequently valuing tithe separately by itself, you twice take tithe into consideration in Ireland, whereas you only take it once into consideration in England?—In Ireland the tithe is not, in fact, taken twice into consideration, inasmuch as it is never considered by the valuator after the valuation of the land. The tithe-owner suffers a deduction from his rent-charge of the entire poundage of the rate upon the whole of his rent-charge. This takes

George Coode, Esq.

8 July 1844.

place as an operation between the landowner and the owner of the rent-charge, without the intervention of any persons concerned in making the rate or collecting it. The value of the tithe rent-charge is entirely excluded from view in the valuation for the poor-rate.

1770. If the whole of the labour, rent, and taxes which were to be paid out of the gross profits of a farm amounted to 105*l.*, the tithe alone amounting to 5*l.*, under the provisions of the Irish Poor Relief Act, would not the valuator have to value that property only as if the gross profit were 100*l.* instead of 105*l.*?—He would have to value it at 105*l.* in that case.

1771. Mr. *Shaw*.] Are you quite confident that your new definition would be more easily construed than the old one by courts of justice?—I must admit the proverbial danger of definitions; and my previous evidence would show, that my own opinion was, that an alteration of the definition was not required except in so far as the views of the Committee might involve changes of principle. They might desire to adopt a new plan of valuation; and that definition which I have handed in, is framed upon the scheme of a definition which was put into my hands by a Member of the Committee, with a view to express what appeared, during the course of my examination, to be the views of the Committee. But if I am to answer, as to my own personal conviction of the necessity of a new definition, I should say, certainly, I do not think a new definition necessary, if the same purposes are to be attained, as I conceive are now in fact attained as the fair result of the definition contained in the Poor Relief Act.

1772. Then you rather give that as your own impression of what the construction of the present words of the Act ought to be, not as suggesting that it would be an improvement to alter them?—It does not quite express the effect of the definition in the Poor Relief Act, inasmuch as it is rather an attempt to express strictly the net annual value of the one tenement under consideration, than that which the definition in the Poor Law Relief Act expresses, namely, the two values; one, the tenement immediately under consideration, the land, *plus* the second value, namely, the value of the tithe commutation rent-charge.

1773. Do you mean to suggest an alteration in the law relative to the rent-charge?—I should not myself propose an alteration in the terms of the Act, but the definition which I handed in to the Committee was a modification of one which was put into my hands, in these terms: “An estimate of the yearly rent which could reasonably be expected to be paid by a solvent tenant, who shall be bound to keep the tenement in its actual state of repair, and pay all rates, taxes, and other charges (not by law payable by the landlord?), and who shall have such a term certain by lease, or otherwise, as may reasonably be required, for the profitable occupation of the tenement valued.” That was framed by a Member of the Committee, and the definition which I have put in is a modification adopting the principle; but I have not handed it in as proposing that it should be adopted in preference to the definition now contained in the Irish Poor Relief Act. Perhaps I might add, that if the whole question were an open one, and there was no particular policy applicable to tithe, I should, in fairness to the tithe-owner, recommend the valuation of tithe as separate from land, so that it might be rated upon the same principle which is applicable to other tenements under the Poor Relief Act.

1774. Sir *D. Norreys*.] Do you conceive that the words of your definition, “having such a term certain as would enable him to take the utmost benefit of the occupation of the tenement, in such its actual condition,” would get rid of any difficulty as to the construction of the words of the Act of Parliament, whether the certainty of the term were to be taken into consideration or not?—I think to those persons who entertained such difficulty, those words would remove it; but not myself admitting that the difficulty does in fact exist, I cannot admit that any words are necessary to get rid of it.

1775. Mr. *Shaw*.] You think, in short, that would be the proper construction of the words of the Act referred to?—Yes, as far as it goes; and they have been so construed.

Appendix, No. 1.

LETTER from Sir *D. J. Norreys* to Sir *W. Wrixon Becher*, Bart., Foreman of the Grand Jury of the County of *Cork*.

Dear Sir William Becher,

Athenæum, 13 March 1844.

I TAKE the liberty of addressing the grand jury through you, as their foreman, on a subject of so much importance, not only to the county of *Cork*, but also to a large portion of the South of Ireland, that I am confident no apology will be required from me.

You are aware that a valuation of Ireland is in progress, under the superintendence of Mr. Griffith; that it was commenced many years ago, under the provisions of the Act 7 Geo. 4, c. 62 (1826), and that it has at length reached a county which adjoins the county of *Cork*.

On the 27th of November last, the state of the valuation was as follows:

Extent of counties, the valuation of which may be considered complete	Acres.
- - - - -	10,585,816
Ditto of seven counties, the valuation of which is in progress	4,688,137
The extent of five counties (<i>Cork</i> , <i>Tipperary</i> , <i>Limerick</i> , <i>Kerry</i> , and <i>Dublin</i>), the valuation of which has not been commenced	4,846,833

The estimate of the cost of completing the valuation of the counties in which it is in progress, is 43,188 *l.*; but as up to the month of November last, only 7,502 *l.* had been expended, and very little could have been done during the winter months, we may assume that the valuation of at least three-fourths of these counties yet remains to be entered on.

Considering, therefore, that the area of the counties in which the valuation has not been commenced, is equal to nearly one-fourth of Ireland,—that the area of the counties of which the valuation is so little advanced, is nearly of the same extent,—we may fairly assume, as an equivalent for the present state of the valuation, that two-thirds of it are not yet completed, and that more than one-third has not yet been commenced.

Where so much remains to be done, it is not too late to raise the question whether the valuation ought to be continued in its present form, or whether, owing to the recent introduction of the Poor Law system of taxation into Ireland, it be not expedient at once to discontinue the Townland valuation, and to substitute for it such a “Tenement” valuation as could be used both for county and Poor Law purposes.

The valuation of the county of *Cork* alone, by Mr. Griffith’s estimate, will cost 17,865 *l.* You, who are the guardians of the county purse, will surely not submit to this large expenditure without consideration, nor without remonstrance, if you shall be of opinion that the advantage to be derived by the county will not be commensurate to such an outlay.

A few years ago the county of *Cork* was valued at an expense of, I believe, not less than 15,000 *l.*; the latter valuations for poor rates, and their revisions, have cost between 4,000 *l.* and 5,000 *l.*; you will shortly have to pay 17,865 *l.* for a third valuation. It is therefore a question worthy of your consideration, whether this valuation, so dearly purchased, will be worth its cost (nay, even the cost of the books into which it will be transcribed), for practical purposes.

It will be a mere Townland “valuation,” not a statement of the actual value of the townland, but of its relative value as compared with other townlands; it will enable the occupiers of the townland *A.*, to tell whether the amount of county rate which is levied from their division of the parish be in just proportion to the amount levied from the townlands *B.* and *C.*; but how much each occupier ought to contribute towards the common levy, will still be left to his skill in defending his own interests, and his influence in the district. The relative values of the townlands *A.* *B.* and *C.*, may change, mountains may be reclaimed, marshes may be drained, houses may be built in any one of them; but the amount of county rate to be levied from each must remain in its original proportion. The system contains within itself no power of self-adjustment.

The record of the valuation will be a statement that the parish contains so many townlands, that each townland contains so many acres, and that the total value of each is so much. A map, showing the position and extent of the different qualities of soil in the townland, is lodged with a county officer, and is preserved among the county archives; but even if it were accessible to the occupiers, it would be of little advantage to them, as their names are omitted, and the boundaries of different qualities of soil are marked in on the

Letter from Sir
D. J. Norreys to
Sir W. W. Becher,
Bart.

13 March 1844.

map, irrespective of the boundaries of fields or of farms; so that no individual, not practically acquainted with mensuration, could ascertain by the map alone, the relative value of his land, unless the entire be of one quality of soil; he must employ a surveyor to do so; and in many cases a surveyor would be obliged to visit the land before he could decide on the valuation with certainty.

I attribute no censure to Mr. Griffith; his duty is merely to value the townlands of Ireland, according to a certain fixed standard of value. Eighteen years ago, when he commenced the Townland valuation, the possibility of effecting, within reasonable time, a good Tenement valuation of a country so minutely subdivided as this is (even to the extent to which a Tenement valuation would then have been required), may have been doubted. The subsequent introduction of the Poor Law into Ireland, has altered the position of the question; it is necessary now to value the smallest divisions of property; and a system of Townland valuation, however well contrived or conducted, however adequate to its purpose when commenced, has become insufficient for the wants of the country. We must have the Poor Law valuation, and its periodical revisions. Is it necessary then that we should have a Townland valuation also?

The Townland valuation, as at present arranged, cannot be made available for the collection of poor rates: 1st. There is much property liable to poor rates, which is not liable to county rates; it is therefore omitted, viz. mines, quarries, tolls, tithes, &c.; also houses under 5*l.* value. 2dly. The names of occupants, and the size and separate value of farms, are not noticed. 3dly. The standard of valuation is different from that prescribed by the Poor Law.

The Townland valuation assumes that certain conventional prices of agricultural produce, arranged in 1826, remain unaltered; and, in valuing houses, certain fixed rules are applied in every part of Ireland, without reference to local demand; and then one-third of their value, so ascertained, is struck off.

The Poor Law valuation, on the contrary, requires the value and extent of each man's holding to be stated, omits no property on account of the smallness of its value, and prescribes that all valuation shall be based on an estimate of the rent which may "reasonably" be expected for the property valued.

The Townland valuation professes merely to give the relative value of townlands. The Poor Law valuation professes to give the actual and real value of every portion of property contained within the townlands.

The Townland valuation being based on certain fixed prices of agricultural produce, does not accommodate itself to any variation in the prices of produce which may have affected the value of land; while the Poor Law valuation adjusts itself to such variations of price as are of sufficient continuance to affect the rent which may "reasonably" be expected for the land valued.

The Townland and Poor Law valuations are so different in principle and in detail, that any attempt to patch up a Poor Law valuation out of the Townland valuation materials, without re-examination of the district, is a mere delusion. Nay, where a Poor Law valuation is found to coincide in amount with a Townland valuation, the fair inference is, that one or both must be incorrect.

The Townland valuation, therefore, which you are about to purchase for 18,000*l.* will not do for poor-rate purposes; you must buy a valuation for poor rates also.

The Townland valuation fails to be practically useful in one most important particular: it is no guide to the actual value of the several divisions of property of which the townland is composed. It is of no service either to the landlord or the tenant; they cannot refer to it as to the deliberate opinion of an impartial and competent tribunal. It does not exhibit the reasonable value of the land which the one is about to let, and the other to take. From the same cause it fails to be as practically useful for county purposes as it might have been. The townland has to pay a given sum for county rates; the occupiers, *A.* and *B.*, combine and applot a larger sum on *C.* than he ought to pay: hence ill-will and strife between neighbours. Under the Poor Law valuation *C.* may be equally aggrieved by faulty valuation; but no ill-will towards his neighbours can arise. They are not responsible for the valuation.

The Townland valuation is incomplete for the collection of county rates, and totally useless for Poor Law purposes. On the other hand, a good Poor Law valuation would be the best possible valuation for the applotment of county rates; they would be assessed as a poundage on the valuation; every man would know what he ought to pay, and the high constable would collect the amount payable by each rate-payer separately, and not, as at present, collectively, from the townland. The present Poor Law valuations cannot be used for this purpose; they are very imperfect, even as respects property within the union, and are, relatively, most unequal. Some unions have been valued 20 per cent., others 30 per cent. below the standard prescribed by the Poor Relief Act.

I must ask you to bear in mind, that however advantageous I individually might consider a good Tenement valuation of the county, made by competent persons, unconnected with and uncontrolled by unional interests, I should not have had the presumption to suggest the undertaking of a work of such magnitude. The question is, whether you will make a valuation which is at your doors—one which you cannot avoid—practically useful for all purposes; and whether you will not remonstrate against being called on to pay for a valuation of the townland, while you are obliged to pay for a separate valuation of the parts of which that townland is composed? Is it not absurd to have two distinct valuations: the one to give the value of the whole; the other, by a different process, to give the value of its parts?

The object of my addressing you is, to propound for your consideration, whether it would not be for the advantage of the county that the Townland valuation of Ireland should be discontinued; that for the future the general valuation should be made a "Tenement valuation;" and that an estimate of the rent which may be "reasonably expected," should be the basis of such valuation? This will, doubtless, be expensive, but it will be of use. The valuation I ask you to avoid will be scarcely less expensive, but it will be comparatively useless.

You may think that the Townland valuation is inevitable, and that you would only lose your time in considering the question. I should have lost much time in addressing you, had I not sufficient reason to believe that the opinions of the gentlemen of the country on the subject will have much weight in the decision of a question which is at present under the consideration of the Government.

The only argument I have heard against the proposal is, that it disturbs the uniformity of the valuation of Ireland, which has been going on for so many years. If a single parish or a single barony, alone remained undone, the argument would be tenable, but not where one-third of Ireland is still virtually unvalued.

I do not appreciate the importance of uniformity, when the result is valueless. Suppose the Townland valuation of Ireland completed according to its present arrangement, what will be the result obtained? A perfectly fair view of the productiveness, or intrinsic value of the lands, &c. &c. in the North of Ireland, as they were in 1828, as compared with the value of the lands, &c. in the South of Ireland, as they will be in 1848.

It may be objected to my proposal, that having one valuation for the collection of county and poor rates, the people may be led to think, first, that all property should be equally liable to both rates; and secondly, that the rates, whether county or poor rates, should equally be borne by the same individuals, and in the same proportions. As to the first consideration, it might be a hardship on persons whose misfortune it is to have a portion of their property depending on tolls, tithes, &c., to compel them to bear their share of county rates; but it is difficult to say why they should not do so. In England, such property is liable to county rates. As to the second, I do not think that the form of valuation will have any effect on an opinion which I find becoming daily more prevalent, that it is unjust that the occupier alone should bear the burden of county rates. There are many, even landlords, who think that the transfer of a portion of the burden of county rates to the landlords, would not only be just, as respects the tenant, but also that it would introduce much additional economy and attention into the management of county affairs.

During the last Session an Act was passed, which virtually declares the valuation useless in five cities, viz., Cork, Limerick, Waterford, Kilkenny, and Drogheda; it enacts that henceforward the county rate shall be collected according to the Poor Law valuation, and not by the general valuation. Why should not county rates be collected by the same valuation in the county, if all the unions were valued as one district, under the same system?

It may be objected, that, even if a good Tenement valuation be made now, it would become useless in a few years. Such is the case, but when once a good valuation has been made, it is comparatively easy to keep it up to a fair standard; one revisor, appointed for the county at large, would suffice, with very little assistance, to keep all the valuations of the county in a perfect state; and whether it would be worth the expense to establish one Central Board, for the supervision of all the valuations of Ireland, is at least a question worthy of consideration.

The collection of county and poor rates on the same valuation, from the same denominations of property, from the same individuals, and the division of the county into unions, forming communities, each having separate interests of the deepest importance, the rate-payers of which are known to each other, and are accustomed to act together, lead to the consideration of another question, whether the time be not arrived when the antiquated baronial divisions of the county may be disused for county purposes, and the making and repairing roads, &c., be placed on the unions instead of the baronies, as at present. A system of management analogous to that of the Poor Law, could now be easily introduced, a Board of "Road Guardians," similar in constitution to the Board of Poor Relief Guardians, may be elected for each union; and committees, selected by each Board of "Road Guardians," and by the magistrates residing within each union, would form a Central Board, to which the general management of county expenditure could safely and beneficially be entrusted.

There are other arguments in favour of converting the Townland valuation into a Tenement valuation based on actual value, with which I need not trouble the grand jury in detail. Great facilities would be given to the Draining and Inland Navigation Acts; and also for the formation of district industrial schools, and asylums for the destitute incurable.

If there were a valuation of property which could be depended on, the Parliamentary franchise could be connected with it, and a repetition of the scenes which have disgraced our sessions courts would be avoided. There could not be a more equitable mode of ascertaining value, than by a valuation carried on by persons who have acquired great skill in valuing, superintended by a responsible and most respectable public officer, and open to correction by local appeal. The desire to extend the franchise by fictitious valuation, attributed to the Liberal party, would be checked by the increase of burden consequent on it; and the tendency to limit the franchise, attributed to the Conservative party, would be checked by the increased deduction from rents, which any attempt to keep the valuation low, and thereby exclude from the franchise, would involve.

Letter from Sir
D. J. Norreys to
Sir W. W. Beecher,
Bart.

13 March 1844.

Appendix, No. 1.

The questions I submit to the grand jury, are :

Letter from Sir
D. J. Norreys to
Sir W. W. Eicher,
Bart.
13 March 1844.

Do they think that the Townland valuation of Ireland should be continued according to its present arrangement ?

Or are they of opinion that it ought to be made a Tenement valuation, applicable to poor rates as well as county purposes ?

It may be thought that I have referred to topics which are irrelevant to the professed purpose of this letter : desiring to establish the importance of a perfect Tenement valuation of the county ; ought I to have omitted reference to the results to which such a valuation may hereafter lead ?

I shall of course feel much gratified if the grand jury shall agree with me in the view I have taken of the Townland valuation ; but even should they differ from me, I shall still feel that I have done my duty towards them and the county, in affording an opportunity of expressing their dissent from views which I have advocated in my place in Parliament ; views which I have advocated successfully to this extent, that I believe attention to have been drawn to them, and that they are under consideration of the authorities who will have eventually to decide on the course which shall be pursued in respect of the valuation.

Believe me, &c.
(signed) D. Jephson Norreys.

Memorial of Grand
Jury of County of
Kerry.

MEMORIAL of the Grand Jury of the County of *Kerry*.

TO His Excellency the Lord Lieutenant of *Ireland*.

The Memorial of the Grand Jury of the County of *Kerry*, assembled at Spring
Assizes, 1844 ;

Most humbly sheweth,

THAT the grand jury cess in the county of Kerry is most unequally levied by reason of old applotments being upheld by interested parties, the unequal improvement of the country, and the amount of cess chargeable on the county at large being levied on the several baronies according to an ancient scale, which lays on a most unfair proportion on some of them.

That the disproportion is so great, that in several townlands the cess exceeds the rent, while in others it is below three per cent., and while others are altogether discharged.

That an uniform valuation of the county, for the purpose of levying the cess, would be of the greatest possible advantage, not only with a view of equalising the amount chargeable on each cess-payer according to the value of his holding, but removing the great dissatisfaction that exists at the present inequitable state of taxation.

That your memorialists understand that the Ordnance map of the county of Kerry is completed ; and that it is therefore competent for the Executive to proceed with an uniform valuation of the county under the provisions of the 6 & 7 Will. 4, c. 84.

Your memorialists therefore beg that your Excellency will be pleased to take the necessary steps for the instituting proceedings under that Act, and completing without delay an uniform valuation of the county of Kerry for the purposes of taxation.

And memorialists, as in duty bound, will ever pray.

(signed) H. A. Herbert,
Foreman.

Appendix, No. 4.
General Regulations for executing the Cadastral Operations in France.

GENERAL REGULATIONS for executing the CADASTRAL OPERATIONS in France.

(Referred to by Sir R. Keane in his Evidence.)

COMMENCING from the 1st January 183 , the operations of the valuation and registry of lands destined to correct the assessment shall take place in each department.

In consequence, the general council shall annually vote for this purpose an impost, the amount of which shall not exceed in the , on the principle of the manorial contribution.

The account of the receipts and disbursements relative to the operations of the valuation and registry of lands shall each year be laid before the General Council by the Préfet. In order that the new legislative dispositions relating to the valuation of lands may contain fixed principles, reducible to a common measure, the following method is proposed for its execution.

Article 1. The plans shall be executed by parcels.

Art. 2. The operations shall be executed by cantons. Nevertheless the parishes which shall be desirous of possessing the state of their districts or sub-denominations and the matrix of their rolls by anticipation, may receive authority to that effect from the director, on making an advance of the expense, which shall be reimbursed when the department to which they belong shall be completed.

Art. 3.

Art. 3. The survey of the parcels shall be preceded by fixing the boundaries of the parishes with those of their sub-denominations. Disputes respecting the boundaries of parishes of the same department shall be decided by the director of contributions. If disputes arise between the parishes of two departments, they shall be decided by the Government. The intervention of Government is in like manner necessary for the changes of boundary consented to by the respective parishes, as also for the exchange or reunion of territories.

Art. 4. Valuation of Property.—The valuation of estates shall be confided to the proprietors of communes, assisted by an agent appointed by the director. The nomination of the proprietors as valuers, and the tariff of the valuations of the different natures of property, shall take place under the authority of the General Assembly. There shall be joined to the valuers for these two objects two of the proprietors subject to pay the largest share of impost; the proprietor thus nominated, if absent, shall be empowered to name a representative.

Art 5. The valuers thus elected shall have power to propose a surveyor to assist them in the progress of their operations; the selection of the surveyor shall be made by the director, who is to regulate the rate of his remuneration, which is to be defrayed by the commune.

Art. 6. Completing the Parish States and the Matrix Rolls.—The director of contributions shall be charged with the forming of the matrix rolls and parish states, and the labours of copying and calculations.

Art. 7. Communication of Contents.—Each proprietor shall receive a return, describing the situation, the nature, and the contents of each parcel of property which shall have been assigned to him on the plan; he shall make or cause to be made in this return all the remarks which he is of opinion should be made on the description and contents of his property.

Art. 8. Communications of Valuations.—The state of parishes and the matrix rolls, as formed by order of the director, shall be forwarded to the parishes at the same time as the plan of survey. Each proprietor shall be informed of their delivery by a particular advertisement, and he shall have a right to inspect them at the principal place of the parish, in order to protest against any errors that may have been committed in the valuation of his estates, compared with that of property of the same nature in the parish.

Art. 9. Instruction and Judgment of Claims.—Every proprietor is admitted to protest against the valuation of his property during the six months which shall follow the issue of the order for collecting according to the roll of valuation and registry; after the expiration of this period no claim can be admitted, as such would probably be founded on causes subsequent and foreign to the valuation.

Art. 10. The errors of contents shall be rectified in the parish itself, in presence of the claimant, by the geometrician who shall execute the plans. The claims against the valuations shall be adjusted before the inspector and a jury, according to a prescribed form.

Art. 11. Keeping and expense of Books for the Transfer of Property.—Necessary measures shall be taken to ensure the preservation of the matrix rolls, and to retain in force the dispositions of the regulation concerning the changes which annually occur amongst the proprietors.

Art. 12. The forming the registers destined to receive the transfers, being an object of local interest, the expense attending them shall be defrayed by the parishes.

The expense concerning the formation of declarations of proprietors which have transfers to be registered, shall be defrayed by the declarants.

Art. 13. Compensation for the completing the Plans and Rolls.—The expense of the plans according to parcels, shall be regulated by the inspector, having regard to the difficulties, more or less great, which the survey of lands present.

Art. 14. In like manner the inspector shall fix the compensation to the agents of the contribution for the completion of the states of the parishes and the matrix rolls, and the different operations relative to the register of lands, with which they are specially charged.

Art. 15. Rendering account of the Operations connected with the Register of Lands.—The comptroller shall annually remit, through the inspectors, the state of the parishes in which the operations connected with the valuation and registry of lands can be undertaken; and the amount of the expenses which they require for their execution, to be laid before the director.

Art. 16. The distribution of the sums levied for general purposes shall be made by the director, after the necessities and the rights of each department shall have been ascertained.

Art. 17. The account of the receipts and disbursements that the director is bound to submit each year to the general council should include,

1st. For the receipts, the sums proceeding from the money voted by the Government as a general fund.

2d. For disbursements, the detail of sums paid, and the nature of the different labours to which they apply.

Appendix, No. 4.

General Regulations for executing the Cadastral Operations in France.

Explanation of the Proceeding.—The operations for the valuation and registry of lands which the law has ordained to take place in each department, have for their object to rectify the individual boundaries in the interior of each parish; they consist,

- 1st. Of the survey of parishes into parcels.
- 2d. Of the classing and valuation of property.
- 3d. Of the compiling the states and rolls of parishes.
- 4th. In keeping a registry of the transfer of property.

The new direction given to these undertakings at the present day has permitted the execution of them to assume forms the most simple, to reduce them to those strictly necessary; and to distribute them in a manner better adapted to obtain, by the reunion of these different means, a considerable diminution of the expenses attending their completion.

Such is the object of this regulation, of which a legislative enactment should fix the principal basis.

It is not necessary to explain here the reasons for the suppression of many arrangements contained in former instructions; it will be easy to see that they have become entirely useless; even those which have been retained have undergone some modifications, in order to render them appropriate to the new organisation of the valuations and registry of lands. A short explanation of these changes will be sufficient to make known and appreciate the motives.

It is demonstrated by a long experience, that plans which give the configuration and extent of individual property are indispensable for the formation of good matrix rolls; the survey into parcels has been, in consequence, maintained, and no alteration has taken place in this respect, with the exception of modification in some objects of detail. Section 9.

Section 11. The table indicative of the proprietorship and the proprietors, and which is destined to receive the valuation of each parcel, is of a form which permits it to be carried without difficulty on the grounds; and it can without inconvenience receive all the corrections of names, of properties, and of contents, even at the moment when all the verifications are finished, and when the director can proceed to the compiling the states of the parishes.

Regulation, Art. 12. The certificates of contents to communicate to proprietors do not present but what is essentially necessary for them to know; their compiling has been, in the first instance, entrusted to the principal geometricians, and in the next to the director of the contributions.

Art. 14. The mode of communication of these certificates has been rendered simple, prompt, and efficacious.

The comptrollers transmit the certificates into each parish, in order that they may be distributed to the proprietors.

This communication should continue one month, during which the conductor of the survey, who has executed the plan, should proceed to the parish to assist the proprietors in the examination of their certificates, and receive their claims.

At present the communication is made by the geometrician who executes the plan; he is to be the bearer of the certificates into the parish; he calls on the proprietors; he assists them to discover the parcels which bear their names; he receives their observations, rectifies immediately, and in their presence, the omissions and the errors.

The exactness of Plan, and of Indicative Table No. 1, the corresponding of names and of contents, facilitate the subsequent operations, and render unnecessary the revisions to which they are continually subjected.

In transmitting the certificates, corrected, to the director, the conductor of the survey should also transmit a Recapitulative Return. This return affords a certainty that no proprietor of the parish has been forgotten; and as the director must calculate by it the income subject to taxation, it becomes the general recapitulation of the matrix of the valuation and registry of lands, as much relating to contents as to income.

The conductor of the survey should deliver two copies of the plan, one for the director, the other for the parish; the former of which the administration can at all times have recourse to for the information which it may require.

The conductor of the survey will construct two tables of contents of the plan, by parcels to be placed at the head of each atlas. Although at the present an atlas is only necessary for the parish, there should be furnished two tables of contents; one should be at the head of the atlas, the other is destined for the execution of the new map of France.

The great trigonometrical operations that this map requires are, from their nature, independent of the plans which it is requisite to distribute through the parishes.

The tables of contents of the plans in parcels are precious materials for a new map of France.

The other pieces, such as the order for the regulation of the boundary of the parish, and of the divisions of the parish into parcels; the sketch and the register of the trigonometrical operations; the first and second roll of calculations; and the outlines of the plan by parcels, should continue to be executed according to the usual forms.

The

The Distributions, which consists in arranging according to the quality and valuation of lands, will experience modifications much more important. They have been hitherto entrusted to surveyors; they must be at the present entrusted to the proprietors themselves, and it will be easy to appreciate the motives of this determination.

If hired surveyors, strangers to the parishes, should be entrusted with this operation, it must be formed into a combined operation of the surveyors on all points of the kingdom, in order to regulate the different degrees of distribution; but as, under the present arrangement, they have only to rectify individual partition, and that it is only requisite that they be proportioned in the interior of each parish, this proportionality, becoming simply local, cannot be better established than by the proprietors, by whom the surveyors may hereafter be entrusted without any inconvenience; besides, it is but restoration in the exercise of a right which belongs to them by the constituted regulations of the fiscal contribution.

It may be apprehended that errors similar to those complained of might creep in, but no person is ignorant that the completion of matrix rolls at any former period would have been an undertaking entirely new for the parishes, which circumstances would have placed under the influence of all the passions. The times are not the same; the local administrations must adopt a regular course; enlightened proprietors reside on their estates; the principal cultivators are familiarised with the forms of the impost; each understanding his rights, is at the same time the defender of them; and they no longer distrust the valuation of individual property, introducing itself in an arbitrary manner in a time when administrative knowledge is thus far extended. It is further to be considered, that for a long series of years the parishes have been abandoned to themselves, the Government has not furnished them with any document, or with any preparatory labour; with no guide for directing them in an operation of which they have had no experience.

At the present they will have plans which will indicate the respective position of all properties, and tables indicative of each proprietor, of the nature and extent of his estates. They will be assisted by the agents of the Government, who will regulate the returns, &c. &c., and yield them all the information of which they may stand in need.

In fine, the proprietors and parishes may be unwilling to arrive at the knowledge of the real income of property, in order to rectify all the degrees of distribution, and may conceive a distrust which will not in a small degree tend to favour disorder and abuses. At present the matrix roll, detached from the three first degrees of partition, is only used to rectify individual valuations in the interior of each parish, and henceforth it will suffice that these valuations be proportional, without which it would be necessary to adduce in evidence the real income of each property. The operations of the registry of lands can no longer inspire any fear of taxation; the proprietors will acknowledge them as the means of creating amongst them a just partition of impost.

Regulations 20, 21, 22.—It is the General Assembly which is charged with the formation of the tariff of valuations; it is the valuator, composed in general of proprietors, who are acquainted with the productions of the different modes of culture of their territory, and the relation which exists between them: seven proprietors must co-operate in this labour. This measure should suffice to assure the proprietors against acts of rigour and partiality, of which the remembrance of former grievances might create the fear of return; but they have a new security in the determination which has been adopted to submit the tariff of valuations, when completed by the valuator, to an examination, independent of all local prejudices or feelings in the acquiescence of the administrative authority.

Art. 4. The valuation is confided to proprietors named by the General Assembly, whose duty consists solely in distributing each parcel of property into the established quality of land. They are authorized to call upon residents in a state to afford them information respecting the parts of the parish of which they have not a perfect knowledge. They can, in respect to the estates of absentees, fortify themselves with the information of their agents and occupying tenants. They will derive a not less useful assistance from the comptroller of contributions placed near them, to clear up their doubts, to assist them with his observations, and relieve them from the labour of copying and making calculations. If, contrary to all appearance, this reunion of different means should prove insufficient, and that the additional aid of a surveyor in the valuation of property shall be deemed indispensable, the parish has the right to make the demands.

Art. 23. In the meantime a principle is established, according to which the properties should be valued, having regard, not to their actual productions, but to those which they are capable of yielding with the labour in ordinary use in the parish.

Thus, if the proprietors charged with the valuation of property, can justly appreciate this principle, and without either considering the negligence or industry of the cultivator, they will ascertain only the nature of the soil, seldom will it be necessary that a parcel shall be distinguished by many qualities, particularly when it shall be of small extent. The comptroller cannot too often direct the attention of valuator to this important point.

The valuation is immediately followed by the completion of the states of parcels.

The states of parcels have undergone some modifications: they have been separately compiled for properties not built on, and for properties built on. They are at present united in one and the same state.

Appendix, No. 4.

General Regulations for executing the Cadastral Operations in France.

Appendix, No. 4.

The states of parcels embrace, in three distinct parts,

General Regulations for executing the Cadastral Operations in France.

- 1st. The names of proprietors, the nature of properties, and the contents of each parcel.
- 2d. The valuation of parcels.
- 3d. The application of the tariff of valuations to the different qualities.

The regulations and the models explain sufficiently the manner by which they shall in future proceed.

At present each parcel only requires one line in the matrix roll, whatever may be the number of qualities that is assigned to them, and properties built on are valued more by their local value than by that of their superficies.

It is evident how much these points being held in observance, which do not extend to objects of form, simplify and abridge the formation of the states of parishes, and of the matrix rolls.

With every regularity and attention, it is possible that some estates may be over-valued comparatively with other properties of the same nature; it is but just to place the proprietors in a position to obtain a redress of errors committed to their prejudice.

As at present the contingent of each parish must be regulated by operations independent of those which have served to rectify the taxes of individuals, the communication of the matrix rolls before the promulgation of the roll of the parish is quite unnecessary: it is indifferent, as by the effect of the reductions granted to some proprietors, the general income of the matrix may be diminished. Since the variations which can in this case prove the income of the registered lands, cannot have any influence on the contingent of a parish, how much less then must they have on those of the other parishes of the same district.

Art. 8. Such is the reason for sending the states of the parcels and the matrix into a parish, with the form of the roll destined to be used for the collection.

Art. 28. This simultaneous transmission has the double advantage of affording the parishes the ready possession of their matrix rolls, and procuring to the proprietors the means of which they can entirely understand the correctness of the valuations.

Informed of their income and of their impost by advertisement from the director; acquainted by letter, particularly addressed from the office of central agency, of the right which they have to demand; thus the explanations which they may have need of respecting the basis of their assessment, the proprietors resident in the parish, and those who do not reside, or who by particular circumstances may be absent, have a period of six months granted to them,—a term more than sufficient to protest against the errors of any valuation of which they may have cause to complain.

These regulations have provided for all the cases which a contributor may be involved in; and it is sufficient that he conforms to the dispositions which they contain, to be confirmed that they offer to proprietors all the guarantees which they can desire. The income established by the valutors shall be immediately entered in the matrix roll, having regard to the diminution of which it may be judged susceptible; and the re-imposition on the whole parish, in the roll of the following year, will insure to them the reimbursement of the sums that they shall have been surcharged.

It will not be sufficient to give correct matrix rolls to the parishes; their renewed state must also be provided for; and the only means of preserving their state complete will be to note the lines of transfers which annually take place amongst proprietors.

It is not here contemplated of preserving the state of the rolls complete by noting the variations of extent and exterior which result from the divisions and subdivisions of properties; these corrections continually require geometrical operations, an immense labour, joined to an enormous expense.

The essential point is always to place the proprietors in a condition to know the contents and the income, which serve as the base for the amount of their tax. These sources of information exist in the matrix rolls, and these rolls should only be kept in a complete state.

The principles laid down for regulating the books of transfers of property have led to an examination whether it would not be possible to extract from all the measures at present in practice and successively modified, a mode for the alteration of the rolls, which would fulfil completely its object, and which could be invariably followed.

Experience has proved that proprietors do not always describe with precision the lands which they have sold or purchased; it often happens that the property must be pointed out to them on the plan; even that large estates must be divided into unequal portions; and that, further, the situation, the nature, the contents, and the income of entire parcels, must be determined, which may pass from one proprietor to the other.

This labour demands an extensive knowledge of details, and requires in addition the application

application of tariffs of calculations, and of writing; the necessity is admitted of entrusting to the comptrollers the care of collecting and arranging the transfers of property.

Art. 39. The only mode is to generalize the method to be adopted, and to establish that, the income to be given to purchasers or co-heirs, who distribute amongst them a parcel containing different qualities, should be regulated by the contents of the portion that each of them should take in this parcel.

For example, if on a parcel of three acres, producing 24 s. of income, divided originally into three qualities, there shall have been sold an acre, there must be deducted from the account of the seller, without any regard to quality, the third of the contents, and consequently the third of the income of the parcel, 8s., that is to say, 8s. of income and one acre to be carried to the account of the purchaser. The calculations become very easy since that the qualities of each parcel of property are no longer distinctly specified in the matrix; a parcel is carried there under one head with the simple indication of qualities, the total of its contents, and of its income; the entire operation consists in dividing the total income of the parcel by the total contents, to obtain a mean price applicable to the portion of the parcel alienated; to avoid interminable discussions, and to stop the course of changes, it is difficult to remove by any other process the obstacles that they present where parcels are divided into many qualities. The comptroller, after having made himself acquainted with the declarants, and ascertained the parcels objects of transfer, shall form a declaration, in which he shows the names of the buyer and seller; it shall contain the parcels which have been sold. He shall send successively to the director the declarations collected in each parish; on the receipt of these declarations, the director shall cause the transfer to be noted on the matrix roll deposited in the different offices; he will cause to be entered on a particular leaf the former and present situation of the purchasers and sellers, and balance these two results in the application of the transfers; if any errors should occur, they can immediately be detected and rectified.

The director shall send back to the comptroller the declarations, accompanied by a recapitulative state, and the latter will from thence be enabled to keep the matrix of the parish in perfect coincidence with that of the direction.

These transcriptions on the matrix rolls are facilitated by the blank space left at the end of each article, and by the blank leaves which shall be placed at the end of each alphabetical letter. It is possible that all these leaves may not be made use of, but it is not a sacrifice to be regretted whilst it is required to preserve the matrix rolls, which have been formed with so much labour and expense; they will in this manner be kept complete, and it will be sufficient to make an exact copy when, after a certain lapse of time, their transcription shall be judged necessary.

The expenses concerning the changes are connected with the formation of the declaration, which ought to be made by the proprietors, and with the application of the changes on the matrix rolls.

The expenses of alterations on the matrix rolls should be defrayed out of the funds of the registry.

The comptroller should receive the declarations and insert transfers on the matrix rolls of the parishes; he has a right to remuneration for each.

The remuneration ($\frac{1}{4}$ d. for each line of the declaration) should be paid by the declarants.

The indemnity of the comptroller, charged to insert the changes in the matrix rolls deposited in the parishes, and that of the director charged with a similar labour on the matrix rolls deposited at the office of the director, should be regulated by the Government, having regard to the particular care that these labours require.

The alteration that the succession of time shall have introduced into the matrix roll of a parish may render, at the end of some years, the transcription inevitable; this transcription being an object of utility purely local in this instance, the parish which is interested should defray the expense.

In general, the expense of surveying, which has up to this period been demanded, can for the future admit of considerable reductions; the surveyors being accustomed by a long practice to execute their work more expeditiously, can admit of a considerable reduction in their rate of remuneration. This will be less harsh, since they will be certain to find in the survey an occupation uninterrupted for a certain number of years.

The indemnity to the director applies to the expenses of printing, and to the expenses which are requisite for the labour of making copies, and making the calculations of the states of parcels and the matrix rolls. That of the inspector and comptroller relates to the expense of journeys, of the removing and abode in the parishes, for the parts of the operations of the registry of lands with which they are respectively entrusted.

The director has per parcel, as much for property built on as for that not built on; for the expenses of printing, for copying and making calculations for the returns of parcels and the matrix rolls in duplicate, as well as for binding all these pieces.

He is allowed beside for a special office, which makes about per parcel, making the total allowance . The inspectors have an allowance of per department, and per each parish. They are obliged to make two journeys into each, to arrange the preparatory labours of the valuers; their functions do not require them to present themselves more than once in a parish to assist at the formation of the

pendix, No. 4. tariffs of valuations. The indemnity of per department and per parish appears an ample recompense.

General Regulations for executing Cadastral Operations in France.

The comptrollers are allowed per parish, and per parcel.

The removing of comptrollers from place to place, and their expenses of abode in the parishes, as much as to assist the proprietors in the valuations as for the instruction of claims, necessarily requires the same expenses, and experience proves that they have been calculated as regularly as possible.

The expense of the parcel survey, of the states of parcels and matrix rolls, are for the future payable from the funds that the Council General are authorized to vote annually.

The parishes will be thus associated in every county for these expenses, and they will find the advantages of this association become more special and more immediate. It gives to the General Council the certainty that the funds that they shall have voted will be alone appropriated to their territory. The use of it will be directed with order and economy. The expenses can be easily reduced to what are indispensably necessary. The annual vote of funds will keep pace with the progress of the work, and the work will be better combined with the wants and interests of the parishes. The accounts submitted to the inspection of the local administration shall offer that order and clearness of which they are susceptible. This general association is maintained under a form more suitable, and in a manner in which the interests of the different departments cannot hereafter be exposed to injuries. It is maintained by means of a common fund, of which the law has established the principle, and determined the application.

It is destined, on the one part, to be appropriated to the use of the parishes, the particular resources of which will with difficulty enable them to meet their entire expenses; and amongst those parishes will be included those where the works are in a backward state, in consequence of the smallness of the sums raised for the use of the valuation and registry of lands. On the other part, it should be distributed to the parishes in proportion to the funds that the general council shall have voted, and this last application of the common funds is a new proof of the interest that the Government attaches to the progress of the operation of the survey and valuations. After these explanations, there is no longer a doubt of the necessity which exists that the general council should vote the necessary funds; nor of the good effects that shall be produced by the combination of a common supplementary fund with the centralization of expenses in each county.

We have now explained the considerations and the principles on which are founded the regulation of the valuation of lands, and it will be easy to discover that a spirit of order and of justice has alone dictated all the measures pointed out for the regular formation of the rolls, and for their necessary alterations.

It will not appear less evident that the organization given to these labours, and the simple forms according to which they should be executed, by the active and immediate coincidence of the local authorities and of the proprietors themselves, do not permit a suspicion of the least fiscal intention in the operation of the survey and valuation; and that they must, on the contrary, be considered a true and lasting benefit. It must be remarked, that the officers who are charged to assist the proprietors in certain parts of the operation, and to second them in others, are much less the agents of the Government than those of the contributors themselves, according to whose interest they are bound, in effect, to fulfil the different duties which are here laid down for them.

It is, in fine, quite clear that this operation, not being applicable to more than the last degree of assessment, and becoming quite independent of the three other degrees of which it was hoped, till now, it would have been the regulator, it has been practicable to disengage it from the complicated and difficult formalities which, in rendering its advance difficult and uncertain, retarded its progress as well as its results.

Section 1. Survey of Lands.—The survey of lands into parcels is to be regulated in each department by the conductor of the survey.

Section 2. Treaty between the Director and the Interior Surveyors.—The director shall regulate the remuneration of the surveyors, having regard to the price in general established, and to the difficulties, of more or less magnitude, which are likely to occur in forming the plans of parcels.

Section 3. Appointment of Annual Labours.—Each year the director of contributions prepares the state of the parishes to be surveyed the year following, and places them under the management of the comptroller and inspector, with the table of expenses.

Section 4. Order of Execution.—The operations of the survey and valuation of lands should proceed by communes; the order of execution of the survey should be combined, so that the communes directed to be surveyed in the course of the year should receive their states of parcels and their matrix rolls the year following.

Section 5. Parishes to be valued by Anticipation.—The parishes which do not make part of the department annually designed, can apply for the completion of their matrix rolls by anticipation; they are in such case bound to make an advance of the expenses.

Nevertheless,

Nevertheless, the authority of the director should not be given for these anticipated labours, unless they do not interfere with the execution of the ordinary labours.

Appendix, No.

Section 6. Publication of the Labours of the Survey.—The commencement of the survey is announced, by notices posted in the parishes to be surveyed, signed by the director, and in the parishes adjoining. He addresses at the same time a letter of instruction to the valuers nominated at the general assembly, inviting the residents to assist the surveyor in the formation of the parcel plan, and to point out to him and his assistants the different lands, the names of the proprietors, the denomination of property, and the boundaries of the parcels.

General Regulations for execution of the Cadastral Operations in France

Section 7. Boundary of the Parish.—The proceeding for determining the boundary of a parish should precede the acreable survey; it should be entrusted to the conductor of the surveyor, who shall draw up a certificate specifying the boundaries, which shall be signed by himself and seven of the residents of the parish possessing the largest extent of land, and two of the same class of each of the adjoining parishes. Afterwards this certificate should contain the division of the territory of the parish in parcels.

Section 8. Disputes relating to Boundaries.—If a piece of land is contested by two parishes, the conductor of the survey shall make a sketch descriptive of the boundaries claimed on the part of each; after due consideration he will give his opinion, motivated, respecting the boundary which appears to him just to be adopted.

The title of a parish respecting contested land should be the impost that this land shall have supported at any one period.

If land is taxed in two parishes, or if not taxed in any, the director, on the report of the conductor of the survey, shall direct the inspector to investigate the case, with the assistance of a jury; the verdict must be confirmed by an order in council.

If the disputes of boundaries arise between parishes which belong to different departments, the inspectors of each district shall proceed to investigate the boundaries, after convening, on the part of the one and the other, all the residents interested. Their deliberations shall be sent, with the sketch of the boundaries, and the opinion of the conductor of the survey, and laid before the council, who shall determine the limits by proclamation.

If parishes have agreed to substitute for the existing boundaries, a river, a road, or other natural boundary, the surveyor shall sketch the intended alteration, and certify the approbation of the parties; but these changes cannot take place, nor the operations respecting them, until after an order of the general council has been obtained by memorial, signed by the greater proportion of the proprietors connected with the proposed line of alteration, stating the particular considerations which call for the reunion.

The same regulations shall be observed in the changes or reunion of territories.

Portions of land inclosed in a parish, although under the government of another, may claim to be united to the parish within the territory of which it is situated by virtue of an order in council.

If land extending into an adjoining territory is connected with the parish which governs it, by a point of small dimensions, it may claim to be united to the territory into which it extends, by virtue of an order in council.

Section 9. Execution of the Plan by Parcel.—When the boundaries of the parish shall be determined, and its territory divided into parcels, the execution of the plan by parcel shall be proceeded on.

The plan shall be executed according to the following forms, in cities and towns, when the superficies occupied by houses is easily known. After the title of the proprietors have been ascertained, this superficies can be delineated without difficulty.

Section 10. Calculations of Contents.—The conductor of the survey shall calculate and form a catalogue of the contents of all the parcels; he shall form a second catalogue of calculations destined to control the first.

Section 11. Table showing Proprietors and Properties.—The calculations of contents being completed, the conductor of the survey shall complete the indicative table, which shall have been already received in the parish at the moment of forming the plan; the names of the proprietors, the situation, and the nature of each parcel. The columns of this table reserved for the different qualities shall be filled up by the comptroller.

Vide Table No. p. 172.

Section 12. Certificates of Contents.—In order to acquaint proprietors of the nature and contents of their properties, the conductor of the survey shall insert in a certificate for each proprietor, all the parcels which are dispersed under his name in the indicative table.

Vide Table No. p. 173.

Section 13. Recapitulative Return of Certificates.—There shall be formed by the conductor of the survey a recapitulative state, intended to represent, in alphabetical order, the name of each proprietor, the total of the contents of his certificate. This state is terminated by a recapitulation, of which the total should represent the contents, subject to impost of the whole parish.

Vide Table No. p. 173.

Section 14. Communication of Certificates to Proprietors.—The certificates shall be communicated to each proprietor by the surveyor who shall make the plan; he shall be present for this purpose in the parish; he will call upon the proprietors, and, in their absence,

pendix, No. 4. absence, on their agents, and point out to them the articles of property inserted in their certificates, and shall excuse the corrections pointed out as just in the certificate and the indicative table. Each certificate shall be signed by the proprietor and surveyor, and for those who cannot sign, by the mayor or chief officer in cities and towns, and by ——— for the estates situated in the country.

The surveyor who shall have communicated the certificates, shall make a report of them to the conductor of the survey, who shall transmit them with the indicative table to the director of contributions.

Copy of Plan and General Table.—The minute of the plan will be sufficient for all the information which the administration of the contribution may require; the conductor of the survey shall deliver a copy of this plan, which is intended for the parish.

He shall form from the leaves of the parcel a general table plan, representing the circumscription of the parish, its division into parcels, the principal roads, the mountains, the rivers, the position of the chief places, the Crown lands and commons.

The conductor of the survey shall cause two copies to be made, one of which shall be placed at the head of the map destined for the parish, and the other shall be rendered useful in the execution of the map of France.

In order to fulfil this last object, the plans, after their conversion into a general table, shall be reduced to an uniform scale of 1 to 10,000.

Times of Payment to the Conductor of the Survey.—The remuneration of the chief geometriician is divided into five equal payments.

The first fifth when he shall transmit the declaration in duplicate of the boundary of the parishes under survey, of their division into parcels, the trigonometrical delineation, and the register of calculations.

The second fifth when the surveyors are on the land to proceed with the plan.

The third fifth when the survey of the land is half executed, and that this degree of advancement is certified by the conductor of the survey.

The fourth fifth when the surveyor of the lands of the parishes shall be finished, that the plans shall have been calculated, the certificate of contents rectified, and that these certificates, the indicative tables, and the outlines of plans destined for the valuator, shall have been submitted to the director.

The last fifth when the conductor of the survey shall have delivered to the director the atlas bound, destined for each parish, and the two collective tables.

In fifteen days which shall follow the last payment, the conductor of the survey shall be bound to transmit to the Government a return, margined by the surveyors who have taken the acreage, proving the payment of their remuneration, and a certificate from the chairman of valuator in each parish, attesting that they have paid the guides, from whom they have gained intelligence respecting the nature and quality of the lands.

[illegible]

TABLE No. 4.

VERBAL PROCESS of the Municipal Council's Deliberations ; containing,

- 1st. The Nomination of the Proprietors who have the Distribution of the Funds.
- 2d. The fixing the Number of the Classes in which the different Properties should be distributed.
- 3d. The establishment of the Proportion which ought to exist between the Price of the First Class of the four principal natures of Culture.
- 4th. The Tariff of the Valuations of each Class of each nature of Property.

To-day, we, members of the municipal council, and proprietors, convoked extraordinary by the mayor, under the order of the préfet bearing date _____, are united in the usual place of sittings, in order to proceed, in the presence of the inspector of the direct contribution, to the operations prescribed by the above statements.

Nomination of the Proprietors who have the distribution of the Funds.

We have first named for the classification of the different properties of the commune, Mess. _____, foreign proprietors, and in their absence, Mess. _____, their farmers and stewards

These proprietors, which we acknowledge possessing a perfect knowledge of the different parts of the territory, have the means to unite for each section the number of arbitrators which they may judge needful to operate regularly.

Fixing the Number of Classes in which the different Properties ought to be distributed.

After the general acknowledgment which has been made of the territory, we have fixed the number of classes,—

For the arable lands, at
For the meadows - at
&c. &c. &c.

The houses will be divided into classes.

The types for the classification and valuation of the funds are fixed as follows :

Lands :	
1st Class lands of Mr.	Section, No. of plan.
2d Class ditto of Mr.	Ditto - ditto.
&c. &c. &c.	

Meadows :	
1st Class of meadows of Mr.	Section, No. of plan.
2d Class - ditto of	Ditto - ditto.
&c. &c. &c.	

Proportion which ought to exist between the Price of the First Class of the four principal Natures of Culture.

In order to establish the equal proportion of a valuation between the different natures of culture, we have sought the proportion which the price of the first class of meadows, vineyards, underwoods, &c. might bear to the first class of arable lands.

We have decreed the net revenue of the first class of arable lands ought to be carried to
That proportionally the net revenue of the first class of the meadows ought to be of
That of the first class of the vineyards, of
Ditto of the underwood, of
 &c. &c. &c.

The Tariff of a Valuation of each Class of each Nature of Property.

In order to establish the most perfect proportional equality between the valuation of each class of each nature and culture, we have formed the following Table:

Nature of the Properties.	Class.	Price of Local Measure.	Price of Surveying.
Arable lands - - - - -	1 2 3 4 5		
Meadow lands - - - - -	1 2 3 4 5		
Vineyards - - - - -	1 2 3 4 5

Appendix, No. 7.

My Lord,

Woodfort, Mallow, 7 June.

THE Mallow Poor Law Union, of which I am vice-chairman, as originally formed contained some districts which were after a time severed from it, and became adjuncts to other unions. The district of Shandrum, so severed, was annexed to the Kilmallock Union. I beg to lay before the Valuation Committee, through your Lordship, a correct copy of the valuation of this district whilst it belonged to the Mallow Union, and what I believe to be a correct copy of its valuation by the Kilmallock Valuers. A very brief interval occurred between both valuations. I have no means of ascertaining whether any change has taken place in the Kilmallock Valuation since originally made. The very remarkable difference that exists in many instances between the valuations affords strong grounds for doubting the applicability of existing Poor Law Valuations to any general purpose, and also of their fairness in reference to the proportions of poor rate to be borne by landlord and tenant. I think it right to state that a very general opinion prevails that the valuation of the Mallow Union is too high, compared with that of neighbouring unions.

I have, &c.

(signed) Thomas Ware.

VALUATION OF THE ELECTORAL DIVISION OF SHANDRUM, in the County of *Cork*, by the
VALUATORS of the MALLOW and KILMALLOCK UNIONS, extracted from the Valuation Books of those Unions.

Appendix, No. 8.

ANALYSIS of the Reports on the POOR LAW VALUATIONS, as regards their Difference between Rated and Letting Value, appended to the
 "Returns of Parliamentary Electors, Ireland. 1842-3."

(REFERRED TO IN MR. MUGGERIDGE'S EVIDENCE. QUESTION 1197.)

VALUATIONS, Reported as equal to Letting Value.	Reported as being not exceeding 5 per Cent. lower than Letting Value.	Reported as being from 5 to 10 per Cent. under Letting Value.	Reported as being 10 to 15 per Cent. under Letting Value.	Reported as being 15 to 20 per Cent. under Letting Value.	Reported as being 20 per Cent., or upwards, under Letting Value.	Unions in which the Rate of Difference between Rating and Letting Value is not Reported on.	Miscellaneous Reports on, as to difference between Rated and Letting Value.
Ballymena.	Athy.	Ardee.	Antrim.	Cashel.	Armagh.	Balrothery.	Abbeyleix (a).
Cahiriveen.	Balinasloe.	Banbridge.	Athlone.	Cootehill.	Bailieboro'.	Bandon.	Carlow (d)

Celbridge.	Ballycastle.	Clogher.	Ballinrobe.	Edenderry.	Baltinglass.	Callan (c).	Castlederg (f).
Dungannon.	Boyle.	Downpatrick.	Ballymoney.	Letterkenny.	Carrick-on-Shan- non.	Clonmel.	Castlereagh (g).
Granard.	Loughrea.	Gort.	Castlebar.	Longford.	Castleblayney.	Coleraine.	Dublin, N. (h).
Inishoven.		Kilkeel.	Cavan.	Lowtherstown.	Clogheen.	Cookstown.	Dublin, S. (i).
Kells.		Larne.	Clifden.		Donegal.	Cork.	Ennis (k).
Killarney.		Mohill.	Clones.		Drogheda.	Dunfanaghy.	Kilkenny (l).
Macroom.		Monaghan.	Dundalk.		Dungarvan.	Dunmanway.	Limerick (m).
Manorhamilton.		Newry.	Enniscorthy.		Fermoy.	Dunshaughlin.	Londonderry (n).
Mullingar.		Newtownards.	Galway.		Mountmellick.	Enniskillen.	Lurgan (o).
Navan.		Shillelagh.	Gorey.		Thurles.	Ennistymon.	Magherafelt (p).
Newtownlimavady.		Wexford.	Lisnaskea.			Genties.	Naas (q).
Oldcastle.			Rathdrum.			Gortin.	Parsonstown (r).
Rathdown.			Roscommon.			Kanturk.	
Stranorlar.			Sligo.			Kenmare.	
Trim.			Tuam.			Kilmallock.	
Tullamore.						Kilrush.	
						Kinsale.	
						Lisburn.	
						Lismore.	
						Listowel.	
						Mallow.	
						Midleton.	
						Milford.	
						Nenagh.	
						Newcastle.	
						New Ross.	
						Omagh.	
						Rathkeale.	
						Roscrea.	
						Scariff.	
						Skibbereen.	
						Strabane.	
						Swinford.	
						Tipperary.	
						Tralee.	
						Waterford.	
						Westport.	

(a) Abbeyleix.—Reported as somewhat under the rents in cases where there are middle landlords, and somewhat above them in cases where the tenants derive immediately from good landlords.

(b) Belfast.—Reported as a fair and satisfactory valuation; on houses of from 10 L. to 20 L. value may, perhaps, be 10 per cent. under the actual rent.

(c) Callan.—A shade or two lower than the actual letting value.

(d) Carlow.—Where solvent tenants hold directly under a head landlord, difference between rated value and rent paid, about 5 s. per Irish acre; where there is subletting, the difference would be 8 s. or 9 s.

(e) Carrick-on-Suir.—A little lower than the rents.

(f) Castlederg.—It is under the letting value.

(g) Castlereagh.—About a fifth below what the land is or might let for.

(h) Dublin, N.—Best class houses valued upon a lower scale than houses of an inferior description. In the rural divisions the valuation is on a scale considerably lower than the net annual value.

(i) Dublin, S.—The valuation is fully equal to the net annual value of the best class houses, and perhaps to that of the lowest, but below it in the middle class of houses; rural divisions lower than net value.

(k) Ennis.—Rent as to value is as about five to three.

(l) Kilkenny.—In cases of subtenancies, 20 to 25 per cent. under the lettings; in cases of immediate tenancy under the owners in fee it is sometimes higher than the rents.

(m) Limerick.—In the city one-third less than letting value; in rural districts one-fourth.

(n) Londonderry.—The city is too high, and the country too low valued.

(o) Lurgan.—This valuation is fully one-third under what it ought to be.

(p) Magherafelt.—Considerably below the majority of the rentals recently made.

(q) Naas.—About a sixth under the rent which a prudent proprietor would expect, and about a third or fourth under such a letting as would take place if the proprietor let his lands by advertisement to the highest bidder.

(r) Parsonstown.—In some instances 25 per cent. under letting value, in other instances at or near their full letting value.

INDEX.

ANALYSIS OF INDEX.

ALPHABETICAL and CLASSIFIED LIST of the PRINCIPAL HEADINGS referred to in the following INDEX, with the Page of the INDEX at which they will be respectively found.

ACTS OF PARLIAMENT. The rates under the 9 Geo. 4, c. 82, must now be levied according to the Poor Law Act, *Griffith* 312, 313—Act of 12 Geo. 2, directing county-rate in England to be paid by overseers out of poor-rate, *Coode* 1692—Act of 6 & 7 Will. 4, directing the borough-rate to be raised in the same way, *Ib.*

Agriculture. See Cultivation. Rents. Soils.

Agricultural Produce. See *Prices.*

In the poor law valuation, the party rated has the right to appeal, which he has not in the townland valuation, *Senior* 988—The frequency of revision one reason of there being no appeals under the poor laws, *Ib.* 992—Rarity of appeals against the poor-rate, *Gulson* 1473—The result of an alteration in the rate after it has been struck would not alter the permanent rate upon the electoral division, *Ib.* 1488-1493—Appeal proposed to be allowed under the plan of general valuation, *Ib.* 1605-1610—Plan for facilitating the means of appeal; court to which appeals should be made; Board of Umpirage proposed, *Clements* 1634-1638. 1655.

Ardoyne Parish (Carlow). Field-book of part of the parish of Ardoyne, barony of Forth, *App.* 184.—Applotment of part of the parish, *Ib.* 187.—Valuation map, showing the subdivisions made by the valuator, for the purpose of determining the value of the land, *Ib.*—Map of part of the parish, divided into farm tenements, for the purpose of the general valuation of Ireland, *Ib.*

Assessment. The townland valuation was intended to be a permanent one, for the purposes of the applotment of the county assessment, *Griffith 19*.

Assistants

Report, 1844—continued.

Assistants to Valuers. Selection of assistants by the valuers under the Poor Law Act; reason for supposing that, in some instances, the election of the head valuer was made contingent upon his subsequent selection of particular assistants, *Muggeridge* 1171-1173.

Aughaloo Parish (Derry). The townland valuation in this parish rarely differs so much as 1s. in the pound from the proprietors' rental, *Rep.* v.

B.

Baltinglass Union. In this union the poor law valuation is 20 per cent. below the letting value, *Muggeridge* 1187.

Banbridge Union. Evidence relative to the manner in which the valuation in this union was conducted, *Gulson* 1412.

Bandon Union. Principle on which the valuation of this union proceeded, *Coode* 1358-1360.

Bases of Valuations. In laying down a basis for a general valuation, the amount expected to be received for the use of the property, valued for a series of years, is the test of actual value, *Senior* 1049-1061—The fair basis of a valuation is the net annual value or net rental of the property assessed, *Coode* 1670.

See also *Cadastre* (France). *County Valuation* (England). *Landlords' Taxes.* *Letting Value.* *Poor Law Valuation*, II. III. *Rack Rent.* *Tenures.* *Tithe Valuation.* *Townland Valuation*, 1. 3.

Becher, Sir W. *Wrison*, Bart. See *Norreys*, Sir D. J., Bart. M. P.

Belfast Union. In Belfast the valuation was properly taken; principle on which it proceeded, *Coode* 1364; *Gulson* 1412.

Boards of Guardians. Guardians in the south of Ireland have a direct interest in lowering the valuation, and have occasionally acted upon that interest, *Senior* 980—Difference in the constitution and working of Boards of Guardians in the north and south of Ireland, *Ib.* 985, 986—Influence produced on the minds of Boards of Guardians affecting the general accuracy of the poor law valuations, *Muggeridge* 1178-1181.

See also *Collection of Rates*, 3. *Poor Law Valuation*, I. II. *Revision of Valuations*, 3. *Valuers*, 2.

Bogs. How bogs, plantations, and copses were valued in the townland valuation, *Griffith* 37-39.

Borough Rate. See *Acts of Parliament.* *Supplementary Valuations.*

Boystown Parish (Wicklow). The rents at which the lands in this parish are let are 8s. 3d., or about 42 per cent. higher than the townland valuation; this discrepancy explained, *Griffith* 361.

Bridges. See *Tithes.*

Brooke, Sir A., Bart. M. P. See *Lisnaskea Union* (Fermanagh).

C.

Cadastre, The (France). Mode in which the French cadastre has been carried on; basis of the calculation which has been adopted there, *Sir R. Keane* 658—Alteration which has taken place in the mode of carrying on the cadastre, *Ib.* 659—Usual extent of each separate valuation on the French system, *Ib.* 660-663—The valuation in France, as described by witness, gave satisfaction, *Ib.* 672—Mode of appeal given to those who are dissatisfied, *Ib.* 673—General regulations for executing the cadastral operations (referred to by Sir R. Keane in his evidence), *App.* 164.

See also *Appeals.* *Taxes.* *Valuers*, 3.

Capital. Tenants in Ireland have not large capital as compared with English tenants, *Senior* 1107.

Carlow County. Comparison of the amount of value as given in the general valuation of this county, with the actual rents, and also with the poor law valuation, together with the proportions which these valuations bear to the rents, *App.* 183.

See also *Ardoyne Parish* (Carlow).

Carlow Union. In this union the poor law valuation is from 5s. to 8s. lower than the actual rent, *Muggeridge* 1189.

Cavan County. Comparison of the amount of value as given in the general valuation of this county with the actual rents, and also with the poor law valuation, together with the proportions which these valuations bear to the rents, *App.* 182.

Celbridge

Report, 1844—continued.

Celbridge Union. Close approximation of the poor law valuation to the actual rental in this union, *Muggeridge* 1190.

Change of Occupiers. How the rate should be collected in cases where, after the striking of the rate, a change in the occupier takes place, *Clements* 1651, 1652.

Clements, Honourable Charles S. (Analysis of his Evidence.)—Has been employed as Assistant Poor Law Commissioner in Ireland from 1838 until 1842; 1611–1613—General satisfaction expressed with Mr. Griffith's valuation in the counties of Londonderry and Tyrone; examination into its accuracy, made with a view to its adoption for poor law purposes in those counties; the discrepancies which have been discovered are to be attributed to the principle on which the valuation was based, 1614–1622, 1659—Utility of Mr. Griffith's valuation in making the valuations under the poor law; the valuation itself cannot be adapted to the purposes of the Poor Relief Act, 1623–1625. 1658–1662—General accuracy of the poor law valuations, 1626. 1655, 1656—How far the valuation is satisfactory as compared with other valuations, 1627, 1628.

Constant revision necessary for securing a perfect valuation; periodical revisions lead to attempts by individuals to obtain alterations in their valuations to which they are not entitled, 1629–1631—Discrepancies found to exist in the scale of value between one poor law union and another; how this is to be remedied, 1632, 1633—Plan for facilitating the means of appeal; court to which appeals should be made; Board of Umpirage proposed, 1634–1638. 1655—Great advantage of one uniform valuation, both for county and poor law purposes, based upon the poor law valuation, 1638–1642—The winter in the country the most convenient period for collection; in towns the collection might be made twice a year, 1643–1647.

The county cess and poor-rate, to be collected together, ought to be brought into one rate, 1644—Alteration in the mode of rating by grand jury presentments that would be necessary, 1645, 1646—Greater economy and facility in the collection by bringing the making of the rate and its payment into one department, and of having independent officers responsible for the making and collection of the rate, irrespective of the parties requiring the money, 1647–1650. 1653, 1654—Greater facility given in the collection where the collector is under security, 1650—How the rate should be collected in cases where, after the striking of the rate, a change in the occupier takes place, 1651, 1652—Whether the present poor law valuations can be taken as the basis of any valuation for general purposes, 1655, 1655*—Superiority of the poor law valuations in the north of Ireland, compared to those in the south, 1656, 1657.

Clonmel Union. The valuation of Clonmel was conducted upon right principles, by allowing a sufficient term of tenancy to enable the tenant to have the benefit of his crops, *Coode* 1361–1363.

COLLECTION OF RATES:

1. *Recommendation that the Collection of the Poor Rate and County Cess should be combined.*
2. *How far Opposition is met with in the Collection of Rates.*
3. *Advantage of placing the Collection in the hands of some one Officer, under Security.*
4. *Expediency of fixing a stated Period for the Collection; Opinions as to what Period would be the best.*

1. *Recommendation that the Collection of the Poor Rate and the County Cess should be combined:*

Recommendation of the Committee that measures be taken for collecting the county cess and the poor-rate upon the same basis and by the same officers, *Rep.* xi—Annual saving which would be effected by the combined collection of these rates, *Ib.*—The direct advantages of a correct valuation for the imposition of the local taxes would be, that their assessment would be rendered fairer, and their collection would be thus facilitated, *Ib.* xii—The county cess and poor-rate, to be collected together, ought to be brought into one rate, *Clements* 1644—Alteration in the mode of rating by grand jury presentments that would be necessary, *Ib.* 1645, 1646.

2. *How far Opposition is met with in the Collection of Rates:*

Complaints made as to the time of levying, *Sir R. A. Ferguson* 502—Difficulty in the collection of the county cess previous to the summer assizes, *Senior* 1039–1042—In that part of Ireland with which witness is best acquainted no opposition to the collection of the poor-rate has been met with, *Ib.* 1046—Opposition experienced in the collection of the poor-rate, and from what arising, *Muggeridge* 1231.

COLLECTION OF RATES—continued.

3. *Advantage of placing the Collection in the hands of some one Officer, under Security:*

Objection to the discretion of appointing the time of collecting being left with the Boards of Guardians, *Muggeridge* 1247—Propriety of having one uniform period in the year for the collection of all assessments by one class of officers; whether any difficulties exist to such plan being carried out, *Ib.* 1250-1262—Advantage of placing the collection in the hands of one individual, *Gulson* 1554—And of regulating the periods at which the collection should be made, *Ib.* 1554. 1557-1560—Greater economy and facility in the collection by bringing the making of the rate and its payment into one department, and of having independent officers responsible for the making and collection of the rate irrespective of the parties requiring the money, *Clements* 1647-1650. 1653, 1654—Greater facility given in the collection where the collector is under security, *Ib.* 1650.

4. *Expediency of fixing a stated Period for the Collection; Opinions as to what Period would be the best:*

Usual periods of striking and levying poor and county rates, *Sir R. A. Ferguson* 504-506—Under the instructions of the Poor Law Commissioners two rates are made annually; it has been found necessary to depart from this in some cases, *Senior* 1038—Preference given to an annual collection in November, *Ib.* 1038. 1041, 1042—Periods of collection of poor-rates at present; under the instructions of the Poor Law Commissioners they should be made twice in the year, *Muggeridge* 1244, 1245—Expediency of a stated time being fixed, *Ib.* 1246-1248—The months of November, December, and January, the best period for collection, *Gulson* 1555, 1556—Alteration of the law in respect to county presentments that would be necessary, *Ib.* 1561—Economy of the proposed plan, *Ib.* 1563-1568—The winter in the country the most convenient period for collection; in towns the collection might be made twice a year, *Clements* 1643-1647—Time at which the rates should be collected; there are many circumstances why the collection should be as infrequent as possible, *Lewis* 1744.

See also *Change of Occupiers.* *Gualtier Barony* (Waterford).

Collectors of Rates. In whom the appointment of collector should be vested; it should be provided for by legislative authority, *Gulson* 1562. 1570, 1571—Observations on the proposal that the office of collector under the proposed consolidation should be independent of guardians or county authorities, *Coode* 1685—The due performance of the duty would be attained by the collector giving security, *Ib.*

See also *Consolidation of Rates.*

Commons. See *Exemptions from Taxation.*

Consolidation of Rates. Economy of raising all the rates together, *Sir R. A. Ferguson* 502, 503—All local taxation should be collected by the same officer at a certain fixed period of the year, *Senior* 1037-1046—How the rates should be collected under the proposed consolidation, *Coode* 1683—Officer by whom the rate should be collected, *Ib.* 1683, 1684—How, supposing all property to be equally liable to all local taxation, when a difference of liability occurs, the collection of one rate from properties not liable to the entire of the rates is to be made, *Ib.* 1695, 1696—Expediency of a consolidation of the valuations for the county cess and poor-rate; as the law now stands such consolidation is impracticable, *Lewis* 1718—Expediency of the county cess and the poor-rate being collected simultaneously by one set of officers; the body with whom the appointment of these officers should rest of subordinate importance, *Ib.* 1744.

See also *County Cess.* *Small Tenements.*

Coode, George. (Analysis of his Evidence.)—Assistant secretary to the Poor Law Commissioners; drew the Poor Relief (Ireland) Act, 1297-1299—Desire felt by many Irish Members during the preparation of the Bill, that Mr. Griffith's townland valuation should be made applicable to the purposes of the Poor Law, 1300—The preference given at last to a separate valuation, apart from any opinion of the propriety of assimilating the law to that of England, 1301—Difference in the bases of English and Irish valuations, in respect to deductions from the net annual value for landlords' taxes, 1303—In Ireland there are few landlords' taxes, but by an Act of last Session the poor-rate is imposed directly upon the landlord in certain cases, 1303.

Comparison of the words of the two Acts in regard to landlords' taxes, 1304-1306—In Ireland the value is to be put, placing the usual tenant's rates and taxes upon the tenant, but in England, upon the landlord; manner in which the English Act is practically interpreted, 1307-1310—The question has not come directly before the courts, 1311, 1312—With certain exceptions, the principle of valuation is the same in England and in Ireland, 1313—Timber is liable to the rate in Ireland, and is exempt in England, 1314—All mines that have been opened seven years are liable in Ireland, but in England coal-mines only are liable, *Ib.*—Easements, rights of way, and tolls, are liable in Ireland, and are held, by the construction of the courts, not to be liable in England, *Ib.*—Turf would be rateable in England, but is exempted, under some circumstances,

Report, 1844—continued.

Coode, George. (Analysis of his Evidence)—continued.

circumstances, in Ireland, 1315—In Ireland a valuator would not value the timber, but only the productive value of the land itself on which it stands, 1316—In England all woodlands are exempt from rates, unless they come within the description of “saleable underwood, 1317.”

In Ireland the valuator would have to consider the accruing value of the timber from year to year, 1318—The valuer’s business would be confined to an estimate of the annual increment of the value of the produce, 1320–1322—He must assume that the permanent property would not be deteriorated in value, and that the best annual profit could be made from the land, 1323–1325—Case of an osier-bed, which is cut once in two years; two modes in which such property might be valued, 1326–1328—Similar case as regards liquorice, where the crop is five years coming to perfection; the tenant’s interest in the value which has accrued from year to year would be valued, 1329–1336.

The value should be estimated at the rent which might be obtained from a tenant who took the land as it was, with no expectation of making improvements, 1337–1340—It is assumed that the tenant is to have the full benefit of his tenure during the year, and to be entitled to the accruing profits, 1341–1344—And that the land is let for a term that will allow the tenant to take the full benefit of the mode of cultivation or occupation with which he enters upon the land, 1345–1352—The valuer must not assume prospective improvements, but must be bound by the existing state of the land, 1353–1356.

The valuation of the union of Longford was not in accordance with the terms of the Act, 1357—Nor that of the Bandon Union, 1357–1360—The valuation of Clonmel was conducted upon right principles, by allowing a sufficient term of tenancy to enable the tenant to have the benefit of his crops, 1361–1363—In Belfast also the valuation was properly taken, 1364—If a practical evil were shown to arise from an irregular valuation, the commissioners would order a new valuation, 1365, 1366—If the construction put upon the Act by witness be that which is thought the best law of valuation, the existing Act needs no alteration, 1367–1369—Possible differences between the actual rent and the value of the land, 1370–1372—The fixed machinery of a mill, which may be considered part of the freehold, can alone be valued, 1373–1375—There is no necessity for connecting the valuation of Ireland with the Poor Law Commissioners, 1376, 1377—The poor law valuation is decidedly preferable to Mr. Griffith’s townland valuation, 1378.

[Second Examination.]—Mr. Gulson’s evidence with reference to the Municipal Corporation and Poor Law Acts, and the “landlords’ repairs and insurances,” adverted to; legitimate construction to be put upon the clause in the Act 6 & 7 Vict. c. 92, with reference to the towns having a population of 3,000, to which a charter of incorporation under the said Act “may” be granted, 1664–1669—The fair basis of a valuation, is the net annual value or net rental of the property assessed, 1670—Assessing the gross rack-rent of property is contrary to all precedent; objections to such a basis of valuation, as referring more particularly to a Bill introduced during the present Session for the amendment of the laws relative to the assessing and levying of county rates, 1671–1676.

Clause in the before-mentioned Bill, providing for an allowance of 30 per cent., on account of houses and buildings within any parish or place where such houses and buildings exceed in value one-tenth of the whole of the estates and rateable property within such parish or place, 1677—Probable grounds for the introduction of this clause into the Bill, 1678—Whether it might be applied to Ireland, 1679—Recommendation of the commissioners in their report on local taxation, that there should be one valuation for the purpose of all local taxation in England, 1680—In England, as in Ireland, some properties are liable to particular taxes which others are not liable to, 1681—Recommendation that in England the same property should be made liable to the same taxes generally, so far as relates to county and poor-rates, 1682—How the collections should be made under such consolidation, 1683—Officer by whom the rate should be collected, 1684.

Observations on the proposal that the office of collector should be independent of guardians or county authorities, 1685—The due performance of the duty would be attained by the collector giving security, *Id.*—Authority exercised by the overseers in England in making and collecting rates; they are independent of guardians as well as county authorities, 1686–1694—Act of 12 Geo. 2, directing county rate to be paid by overseers out of poor-rate, 1692—Act of 6 & 7 Will. 4, directing the borough rate to be raised in the same way, *Id.*—How, supposing all property to be equally liable to all local taxation, when a difference of liability occurs, the collection of one rate from properties not liable to the entire of the rates is to be made (form of rate-book put in), 1695, 1696.

Objections to the principle of the supplemental valuations required to be made by the Poor Law Commissioners under the Act 6 & 7 Vict. c. 93, in boroughs in which rates are levied under the Act 9 Geo. 4, c. 82, called the “Lighting and Cleansing Act,”

Cooe, George. (Analysis of his Evidence)—continued.

1697-1699—General state of the valuations in England, taking the County Rate Act as the test of the state they stand in, 1700-1704—Table in illustration, *Ev. p. 141*—The English system of valuation not to be recommended for introduction into Ireland, 1705—The basis of the poor law valuation to be preferred to Mr. Griffith's, if a valuation for the general purposes of taxation be introduced into Ireland, 1706—Great skill and knowledge of the subject displayed by Mr. Griffith in the conduct of his valuation; defectiveness of the principle laid down; according to Mr. Griffith's own evidence before the Committee on the county-cess, it was found to be incapable of being carried out in practice, 1707—Impossibility of Mr. Griffith's valuation already effected being used as the groundwork of its revision, 1708—Meaning of the term "fair letting value," 1709-1712—Utility of a fair valuation of property in checking landlords attempting to get exorbitant rents upon their property, 1713.

[Third Examination.]—Form of words proposed to obviate any difficulty in the construction of the law defining the principle of rating, 1760—Examination in reference to the valuation of tithes, 1761-1763—Difference in regard to the rating of tithes in England and in Ireland; in England the land is estimated at a value which supposes the tenant to pay the gross tithe-commutation rentcharge, which cannot be done in Ireland, 1764-1770—The words suggested by witness were drawn up to express the supposed views of the Committee, and not because he deems the Act to require amendment, 1771-1775.

Copses. Copses cut for profit are valued in the townland valuation as if in pasture, *Rep. iv.*

Cork County. A valuation for the county rate, made a few years ago for this county under a local Act, renders Mr. Griffith's valuation unnecessary, *Rep. vii.*

See also *Norreys, Sir D. J., Bart. M. P.*

County Cess. Recommendation of the Committee that Mr. Griffith be instructed to revise the existing poor law valuations, so as to convert them into valuations which can be used for the assessment of the county cess, *Rep. ix*—In so revising these valuations, the tenement should be adopted as the unit of valuation; each tenement should be valued according to its net annual value for a fair average term of years, *Ib.*—Recommendation of the various witnesses that the county cess and the poor-rates should be levied together, *Ib.*—The same principle of payment between landlord and tenant should be applied to both taxes, *Ib.*—Recommendation that measures be taken for assessing the county cess and the poor's-rate upon the same basis, *Ib.*—Extract from Report of Select Committee on the state of the poor in Ireland, in 1830, in reference to the payment of the county cess, *Ib. x*—For this purpose it must be declared that the county cess should be (as in England) levied with the poor's-rate, and paid over to the county treasurer upon order made by the grand jury, *Ib. xi*—If the county cess and the poor-rate were consolidated, it would be necessary that both rates should, with respect to small tenements, be imposed and levied on the same principles, *Ib.*

In those counties which have not commenced, or which are now in progress, it would not be practicable so to revise the existing poor law valuations as to convert them into valuations which could be used for the assessment of the county cess, *Griffith 155*—The townland valuation was confined entirely to the tenement valuation of land and houses, which are required to be valued for the purposes of the county assessment, *Ib. 220*—The county rates are levied by a poundage on the amount at which each individual holder of lands stands rated in the books, *Sir R. Keane 546*—Much property is subject to poor-rate, which is not subject to county cess, *Gulson 1539*—Dissatisfaction expressed on account of that difference of liability, *Ib. 1540*—County cess is solely paid by occupiers, *Ib. 1551*—The assimilation of the practice in Ireland to that in England of paying the county cess out of the poor-rate recommended, *Ib. 1562-1569*—Houses of a less annual value than 5*l.* are not rated to the county cess; houses of a higher amount are only rated at two-thirds of the value, *Lewis 1757.*

See also *Acts of Parliament. Collection of Rates. Consolidation of Rates. Cork County. Exemptions from Taxation. General Valuation. Key, The. Landlord and Tenant. Londonderry County. Poor Law Valuation, III. Rack Rent. Small Tenements. Tithes. Townland Valuation, 2. Vacant Houses.*

County Presentments. See *Collection of Rates. County Cess.*

County Rates Bill. Evidence relative to the Bill introduced during the present Session, for the amendment of the laws relative to the assessing and levying of county rates, *Cooe 1671-1676*—Clause in the Bill providing for an allowance of 30 per cent. on account of houses and buildings within any parish or place where such houses and buildings exceed in value one-tenth of the whole of the estates and rateable property within such parish or place, *Ib. 1677*—Probable grounds for the introduction of this clause into the Bill, *Ib. 1678.*

Report, 1844—continued.

County Valuations (England). General state of the valuations in England, *Coode* 1700—1704—How the county rate is to be assessed, *Ib.* 1703—Way in which parishes have attempted to evade their fair share of contribution, *Ib.*—Means adopted to counteract these attempts at evasion, *Ib.*—Powers of justices in quarter sessions, under the Act 55 Geo. 3, c. 51, in regard to appeals, and in cases of attempts at evasion, *Ib.*—Variety of modes by which the relative proportions of the parishes contributing are ascertained, *Ib.*

Standards serving as the basis of the valuation in different counties, *Coode* 1703—Inequality existing through the defective valuation to the poor's-rate, *Ib.*—The correction of the valuation to the poor's rate is the only practicable correction of the inequalities in the imposition of the burden of all the taxes of the county rate series, *Ib.*—Table showing the date of valuation and principle on which made in different counties in England and Wales, *Coode's Ev. p.* 141—The valuation of counties is very unsatisfactory, *Coode* 1703—The English system of valuation not to be recommended for introduction into Ireland, *Ib.* 1705.

Cultivation. Witness would value the same quality of land differently, according to the different systems of cultivation, *Griffith* 143—149—Injury that has been occasioned to the uniformity of Mr. Griffith's valuation, by taking the system of agriculture into consideration, *Sir R. A. Ferguson* 447—449—According to witness's view of the value of land, a parish which is badly cultivated would be valued lower than a well-cultivated one, *Purdon* 728—744—Size of the districts generally from whence the average state of cultivation is taken, *Ib.* 749—763.

See also *Down County. Soils. Tenant Right. Townland Valuation, 3. Value of Land.*

D.

Derry County. Near approximation of the townland valuation to the proprietors' rental in this county, *Rep. v.*—Some landlords in the county of Derry let their lands 33 per cent. above the townland valuation; the London companies do not, *Griffith* 428—The poor law valuation in this county is fully as high, if not exceeding the actual rent, *Senior* 977—Value per acre of the tenant right in some of the better managed estates in the county of Derry, *Ib.* 1071—1079.

Derry Union. Inquiry made into the correctness of Mr. Griffith's valuation in this union, and result, *Clements* 1617.

Donard Parish (Wicklow). Evidence relative to the townland valuation in this parish, *Griffith* 361.

Down County. The large landlords in the county Down let their lands 33 per cent. above the townland valuation, *Griffith* 425—431—Higher state of cultivation of the county of Down than the county of Derry; witness would value land in the county of Down higher than in the county of Derry, *Ib.* 432—436.

Downpatrick Union. Evidence relative to the manner in which the valuation in this union was conducted, *Gulson* 1412.

Drogheda Union. Extent to which the poor law valuation in this union differed from the townland valuation, *Purdon* 793—801—The valuers did not make use of Mr. Griffith's valuation to guide them, *Ib.* 802.

Dundalk Union. Evidence relative to the manner in which the valuation in this union was conducted, *Gulson* 1413—1423.

Dungarvon Union. The poor law valuation of the Dungarvon Union is low; it has not been made according to the directions of the Poor Law Act, *Sir R. Keane* 587—590.

E.

Electoral Divisions. The present system of charging the whole assessment on electoral divisions instead of the union at large, causes great inequality and confusion in the rates, *Gulson* 1495.

Empty Houses. See *Vacant Houses.*

Enniscorthy Union. In this union the poor law valuation is 10 per cent. below the letting value, *Muggeridge* 1190.

Exemptions from Taxation. Many hereditaments, such as mines, commons, and rights of common, rated under the Act 1 & 2 Vict. c. 56, to the poor-rate, are not liable to county cess, *Griffith* 410, 411—All property should be liable to the same taxes; exemptions should be the same for all, *Sir R. A. Ferguson*, 507—510—Expediency of all real property

Report, 1844—continued.

Exemptions from Taxation—continued.

perty being equally subject to taxation for local purposes, *Senior* 1009, 1010—Satisfaction that would be created by making property equally liable to the payment of taxation; much property is subject to the poor-rate which is not subject to the county cess, *Gulson* 1538–1541—In England, as in Ireland, some properties are liable to particular taxes, which others are not liable to, *Coode* 1681—Recommendation that in England the same property should be made liable to the same taxes generally, so far as relates to county and poor rates, *Ib.* 1682.

Exemptions of property rateable to the poor-rates from the payment of county cess; how far those exemptions should be preserved if the two rates be consolidated, *Lewis* 1719–1725—All exemption of property from local taxes is an evil; danger in exempting any class of persons from a common burthen to which property is subject, *Ib.* 1719.—See also *Machinery. Mines. Timber. Turf.*

Expense of the Valuation. Evidence as to what has been the expense of the general valuation, *Griffith* 153, 154.

See also *Houses. Poor Law Valuation, I. 4. III. Tenement Valuation. Townland Valuation, 2. Waterford County.*

F.

Farmers. See *Rack Rent.*

Farms. See *Townland Valuation, 3.*

Ferguson, Sir Robert Alexander, Bart. M. P. (Analysis of his Evidence.)—As magistrate, and also frequently on the grand jury of the county of Londonderry, the subject of the townland valuation has come under witness's notice, 437—Was chairman of the County Cess Committee in 1836, and upon the recommendation of that Committee introduced the Act under which the valuation is at present carried on; the Valuation Act was introduced on the recommendation of the Committee of 1824, of which the present Lord Monteagle was chairman, 438—Recommendation of the latter Committee, laying down the principles on which the valuation should be conducted, 438–440—Introduction of the Act of 1826; its provisions, 440—Correction of blunders as to houses exempted by the Act 2 & 3 Will. 4, c. 73, *Ib.*—Repeal of both these Acts, and simplification and change of system effected by Act of 1836; 440, 441—The valuation of the earlier counties is confined to townlands not extending to subdivisions of fields, or showing houses, 442—Use of quality lines in the valuation; by their abandonment each tenement could be given, 442, 443—In the counties lately mapped, the boundaries of farms and the fences of fields are given, 444, 445—Propriety of the valuers going again over the earlier counties, and marking in the boundaries of farms and fields, 446.

How far the main object of the Committee of 1824, uniformity, has been attained by Mr. Griffith's valuation; circumstances tending to injure or destroy that uniformity, 447–455—Result of the valuation being brought into operation in Londonderry; its total uselessness for poor law purposes; difference discovered in various townlands in which comparisons were instituted, 455, 456. 459–463—Mode by which the county cess was apportioned in the county of Londonderry prior to Mr. Griffith's valuation; the latter valuation considered to be an improvement, 457, 458—Inequality in the valuation; over-valuation of mountain lands, and under-valuation of the good lands, 459–463.

Absence of any uniform principle in the poor law valuation; it has not given general satisfaction, 464–466—Incompetency of the valuers in some instances; description of persons usually employed as valuers, and by whom appointed, 467–470—The valuers had no interest in valuing the land very low; in Londonderry and Tyrone the valuations were about the usual rents, 471–473—Alteration made in the law giving the appointment of valuers to the Poor Law Commissioners, 474, 475—Average expense of the poor law valuations, 476.

Existence of the tenant right in the north; attempt making by the landlords to reduce it, 477–480—Origin of the custom, 481, 482—Under these old tenures it was necessary, in most cases, for the tenant to be a Protestant, 483—Value per acre of the tenant right, 484—Whether a higher rent is paid for land on which there is no tenant right; attempt made by the landlord in some cases, where the tenant was not able to pay the tenant right, to put on an additional per-centage till it was paid, 484–490—No tendency in the payment to injure the incoming tenant by depriving him of the means of stocking the farm and carrying it on, 491—Inequality of the right in different districts, 492, 493—The valuers, in making their valuation for the purposes of the poor law, do not take the price paid for the tenant right into the valuation, 494, 495.

Report, 1844—continued.

Ferguson, Sir Robert Alexander, Bart. M.P. (Analysis of his Evidence)—continued.

Great utility of Mr. Griffith's valuation for general purposes in Ireland, 497.—No advantage is to be derived from carrying on that valuation according to a certain set of prices, 498.—It would be desirable to make it a fair valuation of tenements between landlord and tenant; it might then at once be used for the Poor Law, 498-500.—Advantage of having one authentic valuation by which to raise all rates, 501.—Economy of raising all the rates together, 502, 503.—Complaints made of the time of levying, 502.—Periods of striking and levying poor and county rates, 504-506.—All property should be liable to the same taxes; whether this should be extended to tithes, 507-510.—Alteration of the law requisite to complete the valuation as suggested, 511.—The basis of the poor law valuation recommended, 512-515.—Difficulty that has arisen with regard to the construction to be put upon the words "sub-denomination," in the Valuation Act; how this difficulty might be avoided, 516.—Complaints as to the amount laid upon towns, in reference more particularly to vacant houses, 516, 517.—Great discrepancy existing between Mr. Griffith's valuation and the letting rents, 518-522.

Ferries. The townland valuation did not include ferries, *Griffith* 41-44.

Field Prices. See *Prices*.

Fisheries. The townland valuation did not include fisheries, *Griffith* 41-44.

Flax. Flax has not been included in the schedule of agricultural prices, because it is not universally grown in Ireland; where flax is grown it adds to the value of the land, *Griffith* 64-69.

France. Rents are sometimes paid in France in kind, sometimes half money and half produce, *Sir R. Keane* 681.

See also *Cadastre (France)*. *Rents (France)*. *Taxes*. *Valuators*, 3.

Franchise. The indirect advantages of a correct and trustworthy valuation for the imposition of local taxes, would be to furnish a safe criterion for any municipal or Parliamentary franchise, or other public right in which a property qualification might be an ingredient, *Rep.* xii.—In France the franchise is based upon the valuation, *Sir R. Keane* 664.—Immediate and incidental purposes to which the proposed general valuation is applicable; for the imposition of local taxes; to secure a fair standard for the regulation of municipal and Parliamentary franchises, *Lewis* 1745.

See also *Revision of Valuations*, 4.

G.

GENERAL VALUATION:

1. *Expediency of having one Valuation for all purposes of Local Taxation; Basis on which it should be founded.*
2. *Mode in which it should be conducted.*
3. *Revision of such Valuation which would be necessary.*
4. *Paper laid before the Committee.*

1. *Expediency of having one Valuation for all purposes of Local Taxation; Basis on which it should be founded:*

All the witnesses examined before the Committee concur in recommending one valuation for all purposes of local taxation in Ireland, and that such valuation should distinguish the value of each tenement separately, *Rep.* viii. ix.—It should be constructed by valuers appointed, and superintended by a responsible officer, independent of all local authorities or influence, *Ib.* ix.—Opinion of most of the witnesses examined before the Committee that the county cess and the poor rate should be levied together, *Ib.*—The same principle of payment between landlord and tenant should be applied to both taxes, *Ib.*—From the changes recommended by the Committee, in the place of two faulty valuations, would be substituted a single valuation, uniform in its construction, and based upon a correct estimate of value, and likewise susceptible of revision from time to time, *Ib.* xi.—How by the substitution of one valuation for two or more valuations, additional securities for its correctness would be created, *Ib.*—It would be requisite to alter the law, for the purpose of having one valuation, on which the poor law rates and the county rates should be collected, *Griffith* 169.—It would be very desirable in Ireland that there should be but one valuation for all purposes of taxation, *Griffith* 315-319; *Sir R. Keane* 563. 648; *Sir R. A. Ferguson*, 501; *Muggeridge* 1263-1265. 1267; *Gulson* 1507-1510.

Great advantage of one uniform valuation both for county and poor law purposes, based upon the poor law valuation, *Gulson* 1601, 1602; *Clements* 1638-1642.—Neither

GENERAL VALUATION—continued.

1. *Expediency of having one Valuation for all purposes of Local Taxation, &c.*—cont'd.

the present townland valuation, nor the poor law valuation as it stands, would form a sufficient basis for such uniform valuation, *Muggeridge* 1263-1265. 1267—How far Mr. Griffith's or the poor law valuation affords the best basis, *Ib.* 1266. 1268-1269—Witness in carrying out an uniform valuation for Ireland, would not take the basis as adopted by Mr. Griffith, *Gulson* 1549—The proposed valuation should be made the basis for all local taxation, *Ib.* 1553—Whether the present poor law valuations can be taken as the basis of any valuation for general purposes, *Clements* 1655, 1655*—Recommendation of the Poor Law Commissioners in their Report on local taxation, that there should be one valuation for the purpose of all local taxation in England, *Coode* 1680—Preference to be given to the principle laid down in the Poor Law Act, over that in the County Valuation Act, in carrying out one general valuation; erroneousness of the principle laid down in the latter Act, *Lewis* 1726-1734—Objection to its being constructed with a view to affording the means of arbitration between landlord and tenant for the determination of rent, *Ib.* 1745—The existence of competition might be taken into account in estimating the proper rent of land; but the ordinary average rent of the district, even if it be determined by active competition, is only to be looked to, *Ib.* 1746-1756.

2. *Mode in which it should be conducted:*

Control under which such valuation should be placed; there should be a central controlling authority, *Sir R. Keane* 649-654—The appointment of officers and valuers should be placed under this central body, *Ib.*—A permanent independent Board for conducting the proposed general valuation recommended, *Senior* 1033, 1034; *Gulson* 1507-1510—It is essential that the valuation should be made by an independent in preference to a local Board, *Muggeridge* 1279. 1281. 1294, 1295—Which should be unconnected with the poor law system, *Ib.* 1280—There is no necessity for connecting the valuation of Ireland with the Poor Law Commissioners, *Coode* 1376, 1377—By whom the expense should be borne; it would be very moderate where Mr. Griffith's county valuation was effected; the responsibility of keeping the valuation in its present state should rest with the proposed Board, which should be constantly in operation, *Gulson* 1527, 1528—The valuation should be conducted by a permanent central Board, independent of the Poor Law Commissioners and all local influence, *Ib.* 1603—A general valuation would be best conducted by an independent body similar to that constituted under the present Valuation Act; it should be a permanent authority for the construction and superintendence of the valuations, *Lewis* 1742, 1743.

3 *Revision of such Valuation which would be necessary:*

If one general valuation were established in Ireland, it would require revision more than once in seven years, *Sir R. Keane* 627-631—Whether the proposed general valuation should be proceeded with simultaneously through the whole of Ireland, *Gulson* 1519—Supposing the valuation to be established and to be satisfactory, a revision for poor law purposes once in five years would be adequate, *Muggeridge* 1282-1284—The valuation should be revised every three years by the Board, *Gulson* 1529-1531—The revision should be made every three years by the same authority that made the valuation, *Ib.* 1604.

4. *Paper laid before the Committee:*

Comparison of the amount of value as given in the general valuation in Ireland with the actual rents, and also with the poor law valuation in certain districts, together with the proportions which these valuations bear to the rents in those districts, *App.* 181.

See also *Appeals. Poor Law Valuation. Revision of Valuations, 4. Roads. Tithe Valuation.*

Gorey Union. In this union the poor law valuation is one-eighth below the ordinary letting value of the land, and with regard to the letting value of houses, even in a lower proportion, *Muggeridge* 1191-1193.

Grand Jury Presentments. See *Collection of Rates. County Cess.*

Griffith, Richard. (Analysis of his Evidence.)—Commissioner for the valuation of Ireland, under the 6 & 7 Will. 4, c. 84; this Act was passed in consequence of a recommendation of a Select Committee of the House of Commons to amend the Act passed in 1824, 1-5—Progress made in the valuation; counties which have been valued; counties which are yet untouched, 6-13—Sum expended in the valuation; sum remaining to be expended, *Ib.*—Source from which the expense is defrayed; it is paid out of the Treasury, but is charged upon the county cess, 14-17.

The Act prescribed that the valuation should be made in the townlands, and that the scale of value should be according to a fixed standard contained in the Act; the townland was to be the unit of valuation, 18, 19—The valuation was intended to be a permanent one, for the purposes of the applotment of the county assessment, 19—The applotment made under the general valuation, and divided according to lots made by the

Griffith, Richard. (Analysis of his Evidence)—continued.

the valutors, has given general satisfaction; there have been very few appeals against the relative value of townlands, 20-24—Principle with regard to prices upon which the valuation has been made, 25-30.

The results of the valuations made under witness's direction have corresponded very nearly with the great landed proprietors' rents, 28. 52-57. 74-76. 107-120. 123, 124—They were under from 20 to sometimes 40 per cent. the rents of the middle landlords or small landed proprietors, 28—Directions of the Act with regard to the valuation of houses; how carried into effect; all under 5*l.* annual value were omitted, 31-33—Outbuildings were valued according to the same system as the houses, 34, 35—Way in which water power was valued, 36—How bogs, plantations, and copses were valued, 37-39—The valuation did not include tolls, corporate or private, 40—Neither did it include fisheries, quarries, tithes, nor ferries, 41-44—An additional value was put on the land by the sea-shore, from the facility of getting manure arising from the right of cutting sea-weed, 45, 46—In certain cases an additional value was put upon the land on account of its being attended with profitable incidents, 47-51.

Instances of the difference between the valuation of the land adopted by witness under the Act, and the actual letting value, 58-63—Flax has not been included in the schedule of agricultural prices, because it is not universally grown in Ireland; where flax is grown, it adds to the value of the land, 64-69—Land was valued in every case according to the scale laid down in the Act; not by the actual present value, 70-73—Under a good system of farming the farmers in Ireland might not only pay much higher rents, but live much better than they do, 73—The great landlords of the country let at considerable lower rents than the others receive immediately adjoining, 76—The great landlords let almost always by valuation, the smaller by tender, 77-79.

Evidence as to the existence of the tenant-right in all places where the land is let from year to year, whether by valuation or otherwise, 80-90—In most cases the poor law valuation is considerably above the general valuation; in some cases it is under it, 91-93—If the people exerted themselves, they could pay high rents extremely well; but they do not, 94-102—There are many districts in the west of Ireland where the lands are let extremely low, and the tenants are worse off than where they are let a great deal higher, 102—It is the general opinion that the valuation is supposed to be one-fourth under the real value, 121-132.

What is termed a high rent value, is rather the want of skill and industry on the part of the tenants than any want of value in the land, 133, 134—If there were less competition, and a much smaller number of tenants in Ireland, with a better system of agriculture, the landlords might receive much higher rent, 135-137—In any case where two persons were to pay a proportion, as in the case of the poor law, it is absolutely necessary that what might be considered the letting value of the land should form the scale of valuation, 138-140—Possession which witness considers constitutes a great landlord, 141, 142—Witness would value the same quality of land differently according to the different system of cultivation, 143-149.

Steps witness would take, supposing it to be considered desirable to raise his valuation, and make it approach the actual lettings in Ireland, 150-152—Evidence as to what has been the expense of the general valuation, 153, 154—In those counties which have not commenced, or which are now in progress, it would not be practicable so to revise the existing poor law valuations as to convert them into valuations which could be used for the assessment of the county cess, 155—If the instructions which were given with respect to the poor law valuation have been followed out, they would give the present fair letting value of the country, 156-159. 162, 163.

If the poor law valuation were carried out, there would be a difference of about 12½ per cent. between their valuation and witness's, 160, 161—The original valuation, the townland valuation, might be carried out, and by adding a per-centage equal to the difference between the letting rents and the townland valuation scale, the fair letting rent would be obtained, 164-168—It would be requisite to alter the law for the purpose of having one valuation, on which the poor law rates and the county rates should be collected, 169—There would be no objection to adopt the poor law basis in preference to the townland basis, 170—The townland basis would have no advantage over the poor law basis, excepting that the low valuation would give more general satisfaction, 171—A tenement valuation, for the purposes of the poor-rate, might be made at a very small expense in those counties in which the townland valuation has been completed, 172-175.

[Second Examination.]—Papers delivered in to show that the power exists of converting the townland valuation into a tenement valuation; examination in explanation of these papers; the conversion might be made with only the additional expense of a halfpenny an acre when the valuation has already been made, 176-191—With regard to the counties now in progress, a tenement valuation could not be made cheaper than in the counties not begun, 192-205—The new system of valuation commenced in 1839; the present system does not altogether apply to valuations between 1830 and 1839; 206, 207.

Griffith, Richard. (Analysis of his Evidence)—continued.

Remarks upon and amendments of former evidence, first, as to "Whether the system of survey which has been adopted, is such as to prevent individuals from knowing the inequalities of valuation by which they themselves may be individually affected;" and secondly, "whether it would not have been an advantage to the country if such an arrangement had been made in the survey, that the relative value of particular farms should be ascertained, whereby sub-applotments for the subdivisions might have been made," 208-210—Witness is not authorised, under the existing law, to make his valuation a valuation of separate tenements, 211-213—Under the Act regulating the townland valuation, witness would not be justified in valuing property which is not subject to county rates, 214.

The townland valuation was confined entirely to the tenement valuation of land and houses, which are required to be valued for the purposes of the county assessment, 220—In order to make a tenement valuation available for the purpose of the poor-rate, it would require a greater sum than a halfpenny an acre, where subjects liable to taxation not included on the county valuation, occurred, 221-232—The principle of townland valuation does not involve any principle of occasional revision, 233-236—Reasons for considering that the improvements which have taken place in the condition of Ireland, during the 18 years that the valuation has been going on, will not materially affect the relative value of land throughout the country, 237-247. 280-283.

Witness in his valuation is in some degree guided by the state of agriculture in the district, but is mainly guided by the intrinsic quality of the soil; how far the same quality of soil, well or badly cultivated, would bear a comparison, 248-252—Although under these circumstances the valuation would not be exactly uniform, still it will approximate to it, 253, 254—The only way to remedy this would be a quinquennial revision, 255—The time and expense for completing such revision would not be considerable, 256-268—General size of townlands in Ireland; smallest average quantity that was given in the townland valuation, 269, 270—The sub-applotment was made under the Grand Jury Act, not under the Valuation Act; mode in which the sub-applotment was proceeded with, 271-279.

It would not be in witness's power so to revise the poor law valuations as to render them a proper basis on which to levy the county cess, 284-292—Generally speaking the valuers under the poor law were guided in their estimate of the value of land by the rent which the landlord had previously set upon it, 293-300—Witness was consulted as to what proportion the poor law valuation should bear to his; recommendation made by witness; in some instances it has been acted upon, 301-305—Valuers appointed by the poor law guardians, would come to a great deal more money, to do the thing accurately, than if done under witness's direction, 306, 307—The tithe valuation could not be so amended as to form the basis of a general valuation, 308-311.

[Third Examination.]—Since last examination has referred to clauses of Poor Relief Act relating to valuation, and to 9 Geo. 4, c. 82, the rates under which must now be levied according to the Poor Relief Act, 312, 313—Under the Irish Drainage Act, valuations are required to be made of lands and tenements, 314—Desirableness of having one valuation on which several rates should be levied, 315-319—How the townland valuation might be made applicable to poor law purposes, in those districts where it has not been commenced, 320, 321—The scale of prices assumed in the Act were 2s. 6d. in the pound lower than the average price of the day; reason of witness having made a reduction of one-eighth in the valuation, and of his continuing to do so, notwithstanding prices are now about equal to those in the Act, 322-335.

Per-centage advised by witness to be put on his valuation to make it applicable to poor law purposes, 336-341. 427. 430—The tables are applicable equally to all parts of Ireland, being calculated upon the produce, which is consequent upon the system of farming, 342—How far local circumstances may interfere with the application of those principles; instructions issued for the guidance of the valuers on the subject, 343-370—Alteration of the law necessary to enable the townland valuation to be completed so as to be applicable to poor law purposes, 371, 372—Standard laid down in the Poor Law Act; whether sufficiently accurate as an indication of value, 373, 374.

Whether the amount at which land could let from year to year is a true indication of the actual value; the tenure on which land is held should form a distinct basis of valuation, 375-379—Supposition on which the townland valuation is based with regard to the routine of cultivation and capabilities of soils, 380-390—Consideration given to the outgoings and other expenses on land, 391-395—Since the commencement of the valuation an Act has passed removing the payment of tithe from the occupying tenant; the valuation is however continued on the principle of the tenant being still subject to it, 396-400—In making the valuation for poor law purposes, the average letting value of the lands, according to the quality in the district, would be taken, 401, 402.

Griffith, Richard. (Analysis of his Evidence)—continued.

Objection to the townland valuation being adapted to the standard on which the poor law valuation is to be made; the arrangements of the former could be accommodated to the latter, 403-407—Under the Act 1 & 2 Vict. c. 56, all hereditaments are rated to the poor-rate, 408, 409—Many hereditaments, such as mines, commons, and rights of common, rated under that Act, are not liable to county cess, 410, 411—Machinery is not mentioned in the general clause of the Act, 412—Trifling increased expense of making a valuation for the purposes of the poor law, in addition to the townland valuation, 413-417—Cheaper rate at which witness could value for the purposes of the poor law than valuers appointed by Boards of Guardians could do it, 418, 419—Rent must be assumed at a higher rate than that of witness's valuation, 420-422—Great distinction drawn by witness between large and small landlords; large landlords let their lands on a regular system by valuation, and always lower than those who let by tender, 423, 424—Some landlords in the County Down let their lands 33 per cent. above the townland valuation, 425-428—Witness would value in the county of Down higher than in the county of Derry; his reasons, 429-436.

Griffith, Mr. His evidence adverted to by the Committee, *Rep.* iii, *et seq.*

Gualtier Barony (Waterford). Opposition to the collection of the poor-rate in this barony; complaints against the valuation, and against the law itself; alterations subsequently made in the valuation, *Muggeridge* 1231-1236.

Gulson, Edward. (Analysis of his Evidence.)—Assistant Poor Law Commissioner; districts in Ireland in which chiefly employed, 1379. 1386-1389—Steps taken on the introduction of the poor law into Ireland to procure the necessary valuation of the unions, 1380 *et seq.*—Difficulties encountered in making Mr. Griffith's valuation available; defective principle on which that survey is based; its inutility for poor law purposes, 1380-1384. 1396—The division of the rate between landlord and tenant in certain varying proportions has been a source of much difficulty in arriving at satisfactory results as to valuation, 1385—Greater practical results produced by the separation of interest of landlord and tenant in the south and west than in the north, and from what causes, 1390-1395.

The poor law valuations in the south are not to be taken as indications of the fair value of the tenements contained in the unions, 1397—Complaints of inequality in the valuations of tenements, 1398, 1399—Difficulty experienced in procuring persons to act as revisers under the Act of last session, making the Poor Law Commissioners responsible for the valuations, 1400-1407—On whose representation revisions have been ordered, 1408, 1409—Class of men employed in the valuation; personal influence under which the valuation was in some cases made; case of the Dundalk Union, 1410-1425—Contests in the Boards of Guardians, in the south of Ireland, as to the appointment of valuers; complaints of the valuers being very often appointed for the purpose of making a low valuation, 1426-1429.

Vesting the appointment in the commissioners would give satisfaction to the landlords and better class of tenants, 1430, 1431—It would lead to a truer valuation, and thereby avoid litigation and appeal, 1432, 1433—Act of last Session, requiring the Poor Law Commissioners to have supplemental valuations for the purposes of towns, under the provisions of the 9 Geo. 4; complaints from certain towns with regard to the non-completion of their valuations, 1434-1452—There are no means of ascertaining the towns which are under the 9 Geo. 4; neither in that Act, nor in the 6 & 7 Vict. c. 93, is there any specification of the towns to be rated, 1453, 1454—Explanation of column in the form of rate drawn out by the commissioners under the latter Act, relative to "landlords' repairs," and "landlords' insurance," 1455-1463—No rate is legal, unless it be filled up according to the orders of the commissioners, 1464—Extent to which the columns relative to landlords' repairs and insurance apply to those districts having no corporation, but a town of 3,000 inhabitants, 1465-1472.

Rarity of appeals against the poor-rate, 1473—No appeal can take place against the valuation simply, 1474—Whether it would be more convenient if the valuation were first made perfect before striking the rate, 1475-1478. 1480, 1481. 1484-1506—Under the commissioners' orders, the rate should be struck twice a year; period of the year at which witness would recommend it to be struck, 1482—Supposing the valuation to be perfect, the revision would take a very short time in making, 1483—Importance of one general valuation for all purposes of local taxation in Ireland; to be based upon the actual fair letting value; and be made by a central Board, independent of all local influences, whether of poor law guardians or county authorities, 1507-1510—Preference to be given to the poor law principle of valuation over that of Mr. Griffith; faulty principle of the latter; its inapplicability to general purposes, 1511-0.63.

Gulson, Edward. (Analysis of his Evidence)—continued.

1515. 1549-1552—Advantage to the well-working of the poor law, of taking the valuations out of the hands of the Boards of Guardians and commissioners, 1516-1518.

Whether the proposed general valuation should be proceeded with simultaneously throughout the whole of Ireland, 1519—By whom the expense should be borne; it would be very moderate; where Mr. Griffith's county valuation was effected, the responsibility of keeping the valuation in its present state should rest with the proposed Board, which should be constantly in operation, 1527, 1528—The valuation should be revised every three years by the Board, 1529-1531—How a triennial revision might affect the elective franchise, 1532-1534—In England, occupiers have not the same interest in making the valuation low as in Ireland, 1535, 1536—Course to be pursued in the case of property falling out of lease shortly after the general revision, and, from having one occupant, becoming divided among ten, 1537—Satisfaction that would be created by making property equally liable to the payment of all taxation; much property is subject to the poor-rate which is not subject to the county cess, 1538-1541—General expediency of extending to the county taxation the principle introduced by the poor law, of dividing the taxation between the landlord and tenant, 1542—Explanation of a paragraph in last Report of the Poor Law Commissioners, recommending advantage to be taken of Mr. Griffith's townland valuation in the formation of the poor law valuation, 1543-1548.

[Second Examination.]—The proposed valuation should be made the basis for all local taxation, 1553—Advantage of placing the collection in the hands of one individual, 1554—And of regulating the periods at which the collection should be made, 1554. 1557-1560—The months of November, December, and January, the best period for collection, 1555, 1556—Alteration of the law in respect to county presentments that would be necessary, 1561—The assimilation of the practice in Ireland to that in England, of paying the county cess out of the poor-rate, recommended, 1562-1569—In whom the power of appointment of collector should be vested; it should be provided for by legislative authority, 1562. 1570, 1571—Economy of the proposed plan, 1563-1568—Copy of the General Order of the Poor Law Commissioners, issued in consequence of the Act of last Session, in relation to the form of rate produced, and lengthened examination in reference to the column in the same, relative to "landlords' repairs and insurance," 1572-1594—Obscurity in the provisions of the Act; great trouble imposed upon the commissioners in consequence of the connexion of the Municipal Act with the poor law, 1595-1600—One valuation, based upon the poor law principle, according to which all local taxation should be levied, recommended, 1601, 1602—Such valuation to be conducted by a permanent central Board, independent of the Poor Law Commissioners, and of all local influence, 1603—And revised every three years by the same authority that made the valuation, 1604—Appeal to be allowed, 1605-1610.

Gulson, Mr. Witness concurs in Mr. Gulson's evidence relative to the passage in the Tenth Report of the Commissioners upon Irish Valuation, *Lewis* 1717.

H.

Hereditaments. Under the Act 1 & 2 Vict. c. 56, all hereditaments are rated to the poor-rate, *Griffith* 408, 409.

See also *Exemption from Taxation.*

Houses. The rules contained in the Valuation Act (6 & 7 W. 4, c. 84), order houses above 5 *l.* annual value to be valued at two-thirds of that value, and houses of less than 5 *l.* to be omitted, *Rep.* iv—Directions of the Act, with regard to the valuation of houses, how carried into effect; all under 5 *l.* annual value were omitted, *Griffith* 31-33—Making Mr. Griffith's valuation a tenement valuation, would not cause any very great addition to the expense of the valuation, *Purdon* 813 *et seq.*—All houses under 5 *l.* are not valued; steps taken to ascertain whether their value is under that sum, *Ib.* 814, 815—Virtually all houses are valued down to 4 *l.*; those between 4 *l.* and 5 *l.* are struck out in Mr. Griffith's office, *Ib.* 816-840.

Incumbrances upon Land. There is no reason why incumbrances upon land should be rateable to any local rate, *Lewis* 1725.

Insurance. See *Landlords' Repairs and Insurance.*

Irish Drainage Act. Under this Act valuations are required to be made of lands and tenements, *Griffith* 314.

K.

Keane, Sir Richard. (Analysis of his Evidence.)—Witness has turned his attention to the subject of valuation; opportunities witness has had of considering the subject practically; has made himself acquainted with the mode of carrying on valuations in France and in Bavaria, 523-525—Part taken by witness in the valuation of the county of Waterford, 527—It is a townland valuation, with reference to farms and tenements, 528, 529—Process by which the valuation is arrived at; explanation of the types, as they are called, of the different classes of land; this is only the relative value of the land, 530-534—Process by which the type of land is arrived at, 535, 536—Bearing the calculation of the mean has upon the classes or types adopted, 537-540—Forty shillings having been adopted as the standard for the first class, all other lands were rated with reference to their absolute rent value, according to the practice of the husbandry made use of in the country, 541-545.

The county rates are levied by a poundage on the amount at which each individual holder of land stands rated in the books, 546—With certain additions contemplated under the poor law, a rate might be levied under the Poor Law Act according to this valuation, 547, 548—As the valuation is now made, it could not be applied to the poor law rating; the valuation is too low for a poor law valuation, 549-559—Mr. Griffith's valuations appear to be more provisional than definitive; meaning witness attaches to the term provisional, 561, 562. 566-569—It would be very desirable in Ireland that there should be but one valuation for all purposes of taxation, 563—As the basis, witness would prefer the poor law valuation, according to the instructions of the commissioners, to the townland valuation; it is more applicable to Ireland, 564, 565. 570-581.

The poor law valuation of the Lismore Union is full 15 per cent. under the actual letting value, 571-581. 614-616—The fair letting value of land is what it really yields to the proprietor from year to year, 582-586—The poor law valuation of the Dungarvon Union is low; it has not been made according to the directions of the Poor Law Act, 587-590—In the cases with which witness is personally acquainted, the poor law valuation is from 5 to 10 per cent. below the actual letting value, 591-601—If general taxation is to be based upon valuation, it would be perfectly safe in Ireland to leave the valuations in the hands of local Boards, 602-604—Further evidence as to the mode in which the valuation for the county of Waterford was taken; mode in which the valuation of the baronies was distributed among the valuers; the valuers were appointed by the commissioners; check over the valuers; evidence as to the canvassing for these situations, 605-613.

If one general valuation were established in Ireland, it would not require revision more than once in seven years, 627-631—Cost of the valuation in the county of Waterford; rate at which it stands per acre, 632-636—Valuations should be made with all equitable considerations, and coming up as nearly to the fair value of the land as can possibly be ascertained, 640-642—Looking at the townland valuation of Ireland in reference to the geology of the country, there can be no great secret in ascertaining and valuing the texture of soils in Ireland, 644—Eighteen of the counties in the interior of Ireland, which are the richest counties, are upon one description of subjacent rock, the only difference in soil arises merely from the depth over that, *Id.*

Now that a valuation for poor law purposes has been rendered requisite, there is no reason for continuing the townland valuation, 645-647—It is quite possible, and very desirable, to make one good valuation for all purposes, 648—Control under which such valuation should be placed; there should be a central controlling authority; the appointment of officers and valuers should be placed under that central body, 649-654—How far there should be an appeal from any erroneous valuation which might be exercised, 655, 656.

[Second Examination.]—Mode in which the French cadastre has been carried on, and basis of the calculation which has been adopted there, 658—Alteration which has taken place in the mode of carrying on the cadastre, 659—Usual extent of each separate valuation on the French system, 660-663—In France the franchise is based upon the valuation, 664—Mode in which the land is let in France, 665—By whom the valuers are appointed, 666-668—In the county of Waterford the land is only valued at its relative value, 669-671—The valuation in France, as described by witness, gave satisfaction, 672—Mode of appeal given to those who are dissatisfied, 673—The whole taxes of the country are levied upon this valuation, 674-680—Rents are sometimes paid in France in kind, sometimes half money and half produce, 681—Further evidence as to the different classes of land from which the types, as they are called, are formed, 682-684—Power of appeal given to parties in the county of Waterford to persons who felt themselves aggrieved by the valuation, 685, 686.

Kerry County. Memorial of the grand jury of the county of Kerry, assembled at Spring Assizes 1844, to the Lord-lieutenant, urging the completion of an uniform valuation of the county, for the purposes of taxation, under the 6 & 7 Will. 4, c. 84, App. 162.

Report, 1844—continued.

Key, The. Mode of applotment of the county cess, by the key, formerly in use in the county of Londonderry; its origin; its unequal operation, *Sir R. A. Ferguson* 457.

Kilkeel Union. Evidence relative to the manner in which the valuation in this union was conducted, *Gulson* 1412.

Kingstown Union. The valuation made for the commissioners of the harbour was not thought sufficiently accurate for the purposes of the poor law, *Muggeridge* 1163.

L.

Landlord and Tenant. Objections to interfering with existing arrangements between landlord and tenant, *Senior* 1011, 1012—Growing feeling in favour of a new distribution of county rates, so that a portion should be borne by the landlord as well as by the occupier, *Ib.* 1013–1016—An equitable distribution of the burden between landlord and tenant could not take place without a fresh uniform valuation, *Ib.* 1017—Beneficial operation of the provision in the Poor Law Act dividing the burden of the rate between the landlord and tenant; respects in which it acts unfairly, *Muggeridge* 1208–1214—By the Act of last Session the poor-rate upon all tenements of less annual value than 4*l.* in the country, and 8*l.* in towns, is imposed upon the owner and not upon the occupier, *Lewis* 1758—The division of the rate between landlord and tenant in certain varying proportions has been a source of much difficulty in arriving at satisfactory results as to valuation, *Gulson* 1385—Greater practical results produced by this operation of interest of landlord and tenant in the south and west than in the north, and from what causes, *Ib.* 1390–1395—General expediency of extending to the county taxation the principle introduced by the poor law of dividing the taxation between the landlord and tenant, *Ib.* 1542.

See also *County Cess. General Valuation, 1. Landlord's Repairs and Insurance. Townland Valuation, 4.*

Landlords. Great distinction drawn by witness between large and small landlords; large landlords let their lands on a regular system by valuation, and always lower than those who let by tender, *Griffith* 141, 142, 423, 424.

See also *Agricultural Improvements. Down County. Landlords' Repairs and Insurance. Letting Value. Rents. Tenant Right. Valuers, 2.*

Landlords' Repairs and Insurance. Copy of the General Order of the Poor Law Commissioners issued in consequence of the Act of last Session in relation to the form of rate produced, and lengthened examination in reference to the column in the same relative to "landlords' repairs and insurance," *Gulson* 1572–1594—Extent to which the columns relative to landlords' repairs and insurance apply to those districts having no corporation but a town of 3,000 inhabitants, *Ib.* 1465–1472—Obscurity in the provisions of this Act; great trouble imposed upon the commissioners, in consequence of the connexion of the Municipal Act with the poor law, *Ib.* 1595–1600—Legitimate construction to be put upon the clause in the Act 6 & 7 Vict. c. 92, with reference to the town having a population of 3,000 to which a charter of incorporation under the said Act "may" be granted, *Coode* 1664–1669.

See also *Supplemental Valuations.*

Landlords' Taxes. Difference in the bases of English and Irish valuations in respect to deductions from the net annual value for landlords' taxes, *Coode* 1303—In Ireland there are few landlords' taxes, but by an Act of last Session the poor-rate is imposed directly upon the landlord in certain cases, *Ib.*—Comparison of the words of the two Acts in regard to the landlords' taxes, *Ib.* 1304–1306—In Ireland the value is to be put, placing the usual tenant's rates and taxes upon the tenant, but in England upon the landlord; manner in which the English Act is practically interpreted, *Ib.* 1307–1310—The question has not come directly before the courts, *Ib.* 1311, 1312.

See also *Landlords' Repairs and Insurance.*

Legality of Rates. No rate is legal unless it be filled up according to the orders of the commissioners, *Gulson* 1464.

Letting Value. Mr. Griffith does not estimate the annual value according to the amount for which the land would probably let, supposing that amount to be determined by competition, and the land to be cultivated in the ordinary mode, with an average amount of capital and skill, *Rep.* vi—Under the poor law valuation each occupier is rated separately, according to the net annual value of the land to let, *Ib.* vii—Instances of the difference between the valuation of the land adopted by witness under the Act, and the actual letting value, *Griffith* 58–63—Land was valued in every case according to the scale laid down in the Act; not by the actual present value, *Ib.* 70–73—It is the general opinion that the valuation is supposed to be one-fourth under the real value, *Ib.* 121–132—In any case where two persons were to pay a proportion, as in the case of the poor law, it is absolutely necessary that what might be considered the letting value of the land should form the scale of valuation, *Ib.* 138–140.

Letting Value—continued.

Steps witness would take supposing it to be considered desirable to raise his valuation and make it approach the actual lettings in Ireland, *Griffith* 152-155—If the instructions which were given with respect to the poor law valuation have been followed out, they would give the present fair letting value of the country, *Ib.* 156-159. 162, 163—There would be a difference of about 12 $\frac{1}{2}$ per cent. between their valuation and witness's, *Ib.* 160, 161—The original valuation, the townland valuation, might be carried out, and by adding a per-centage equal to the difference between the letting rents and the townland valuation scale, the fair letting rent would be obtained, *Ib.* 164-168—Whether the amount at which land would let from year to year is a true indication of the actual value of that land; the tenure on which land is held should form a distinct basis of valuation, *Ib.* 375-379.

The fair letting value of land is what it really yields to the proprietor from year to year, *Sir R. Keane* 582-586—In the cases with which witness is personally acquainted the poor law valuation is from five to 10 per cent. below the actual letting value, *Ib.* 591-601—Valuations should be made with all equitable considerations, and come up as nearly to the fair letting value of the land as can possibly be ascertained, *Ib.* 640-642.

Mode taken to ascertain what the letting value of ground is in the district which witness is valuing, *Purdon* 764-771—Greatest difference witness has found between the valuation placed by him upon the land, and the actual letting value in the case of lands adjoining towns, where local demand affects their value, *Ib.* 782-792—The poor law valuation is below the letting value, but not very much, *Ib.* 807.

Relation of the poor law valuation to the letting value of the land in the north and south of Ireland; interest guardians in the south had in lowering the valuation, *Senior* 977-986—Practicability of a valuation being founded on the principle of taking the rent paid by the tenant as the actual fair letting value of the land, *Ib.* 1062-1066—Relation which the valuation under the Poor Law Act bears to the actual letting value of the properties, *Muggeridge* 1183-1185—Inequalities in that relative value illustrated in particular unions, *Ib.* 1186-1203—Basis on which the fair letting value was ascertained, *Ib.* 1204-1207—Mode by which the fair letting value could be ascertained in districts where the land is held by middlemen, paying to the head landlord less, and the actual occupier paying more than the value of the ground, *Ib.* 1285-1292—Evidence as to what is to be understood by the term "letting value," *Coode* 1709-1712.

See also *Baltinglass Union. Enniscorthy Union. Gorey Union. Lismore Union. Poor Law Valuation, I. 6. Tenant Right. Townland Valuation, 4. Wexford Union.*

Lewis, George Cornwall. (Analysis of his Evidence.)—Poor Law Commissioner, 1714—Interest of the Boards of Guardians in keeping the valuations unduly low; additional power given to the Poor Law Commissioners to appoint valuers for revising the existing valuations, 1715—Soundness of the principle on which the poor law valuations are formed; doubts as to whether they have been executed with that skill and uniformity which would render it safe to adopt them as the foundation of a general system of local taxation, 1716—Witness concurs in Mr. Gulson's evidence relative to the passage in the Tenth Report of the Commissioners upon Irish Valuation, 1717—Desire of the commissioners to adapt Mr. Griffith's valuation to the purposes of the poor law; its inapplicability, *Ib.*—Expediency of a consolidation of the valuations for the county cess and poor-rate; as the law now stands, such consolidation is impracticable, 1718.

Exemption of property rateable to the poor-rates from the payment of county cess; how far those exemptions should be preserved if the two rates be consolidated, 1719-1725—All exemption of property from local taxes is an evil, 1719—Whether it be desirable to impose any burthen on tithes, 1719-1723—Upon tolls, corporate or private, and ferries, 1724—Upon rentcharges, mortgages, or jointures, 1725—Preference to be given to the principle laid down in the Poor Law Act, over that in the County Rate Valuation Act, in carrying out one general valuation; erroneousness of the principle laid down in the latter Act; the principles of the poor law valuation generally adverted to, 1726-1734—Changes in the value of land to be provided for by a periodical revision, 1735—Meaning of the term "rent," as applied to the poor law valuation, 1736-1739.

Difficulty of laying down any rule with respect to revision; a permanent power of revision, such as is exercised by the overseers in England, and the application of that power wherever the changes in the value of property are frequent and considerable, recommended, 1740—Strong objections to fixing by law a limit of as much as three or five years for any valuation of local taxes; once a year should be the extreme limit, 1741—Important difference between the Irish Valuation Act and the English valuation, *Ib.*—Impossibility of forming a judgment as to the fairness of Mr. Griffith's valuation; the absence of objection to it no evidence of its accuracy, *Ib.*—A general valuation would be best conducted by an independent body, similar to that constituted under the present Valuation Act; it should be a permanent authority for the construction

Report, 1844—continued.

Lewis, George Cornwall. (Analysis of his Evidence)—continued.

and superintendence of the valuations for local taxes, 1742, 1743—Expediency of the county cess and the poor-rate being collected simultaneously by one set of officers; the body with whom the appointment of these officers should rest, of subordinate importance, 1744.

Time at which the rates should be collected; there are many circumstances why the collection should be as infrequent as possible, 1744—Immediate and incidental purposes to which the proposed general valuation is applicable, both for the imposition of local taxes, and to secure a fair standard for the regulation of municipal and Parliamentary franchises, 1745—Objection to its being constructed with a view to affording the means of arbitration between landlord and tenant for the determination of rent, *Ib.*—The existence of competition might be taken into account in estimating the proper rent of land; but the ordinary average rent of the district, even if it be determined by active competition, is only to be looked to, 1746-1756—The valuation should extend to every tenement, however small its value, 1757—Whether, in the event of the consolidation of the poor-rate and county cess, the county cess upon tenements of less value than 4*l.* should be paid by the landlord, in the same manner that the poor-rate upon tenements below that value is now paid, 1757-1759.

Liability to Rates. Some easements, rights of way, and tolls liable to the poor-rate in Ireland, are held not to be liable in England, *Coode* 1314.

Linen Manufacture. Higher rent value of land in the districts of Antrim, Derry, Tyrone, Armagh, and Down, in which the linen manufacture prevails, *Rep.* vi—This commercial value amounting to about 2*s.* 6*d.* in the pound was not taken into consideration in the townland valuation, *Ib.*

Liquorice. Case of a crop of liquorice, where the crop is five years coming to perfection; mode in which such property might be valued, *Coode* 1329-1336—How a crop of liquorice, taking five years to arrive at perfection, would be valued, *Ib.* 1329.

Lisburn Union. Evidence relative to the manner in which the valuation in this union was conducted, *Gulson* 1412.

Lismore Union. The poor law valuation of the Lismore Union is full 15 per cent. under the actual letting value, *Sir R. Keane* 571-581. 614-626.

Lisnaskea Union (Fermanagh). Paper showing the respective amounts of the Ordnance and net poor-rate valuation in this union (delivered in by Sir A. Brooke, Bart. M. P.), *App.* 163.

Local Boards. If general taxation is to be based upon valuation, it would be perfectly safe in Ireland to leave the valuation in the hands of local Boards, *Sir R. Keane* 602-604.—See also *General Valuation*, 2.

Local Taxation. See *Collection of Rates.* *Consolidation of Rates.* *County Cess.* *General Valuation.* *Poor Law Valuation.* *Poor's Rate.* *Rating.* *Townland Valuation.*

Londonderry County. Mode by which the county cess was apportioned in the county of Londonderry prior to Mr. Griffith's valuation; the latter valuation was considered to be an improvement, *Sir R. A. Ferguson* 457, 458.

Longford Union. The valuation of the union of Longford was not in accordance with the terms of the Act, *Coode* 1357.

Lurgan Union. Evidence relative to the manner in which the valuation in this union was conducted, *Gulson* 1412.

M.

Machinery. The rules contained in the Valuation Act (6 & 7 Will. 4, c. 84), order machinery in a mill or manufactory to be omitted, *Rep.* iv—Machinery is not mentioned in the general clause of the 1 & 2 Vict. c. 56, *Griffith* 412—The fixed machinery of a mill, which may be considered part of the freehold, can alone be valued, *Coode* 1373-1375.

Mallow Union. Evidence relative to a complaint made by the town of Mallow, with regard to the non-completion of the supplemental valuation directed by the Act 6 & 7 Vict. c. 93, to be made by the Poor Law Commissioners, *Gulson* 1436-1450.

Manure. In the townland valuation an additional value was put on land by the sea-shore, from the facility of getting manure, arising from the right of cutting sea-weed, *Griffith* 45, 46.

Mayo County. Comparison of the amount of value as given in the general valuation of this county, with the actual rents, and also with the poor-law valuation, together with the proportions which these valuations bear to the rents, *App.* 181, 182.

Middlemen.

Report, 1844—continued.

Middlemen. See *Letting Value*.

Mines. In Ireland all mines that have been opened seven years are liable to the poor-rate; in England coal mines only are liable, *Coode* 1314.

See also *Exemptions from Taxation*.

Muggeridge, Richard M. (Analysis of his Evidence.)—Lately an Assistant Poor Law Commissioner, 1159-1216—Districts in which principally employed when acting in that capacity, 1160-1162—Course adopted in reference to the valuations on the introduction of the poor law, 1163 *et seq.*—Steps taken to ascertain whether there were any existing surveys that could be made available, 1163—Resolutions obtained from the Board of Guardians in each case that in their judgment no adequate existing survey or valuation was in force, *Ib.*—Advertisement for tenders, 1164, 1165—Usual number of tenders sent in, and description of parties tendering, 1165—Means taken to secure the services of professional persons, 1165-1169—Maximum and minimum price per thousand acres, 1169—Selection of assistants by the valutors; reason for supposing that in some instances the election of the head valuator was made contingent upon his subsequent selection of particular assistants, 1171-1173.

Effort made to secure uniformity of valuation in the same county, 1173-1175—Code of instructions upon valuation and rating issued by the Poor Law Commissioners, dated 25 March 1840; 1176—Time taken in forming the country into unions; care observed in the distribution of property, 1176, 1177—Influence produced by the Act on the minds of Boards of Guardians, affecting the general accuracy of the work, 1178-1181—General accuracy of the poor law valuation; obstacles to the survey being accurate, 1182—Relation which the valuation bears to the actual letting value of the properties, 1183-1185—Inequalities in that relative value; illustrated in particular unions, 1186-1203—Basis on which the fair letting value was ascertained, 1204-1207.

Beneficial operation of the provision in the Poor Law Act dividing the burthen of the rate between the landlord and the tenant; respects in which it acts unfairly, 1208-1214—Date of the Act coming into operation, 1215—Course taken on the completion of valuations, to amend or revise them, 1219—Changes made in the valutors in making the corrections, 1220-1224—Complaints and dissatisfaction in some cases as to the mode in which the first survey was made; feeling of the country in favour of local valutors, 1225-1227—Few appeals have been made from the decisions of the Board of Guardians; result in the majority of cases, 1228-1230—Opposition experienced in the collection of the poor-rate, arising out of the mode of valuation, 1231—Inquiry made into complaints; subsequent alteration of the valuation in many cases, 1232-1236—Removal of dissatisfaction by the subsequent correction of inaccuracies, 1237—Course open to an individual feeling himself aggrieved with the amount at which he has been valued, 1238-1240—Effect of a reduction being made in the amount of a valuation, in disarranging the rate which has been struck, 1241, 1242—Decided improvement of the existing valuation being made perfect and undergoing all the requisite appeal previous to the striking of the rate, 1243.

Periods of collection of poor-rates at present under the instructions of the Poor Law Commissioners should be made twice in the year, 1244, 1245—Expediency of a stated time being fixed, 1246-1248—Objection to the discretion of appointing the time of collecting being left with the Board of Guardians, 1247—Impracticability of having the collection only once a year in town unions; no difficulty in rural districts, 1249—Propriety of having one uniform period in the year for all collections by one class of officers; whether any difficulties exist to such plan being carried out, 1250-1262.

Desirableness of an uniform valuation for the purposes of all public assessments; neither the present townland valuation nor the poor law valuation as it stands would form a sufficient basis for such uniform valuation, 1263-1265, 1267—How far Mr. Griffith's or the poor law valuation affords the best basis, 1266, 1268, 1269—The actual value paid for the use of the ground would be the fairest basis, 1270—The improveable capabilities of the soil should also be admitted, 1271-1278—It is essential that the valuation should be made by an independent in preference to a local Board, 1279, 1281, 1294, 1295—It should be unconnected with the poor law system, 1280—Supposing the valuation to be established, and to be satisfactory, a revision once in five years would be adequate for poor law purposes, 1282-1284—Mode by which the fair letting value could be ascertained in districts where the land is held by middlemen, paying to the head landlord less, and the actual occupiers paying more than the value of the ground, 1285-1292.

Mullingar Union. Extent to which the poor law valuations in this union differed from the townland valuation, *Pardon* 793-801—The valutors did not make use of Mr. Griffith's valuation to guide them, *Ib.* 802.

Report, 1844—continued.

N.

Newry Union. Evidence relative to the manner in which the valuation in this union was conducted, *Gulson* 1412.

Norreys, Sir D. J., Bart. M. P. Letter from Sir D. J. Norreys to Sir W. Wrixon Becher, bart., foreman of the grand jury of the county of Cork, submitting to the grand jury whether the townland valuation should be continued according to its present arrangement, or whether it ought to be made a tenement valuation, *App.* 159.

O.

Occupiers. In England occupiers have not the same interest in making the valuation low as in Ireland, *Gulson* 1535, 1536—Course to be pursued in the case of property falling out of lease shortly after the general revision for the poor-rate, and instead of having one occupant, becoming divided among ten, *Ib.* 1537.

See also *Landlord and Tenant.* *Letting Value.* *Tithes.*

Ordnance Survey. See *Lisnaskea Union* (Fermanagh).

Osier Beds. How an osier bed cut every two years could be rated under the terms of the Poor Relief Act, *Coode* 1326–1328.

Outbuildings. The rules contained in the Valuation Act (6 & 7 Will. 4, c. 84) order outbuildings to be valued with the house, *Rep.* iv—Outbuildings were valued in the townland valuation along with the houses, *Griffith* 34, 35.

Overseers (England). Authority exercised by the overseers in England in the making and collecting rates; they are independent of guardians as well as county authorities, *Coode* 1686–1694.

POOR LAW VALUATION :

I. *How conducted :*

1. Generally.
2. Basis adopted.
3. Valuers.
4. Average Expense.
5. Appeals.
6. Whether accurate.
7. Paper laid before the Committee.

II. *Basis on which the Valuation should be made.*III. *Whether the Basis of the Poor Law is to be preferred to the Townland Valuation.*I. *How conducted :*1. *Generally :*

The poor law valuation has been made under the provisions in sections 63–65 of the Irish Poor Relief Act (1 & 2 Vict. c. 56), *Rep.* vii—Steps taken on the introduction of the poor law into Ireland to procure the necessary valuation of the unions, *Senior* 963; *Muggeridge* 1163 *et seq.*; *Gulson* 1380—A period in which the valuation was to be completed was defined; it was not sufficient, *Senior* 970, 971—Resolutions obtained from the Board of Guardians in each case, that in their judgment no adequate existing survey or valuation was in force, *Muggeridge* 1163—Advertisements for tenders for performing the valuation; usual number of tenders sent in, and description of parties tendering, *Ib.* 1165–1169.

2. *Basis*

POOR LAW VALUATION—continued.

I. How conducted—continued.

2. Basis adopted:

Indefinite wording of the Poor Relief Act as regards "net annual value," and the term, "from year to year;" how the annual value should be taken, *Rep.* viii—Generally speaking, the valuers under the poor law were guided in their estimate of the value of land by the rent which the landlord had previously set upon it, *Griffith* 293-300—Standard laid down in the Poor Law Act; whether sufficiently accurate as an indication of value, *Ib.* 373, 374—The valuers in making their valuation do not take the price paid for the tenant-right into the valuation, *Sir R. A. Ferguson* 494, 495—General principles developed in the instructions of the Poor Law Commissioners; respect in which those instructions differed from the principles on which the townland valuation was carried on, *Senior* 976, 987, 988-992—The rent actually paid was taken as the test of value, *Ib.* 1005-1008—Code of instructions upon valuation and rating issued by the Poor Law Commissioners, dated 25th March 1840, *Muggeridge* 1176—With certain exceptions the principle of valuation is the same in England and in Ireland, *Coode* 1313—The principles of the poor law valuation generally adverted to, *Lewis* 1726-1734—Meaning of the term "rent," as applied to the poor law valuation, *Ib.* 1736-1739.

3. Valuators:

The valuation has for the most part been executed by persons of inferior skill, who have not applied the principles of the poor law valuation uniformly in the different unions, *Rep.* vii—Class of persons who were employed as valuers, *Sir R. A. Ferguson* 467-470; *Purdon* 805, 806; *Gulson* 1410-1425—Their incompetency in some instances, *Sir R. A. Ferguson* 467-470—Professional persons were employed in every instance; they were generally competent, *Senior* 964-967—Local or party feeling had no influence in the appointment of valuers in the north; in the south it was otherwise, *Ib.* 968, 969—Alteration made in the law giving the appointment of valuers to the Poor Law Commissioners, *Sir R. A. Ferguson* 474, 475.

4. Average Expense:

Average expense of the poor law valuations, *Sir R. A. Ferguson* 476—Cost of the original valuation; average rate per acre, *Senior* 1000-1004—Maximum and minimum price per 1,000 acres, *Muggeridge* 1169.

5. Appeals:

Description of appeal provided by the Act of Parliament, *Senior* 993, 998, 999—Infrequency of appeals; general result, *Ib.* 994-996—If a practical evil were shown to arise from an irregular valuation, the commissioners would order a new valuation, *Coode* 1365, 1366.

6. Whether accurate:

The valuers had no interest in valuing the land very low; in Londonderry and Tyrone the valuations were about the usual rents, *Sir R. A. Ferguson* 471-473—General accuracy of the poor law valuations, *Purdon* 803, 804; *Muggeridge* 1182; *Clements* 1626, 1655, 1656—Exhibition of the valuation when completed; active part taken by Boards of Guardians in reference to complaints; complaints were chiefly as to relative value, *Senior* 972-975—The existing poor law valuations are a fair criterion of the relative value of tenements in the same union; their want of a common basis has led to considerable differences, *Ib.* 1047, 1048—If the construction put upon the Act by witness be that which is thought the best law of valuation, the existing Act needs no alteration, *Coode* 1367-1369—How far the valuation is satisfactory as compared with other valuations, *Clements* 1627, 1628—Superiority of the poor law valuations in the north of Ireland as compared with those in the south, *Ib.* 1656, 1657—Soundness of the principle on which the poor law valuations are formed; doubts as to whether they have been executed with that skill and uniformity which would render it safe to adopt them as the foundation of a general system of local taxation, *Lewis* 1716.

In most cases the poor law valuation is considerably above the general valuation; in some cases it is under it, *Griffith* 91-93—Absence of any uniform principle in the poor law valuation; it has not given general satisfaction, *Sir R. A. Ferguson* 464-466—There have been cases where it did not afford satisfaction to many of the occupants in the country, *Purdon* 803, 804—In the north the poor law valuation is somewhat below the test provided by the Act, *Senior* 977—In the south the valuation is considerably below the letting value, *Ib.* 979, 980—Discrepancies found to exist in the scale of value between one poor law union and another; how this is to be remedied, *Clements* 1632, 1633.

Report, 1844—continued.

POOR LAW VALUATION—continued.

I. *How conducted*—continued.

7. Paper laid before the Committee :

Analysis of the reports of the poor law valuations as regards their difference between rated and letting value, appended to the "Returns of Parliamentary Electors, Ireland, 1842-43," App. 196.

II. *Basis on which the Valuations should be made :*

The average letting value should be taken as the standard of the poor law valuation, *Griffith* 365—In making the valuation, the average letting value of the lands, according to the quality in the district, would be taken, *Ib.* 401, 402—Whether in the poor law valuation, the consideration of the qualities of the soil ought to be thrown overboard, *Muggeridge* 1292—Whether it would be more convenient if the valuation were first made perfect before striking the rate, *Gulson* 1475-1478. 1480, 1481. 1484-1506—Advantage to the well-working of the poor law of taking the valuations out of the hands both of the Boards of Guardians and Poor Law Commissioners, *Ib.* 1516-1518.

III. *Whether the Basis of the Poor Law is to be preferred to the Townland Valuation :*

The principles upon which the valuation has been constructed appear to the Committee to be sounder than those followed in the formation of Mr. Griffith's valuation, *Rep.* vii—There would be no objection to adopting the basis of the poor law valuation in preference to the townland basis, *Griffith* 170—The townland basis would have no advantage over the poor law basis, *Ib.* 171—It would not be in witness's power so to revise the poor law valuations as to render them a proper basis on which to levy the county cess, *Ib.* 284-292—Witness was consulted as to what proportion the poor law valuation should bear to his valuation; recommendation made by witness; in some instances it was acted upon, *Ib.* 301-305—Trifling increased expense of making a valuation for the purpose of the poor law, in addition to the townland valuation, *Ib.* 413-417—Cheaper rate at which witness could value for the purposes of the poor law than valuers appointed by Boards of Guardians could do it, *Ib.* 418, 419.

As the valuation is now made, it could not be applied to the poor law rating; it is too low for a poor law rating, *Sir R. Keane* 549-559—As the basis, witness would prefer the poor law valuation, according to the instructions of the commissioners, to the townland valuation; it is more applicable to Ireland, *Ib.* 564, 565. 570-581—Now that a valuation for poor law purposes has been rendered requisite, there is no reason for continuing the townland valuation, *Ib.* 645-647—The principle of the poor law valuation, the test being the yearly rent paid by the tenant, is far sounder than Mr. Griffith's townland valuation, where the test of value is the comparison of one set of lands with others of recognized value; the relative principle of each generally adverted to, *Senior* 1018-1032—Difficulties encountered in making Mr. Griffith's valuation available; defective principle on which that survey is based; its inutility for poor law purposes, *Gulson* 1380-1384. 1396—Explanation of paragraph in last Report of the Poor Law Commissioners, recommending advantage to be taken of Mr. Griffith's townland valuation, *Ib.* 1543-1548—The basis of the poor law valuation is to be preferred to Mr. Griffith's, if a valuation for the general purposes of taxation be introduced into Ireland, *Coode* 1706.

lord and Tenant. *Letting Value.* *Poor Law Valuation.*

Prices. The rules contained in the Valuation Act (6 & 7 Will. 4, c. 84), order the valuation of all lands to proceed with reference to certain prices of grain, potatoes, &c. specified in the Act; these prices were taken from the average prices of the years 1816, 1817, *Rep.* iv—Principle, with regard to prices, upon which the townland valuation has been made, *Griffith* 25-30—The lands which witness is at present engaged in valuing are valued,

Report, 1844—continued.

Prices—continued.

valued, not in reference to any particular prices of agricultural produce, but in reference to the value which witness, under the valutors previously employed, put upon the lands upon which he commenced, *Purdon 695 et seq.*—The field prices laid down by the first valuator supposed the land in the ordinary state of culture, *Ib. 745*—Mr. Griffith's system is, that the field prices bear the same relative proportion in all parts of Ireland, *Ib. 746, 747*—Mr. Griffith can, on any subsequent period, make these field prices applicable for any purpose that may be required, *Ib. 748*.

See also *Flax. Townland Valuation, 3.*

Purdon, Robert. (Analysis of his Evidence.)—Is engaged in the townland valuation of Ireland, 688-691—How witness, when he first commenced valuing for the townland valuation, was instructed in the mode of carrying it on, 692-694—The lands which witness is at present engaged in valuing are valued, not in reference to any particular prices of agricultural produce, but in reference to the value which witness, under the valutors previously employed, put upon the lands upon which he commenced, 695 *et seq.*—Evidence generally as to the system pursued by the valutors and check valutors in valuing a county; different districts assigned to each, 695-705—Means taken to ascertain that the valutors are carrying on the valuation fairly to each other relatively, 706-712.

Necessity for a revision of any valuation; the value put upon land now must be very different from the true value, say 20 years hence, 726—There is no provision made in the existing Act for a revision of Mr. Griffith's valuation, 727—According to witness's view of the value of land, a parish which is badly cultivated would be valued lower than a well-cultivated one, 728-744—The field prices laid down by the first valuator supposed the land in the ordinary state of culture; Mr. Griffith's system is, that the field prices bear the same relative proportion in all parts of Ireland, 745-747—Mr. Griffith can, on any subsequent period, make these field prices applicable for any purpose that may be required, 748—Size of the districts generally from whence the average state of cultivation is taken, 749-763—Mode taken to ascertain what the letting value of ground is in the district which witness is valuing, 764-771—Next operation that takes place in the office after the valuation has been checked by witness, 772 *et seq.*

Period at which and mode in which, after the valuation, the public interested in the result is made aware of it, 772-776—Means the public have of ascertaining the correctness of the details from which the total valuation of the townlands has been made up, 777-781—Greatest difference witness has found between the valuation placed by him upon the land, and the actual letting value, in the case of lands adjoining towns, where local demand affects their value, 782-792—Extent to which the poor law valuations in the Mullingar Union and the Drogheda Union differed from the townland valuation, 793-801—The valutors in these unions did not make use of Mr. Griffith's valuation to guide them, 802—The poor law valuations have been generally tolerably well conducted; there have been cases where it did not afford satisfaction to many of the occupants in the country, 803, 804—Class of persons who were employed as valutors, 805, 806—The poor law valuation is below the letting value, but not very much, 807.

Opportunity the occupiers of the townland, who have not attended the committee of revision, have subsequently of ascertaining the relative value at which their lands have been valued, 808-812—Making Mr. Griffith's valuation a tenement valuation, so that every house within the district, and every separate farm, should be separately valued, would not cause any very great addition to the expense of the valuation, 813 *et seq.*—All houses under 5*l.* are not valued; steps taken to ascertain whether their value is under that sum; virtually, all houses are valued down to 4*l.*; those between 4*l.* and 5*l.* are struck out in Mr. Griffith's office, 813-840.

[Second Examination.]—The townland valuation being a comparative valuation, the comparison with other lands is chiefly attended to by the valutors, 841-853—Witness would take the average culture of each locality as the standard of the district, 854-865, 878-880—In estimating the rent which witness would consider could be paid by a farmer to enable him to live in easy circumstances, one standard could not be taken for the entire of Ireland; there should be a separate calculation for each district, 866-869—With regard to modern lettings, the rent paid for land in Ireland is generally high, 870-875—On the estates of the large proprietors rent is more moderate than on those of smaller proprietors and middlemen, 876, 877—There are very great varieties in Ireland as to the amount of produce which is reserved for the payment of rent, 881-883—Why there should be a difference in the valuation of tillage and of grazing farms, 887-914.

Variations in rent arising from the intensity of competition; how, under these circumstances, witness could proceed in his valuation, 915-923—Much larger rents would be exacted in England and Scotland upon lands of the same qualities as those lands in Ireland, and higher rents could be paid, 924, 929-934—There are a great many extensive landlords who do not let by tender but by valuation, 925-928, 935—Class of persons who usually object to the townland valuation, 936-939—The probable expense of con-

Report, 1844—continued.

Purdon, Robert. (Analysis of his Evidence)—continued.

verting the existing townland valuation into a tenement valuation would be about three farthings an acre, 940-942. 944. 950-953—The additional expense of carrying on the townland for the future, as a tenement valuation, would be something less, 943—Certain property is rateable under the Poor Law Act, which is not liable to the county cess, such as canal property, mining property, &c. 945—The valuation of these large masses of property could be carried on without any great additional expense, 946, 947—In respect to houses under 5*l.* value, which are omitted in the townland valuation, but which would be subjected to valuation under the poor law, a sort of rough valuation is obliged to be made of them now, in order to ascertain whether they are or are not of the value of 4*l.* or 5*l.*, 948, 949.

Q.

Quality Lines. Use made of quality lines in Mr. Griffith's valuation; by their abandonment each tenement could be given, *Sir R. A. Ferguson* 442, 443.

Quarries. The townland valuation did not include quarries, *Griffith* 41-44.

R.

Rack Rent. The townland valuation is about 25 per cent. under the full or rack rent value, *Rep.* v—Assessing the gross rack rent of property is contrary to all precedent; objections to such a basis of valuation, as referring more particularly to a Bill introduced during the present Session for the amendment and levying of county rates, *Coode* 1671-1676.—See also *Townland Valuation*, 4.

Rathdown Union. Close approximation of the poor law valuation to the actual letting value in this union, *Muggeridge* 1194, 1195.

Rathdrum Union. In this union the poor law valuation is 10 or 15 per cent. under the letting value, *Muggeridge* 1196.

Rating. Form of words proposed to obviate any difficulty in the construction of the law defining the principle of rating, *Coode* 1760. 1771-1775.

See also *Acts of Parliament.* *Collection of Rates.* *Consolidation of Railways.*
County Cess. *Letting Value.* *Liability to Rates.* *Poor's Rate.*

Rentcharges. Whether it be desirable to impose any burthen upon rentcharges, mortgages, or jointures, *Lewis* 1725.

Rents. Under a good system of farming the farmers of Ireland might not only pay much higher rents but live much better than they do, *Griffith* 73. 94-102—The great landlords of the country let at considerably lower rents than the others receive immediately adjoining, *Ib.* 76—The great landlords let almost always by valuation; the smaller by tender, *Ib.* 77-79—There are many districts in the west of Ireland where the lands are let extremely low, and the tenants are worse off than where they are let a great deal higher, *Ib.* 102—What is termed a high rent value is rather the want of skill and industry on the part of the tenants than any want of value in the land, *Ib.* 133, 134—If there were less competition and a much smaller number of tenants in Ireland, with a better system of agriculture, the landlords might receive much higher rents, *Ib.* 135-137—The great landlords let their land lower than the average scale of the country; therefore, in their view, the poor law valuation would be higher than their rents, *Ib.* 163—Land in Ireland, let in small divisions, often pays double what a reasonable landlord would let the land for in larger divisions, *Ib.* 361—Comparative rent of land in the north and south of Ireland, *Senior* 981-985—There is hardly any price which might not be got for land in Ireland, *Muggeridge* 1184—Utility of a fair valuation of property in checking landlords attempting to get exorbitant rents upon their property, *Coode* 1713.

Rents (France). Rents are sometimes paid in France in kind, sometimes half money and half produce, *Sir R. Keane* 681.

Repairs. See *Landlords' Repairs and Insurance.*

Report, 1844—continued.

REVISION OF VALUATIONS:

1. *Generally.*
2. *Townland Valuation.*
3. *Poor Law Valuation.*
4. *Periodical Revision under proposed General Valuation.*

1. *Generally:*

No valuation, however just the principles on which founded, can retain its applicability for many successive years; a machinery for revision from time to time is indispensable to secure accuracy, *Rep.* vii—Means should be provided for a revision of any valuation, as circumstances and the altered condition of property may require, *Ib.* ix.

2. *Townland Valuation:*

The Townland Valuation Act, 6 & 7 Will 4, c. 84, contains no powers for revising the valuation when made, *Rep.* vii—The principle of townland valuation does not involve any principle of occasional revision, *Griffith* 233-236—Means taken to ascertain that the valuers are carrying on the valuation fairly to each other relatively, *Purdon* 706-712—Necessity for a revision of any valuation; the value put upon land now must be very different from the value, say 20 years hence, *Ib.* 726—There is no provision made in the existing Act for a revision of Mr. Griffith's valuation, *Ib.* 727—Impossibility of Mr. Griffith's valuation, already effected, being used as the groundwork of its revision, *Coode* 1708.

3. *Poor Law Valuation:*

It is desirable that the powers relating to the revision of valuations, now vested in the Poor Law Commissioners, should be vested in the Commissioners of Valuations, *Rep.* xi—The poor law revision takes place every year; advantage of this opportunity of frequent revision, *Senior* 988-992—Course taken on the completion of the valuations under the Poor Law Act to amend or revise them, *Muggeridge* 1219—Change made in the valuations in making the corrections, *Ib.* 1220-1224—Difficulty experienced in procuring persons to act as revisers under the Act of last Session, making the Poor Law Commissioners responsible for the valuations, *Gulson* 1400-1407—On whose representations revisions have been ordered, *Ib.* 1408, 1409—Supposing the valuation to be perfect, the revision would take a very short time in making, *Ib.* 1483.

Complaints and dissatisfaction in some cases as to the mode in which the first survey was made; feeling of the country in favour of local valuers, *Muggeridge* 1225-1227—Inquiry made into complaints; subsequent alteration of the valuation in many cases, *Ib.* 1232-1236—Removal of dissatisfaction by the subsequent correction of inaccuracies, *Ib.* 1237—Course open to an individual feeling himself aggrieved with the amount at which he has been valued, *Ib.* 1238-1240—Effect of a revision being made in the amount of a valuation in disarranging the rate which has been struck, *Ib.* 1241, 1242—Decided improvement of the existing valuation being made perfect, and undergoing all the requisite appeal previous to the striking of the rate, *Ib.* 1243—Interest of the Boards of Guardians in keeping the valuations unduly low; additional power given to the Poor Law Commissioners to appoint valuers for revising the existing valuations, *Lewis* 1715.

4. *Periodical Revision under proposed General Valuation:*

If one general valuation were established in Ireland, it would not require revision more than once in seven years, *Sir R. Keane* 627-631—Under the proposed general valuation, a septennial revision would be sufficient, *Senior* 1035—How a triennial revision under the proposed general valuation might affect the elective franchise, *Gulson* 1532-1534—Constant revision necessary for securing a perfect valuation; periodical revisions lead to attempts being made by individuals to obtain alterations in their valuations to which they are not entitled, *Clements* 1629-1631—Changes in the value of land to be provided for by a periodical revision under the proposed general valuation, *Lewis* 1735—Difficulty of laying down any rule with respect to the frequency of revision; a permanent power of revision, such as is exercised by the overseers in England, and the application of that power wherever the changes in the value of property are frequent and considerable, recommended, *Ib.* 1740—Strong objections to fixing by law a limit of as much as three or five years for any valuation of local taxes; once a year should be the extreme limit, *Ib.* 1741.—See also *Appeals. General Valuation, 3. Soils.*

Roads. The question of lands being well or ill roaded could not be taken into consideration in a uniform valuation, *Sir R. A. Ferguson* 450.—See also *Tithes.*

S.

Saleable Underwood. See *Copses. Timber.*

Scariff Union. Evidence respecting the valuation of this union, *Senior* 980.

Report, 1844—continued.

Senior, Edward. (Analysis of his Evidence.)—Assistant Poor Law Commissioner; at present acting in Ireland, 955-957—Districts in which chiefly employed, 958-960—Course taken by the Boards of Guardians as to the valuation, 963 *et seq.*—Professional persons were employed in every instance; they were generally competent, 964-967—Local or party feeling had no influence in the appointment of valuers in the north; in the south it was otherwise, 968, 969—A period within which the valuation was to be completed was defined; it was not sufficient, 970, 971—Exhibition of the valuation when completed; active part taken by Boards of Guardians in reference to complaints; complaints were chiefly as to relative value, 972-975.

General principles developed in the instructions of the Poor Law Commissioners, 976. 987—Relation of the poor law valuation to the letting value of the land in the north and south of Ireland; interest guardians in the south had in lowering the valuation, 977-986—Respect in which the instructions differed from the principles on which Mr. Griffith's townland valuation was carried on, 988-992—Description of appeal provided by the Act of Parliament, 993, 998, 999—Infrequency of appeals; general result, 994-996—Cost of the original valuation; average rate per acre, 1000-1004—The rent actually paid was taken as the test of value, 1005-1008.

[Second Examination.]—Expediency of all real property being equally subject to taxation for local purposes, 1009, 1010—Objections to interfering with existing arrangements between landlord and tenant, 1011, 1012—Growing feeling in favour of a new distribution of county rates, so that a portion should be borne by the landlord as well as by the occupier, 1013-1016—An equitable distribution of the burden between landlord and tenant could not take place without a fresh and uniform valuation, 1017—The principle of the poor law valuation, the test being the yearly rent paid by the tenant, is far sounder than Mr. Griffith's townland valuation, where the test of value is the comparison of one set of lands with others of recognized value; the relative principle of each adverted to generally, 1018-1032—A permanent independent Board for conducting the proposed general valuation recommended, 1033, 1034, 1036—A septennial revision would be sufficient, 1035—All local taxation should be collected by the same officer at a certain fixed period of the year, 1037-1046.

Difficulty experienced in the collection of the county cess previous to the summer assizes, 1039-1042—The existing poor law valuations are a fair criterion of the relative value of tenements in the same union; the want of a common basis has led to considerable difference, 1047, 1048—In laying down a basis for a general valuation, the amount expected to be received for the use of the property valued for a series of years is the test of actual value, 1049-1061—Practicability of a valuation being founded on the principle of taking the rent paid by the tenant as the actual fair letting value of the land; means of checking the amount of rent extended by competition that would be thus afforded, 1062-1066—Nature of the tenant-right existing in Ulster; its general principles and operation adverted to at length; is a very old custom; whether in cases where it exists the rent payable to the landlord should be taken as the fair letting value; extent to which a strict construction of the Act of Parliament would disturb the uniformity of the valuation throughout all parts of Ireland, 1067-1157.

Shandrum, Electoral Division of (Cork). Letter from Thomas Ware, enclosing valuation of the electoral division of Shandrum, county of Cork, by the valuers of the Mallow and Kilmallock Unions, extracted from the valuation books of those unions, *App.* 192.

Shillelagh Union. In this union the poor law valuation exceeds the rental in many cases, *Muggeridge* 1183.

Size of Farms. Difference in size between the holdings in the south and in the north, *Senior* 1043.

Size of Townlands. General size of townlands in Ireland; smallest average quantity that was given in the townland valuation, *Griffith* 269, 270.

Small Tenements. The proposed general valuation should extend to every tenement, however small its value, *Lewis* 1757—Whether, in the event of the consolidation of the poor-rate and county cess, the county cess upon tenements of less value than 4*l.* should be paid by the landlord in the same manner that the poor-rate upon tenements below that value is now paid, *Ib.* 1757-1759.

Soils. Instructions given to the valuers under the townland valuation, with regard to the nature and depth of soils, and the qualities of sub-soils, *Rep.* iv—Witness, in his valuation, is in some degree guided by the state of agriculture in the district, but mainly by the intrinsic quality of the soil; how far the same quality of soil, well or badly cultivated, would bear a comparison, *Griffith* 248-252—Although under these circumstances the valuation would not be exactly uniform, still it would approximate to it, *Ib.* 253, 254—The only way to remedy this would be a quinquennial revision, *Ib.* 255—The time and expense for completing such revision would not be considerable, *Ib.* 256-268—Looking at the townland valuation of Ireland, in reference to the geology of the country, there can be no great secret in ascertaining and valuing the texture of soils in Ireland,

Report, 1844—continued.

Soils—continued.

Ireland, *Sir R. Keane* 644—Eighteen of the counties in the interior of Ireland, which are the richest counties, are upon one description of subjacent rock; the only difference in soil arises merely from the depth over that, *Ib.*

See also *Poor Law Valuation*, II. *Townland Valuation*, 3.

Striking of Rates. Under the commissioners' orders the rate should be struck twice a year; period of the year at which witness would recommend it to be struck, *Gulson* 1482.

Sub-Applotments. Whether it would not have been an advantage if such an arrangement had been made in the survey, that the relative value of particular farms should be ascertained, whereby sub-applotments for the subdivisions might have been made, *Griffith* 210—The sub-applotment was made under the grand jury, but not under the Valuation Act; mode in which the sub-applotment was proceeded with, *Ib.* 271–279.

Supplemental Valuations. Act of last Session requiring the Poor Law Commissioners to have supplemental valuations for the purposes of towns under the provisions of the 9 Geo. 4; complaints from certain towns with regard to the non-completion of valuations, *Gulson* 1434–1452—There are no means of ascertaining the towns which are under the 9 Geo. 4; neither in that Act, nor in 6 & 7 Vict. c. 93, is there any specification of the town to be rated, *Ib.* 1453, 1454—Explanation of column in the form of rate drawn out by the commissioners under the latter Act, relative to "landlords' repairs and landlords' insurance," *Ib.* 1455–1463—Objections to the principle of the supplemental valuations required to be made by the Poor Law Commissioners under the Act 6 & 7 Vict. c. 93, in boroughs in which rates are levied under the Act 9 Geo. 4, c. 82, called the "Lighting and Cleansing Act," *Coode* 1697–1699.

T.

Taxation. See *Collection of Rates.* *Consolidation of Rates.* *County Cess.* *Exemption from Taxation.* *General Valuation.* *Landlords' Taxes.* *Tithes.*

Taxation (France). The whole taxation of the country is levied upon the cadastre, *Sir R. Keane* 674–680.

Tenant Right. Existence of the tenant-right in all places where the land is let from year to year, whether by valuation or otherwise, *Griffith* 80–90—Existence of the tenant-right in the north of Ireland; attempt making by landlords to reduce it, *Sir R. A. Ferguson* 477–480—Origin of the custom, *Ib.* 481, 482—Under these old tenures it was necessary in most cases for the tenant to be a Protestant; grants in Londonderry to persons denominated innocent Papists, *Ib.* 483—Value per acre of the tenant-right, *Ib.* 484—Whether a higher rent is paid for land on which there is no tenant-right; attempt made by the landlord, in some cases where the tenant was not able to pay the tenant-right, to put on an additional per-centage till it was paid, *Ib.* 484–490—The payment does not in all cases injure the incoming tenant by depriving him of the means of stocking the farm and carrying it on; it may in cases of small tenants, *Ib.* 491—Inequality of the right in different districts, *Ib.* 492, 493—Nature of the tenant-right existing in Ulster; its general principles, and operation adverted to at length; whether, in cases where it exists, the rent payable to the landlord should be taken as the fair letting value; extent to which a strict construction of the Act of Parliament would disturb the uniformity of the valuation throughout all parts of Ireland, *Senior* 1067–1157—To the custom of tenant-right in the north, both the absence of agrarian outrage, as well as a much higher state of cultivation, is almost entirely to be attributed, *Ib.* 1089.

Tenants. See *Landlord and Tenant.* *Occupiers.* *Rents.* *Tithes.* *Value of Land.*

Tenement Valuation. Impossibility of the owner of a single tenement in a townland judging from his own holding of the accuracy of the total valuation, *Rep.* viii—Unless the valuation imposes a separate value on each tenement, there cannot be any effectual redress to the ratepayer, or effectual responsibility on the part of the valuator, *Ib.*—Statement by Mr. Griffith, that the cost of making a tenement valuation in those parts of Ireland in which the county valuation is completed, would be about a halfpenny per acre, *Ib.* ix—Where the county valuation is not completed the extra cost would be less than a halfpenny, *Ib.*—Mr. Griffith states that, by the terms of the Act, he is bound to make his valuation a valuation of townlands, *Ib.*—There is no doubt entertained by the Committee that such is the intention of the Act, *Ib.*—Opinion of the Committee that there is nothing in the Act which prohibits the valuator from specifying the values of the several tenements comprised in each townland, *Ib.*

A tenement valuation for the purposes of the poor-rate might be made at a very small expense in those counties in which the townland valuation has been completed, *Griffith* 173–175—With regard to the counties now in progress, a tenement valuation could not be made cheaper than in the counties not begun, *Ib.* 192–205—Witness is not authorized under the existing law to make his valuation a valuation of separate tenements, *Ib.* 211–213—Nor would he be justified in valuing property which is not subject to county rates, *Ib.* 214.

Report, 1844—continued.

Tenement Valuation—continued.

Papers delivered in to show that the power exists of converting the townland valuation into a tenement valuation; examination in explanation of these papers, *Griffith* 176–191—The conversion might be made with only the additional expense of a halfpenny an acre where the valuation has already been made, *Ib.*—But in order to make a tenement valuation available for the purpose of the poor-rate, it would require a greater sum than a halfpenny an acre where property liable to taxation, not included in the county valuation, occurred, *Ib.* 221–232—The poor law valuations in the south are not to be taken as indications of the fair value of the tenements contained in the unions, *Gulson* 1397—Complaints of inequality in the valuations of tenements, *Ib.* 1398, 1399.

See also *County Cess.* *Houses.* *Norreys, Sir D. J., Bart. M. P.* *Outbuildings.*
Poor Law Valuation. *Small Tenements.* *Tenements.* *Townland Valuation, 4.*

Tenures. The general tenures of land should form the basis of valuation, *Griffith* 376.

Test of Value. Possible differences between the actual rent and the value of the land, *Coode* 1371, 1372.

See also *Bases of Valuations.* *Poor Law Valuation, I. 2. III.*

Timber. Timber is liable to the rate in Ireland, but is exempt in England, *Coode* 1314—In Ireland a valuator would not value the timber, but only the productive value of the land itself on which it stands, *Ib.* 1316—In England all woodlands are exempt from rates unless they come within the description of “saleable underwood,” *Ib.* 1317—In Ireland the valuator would have to consider the accruing value of the timber from year to year, *Ib.* 1318—The valuer’s business would be confined to an estimate of the annual increment of the value of the produce, *Ib.* 1320–1322—He must assume that the permanent property would not be deteriorated in value, and that the best annual profit could be made from the land, *Ib.* 1323–1325.—See also *Copses.*

Tithe Valuation. The tithe valuation is found to be so defective in principle, and so wanting in uniformity, that the Committee have felt it their duty to dismiss it from their consideration, *Rep.* iii—The tithe valuation could not be so amended as to form the basis of a general valuation, *Griffith* 308–311.

Tithes. The townland valuation did not include tithes, *Griffith* 41–44—Since the commencement of the townland valuation an Act has passed removing the payment of tithe from the occupying tenant; the valuation is, however, continued, on the principle of the tenant being still subject to it, *Ib.* 396–400—Whether it be desirable to impose any burthen on tithes, *Sir R. A. Ferguson* 507–510; *Lewis* 1719–1723—In England tithes are subject to county rates, *Sir R. A. Ferguson* 509—Grounds on which tithes have been considered to be subject to taxation, *Lewis* 1721, 1722—It would not be equitable now to subject tithe to any additional burthens for the purpose of the county cess, *Ib.* 1723—In so far as it is susceptible of increase with the rent of land, and the general prosperity of the country, it would be a ground for subjecting it to charges for objects by which that general prosperity is promoted, such as the construction of roads and bridges, *Ib.*—Examination in reference to the valuation of tithes under the Poor Relief Act, *Coode* 1761–1763—Difference in regard to the rating of tithes in England and in Ireland; in England the land is estimated at a value which supposes the tenant to pay the gross tithe commutation rentcharge, which cannot be done in Ireland, *Ib.* 1764–1770.

Tolls. The townland valuation did not include tolls, corporate or private, *Griffith* 40—Easements, rights of way, and tolls, are liable in Ireland, and are held by the construction of the courts not to be liable in England, *Coode* 1314—Whether it be desirable to impose any burthen upon tolls, corporate or private, and ferries, *Lewis* 1724.

TOWNLAND VALUATION:

1. *Statutory Provisions under which the Valuation is conducted; alteration of the Law necessary.*
2. *Progress made in the Valuation; Expense, and how defrayed.*
3. *Basis on which carried out; the Poor Law Basis recommended.*
4. *How far Accuracy and Uniformity have been attained.*
5. *Whether applicable to Poor Law Purposes; how it could be made so.*

1. *Statutory Provisions under which the Valuation is conducted; alteration of the Law necessary:*

The valuation was set on foot in consequence of the recommendation of the Select Committee of 1824 on the survey and valuation of Ireland, *Rep.* iii; *Sir R. A. Ferguson* 438—The valuation is now conducted under the Act 6 & 7 Will. 4, c. 84, *Rep.* iii—Provisions of the Act of 1826, *Sir R. A. Ferguson* 440—Correction of blunders as to houses exempted by the Act 2 & 3 Will. 4, c. 73, *Ib.*—Simplification and change of system,

Report, 1844—continued.

TOWNLAND VALUATION—continued.

1. *Statutory Provisions under which the Valuation is conducted, &c.*—continued.

system effected by Act of 1836, *Sir R. A. Ferguson* 440, 441—By the Act of last Session borough towns have been taken out, *Ib.* 498—Alteration of the law requisite to complete the valuation, *Ib.* 511–517.

2. *Progress made in the Valuation; Expense, and how defrayed:*

The townland valuation for the purposes of the county cess was commenced by Mr. Griffith, as Commissioner of Valuation, in 1830, *Rep.* iii—Progress of the valuation towards completion up to 27th March 1844, *Ib.*—The extension of Mr. Griffith's valuation to those counties not yet valued by him, in which a valuation for poor law purposes exists, is unnecessary, *Ib.* vii—Progress made in the valuation; counties which have been valued; counties which are yet untouched, *Griffith* 6–13—The valuation has been very little carried into effect in the south of Ireland, *Clements* 1658.

Sum expended in the valuation up to 27th March 1844; amount required for its completion, *Rep.* iv; *Griffith* 6–15—The expense is defrayed by the county valued, charged upon the county cess, *Rep.* iv; *Griffith* 16, 17.

3. *Basis on which carried out; the Poor Law Basis recommended:*

Rules laid down in the Valuation Act, 6 & 7 Will. 4, c. 84, s. 9–14, for the guidance of the Commissioner of Valuation, *Rep.* iv—The county cess being imposed upon townlands, and afterwards apportioned amongst the occupiers, it was deemed sufficient to make this valuation a valuation of townlands; accordingly the lowest unit of value is a townland, *Ib.*—The mode by which the annual value of the land valued was to be estimated not having been clearly laid down in the Valuation Act, the commissioner was left to exercise his own discretion, *Ib.*—Explanation of the principle followed by Mr. Griffith in forming the estimate of value, being an extract from a communication, dated 20th April 1841, from Mr. Griffith to the Commissioners of Inquiry into the Grand Jury Laws, *Ib.* iv–vi—Objections to be urged against the principle of valuation employed by Mr. Griffith, *Ib.* vi, vii—Recommendation of the Committee that Mr. Griffith be instructed not to continue his valuation under the Act 6 & 7 Will. 4, upon the principles which he has hitherto followed, *Ib.* ix.

The Valuation Act prescribes that the valuation should be according to a fixed standard contained in the Act; the townland was to be the unit of valuation, *Griffith* 18, 19—In certain cases an additional value was put upon the land on account of its being attended with profitable incidents, *Ib.* 47–51—The scale of prices assumed in the Act were 2 s. 6 d. in the pound lower than the average prices of the day; reason for witness having made a reduction of one-eighth in the valuation, and of his continuing to do so notwithstanding prices are now about equal to those in the Act, *Ib.* 322–335—General principles on which the valuation is conducted, *Ib.* 327 *et seq.*; *Senior* 1022; *Clements* 1640; *Lewis* 1728. 1734—Witness considers he has followed the instructions of the Act 6 & 7 Will. 4; he took his own view of it, *Griffith* 329—The tables contained in the outline adopted by witness in carrying on the valuation are applicable equally to all parts of Ireland, being calculated upon the produce, which is consequent upon the system of farming, *Ib.* 342—How far local circumstances may interfere with the application of those principles; instructions issued for the guidance of the valuers on the subject, *Ib.* 343–370.

Supposition on which the valuation is based with regard to the routine of cultivation and capabilities of soils, *Griffith* 380–390—Consideration given to the outgoings and other expenses on land, *Ib.* 391–395—Rent must be assumed at a higher rate than that of witness's valuation, *Ib.* 420–422—Recommendation of the Committee of 1824, laying down the principles on which the valuation should be conducted, *Sir R. A. Ferguson* 438–440—The valuation of the earlier counties is confined to townlands, not extending to subdivisions of fields, or showing houses, *Ib.* 442—In the counties lately mapped the boundaries of farms and the fences of fields are given, *Ib.* 444, 445—Propriety of the valuers going again over the earlier counties, and marking in the boundaries of farms and fields, *Ib.* 446—The land was valued according to the prices of the neighbouring markets, and then from the total of each townland one-eighth being deducted to bring it to the prices of the Act, *Ib.* 496.

No advantage is to be derived from carrying on the valuation according to a certain set of prices, *Sir R. A. Ferguson* 498—Difficulty that has arisen with regard to the construction to be put upon the words “sub-denomination,” and how it might be obviated, *Ib.* 516—How witness, when he first commenced valuing for the townland valuation, was instructed in the mode of carrying it on, *Purdon* 692–694—No redress, by appeal, is open to an occupier dissatisfied with the apportionment, *Clements* 1640—Impossibility of an individual ascertaining whether his property is fairly valued, *Lewis* 1741—Important difference between the Irish Valuation Act and the English valuation, *Ib.*—Power given to the Lord Lieutenant under the Valuation Act to direct houses, of a less annual value than 5 l., to be erased from the list, *Ib.* 1757.

TOWNLAND VALUATION—continued.

3. *Basis on which carried out, &c.*—continued.

The witnesses concur in opinion that the valuation should be constructed upon the principle laid down in 1 & 2 Vict. s. 64, viz. "The net annual value," *Rep.* viii.—Objection to the townland valuation being adapted to the standard on which the poor law valuation is to be made; the arrangements of the former could be accommodated to the latter, *Griffith* 403-407.—The basis of the poor law valuation recommended, *Sir R. A. Ferguson* 512-515.—The poor law valuation is decidedly preferable to Mr. Griffith's townland valuation, *Coode* 1378.—Preference to be given to the poor law principle of valuation over that of Mr. Griffith; faulty principle of the latter; its inapplicability to general purposes, *Gulson* 1511-1515. 1549-1552.

4. *How far Accuracy and Uniformity have been attained:*

The scale of value adopted by Mr. Griffith is nearly that of the great landed proprietors, but considerably below the rack rents, *Rep.* v.—Practically there is scarcely any tangible criterion of the accuracy of Mr. Griffith's calculation, *Ib.* viii.—The results of the valuation have corresponded very nearly with the great landed proprietors' rents, *Griffith* 28. 52-57. 74-76. 107-120. 123, 124.—They were sometimes from 20 to 40 per cent. under the rents of the middle or small landed proprietors, *Ib.* 28.—How far the main object of the Committee of 1824, uniformity, has been attained; circumstances tending to injure or destroy that uniformity, *Sir R. A. Ferguson* 447-455.—Great utility of the valuation for general purposes in Ireland, *Ib.* 497.—Completeness and accuracy of Mr. Griffith's valuation, so far as its original purposes are concerned, *Gulson* 1550-1552.—Mr. Griffith's valuation is generally one-fourth below the letting value, *Clements* 1617.

Inequality in the valuation; over-valuation of mountain lands and under-valuation of the good lands, *Sir R. A. Ferguson* 459-463.—Complaints as to the amount laid upon towns, in reference more particularly to vacant houses, *Ib.* 516, 517.—Great discrepancy existing between Mr. Griffith's valuation and the letting rents, *Ib.* 518-522.—Mr. Griffith's valuations appear to be more provisional than definitive; meaning witness attaches to the term provisional, *Sir R. Keane* 561, 562. 566-569.—General satisfaction expressed with Mr. Griffith's valuation in the counties of Londonderry and Tyrone; examination into its accuracy made with the view to its adoption for poor law purposes in those counties; the discrepancies discovered are to be attributed to the principle on which the valuation was based, *Clements* 1614-1622. 1659.—Great skill and knowledge of the subject displayed by Mr. Griffith in the conduct of his valuation; defectiveness of the principle laid down; according to Mr. Griffith's own evidence before the Committee on the county cess; it is shown to be incapable of being carried out in practice, *Coode* 1707.—Impossibility of forming a judgment as to the fairness of Mr. Griffith's valuation; the absence of objection to it no evidence of its accuracy, *Lewis* 1741.

5. *Whether applicable to Poor Law Purposes; how it could be made so:*

Result of the valuation being brought into operation in Londonderry; its total uselessness for poor law purposes; difference discovered in various townlands in which comparisons were instituted, *Sir R. A. Ferguson* 455, 456. 459-463.—With certain conditions contemplated under the poor law, a rate might be levied under the Poor Law Act according to the townland valuation, *Sir R. Keane* 547, 548.—Desire felt during the preparation of the Poor Relief Act that Mr. Griffith's townland valuation should be made applicable to the purposes of the poor law, *Coode* 1300.—The preference was given at last to a separate valuation apart from any opinion of the propriety of assimilating the law to that of England, *Ib.* 1301.—Desirableness of completing the remaining portion of Mr. Griffith's valuation so as to make it more perfectly applicable to poor law purposes, *Gulson* 1545, 1546.—Utility of Mr. Griffith's valuation in making the valuation under the poor law; the valuation itself cannot be adapted to the purposes of the Poor Relief Act, *Clements* 1623-1625, 1658-1662.—Desire of the Poor Law Commissioners to adapt Mr. Griffith's valuation to the purposes of the poor law; its inapplicability, *Lewis* 1717.

One-third being added will bring the townland valuation to nearly the full rent value of the land under ordinary proprietors, *Rep.* v, vi.—How the townland valuation might be made applicable to poor law purposes in those districts where it has not been commenced, *Griffith* 320, 321.—Per-centage advised by witness to be put on the townland valuation to make it applicable to poor law purposes, *Ib.* 336-341. 427. 430.—Alteration of the law necessary to enable the townland valuation to be completed so as to be applicable to poor law purposes, *Ib.* 371, 372.—It would be desirable to make it a fair valuation of tenements between landlord and tenant; it might then at once be used for the poor law, *Sir R. A. Ferguson* 498-500.

Report, 1844—continued.

Trim Union. Evidence relative to the valuation of this union, *Gulson* 1451.

Turf. Would be rateable in England; is exempted under some circumstances in Ireland, *Coode* 1315.

U.

Ulster, Province of. Throughout the province of Ulster it is usual to let land by valuation and not by competition, *Senior* 978—All the land in that province is let considerably below the competition value, *Ib.*—Nature of the tenant-right existing in Ulster; its general principles and operation in regard to the poor law valuation adverted to, *Ib.* 1067-1157.

Uniformity of Valuation. Means taken under the poor law valuation to secure uniformity in the same county, *Muggeridge* 1173-1175.—See also *Townland Valuation*, 4.

V.

Vacant Houses. There is no relief in the case of vacant houses as regards the county cess, though there is in reference to the poor-rate, *Sir R. A. Ferguson* 516.

Valuation Act. See *Acts of Parliament.* *General Valuation*, 2. *Houses.* *Letting Value.* *Machinery.* *Outbuildings.* *Poor Law Valuation.* *Prices.* *Townland Valuation.*

VALUATORS:

1. *Townland Valuation.*
2. *Poor Law Valuation.*
3. *French Cadastre.*

1. *Townland Valuation:*

Evidence generally as to the system pursued by the valuers and check valuers in valuing a county; different districts assigned to each, *Purdon* 695-705—General number of valuers in each county; different districts are assigned to each, *Ib.* 704, 705.

2. *Poor Law Valuation:*

Valuers appointed by the poor law guardians would come to a great deal more money to do the thing accurately, than if done under witness's direction, *Griffith* 306, 307—Mode in which the valuation of the baronies was distributed among the valuers; the valuers were appointed by the commissioners; check over the valuers; evidence as to the canvassing for these situations, *Sir R. Keane* 605-613—Contests in the Boards of Guardians in the south of Ireland as to the appointment of valuers; complaints of the valuers being very often appointed for the purpose of making low valuations, *Gulson* 1426-1429—Satisfaction to the landlords and better class of tenants vesting the appointment in the commissioners would give, *Ib.* 1430, 1431—It would lead to a truer valuation, and thereby avoid litigation and appeal, *Ib.* 1432, 1433—It would remove a great source of dissension, *Ib.* 1516-1518.

3. *French Cadastre:*

By whom the valuers under the French cadastre are appointed, *Sir R. Keane* 666-668.

Value of Land. Reasons for considering that the improvements which have taken place in the condition of Ireland during the 18 years that the valuation has been going on, will not materially affect the relative value of land throughout the country, *Griffith* 237-247. 280-283—The value should be estimated at the rent which might be obtained from a tenant who took the land as it was, with no expectation of making improvements, *Coode* 1337-1340—It is assumed that the tenant is to have the full benefit of his tenure during the year, and to be entitled to the accruing profits, *Ib.* 1341-1344—And that the land is let for a term that will allow the tenant to take the full benefit of the mode of cultivation or occupation with which he enters upon the land, *Ib.* 1345-1352—The valuer must not assume prospective improvements, but must be bound by the existing state of the land, *Ib.* 1353-1356.
